CT 449 Cont.	█	To: Project Team From: █ █	Email: █	Project Update	March 30, 2023	<p>Hello,</p> <p>Just interested in where we stand on the Bradford bypass. I am confident that behind the scenes there is positive progress. Very interested with my support.</p> <p>Thank you</p> <p>█</p>	<p>Hello █</p> <p>Thank you for your interest in the Bradford Bypass Preliminary Design Study and project-specific assessment of environmental impacts, undertaken in accordance with Ontario Regulation 697/21. The Project Team acknowledges and appreciates your continued support for the Bradford Bypass.</p> <p>MTO is currently undertaking 15 environmental studies to update and document environmental conditions, identify, and evaluate potential impacts of the project and recommend mitigation measures to reduce potential impacts and meet current environmental legislative requirements. To view the full list of studies being conducted, please visit the overview page on the Project Website (https://www.bradfordbypass.ca/overview/).</p> <p>The studies are anticipated to be completed in 2023. Results of the studies, including commitments to future work, will be summarized in a Draft Environmental Impact Assessment Report (EIAR) per O. Reg. 697/21. Project commitments and anticipated permits and approvals identified in the studies will be carried forward to subsequent Detail Design and construction phases.</p> <p>As your contact information is already on the Project Contact List, you will continue to be notified through email of future milestone events including filing of the Draft and Final EIARs and other updates for this study.</p> <p>We encourage you to visit the Project Website (www.bradfordbypass.ca) to review information on the project as it becomes available.</p> <p>If you have any other questions, please feel free to reach out to the Project Team at your earliest convenience. You can reach the Project Team via email at projectteam@bradfordbypass.ca, toll free at 1-877-247-6036, or by visiting the Project Website at www.bradfordbypass.ca.</p> <p>Sincerely,</p>

CT-572	█	To: Project Team From: █	Email: █	Interchange Update	April 3, 2023	<p>Good Morning:</p> <p>Can you please update us as to what the preferred intersection design is at SR 10 and the Bypass. We do not recall seeing a final design.</p> <p>Thanks,</p> <p>█</p>	<p>█ called █ on June 8, 2023. <u>Summary below.</u></p> <p>█ provided an introduction</p> <p>█ noted the Project Team has received █ comments and messages, including during the interchange consultation event in April/May 2022. The Project Team is working to address all comments received for the project in priority order. █ prefers Alternative #2 (Parclo AB) at Sideroad 10 interchange.</p> <p>█ noted he has a lawyer representing him, and will be sending in more questions to the Ministry.</p> <p>█ understands the interchange was requested by the municipality. Alternative #2 has less impact on █ property than Alternative #1 and #3.</p> <p>█ noted the preferred interchange was presented for review in November 2022 during Public Information Centre #2. █ noted he was not aware of the preferred alternative at Sideroad 10 interchange presented in November 2022, and was only aware on June 1, 2023, with the notification of the Draft Environmental Impact Assessment Report. █ noted the assessment of the interchange was based on four key criteria: Environment, Traffic Operations, Geometrics, and Structure Requirements. N. Valenton noted a Parclo A4 interchange provides the best traffic operations and greatest safety to users.</p> <p>█ noted the proposed interchange is very close to County Road 4 Parclo A4 interchange, and the interchanges at Highway 400/County Road 88 and Highway 400/Line 5 and having two Parclo A4 interchanges within a close</p>

							<p>proximity is excessive. [REDACTED] inquired if a Sideroad 10 interchange as a Parclo A4 has traffic justification as it appears excessive and growth north of Bradford appears to be limited with most of the industrial growth moving to be along the Highway 400 employment lands. [REDACTED] noted data from various groups including the municipality and province were used to create the traffic model used to assess the future traffic operations at the interchange.</p> <p>[REDACTED] inquired why the Project Study Area figure in the current notification materials shows Sideroad 10 as a dotted line whereas County Road 4 is shown as a solid line. [REDACTED] noted this shows Sideroad 10 interchange is still under consideration.</p> <p>[REDACTED] inquired about the property acquisition process. [REDACTED] noted a property acquisition information sheet was provided, and MTO is in contact with various property owners.</p> <p><u>Email response back to [REDACTED]</u></p> <p>Hello [REDACTED]</p> <p>Thank you for the call on June 8th, 2023 and for your interest in the Bradford Bypass Preliminary Design Study and project-specific assessment of environmental impacts, undertaken in accordance with Ontario Regulation 697/21.</p> <p>As discussed on the call, the preferred interchange configuration at 10th Sideroad, as well as the overall Bradford Bypass Recommended Plan, were presented at Public Information Centre (PIC) #2 on November 24, 2022 and are described further in the Draft Environmental Impact Assessment Report.</p> <p>Additionally, please note that a response to your comments on the Preliminary Design Interchange Consultation Event was provided on July 26, 2022.</p>

CT-584		To: Project Team From:	Email: [REDACTED] [REDACTED]	Project Transparency	May 9, 2023	<p>Good afternoon [REDACTED] Thank you for your email.</p> <p>I'm not entirely sure where you have received your info from, what rumours you may have heard or where they came from. This is a Provincial Project along with the Ministry of Transportation. The Town of Bradford West Gwillimbury, nor the Council, is not making any decisions on this project at all.</p> <p>To state : 'Apparently, town council, which includes you, has decided to quietly amend this interchange into a definite construction, to appease developers and business owners whom you are placing as more important than your constituents.'</p> <p>is insulting and goes against who I am and what I stand for. I would really like to know where you are getting your information from as this statement is completely false.</p> <p>This project from what I have seen, and you can see for yourself at www.bradfordbypass.ca, has always been transparent. There was a Public Information Center meeting on November 24, 2022 which I had attended and where I first found out about the primary choice of intersection on the 10th Sideroad. My original understanding was that it was only supposed to be a one way ramp (either off or on). You can contact the members working on this project directly through the website.</p> <p>You further state: 'I am extremely disappointed with council acting in such an underhanded manner. Rumour has it that certain councillors are in favour of permitting constituents open accessibility to updated information on the plans for Sideroad 10 re: the Bypass. You have not been included in that list of</p>	N/A

						<p>councillors. Therefore, am I to assume you would rather us to remain uninformed?</p> <p>Again, I have no idea where you are getting your information from but it is false and completely unfounded. Rumours tend to spread quickly and it's really unfortunate when individuals listen to and believe rumours instead of going to the source and asking the appropriate questions in a civil and proper manner. What 'list of councillors' did you have, and where did you come across this 'list'? Your assumptions are incorrect.</p> <p>I appreciate you reaching out and hope that I have brought some clarity to these 'rumours' and false information.</p> <p>For further transparency, I have CC'd the Mayor, Deputy Mayor, the Town's CAO, and contacts from the Bradford Bypass project to receive and read your concerns.</p> <p>[REDACTED]</p> <hr/> <p>[REDACTED]</p> <p>It has come to our attention that plans for the "proposed interchange" at Sideroad 10 and the Bradford Bypass have changed. Apparently, town council, which includes you, has decided to quietly amend this interchange into a definite construction, to appease developers and business owners whom you are placing as more important than your constituents.</p> <p>In concern of true transparency, I would have expected this kind of decision to be shared with the neighborhood directly affected. I am extremely disappointed with council acting in such an underhanded manner. Rumour has it that certain councillors are in</p>

CT-585	████	To: █████ From: Project Team	Email: █████	General Inquiry	May 10, 2023	<i>Individual sent email to Infrastructure Ontario, which was forwarded to MTO Project Team.</i>	<p>Dear █████</p> <p>Thank you for your questions to Infrastructure Ontario regarding the Bradford Bypass. Your questions were directed to the Ministry of Transportation for a response.</p> <p>Regarding your question about the highway being changed from four lanes to eight lanes, the Bradford Bypass is being designed with a standard 100m right-of-way with initial development of a four-lane freeway, which is consistent with the 2002 approved Environmental Assessment (EA). The design includes provisions for the future to increase to eight lanes within the 100m right-of-way. MTO shared the future widening which is documented in the Final Environmental Conditions Report, with you as well as the general public on October 27, 2022. The Environmental Conditions Report documented the updates to the 2002 approved, including the potential for the future widening of the BBP to eight lanes within the 100m right-of-way designation. This possibility was also included in the information provided during Public Information Centre #2, which were shared with on December 1, 2022, which included diagrams of the proposed four-lane and eight-lane cross-sections of the Bradford Bypass.</p> <p>Regarding your questions about route selection, the 2002 approved EA for the Bradford Bypass involved the identification, evaluation, and comparison of 10 alternative corridors and 43 associated potential routes. The 2002 approved EA evaluated all alternatives from a broad range of potential routes, including managing transportation demand, improving existing roadways and/or roadway based modes. This evaluation resulted in the selection of the Technically Preferred Route. The preferred route is included in Official and Transportation Master Plans as well as the <i>Places to Grow Act</i>, and has fewer negative impacts to residential and natural areas when compared to other route options considered.</p> <p>The current Preliminary Design work updated the Technically Preferred Route for the Bradford</p>

COMMENT RESPONSE FORM

Project: Bradford Bypass

Deliverable: Draft Stormwater Management Plan (SWMP) Highway 400 – Highway 404 Link (Bradford Bypass)". Prepared for Ontario Ministry of Transportation, and dated March 22, 2023

Date: May 17, 2023

Comment No.	Section	Review Comment Received From:	Review Comment	AECOM Response	Edits Required?	Edits Made?	Comment Rejected?	Reason
1	General	April 6, 2023	The report states that there are no SWM measures existed under existing drainage conditions. Exhibits 5.1/5.2 (Proposed Drainage Mosaic) and Exhibits 7.1/7.2 (Proposed Stormwater Management Plan) showed that there would be several "existing SWM facilities to be relocated with outflow direction" as indicated in the exhibit legends. A clarification should be provided in the report for those existing facilities, including their existing and future service areas and indicating whether these existing SWM ponds are included in the proposed nine (9) SWM ponds.	As shown on Exhibit 5.1 two existing ponds (R-Ex Pond 1 and R-Ex Pond 2) will be relocated. Their existing drainage areas shall be reviewed and confirmed during the Detail Design phase given that the area around the ponds is undeveloped. It is assumed that these two ponds do not function as SWM ponds per MECF requirements, but this assumption shall be confirmed during the Detail Design phase. These two existing ponds are not part of the proposed nine (9) SWM Ponds.	Yes	Yes	N/A	N/A
2	General	April 6, 2023	It is understood that the proposed SWM ponds will provide treatment to meet the enhanced water quality protection level. It is recommended Table 5 of the report (Proposed SWM Ponds) include the information of the proposed permanent storage volumes of the SWM ponds in comparison with the requested storage defined in Table 3.2 of Stormwater Management Planning and Design Manual (March 2003) to show that the provided storage will meet the MECF's enhanced water quality protection level	Table 5 was revised to include the required permanent pool storage volume as defined in Table 3.2 of the MECF's Stormwater Management Planning and Design Manual (March 2003).	Yes	Yes	N/A	N/A
3	General	April 6, 2023	In terms of the proposed flat-bottom grassed swales, although the design is to meet the MECF Design Manual requirement, what water quality protection level that a grassed swale can provide has not been well defined/recognized. It is recommended that Table 4 of the report (Proposed Flat Bottom Grassed Swales) include the outlet/receiver information of the proposed swales. If the swales directly discharge into a surface watercourse/wetland, further clarification should be provided to discuss the receiver sensitivity and assess the sufficiency of the proposed SWM facility in protecting the receiver water quality.	Table 4 of the report (Proposed Flat Bottom Grassed Swales) has been updated to include the outlet/receiver information of the proposed swales, including Flat Bottom Swale Calculations (Included in Appendix C – Water Quality Analysis and Erosion Potential Analysis for Flat Bottom Swales). The clarification request with respect to the receiver sensitivity and the assessment of the sufficiency of the proposed SWM facility in protecting the receiver water quality shall be conducted in Detail Design when the required additional information and data is available.	Yes	Yes	N/A	N/A
4	General	April 6, 2023	Ontario Regulation 697/21 requires that the SWM plan includes a monitoring plan to evaluate the performance of stormwater management facilities against the design criteria and objectives and to verify that receiving waters are protected. In this regard, the report has proposed several principles as the basis of the monitoring framework. In addition, it is noted that Page 33 of the report has provided recommendations for the subsequent design phase, which include: a) collect water samples at the inlet and outlet points of the flat bottom grassed swales to estimate the removal efficiency of the swales in terms of concentration of total suspended solids (TSS); b) propose the water quality target/protection level based on the receiver sensitivity and the MECF's manual when preparing a SWM plan; c) demonstrate in the SWM plan that the proposed SWM facility is able to achieve the defined "target" and; d) the treated effluent to meet TSS concentration of 25 mg/L before discharging into the receiving water body; etc. I generally support these	Further details about maintenance and monitoring of the proposed SWM facilities shall be provided during the Detail Design phase AECOM agrees that during the Detail Design phase, additional recommendations will be provided, and that the proponent shall commit to conduct as recommended the performance monitoring of the facilities to assure they operate as design.	Yes	Yes	N/A	N/A

Comment No.	Section	Review Comment Received From:	Review Comment	AECOM Response	Edits Required?	Edits Made?	Comment Rejected?	Reason
			recommendations. It is expected that further details will be provided in the final SWM report or during the design phase to follow these recommendations, along with a proponent's commitment to conducting the performance monitoring as recommended.					
5	General	April 6, 2023	Finally, Appendices C-D of the report presented the hydrological model output files with different scenarios (existing condition, propose condition without SWM ponds, proposed condition with SWM ponds). As the project involves many catchments, culvers and watercourses, it will be much helpful if the final report in the appendices can include a model schematic diagram for each simulation scenarios considered.	The schematic for the proposed hydrologic models provided in the final SWM Plan (appendices).	Yes	Yes	N/A	N/A
6	General	Page 1 of 6	<p>The <i>Clean Water Act, 2006</i> (CWA) aims to protect existing and future sources of drinking water. To achieve this, several types of vulnerable areas are delineated around surface water intakes and wellheads for every municipal residential drinking water system located within a source protection area. These vulnerable areas are known as a Wellhead Protection Areas (WHPAs), and surface water Intake Protection Zones (IPZs). Other vulnerable areas that can be delineated under the CWA for municipal drinking water systems include Significant Groundwater Recharge Areas (SGRAs) and Highly Vulnerable Aquifers (HVAs). In addition, event-based modelling areas (EBAs) and Issues Contributing Areas (ICAs) may also occur, overlapping with one of the four above-named vulnerable areas.</p> <p>The Source Protection Information Atlas is publicly available and can be used to locate delineated vulnerable areas in Ontario.</p>	AECOM has factored in the Clean Water Act, 2006 and source protection requirements. The Source Protection Information Atlas was consulted and reviewed as part of the Groundwater Protection and Well Monitoring Plan, provided to MECP for review on March 24, 2023.	No	No	N/A	N/A
7	General	Page 2 of 6	<p>Based on the proposed approximate siting of the grassed swales along certain lengths of the bypass and the nine stormwater management ponds, as described in the Draft Bradford Bypass SWMP, we have determined that the swales and ponds may intersect with several vulnerable areas for the protection of sources of drinking water, as follows:</p> <ul style="list-style-type: none"> - Four proposed stormwater management ponds overlap with IPZ-3 with vulnerability scores ranging from 5.6 to 6.3. - Five proposed stormwater management ponds overlap with HVAs with a vulnerability score of 6. - One proposed stormwater management pond overlaps with a SGRA (SGRAs do not have vulnerability scores). - Parts of the 15,225 metres of grassed swales running the length of the Bradford Bypass intersect with one WHPA-C with a score of 4 and two WHPA-Ds (both with a vulnerability score of 2). - Grassed swales also intersect many areas of SGRAs, HVAs with a vulnerability score of 6 and IPZ-3 with vulnerability scores ranging from 5.6 to 6.3. <p>Based on their proposed approximate siting within the abovementioned vulnerable zones and associated scores, the grassed swales and stormwater management ponds would not be significant drinking water threat activities.</p> <p>In addition to the stormwater management facilities, CSPB also assessed the risk posed to drinking water sources from the application and storage of road salt and snow storage associated with maintaining the proposed bypass. The proposed location of the 16.3 kilometre highway was reviewed to determine where it might intersect with vulnerable areas (see Maps 1 and 2 below). As described above, the bypass would intersect with SGRAs, HVAs with</p>	<p>Can MECP (CSPB) clarify the following:</p> <ul style="list-style-type: none"> - Please identify the locations of the four proposed stormwater management ponds that overlap with IPZ-3 with vulnerability scores ranging from 5.6 to 6.3. - Please identify the locations of the five proposed stormwater management ponds that overlap with HVAs with a vulnerability score of 6, and - Please identify the locations of the one proposed stormwater management pond that overlaps with a SGRA. - Please identify the areas with grassed swales that intersect many areas of SGRAs, HVAs with a vulnerability score of 6 and IPZ-3 with vulnerability scores ranging from 5.6 to 6.3. 	Yes	Yes	N/A	N/A

Comment No.	Section	Review Comment Received From:	Review Comment	AECOM Response	Edits Required?	Edits Made?	Comment Rejected?	Reason
			a vulnerability score of 6, IPZ-3 with vulnerability scores ranging from 5.6 to 6.3, and WHPA-C and D with vulnerability scores of 4 and 2, respectively. Based on the approximate siting of the bypass across the abovementioned vulnerable zones and scores, the application of road salt, the handling and storage of road salt, and snow storage are not significant drinking water threat activities.					
8	General	Page 3 of 6	...However, the abovementioned threat activities may be moderate/low threats to sources of drinking water and select policies of the <i>South Georgian Bay Lake Simcoe Source Protection Plan</i> may still apply. In addition, within HVAs there may be other types of drinking water systems present that are not explicitly addressed by the source protection plan. The proponent should take these into consideration by protecting sensitive hydrologic features that include current or future sources of drinking water for systems not explicitly addressed in source protection plans, such as private systems – individual or clusters, and designated facilities within the meaning of O. Reg. 170/03 under the <i>Safe Drinking Water Act</i> – i.e., camps, schools, health care facilities, seasonal users, etc.	AECOM acknowledges that regardless of the threat activities may be moderate/low threats to sources of drinking water and select policies of the <i>South Georgian Bay Lake Simcoe Source Protection Plan</i> may still apply. In addition, AECOM acknowledges that considerations shall continue to be taken in subsequent design phases to protect sensitive hydrologic features for systems not addressed in source protection plans. AECOM has factored in the <i>Clean Water Act, 2006</i> and source protection requirements. The <i>Source Protection Information Atlas</i> was consulted and reviewed as part of the <i>Groundwater Protection and Well Monitoring Plan</i> , provided to MECF for review on March 24, 2023	No	N/A	N/A	N/A
9	General	Page 3 of 6	In the Bradford Bypass SWMP, the proponent referenced drinking water source protection briefly insofar as the <i>South Georgian Bay Lake Simcoe Source Protection Plan</i> was listed alongside other MECF and MTO manuals for stormwater management planning and drainage, respectively, and conservation authority technical guidelines for stormwater that were used in assessing the existing and proposed drainage systems and in the development of the SWMP.	Comment acknowledged. No edits required.	No	N/A	N/A	N/A
10	General	Page 3 of 6	The proponent should consult with the local source protection authority if they have not already done so. Where this project intersects with a vulnerable area, consideration for the protection of sources of drinking water should be clearly documented. If located in a vulnerable area, the proponent should document whether any project activities are prescribed drinking water threats and thus pose a risk to sources of drinking water. The <i>South Georgian Bay Lake Simcoe Source Protection Authority</i> can provide assistance in determining whether an activity associated with the construction, operation, or maintenance of the project may be a threat to sources of drinking water threat as per the <i>Clean Water Act, 2006</i> and whether there are policies in the source protection plan that apply. Please note, even if the project activities in a vulnerable area are deemed not to pose a risk to sources of drinking water, there may be other policies that apply and so consultation with the local source protection authority is important.	AECOM acknowledges the importance to consult with the local source protection authority, the <i>South Georgian Bay Lake Simcoe Source Protection Authority</i> shall be consulted to determine whether an activity related to the construction, operation, or maintenance of the project may be a threat to sources of drinking water threat as per the <i>Clean Water Act, 2006</i>	No	N/A	N/A	N/A
11	General	Page 3 of 6 and Page 4 of 6	More Information	AECOM acknowledges that the <i>Conservation Ontario's</i> website provides additional information on the <i>Clean Water Act, 2006</i> , SPA and plans including specific information on the vulnerable areas and drinking water threats. In addition, it is acknowledged that a list of the prescribed drinking water threats can be found in section 1.1 of <i>Ontario Regulation 287/07</i> made under the <i>Clean Water Act, 2006</i> .	No	N/A	N/A	N/A

Comment No.	Section	Review Comment Received From:	Review Comment	AECOM Response	Edits Required?	Edits Made?	Comment Rejected?	Reason
				In addition to prescribed drinking water threats, some source protection plans may include policies to address additional "local" threat activities, as approved by the MECF.				
12	General	<div></div> <div></div> <div>Page 3 of 6 and Page 4 of 6</div>	Map 1 and Map 2	AECOM acknowledges that Map 1 provides the areas where the Bradford Bypass intersects drinking water source protection vulnerable areas, and Map 1 provides the areas where the Bradford Bypass intersects Significant Groundwater Recharge Areas (SGRA) and Highly Vulnerable Aquifers (HVA).	No	N/A	N/A	N/A

Site Address: Bradford Bypass	Date: April 05, 2023	LSRCA File #: EA-401570-093020	Municipal Ref #: 2019-E-0048
Application Type: Environmental Assessment	APID: 401570	Submission #: FIRST	Municipality: East Gwillimbury

Documents Reviewed (05-APRIL-2023):

- **Cover Letter:** AECOM, "Draft Stormwater Management Plan, Highway 400 – Highway 404 Link (Bradford Bypass), March 22, 2023
- **SWM Report:** AECOM, "Draft Bradford Bypass Stormwater Management Plan", March 20, 2023
- **Appendix A, B, C, D, E**

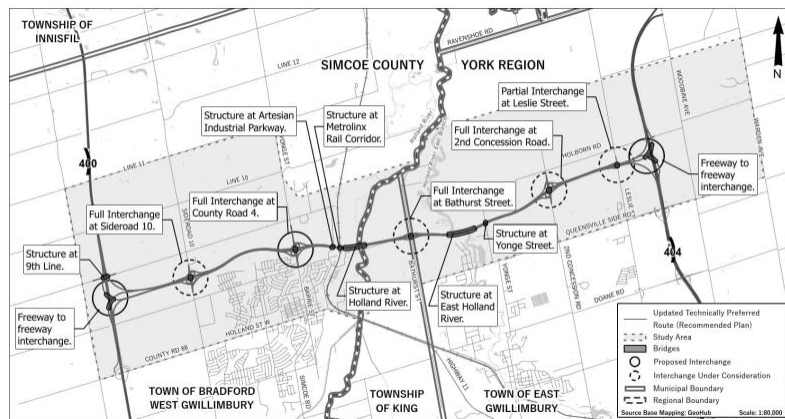

Background Information:

- 16.3km
- Interim – 2 lane configuration (2 lanes in each direction)
- Ultimate – 4 lane configuration
- Holland River and Holland River East Branch
- Flat bottom grassed swales (15,225m of flat bottom grassed swales are proposed on the south and north side of BBP)
- Enhanced grassed swales
- Wet Ponds – 9 ponds proposed to provide quantity and quality control for a drainage area of 130ha
- 90% of the project drainage area will outlet into the Holland River and Holland River East branch

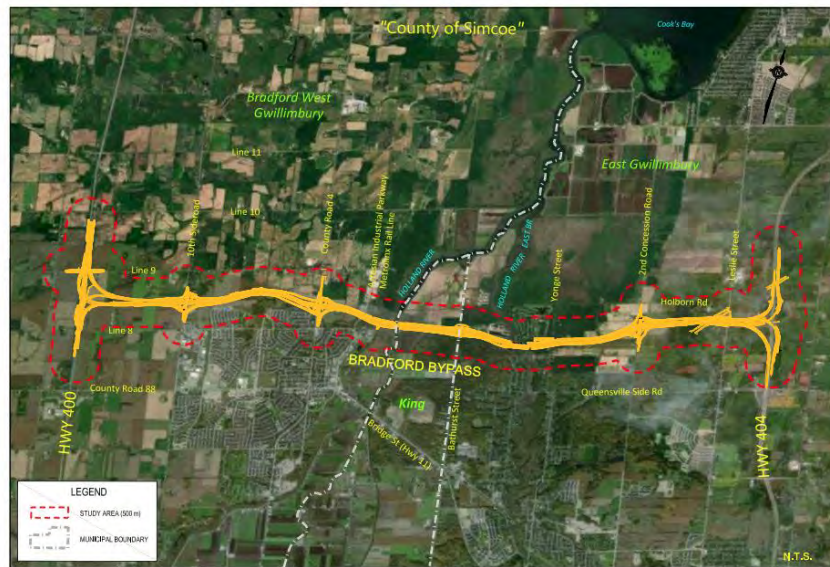

Comment #	Item	Section	Page #	1 st LSRCA Comments (05-APRIL-2023)	1 st Applicant Response on August 16, 2023
E1.	SWM Report	Section 2.3	Page 8	Volume Control: In addition to water quality and water quantity please consider implementing mitigation measures to address LSRCA's volume control criteria. Please see section 3.2.4 of our April 2022 guidelines on volume control criteria for linear development.	Please, clarify/confirm the requirements of this comment as the extended detention zone of the proposed nine (9) SWM ponds shall include the runoff volume from the 4-hour 25mm rainfall event. In addition, the flat-bottom swales with permanent flow check dams shall provide, to some extent, the volume control as required by the LSRCA's volume control criteria for linear development (the direct runoff volume from 12.5 mm of rainfall from the new paved areas of the Bradford Bypass).
E2.	SWM Report	Section 5.2	Page 14	Design Storm Events: The LSRCA requires the 12-hour SCS Type II and the 4-hour Chicago storm events to be modelled. Please consider modelling these storm events to determine existing the proposed flows and volumes Please consider using these storm events to verify the ponds and conveyance measures will be designed to achieve the allowable release rates and storage volumes, from both of these storm files.	Various rainfall distributions were used in the hydrologic analysis (i.e., 12-hour and 24-hour SCS Type 2, 12-hour AES, and 12-hour and 24-hour Chicago). The 24-hour SCS Type 2 was selected to perform the hydrologic analysis given that it provided the higher peak flow values. The 4-hour Chicago 25mm storm was used to complete the water quality assessment of the flat-bottom grassed swales based on the design criteria outlined in the MECP's Stormwater Management Planning and Design Manual (March 2003). The 24-hour SCS Type 2 was used to estimate volumetric requirements for the proposed SWM ponds. The extended detention zone included the runoff volume from the 4-hour Chicago 25mm storm event.
E3.	SWM Report	Section 6.1	Page 18	Flat Bottom Grassed Swales and Enhanced Grassed Swale: It's understood permanent flow check dams or concrete weir (dam) will be installed, where required, in the flat bottom grassed swales or the enhanced grassed swale, respectively.	The proposed flat-bottom grassed swales were designed based on the water quality criteria and erosion potential criterion included in the MECP's Stormwater Management Planning and Design Manual (March 2003). The hydraulic performance of the swales satisfies these design criteria.

Comment #	Item	Section	Page #	1 st LSRCA Comments (05-APRIL-2023)	1 st Applicant Response on August 16, 2023
				<p>Please ensure water quantity control can be demonstrated with all selected measures, if there is no downstream SWM facility.</p> <p>Ideally, a rating curve should be provided for all swales, in addition to pre and post-development flow values.</p>	<p>Quantity control shall be provided to some extent with the use of permanent flow check dams to be located along the swales.</p> <p>Please, confirm if a typical rating curve associated will be provided and will suffice for this Preliminary Design project.</p>
E4.	SWM Report	Section 6.2	Page 27	<p>Proposed Wet Ponds: Please state in the report if the 9 proposed SWM ponds have been designed for the ultimate scenario.</p>	<p>The proposed 9 SWM Ponds have been designed for the ultimate scenario and wording has been added to the SWM Plan to reflect to address the comment.</p>
E5.	SWM Report	Section 6.2	Page 27	<p>Erosion Control / Extended Detention: Please consider implementing and designing the 9 SWM facilities to address erosion control / extended detention as per section 3.4 of LSRCA's April 2022 guidelines.</p>	<p>The 9 SWM Ponds shall be designed as extended detention wet pond. As such, the ponds shall address erosion control / extended detention as per Section 3.4 of LSRCA's April 2022 guidelines.</p>
E6.	SWM Report	Section 6.2	Page 27	<p>Sufficient Outlet: Please ensure all proposed SWM ponds have sufficient outlets, as per section 3.2.2 of LSRCA's April 2022 guidelines.</p>	<p>Section 6.2 of the SWM Plan, described where the ponds shall discharge to assuring that positive drainage is provided and that the ponds shall have sufficient outlet per section 3.2.2 of LSRCA's April 2022 guidelines.</p>
E7.	SWM Report	Section 6.2	Page 27	<p>Design Requirements: Please refer to LSRCA's design requirements when designing the SWM ponds, section 6.4.2.</p> <p>Please pay particular attention to the need of a geotechnical study AND suitable location to construct the SWM facilities (in around the proposed bridge structures and the associated floodplain – see section 6.4.2).</p> <p>Please keep in mind, the proposed ponds collecting drainage from the bridges should not have any negative impact on the flood storage (i.e., no fill in the floodplain).</p>	<p>The Preliminary Design of the SWM Ponds is based on the MECP requirements and have been complemented with design requirements from LSRCA's April 2022 guidelines, Section 6.4.2.</p> <p>For this Preliminary Design study, geotechnical investigations for the Bradford Bypass are limited/ restricted. With this Preliminary Design and information available to us, there are no issues that are known at this time. Additional geotechnical investigations shall be carried out in subsequent design phases to satisfy the technical information and data that is required to facilitate the Detail Design of facilities such as ponds.</p> <p>The SWM Plan shall include the recommendation to carry out a geotechnical investigation in support of the pond design (i.e., location, groundwater, rock depth, suitable soils, etc.).</p> <p>The (4) SWM Pond Pockets that are proposed at the end of the two bridge structures over Holland River and Holland River East Branch are not large. In addition, they shall be constructed adjacent to the bridge embankment to minimize any negative impact on the flood storage.</p>
E8.	Appendix b, c, and d			<p>VO Model: Please provide a model schematic so the reviewer understands how the hydrology model was laid out.</p>	<p>AECOM will provide to LSRCA a digital copy of the hydrologic model and the schematic of the proposed hydrologic model.</p>

Comment #	Item	Section	Page #	1 st LSRCA Comments (05-APRIL-2023)	1 st Applicant Response on August 16, 2023
				Additionally, please provide a digital copy of the hydrology model to LSRCA.	
E9.				<p>Drainage and Hydrology Report:</p> <p>Unfortunately, due to timing, LSRCA didn't have the opportunity to review the "Drainage, Hydraulic and Stormwater Management (SWM Report – Highway 400 – Highway 404 Link (The Bradford Bypass) (GWP 2008-21-00)", prepared by AECOM dated Dec. 2022.</p> <p>If possible, LSRCA would like the opportunity to review and provide comments (if required) on this document.</p> <p>LSRCA staff requested a copy of this document via email on 02-APRIL-2023. The drainage and hydrology report was discovered while reviewing the "Draft Bradford Bypass Stormwater Management Plan", prepared by AECOM dated March 20, 2023.</p>	Drainage and Hydrology Report to be provided.

Selina Marinc will help us to get the PSW layer

Subject: Bradford Bypass Project - Final Stormwater Management Plan

Hello Kathleen O'Neill,

In accordance with Section 22 of Ontario Regulation 697/21, AECOM has prepared the Final Stormwater Management Plan for the Bradford Bypass Project. As the Director of the Ministry of Environment, Conservation and Parks - Environmental Assessment Branch, please use the link to download the Final Stormwater Management Plan, in accordance of Section 22 (6).

<https://we.tl/t-UmriwHW6ZP>

The report will also be published to the Project Website (<https://www.bradfordbypass.ca/>) in accordance with Section 22(7).

Please let us know if you have any questions or concerns.

Sincerely,

The Bradford Bypass Project Team

CT-GMWPP-06 Cont.	█	To: Project Team From: █ █	Email: █	Results Notification	April 10, 2023	<p>Project Team ... I have read the draft groundwater protection and well monitoring plan for the upcoming Bradford Bypass. I live slightly north of the proposed construction and my home relies on ground water provided from a drilled well on my property. While I'm outside of the current planned area where the ground water will be monitored, in the unlikely event that there are some test results that are of concern, I would like to request that I be promptly notified of these results.</p> <p>Thanking you in advance,</p> <p>█</p>	See response above in CT-GMWPP-06.

Reference #	Assigned to:	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE
CT-GMWPP-07	█	To: Project Team From: █	Email: █	Comments	April 13, 2023	<p>Good evening Project Team.</p> <p>Please forward the attached comments to █ █ Manager for the Bradford Bypass Project.</p> <p>Thank you. █</p>	<p>Hello █</p> <p>Thank you for your comments on the Bradford Bypass Draft Groundwater Protection and Well Monitoring Plan, undertaken in accordance with Ontario Regulation 697/21.</p> <p>Please see below the responses to your questions from April 13, 2023.</p> <p>1. From this writer's perspective, these reports should be mandatory, details "Plan". The use of the word "should" and "reports" in the Draft Plan provides no comfort to anyone relying on O.Reg. 697/21 that groundwater in the vicinity of the Bradford Bypass will actually receive any form of effective protection.</p> <p>As part of the Preliminary Design and in accordance with O. Reg. 697/21, the Ministry is still required to follow all relevant provincial and federal legislative requirements, standards, and practices as they apply to the design, construction, and operation of the project for environmental protection. This includes but is not limited to the Permits to Take Water (PTTW)/Environmental Activity and Sector Registry (EASR) Registration for Groundwater. Further details will be confirmed during subsequent Detail Design and Construction phases.</p> <p>In addition to surface water considerations, the ministry is evaluating potential impacts and will implement mitigation measures to avoid and minimize potential impacts to groundwater sources. The Project Team continues to actively consult with key agencies such as the LSRCA and NVCA as the study progresses.</p> <p>As the project falls within the jurisdiction of the Lake Simcoe Region Conservation Authority (LSRCA), pertaining to Ontario Regulation 179/06, the ministry will continue to assess impacts with respect to the <i>Lake Simcoe Protection Act</i> and the Lake Simcoe Protection Plan through consideration of water quality and quantity, stormwater</p>

							<p>management, groundwater management, landscaping and ecological restoration measures; as well as fluvial geomorphological designs for watercourses, erosion and sediment control and spills prevention and protection measures.</p> <p>2. My question to AECOM and MTO with respect to this very important issue is: what steps will you take to ensure that dewatering material (potentially contaminated water) will be disposed of properly rather than simply being dumped into a roadside ditch when presumably no-one is looking?</p> <p>Permits and approvals will be sought during subsequent Detail Design and Construction phases if required. Where construction dewatering volumes between 50,000 and 400,000 L/day are expected, filing of the project on Ministry of the Environment, Conservation and Parks (MECP's) Environmental Activity and Sector Registry (EASR) system is required in accordance with Ontario Regulation 63/16 (as amended). Where expected construction dewatering volumes that exceed 400,000 L/day, a PTTW (Category 3) will be required from MECP in accordance with Section 34 of the Ontario Water Resources Act (RSO, 1990). Permitting requirements will be determined during the subsequent Detail Design phase once the overall design is advanced to a level of detail that makes it appropriate to complete dewatering calculations for excavated areas.</p> <p>During Detail Design, a pre-construction groundwater sampling program shall be conducted for the groundwater monitoring wells located in the vicinity of the proposed dewatering locations (at least one well at one dewatering location) to confirm the groundwater quality in the areas. The collected groundwater samples have to be analyzed for general inorganic parameters (including total suspended solids (TSS) and turbidity), metals, hydrocarbons (F1 to F4 petroleum hydrocarbons, benzene, toluene, ethylbenzene, and xylene) and VOCs Based on the pre-construction groundwater</p>

Reference #	Assigned to:	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE
							<p>analytical results, there will be two anticipated options:</p> <p>Option 1:</p> <p>If the concentrations of the analyzed parameters in dewatering groundwater have been confirmed to be above the applicable standards (i.e., sewer by-law or Provincial Water Quality Objectives (PWQO)), the groundwater needs to be pre-treated prior to being re-used or discharged to the municipal sewer system (if one exists) or nearby drainage ditch. Onsite groundwater treatment may require operating a mobile groundwater treatment unit. The mobile groundwater treatment unit usually consists of a series of containers/tanks containing different types of treatment media, which are customized to remove specific contaminants identified in the groundwater.</p> <p>If the desired groundwater quality could not be met through the treatment processes, the collected water must be disposed properly off-site at an MECP approved facility by the Contractor.</p> <p>Option 2:</p> <p>If the treated groundwater meets the PWQO, the groundwater is recommended to be re-used on site for construction purposes (i.e., dust control etc.) as a water conservation measure. The excess groundwater may be discharged to the municipal sewer system (if one exists) or nearby drainage ditch. During Detail Design and Construction, erosion and sediment control measures and a groundwater monitoring program will be developed and implemented to maintain the environmental quality of the water discharged, both chemical parameters and physical parameters, meet the municipal sewer by-law (if discharged to the sewer), or the PWQO (if discharged to the natural environment), and the requirements provided in Ontario Regulation 387/04 and Ontario Regulation 63/16.</p>

Reference #	Assigned to:	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE
							<p>3. Please explain, given the nature of the surrounding ground, how berms will mitigate the effects of this salt runoff., While the issue of stormwater salt runoff will be addressed in your Preliminary Design Stormwater Management Plan, having not seen this plan and given the extreme permeability of the ground along the Bradford Bypass route, please explain in this plan how you intended to prevent the absorption of further salt into the ground water along either side of the highway once it is in operation. As this is the Lake Simcoe Basin, my understanding is that this alienated groundwater will eventually find its way into Lake Simcoe. This a deleterious substance that will, over tie, severely impact the health of fish and other wildlife in Lake Simcoe.</p> <p>Salt mitigation strategies are applied throughout the entire Bradford Bypass corridor. There are various ways to mitigate salt runoff impacts onto the Bradford Bypass. The first mitigation method is to prevent the source of the issue, which is snow or ice, entering into the corridor. This can be achieved through preventative measures such as landscaping and snowdrift mitigation techniques and practices (i.e., positioning plantings and features). This method promotes sustainable initiatives and requires consideration and input with respect to the development of landscaping plans used in conjunction with snowdrift technical input to identify and implement measures throughout the corridor for areas that are more prone to hazards such as snow. However, the preventative technique would not eliminate all snow entering the corridor and as a result, treatment would be necessary, as appropriate. The second mitigation method is to sustainably confine and treat stormwater runoff through the implementation of effective stormwater management plans. There are several measures that are proposed to be implemented to contain and</p>

Reference #	Assigned to:	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE
							<p>treat any stormwater runoff into the highway. Measures such as enhanced grass swales, rock flow check dams, flat bottom swales, stormwater management ponds, impermeable materials/ liners to name a few features that would be implemented for quantity and quality control.</p> <p>Appropriate mitigation measures to prevent salt and treated sand from entering watercourses and salt-sensitive areas will be proposed based on various factors including the use of MTO's Salt Management Plan and the Ministry of Environment, Conservation and Parks (MECP) Guidelines on Snow Disposal and De-icing Operations in Ontario. The MTO Salt Management Plan outlines salt management operational practices and strategies and Best Management Practices (BMP) in terms of equipment, best practices, materials, storage, testing, storm response, application rules, snow and ice control trainings, snow removal and disposal, and technology review. This includes implementing a balanced approach to the highway salt application based on the amount of snow precipitation and highway conditions.</p> <p>In areas that are particularly sensitive, salt management measures may be necessary to mitigate environmental effects of road salt in accordance with the study objectives utilizing the Code of Practice for Environmental Management of Road Salts released by Environment Canada. The Code of Practice for Environmental Management of Road Salts can be viewed here: https://www.canada.ca/en/environment-climate-change/services/pollutants/road-salts/code-practice-environmental-management.html.</p> <p>4. Please provide me with a copy of your Preliminary Design Stormwater Management Plan (AECOM, 2022C) or better yet, tell me where I can find it on the Bradford Bypass website.</p> <p>Please refer to the link below to access the Draft Stormwater Management Plan which was provided</p>

COMMENT RESPONSE FORM

Project: Bradford Bypass

Deliverable: Draft Groundwater Protection and Well Monitoring Plan (GMWPP) Highway 400 – Highway 404 Link (Bradford Bypass)". Prepared for Ontario Ministry of Transportation, and dated March 24, 2023 (referred to as 'the draft GMWPP')

Date: May 16, 2023

Comment No.	Section	Review Comment Received From:	Review Comment	AECOM Response	Edits Required?	Edits Made?	Comment Rejected?	Reason
1	General		The draft GMWPP considered Source Water Protection and identified Highly Vulnerable Aquifers, Well Head Protection Areas, Significant Groundwater Recharge Areas, water wells, waterbodies and watercourses that may directly or indirectly be affected from a groundwater perspective. Although it was referenced in the draft GMWPP that a hydrogeologic report of the study area was completed, no geologic or hydrogeologic information was provided. It is understood a detailed groundwater assessment will be completed once the freeway alignment is finalized during Detail Design.	AECOM has revised the GMWPP to refer to the Hydrogeology Data Report which contains preliminary geological and hydrogeological information. It is expected that the monitoring of all monitoring wells will continue during Detail Design. The future dewatering assessment will determine properties and areas needing additional monitoring during construction.	Yes	Yes	NA	NA
2	General		The draft GMWPP outlined a groundwater monitoring program for the project to be completed during pre-construction, during construction and post-construction. Details regarding the proposed groundwater quality sampling parameters, groundwater quantity and water level monitoring, along with dewatering effluent discharge, and proposed start date and frequency of monitoring wells were also provided. It was noted that seventeen (17) monitoring wells have been installed. It is unknown if the monitoring wells are sufficient and/or representative of the depth of excavations etc., since no geologic/hydrogeologic information or borehole logs of the completed monitoring wells were provided.	The Hydrogeology Assessment during Detail Design will confirm the monitoring wells installed are representative of the depth of excavation. The proposed Bradford Bypass design has changed since the monitoring wells were first installed; this reference will be added to Table 7.2.	Yes	Yes	NA	NA
3	General		There are numerous private wells in the area which could be affected depending on the depth, type and condition of the well. A water well survey was conducted and identified at least 260 wells within the study area and 24 domestic wells that could be either directly or indirectly affected from the proposed Link. The draft GMWPP noted that an initial door-to-door well survey was completed with minimal response with commitment to conduct a follow-up door-to-door well survey during Detail Design.	AECOM has committed, as listed in Table 7-2, that a follow-up door-to-door water well survey will be completed during Detail Design.	Yes	No	NA	NA
4	General		The proponent is aware that in the event site conditions require construction dewatering greater than 400,000 L/day a Permit to Take Water (PTTW) is required. Preliminary knowledge of the area suggests a PTTW would likely be required. To expedite the construction process, the proponent should consider initiating a pre-consultation with MECP hydrogeologists regarding the PTTW during Detail Design. As such, the MECP will likely be further involved during the Detail Design through the PTTW application process.	As per MTO's typical processes related to construction dewatering, once the dewatering calculations are completed in Detail Design and the need for a PTTW is confirmed the MECP will be contacted.	No	NA	NA	No Edit Required
5	General		The draft GMWPP noted groundwater quality could be impacted from potential spills during construction and from the long-term operation of the road. However, current quality impacts may also be attributed to existing and former land uses resulting from potential contaminating activities. Construction dewatering activities can exacerbate existing groundwater quality problems through the induced migration of contaminant plumes. Additional soil and groundwater sampling and chemical analysis may be required during Detailed Design to gain a better understanding of soil disposal and groundwater dewatering and treatment requirements.	AECOM agrees with the comment, further soil and groundwater sampling/analysis will be completed during Detail Design. No text edits are expected for the current draft of the GWMP.	No	NA	NA	No Edit Required
6	General		If the proposed project involves the transfer of ownership of a property, should a property or part of a property be currently known to be contaminated above applicable standards, the requirements of Ontario Regulation 153/04 (amended) may be applicable.	AECOM acknowledges comment. No text edits are expected for the current draft of the GWMP as property impacts/ownership is not covered in the GWMP.	No	NA	NA	No Edit Required
7	Table 7-2 GW-2.02		To be revised to include monitoring wells be sampled for hydrocarbons. In particular, F1 to F4 petroleum hydrocarbons, benzene, toluene,	AECOM has added the additional hydrocarbon analysis to Table 7-2 and the relevant report sections for consistency.	Yes	Yes	NA	NA

Comment No.	Section	Review Comment Received From:	Review Comment	AECOM Response	Edits Required?	Edits Made?	Comment Rejected?	Reason
			ethylbenzene and xylene as part of the pre-construction baseline monitoring program.					
8	Table 7-2 GW-3.03		To be revised to include the installation of dataloggers in select residential wells as part of the pre-construction monitoring to establish baseline conditions and usage with respect to fluctuating water levels	AECOM and MTO have confirmed the installation of data loggers in all monitoring wells installed by Golder/WSP will be completed in 2023. This will include all the collection of seasonal groundwater elevation trends.	Yes	No	NA	NA
9	Table 7-2 GW-3.04		To be revised to include that domestic water supply wells be sampled for hydrocarbons as part of the pre-construction baseline monitoring / door-to-door well survey to establish baseline conditions. In particular, F1 to F4 petroleum hydrocarbons, benzene, toluene, ethylbenzene and xylene.	AECOM has added the additional hydrocarbon analysis for future water well survey sampling to Table 7-2 and the relevant report sections for consistency.	Yes	Yes	NA	NA
10	Table 7-2 GW-4.02		To be revised to provide 'detailed calculations' regarding the calculated radius of influence at each source dewatering location, and not a 'summary'.	AECOM has revised GW-4.02 to state detailed calculation rather than a summary. This will be completed during Detail Design.	Yes	Yes	NA	NA
11	Table 7-2 GW-5.00		Table 7-2 be revised to include a commitment to identify former and current land uses to identify potential contaminating activities within the study area.	AECOM has revised GW 5.00 in Table 7.2 to reference the 2020 Contaminant Overview Study report that was completed and have included a commitment to identify former and current land uses to identify potential contaminating activities related to dewatering radius of influence with the Study Area.	Yes	Yes	NA	NA
12	Table 7-2 GW-5.00		Table 7-2 be revised to include monitoring wells be sampled for hydrocarbons. In particular, F1 to F4 petroleum hydrocarbons, benzene, toluene, ethylbenzene and xylene as part of the pre-construction baseline monitoring program.	AECOM has added the additional hydrocarbon analysis to Table 7-2 and the relevant report sections for consistency.	Yes	Yes	NA	NA
13	Table 7-2 GW-10.0		Table 7-2 be revised to include a Complaint Protocol which identifies as a minimum, but is not limited to, submission of complaints both during construction and operation of Highway 413. From a groundwater perspective, to ensure that all well quality and quantity complaints are addressed, recorded and handled in an expeditious and effective manner. This should include, but not be limited to, response time frame, contact staff and contact information etc.	AECOM has adjusted the text as requested above to Table 7-2 and the relevant report sections for consistency related to the Complaint Protocol which identifies as a minimum, but is not limited to, submission of complaints both during construction and operation of the Bradford Bypass.	Yes	Yes	NA	NA
14	Figures		Figures 2a to 2e and 3a to 3e should be revised to include the locations of all constructed monitoring wells.	AECOM has revised all mapping to show the existing monitoring well locations.	Yes	Yes	NA	NA

Subject: Bradford Bypass Project - Final Groundwater Protection and Well Monitoring Plan
Attachments: RPT_GMWPP_BBP_60636190_2023-11-02_redacted.pdf

Hello Kathleen O'Neill,

In accordance with Section 23 of Ontario Regulation 697/21, AECOM has prepared the Final Groundwater Protection Well Monitoring Plan for the Bradford Bypass Project. As the Director of the Ministry of Environment, Conservation and Parks - Environmental Assessment Branch, please find attached the Final Groundwater Protection and Well Monitoring Plan in accordance of Section 23 (5).

The report will also be published to the Project Website (<https://www.bradfordbypass.ca/>) in accordance with Section 23 (6).

Please let us know if you have any questions or concerns.

Sincerely,

The Bradford Bypass Project Team

Draft Noise Report - Consultation Record

Comment #	Section #	Ministry of the Environment, Conservation and Parks Comments	Project Team Response	Edits Required to EIR? (Yes/No)
Comments on the Draft Noise Impact Assessment Report				
1.	Section 4.1	<p>TNM 2.5 was used in the noise predictions. This software was superseded by a newer version (TNM 3.1). Therefore, the noise predictions should be re-calculated using the newer version TNM 3.1.</p>	<p>The Project Team acknowledges that a newer versions of the noise modelling software TNM exist (TNM 3.0 and 3.1)</p> <p>The use of TNM 2.5 is consistent with the Environmental Guide for Noise (MTO, 2022).</p> <p>In addition, TNM 2.5 has not been superseded by TNM 3.0 or 3.1. The United States Federal Highways Administration (FHWA) provides the prediction model software; FHWA currently authorizes TNM 2.5 and requires its use on Federal projects in the United States.</p> <p>The Project Team did perform a conformance calculation which was appended in the Draft Noise Impact Assessment Report. The calculation demonstrated that the results of TNM 2.5 and TNM 3.1 would be comparable within this project.</p> <p>Furthermore, use of TNM 3.0 or later introduces practical risks, as the program is prone to glitches and crashing.</p>	No
2.	Section 2.1.1.1	<p>Minimum background noise levels for day assessments in Section 2.1.1.1 are listed as follows: Class 1: 50 dBA Class 2: 45 dBA Class 3: 40 dBA.</p> <p>These levels should be changed to: Class 1: 55 dBA (day) / 50 dBA (night) Class 2: 50 dBA (day) / 45 dBA (night) Class 3: 45 dBA (day) / 40 dBA (night)</p> <p>The first group of minimum background noise levels pertains to stationary sources while the second group of minimum background noise levels pertains to transportation sources. This project involves transportation sources (no stationary sources are involved).</p>	<p>We have used the lower noise level limits consistent with the Environmental Guide for Noise (MTO, 2022) and as the basis for completing the most conservative approach to understanding potential noise impacts.</p>	No
3.	Throughout	<p>In the following tables:</p> <p>4.2, 5.1, 5.2, 5.3, 5.4, 5.5, 5.6, 5.7, 5.8, 5.9, 5.10, 5.11, 5.12, 5.13, 5.14, 5.15, 5.16, 5.17, 5.18, 5.19, 5.20, 5.21, 5.22, 5.23, 5.24, 5.25, 5.26, 5.27 and 5.28;</p> <p>the predicted LEQ levels (dBA) were based on 24 hours, i.e.(LEQ 24). The assessment should be based on 16 hours relating to the following times: 7:00 am to 11:00 pm, i.e.(LEQ 16) at the Outdoor Living Area (OLA). As well as on 8 hours relating to the following times: 11:00 pm to</p>	<p>The use of $LEQ8$ (night) and Plane of Window are described in NPC-300 part C for land use planning authorities, whereas the use of $LEQ24$ and Outdoor Living Area (OLA) are consistent with the Environmental Guide for Noise (MTO, 2022).</p> <p>The point of assessment was the OLA in accordance with the MTO Environmental Guide for Noise (MTO, 2022), and standard practices previously approved by MECP for assessment of roadway improvements/capital works EAs.</p>	No

Comment #	Section #	Ministry of the Environment, Conservation and Parks Comments	Project Team Response	Edits Required to EIR? (Yes/No)
		7:00 am (i.e. LEQ 8) at the Plane of Window (POW). Therefore, all the above listed tables should be adjusted to list LEQ 16 day / LEQ 8 night (not LEQ 24).	Per the MTO Environmental Guide for Noise, traffic volumes for freeways are to be based on 24-hour volumes. The resulting descriptor is Leq24.

Subject: Bradford Bypass Project - Final Noise Report
Attachments: 2023-09-25-BBP_Traffic Noise Report.pdf

Dear Kathleen O'Neill,

In accordance with Section 24 of Ontario Regulation 697/21, AECOM has prepared the Final Noise Report for the Bradford Bypass Project. As the Director of the Ministry of Environment, Conservation and Parks - Environmental Assessment Branch, please find attached the Final Noise Report in accordance with Section 24 (4) of Ontario Regulation 697/21.

Please let us know if you have any questions or concerns.

Sincerely,

The Bradford Bypass Project Team

Reference #	Assigned to:	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE
CT-DraftEIAR-02 Cont.	█	To: Project Team From: █ █ █	Email: █	Air Dispersion Model	June 1, 2023	<p>Hello, can you please provide me with the air dispersion modeling discussed beginning on p.344 of the Draft Environmental Impact Assessment Report?</p> <p>In addition to the air dispersion modelling report, I would like all reports and summaries of how the emissions inventory was developed. The Draft EIAR simply says that MOVES3 was used, but MOVES3 is not a description of a vehicle inventory, however MOVES3 is not a specific vehicle inventory. The MOVES3 guidance states that "it is important to run MOVES for the specific case using accurate local inputs." What local inputs were used for MOVES3? MOVES3 is also based on American emissions standards, was it modified to reflect Canadian emissions standards? What assumptions were used about the proportion of diesel heavy trucks using the Bradford Bypass? Electric vehicles? SUVs and light trucks?</p> <p>Kind regards, █</p>	<p>Hi █</p> <p>Thank you for your interest in the Bradford Bypass Preliminary Design Study and project-specific assessment of environmental impacts, undertaken in accordance with Ontario Regulation 697/21.</p> <p>The air quality assessment was completed using the CAL3QHCR model and MOVES3.0 which is consistent with the approach outlined within the "Environmental Guide for Assessing and Mitigating the Air Quality Impacts and Greenhouse Gas Emissions of Provincial Transportation Projects" ("MTO Air Quality Guideline").</p> <p>While both these models were developed in the United States of America, the project assessment includes considerations that reflect local Study Area conditions. For example, modelling input data included:</p> <ol style="list-style-type: none"> 1. Vehicle Types: Database inputs reflecting vehicle types including passenger vehicles (motorcycles, cars, and trucks); light, medium and heavy commercial trucks; buses (intercity, transit, and school); and other vehicle types such as refuse trucks and motor homes 2. Fuel Types: Fuel types considered include diesel, gasoline, electricity, compressed natural gas (for transit buses only), and types not used in Canada / Ontario (e.g. E-85 (ethanol-based fuels)) were excluded from assessment. 3. Traffic volumes: Actual traffic data from the Study Area for the existing conditions year 2019; COVID-19 traffic influences on today's traffic conditions are excluded. 4. Traffic movements: vehicle distributions were based on traffic data gathered in 2018 and 2013 and using actual posted speed limits.

CT-DraftEIA-15	█	To: Project Team From: █ █	Email: █	Project Update	May 26, 2023	<p>Good day,</p> <p>I have tried to participate in this process both during past project launches as well as the current.</p> <p>The crux of my participation lies in the fact that I live in the most significant settlement along the proposed route. As such, I am hoping specific allowances are going to be made to (vegetatively), buffer residents as well as considerations to other mitigating measures such as canyoning bypass in the █</p> <p>I've tried to follow the protocols in communicating on all occasions over the past decades. I recently seen a <i>handful of residents</i> gathering significant steam to request a revision to route down the road, and they have approached the media to broadcast their message.</p> <p>I have provided painstaking detail on the emails I have sent through this address, to this initiative since its first project launch over a decade ago.</p> <p>I hope to ask for a response with reciprocating detail as to what, if any, of the proposed suggestions have been integrated into helping to preserve and propagate the environment, wildlife, and settlement integrity along the yellow outlined area (please see attached).</p> <p>Thus far, I have only received canned responses with links to massive documents which point to installing industry standard mitigation measures when there lies an opportunity for more.</p> <p>Could you please provide in layman's terms what will be instituted along this settlement this regard so I can be clear on this.</p> <p>Thank you.</p>	<p>Hello █</p> <p>Thank you for your interest in the Bradford Bypass Preliminary Design Study and project-specific assessment of environmental impacts, undertaken in accordance with Ontario Regulation 697/21. The Project Team acknowledges your concerns.</p> <p>At this time, the project-specific assessment of environmental impacts for the Bradford Bypass project considers the entire project footprint (which includes the highway itself) and its anticipated impacts to existing conditions in the study area. Once the project enters the Detail Design phase, impacts will be reconfirmed and a final determination of proposed mitigation measures will be made (including exact locations of highway features, landscape plantings, etc.)</p> <p>As part of the project, the Ministry of Transportation (MTO) has undertaken 15 environmental studies to update and document existing conditions, identify and evaluate potential impacts of the Project and recommend mitigation measures to reduce these impacts to meet current environmental legislative requirements. To view the full list of environmental studies being conducted, please visit the Project Website at the following link: https://www.bradfordbypass.ca/overview/.</p> <p>Natural environmental studies have been completed to document and assess existing natural environment features, outline the preliminary description of potential impacts of the project on the natural environment and outline a description of potential measures to mitigate those impacts. Examples of the natural environment studies include terrestrial ecosystems, fish and fish habitat, and stormwater and drainage.</p> <p>The Preliminary Landscape Conceptual Plan has been completed to identify and assess impacts and mitigation on various landscape features. The Preliminary Landscape Conceptual Plan also includes commitments to future work and has been summarized in the Draft Environmental Impact</p>

CT-DraftEIAR-22		To: Project Team From:	Email:	Project Alternatives	June 3, 2023	<p>I do not understand the rationale at all for this venture.</p> <p>The 404 north is a mess from the 401 to at least up to Green Lane in the afternoon going north and is just as much of a mess going south in the morning.</p> <p>Three Questions I would like the team to answer as soon as possible.</p> <ol style="list-style-type: none"> 1. Why are you adding more traffic to a highway already overloaded. 2. Why has construction been going on for several years on the 404 north and nothing is happening? 3. Why would you not consider building a road beside the 407 that was free or use your money to buy the 407 and get a few trucks off the 401? 	<p>Hello</p> <p>Thank you for your interest in the Bradford Bypass Preliminary Design Study and project-specific assessment of environmental impacts, undertaken in accordance with Ontario Regulation 697/21.</p> <p>Please find below the Project Team's responses to your questions.</p> <p>1. Why are you adding more traffic to a highway already overloaded?</p> <p>Significant population growth is projected for both Simcoe County and the Regional Municipality of York. Even with all currently planned transportation and transit investments, road congestion will continue to increase across the Greater Golden Horseshoe (GGH).</p> <p>The Bradford Bypass has been proposed as a response to this dramatic growth in population and travel demand in the area, including the forecasted increase in congestion on key east-west roadways linking Highway 400 to Highway 404. The proposed location for the Bradford Bypass was also identified in A Place to Grow: Growth Plan for the greater Golden Horseshoe (2020).</p> <p>The purpose of the Bradford Bypass is to relieve congestion on existing local roads between Highway 400 and Highway 404 and provide a northern freeway connection between Highways 400 and 404.</p> <p>2. Why has construction been going for several years on the 404 north and nothing is happening?</p> <p>The Highway 404 work to the north of Major Mackenzie was completed in 2021, and minor upgrade work has since been completed in the area. The Highway 404 expansion south of Major Mackenzie has been ongoing since 2019, and is expected to be completed in 2023.</p>

							<p>3. Why would you not consider building beside the 407 that was free or use your money to buy the 407 and get a few trucks off the 401?</p> <p>As noted, the purpose of the Bradford Bypass is to relieve congestion on existing local roads between Highway 400 and Highway 404. Specifically, the purpose is to alleviate congestion within the Study Area.</p> <p>Highway 407 is located too far south to provide an alternate east-west connection for traffic within the Study Area.</p> <p>If you have any other questions, please feel free to reach out to the Project Team at your earliest convenience. You can reach the Project Team via email at projectteam@bradfordbypass.ca, toll free at 1-877-247-6036, or by visiting the Project Website at www.bradfordbypass.ca.</p> <p>Sincerely,</p> <p>The Bradford Bypass Project Team Email: projectteam@bradfordbypass.ca Toll-Free: 1 (877) 247-6036</p>

CT- DraftEIAR -23 cont.	█	To: Project Team From: █ █ █ █	Email: █	Proposed 10 th Sideroad Interchange	May 23, 2023	<p>At its meeting of May 16, 2023, council received a presentation from several residents living in close proximity to the north-east quadrant of the proposed Sideroad 10 Interchange with the Highway 400 –404 Link. They cited concerns with the preferred design for the interchange, particularly with respect to the required land takings and potential for noise, dust and impacts on local traffic patterns.</p> <p>In response to a request from the group, council passed the following resolution:</p> <p><i>"Resolution 2023-169 Moved by: Deputy Mayor Sandhu Seconded by: Councillor Harper That the deputation from Brent Fellman, Audrey Tucker and Hank Asemgeest regarding the Bradford Bypass Interchange be received; and</i></p> <p><i>That Council authorize the Mayor to provide correspondence to the provincial Bradford Bypass Team requesting that the interchange at Sideroad 10 be reviewed to consider an alternative design. CARRIED."</i></p> <p>Further to the resolution and on behalf of council, I request that MTO consider alternative designs for the interchange such that the concerns expressed above can be addressed.</p> <p>Council remains fully supportive of the interchange in this location and its worth noting that the residents group is also supportive in principle –they have simply requested that the design be reconsidered. Any assistance you can provide in this regard would be appreciated.</p> <p>Please feel free to contact █ █, if you require any</p>	See response in CT-DraftEIAR-23 Cont. below.

CT- DraftEIAR -23 Cont.	█	To: Project Team From: █	Email: █	10 th Sideroad Interchange Concerns	May 31, 2023	<p>To the Bradford ByPass engineering team.</p> <p>My name is █ and I have expressed concerns about the Interchange at the 10th sideroad and the Bradford ByPass. Recently, our neighbourhood has joined together to present a unified concern to have this Interchange reviewed so that the design does not encroach so much on our neighbourhood. We made a presentation to the Bradford WG Council and they support this review. Attached is the letter from █. Also attached is the presentation we made to the Council. We ask that the design be reviewed to minimize the impacts to the local residents.</p> <p>We gave alternate ramp designs and ideas to reduce noise, vibration, and visual improvement. Please consider the changes and let us know what alterations are being completed to address our concerns.</p> <p>Thank you</p> <p>█</p>	<p>Hello Brent,</p> <p>Thank you for your interest in the Bradford Bypass Preliminary Design Study and project-specific assessment of environmental impacts, undertaken in accordance with Ontario Regulation 697/21.</p> <p>In the Ministry's previous feasibility assessment,, nine interchange locations were evaluated along the Bradford Bypass corridor. The 10th Sideroad interchange was determined to be feasible and an evaluation of interchange considerations was completed. A Parclo A4 configuration was identified as the preferred interchange for 10th Sideroad as it can accommodate the highest capacity and provides the greatest safety over the other configurations considered.</p> <p>Public feedback was collected by the Bradford Bypass Project Team at the Preliminary Design Interchange Considerations Consultation event via the Project Website from May to April 2022. All feedback was considered and the preferred configuration of the 10th Sideroad interchange was presented on November 24th, 2022 at the Public Information Centre (PIC) #2. Materials from the Preliminary Design Interchange Considerations Consultation Event and PIC #2 are available on the Project Website: https://www.bradfordbypass.ca/pic/</p> <p>Thank you for the information shared with the █ council. We have received a copy of the resolution passed by Council at the May 16, 2023 Council meeting and are committed to continuing to work with █ to consider the concerns raised by the local residents. Further review of the design configuration of the 10th Sideroad interchange is ongoing.</p> <p>If you have any other questions, please feel free to reach out to the Project Team at your earliest convenience. You can reach the Project Team via email at projectteam@bradfordbypass.ca, toll free</p>

CT-DraftEIAR-31		To: Bradford Bypass Project Team From:	Email:	EIAR	June 9, 2023	<p>To whom it may concern:</p> <p>While looking at the Bradford Bypass, also look at a future expressway linking the 404 in Queensville to the 400 - 11 Interchange through Bradford West Gwillimbury and Innisfill to Crown Hill.</p> <p>When the Green Lane Interchange opened, it was not long before it got congested.</p> <p>The other thing to look at is extending Bathurst Street to the 20th Sideroad and extending Ravenshoe to this new alignment.</p> <p>One more thing to mention, whenever a new road is built, big or small, it has an impact on its environment. I'm sure you are aware of this. This is about traffic congestion which is an major environmental problem in Central Ontario.</p> <p>Thanks</p>	<p>Hello</p> <p>Thank you for your interest in the Bradford Bypass Preliminary Design Study and project-specific assessment of environmental impacts, undertaken in accordance with Ontario Regulation 697/21.</p> <p>As part of the Preliminary Design study, alternate corridor locations for the freeway are not being considered as the Technically Preferred Route for the Bradford Bypass was approved through 2002 Environmental Assessment (EA). This alignment is technically preferred for a freeway in terms of highway network expansion, ease of construction, relationship to provincial and municipal land use planning (Official and Transportation Master Plans, <i>Places to Grow Act</i>), as well as having fewer negative impacts to residential and natural areas when compared to other route options considered. The Draft Environmental Impact Assessment Report (EIAR) includes natural environmental studies have been completed to document and assess existing natural environment features, outline the preliminary description of potential impacts of the project on the natural environment and outline a description of potential measures to mitigate those impacts. The analysis and key results from the traffic assessment are also summarized in the Draft EIAR. The Draft (EIAR can be found on the Project Website from this link:</p> <p>STUDY PROCESS – BRADFORD BYPASS</p> <p>The Draft EIAR is available for review and comment on the project website from June 1 to June 30, 2023 and comments and feedback can be provided to the ministry via the Project Website, email or by telephone.</p> <p>We encourage you to visit the Project Website (www.bradfordbypass.ca) to review information on the project as it becomes available.</p> <p>If you have any other questions, please feel free to reach out to the Project Team at your earliest convenience. CT-DraftEIAR-43	To: Project Team From: [REDACTED]	Email: [REDACTED]	Draft EIAR Air Quality	June 21 2023	<p>--- Name --- [REDACTED]</p> <p>--- Email --- [REDACTED]</p> <p>--- Please provide your comments on the Draft Environmental Impact Assessment Report here: ---</p> <p>Envision SQ Inc. is the manufacturer of SmogStop® Barrier, a patented noise/air quality barrier proven to reduce concentrations of vehicle emissions, such as nitrogen oxides and polycyclic aromatic hydrocarbons. The SmogStop Barrier, which is approved by MTO for use in Ontario, is a novel technically and economically feasible technology for mitigating noise and air quality impacts for critical and sensitive receptors along road and rail corridors. The DEIA identifies several locations where the BB is expected to result in noise and air quality impacts to such receivers. As a novel technology that can reduce impacts identified in the DEIA, it is imperative that this EIA include specific commitments to investigate the use of noise/air quality barriers to mitigate air quality impacts in areas where the predicted contaminant concentrations exceed government standards under Future Build scenarios.</p> <p>Section 5.2.3 of the DEIA makes note of a separate Noise Impact Assessment Report with details of the noise assessment, but Section 5.2.4 on Air Quality presents only summary findings. Is there an Air Quality Impact Assessment Report available for review and comment in conjunction with the summaries provided in the DEIA? If so, we would be grateful if we could review</p>	<p>Hi [REDACTED]</p> <p>Thank you for your interest in the Bradford Bypass Preliminary Design Study and project-specific assessment of environmental impacts, undertaken in accordance with Ontario Regulation 697/21.</p> <p>Tables 5-17 and 5-18 of the Draft Environmental Impact Assessment Report (EIAR), along with the air and noise information provided in the EIAR, are intended to provide a summary of the work completed to understand the potential impacts associated with the project</p> <p>Copies of the Air Quality Impact Assessment (AQIA) and Noise Impact Assessment Report can be downloaded at the following links: [LINK]</p> <p>Air quality impacts were provided for both the maximum exceeded sensitive receptor locations and maximum impacted critical receptor locations within the Study Area. Based on the modelled results of air quality impacts from the project Future Build Conditions scenario, the AQIA report displays a visual representation of highly impacted areas within the Study Area for each contaminant of concern via a series of isopleth contour maps (Appendix J). In addition, the AQIA report displays a map of sensitive and critical receptors included within the assessment (Appendix A). These maps, in combination, show the potential areas of higher air quality impact within the Study Area related to the affects from the project. Maximum modelled concentrations for each receptor within the Study Area are included in Appendix I.</p> <p>In keeping with the ministry's commitment to continue to explore innovative opportunities to address noise mitigation through engineering and other enhancements, the ministry may consider refinements to other mitigation measures in Table 5-26 of the Draft EIAR to allow for consideration of innovative opportunities to mitigate all impacts associated with the Project during future phases of work.</p>	No

					<p>it, so that we may provide comments on the detailed findings contained therein. Relatedly, we request the Commenting Period be extended to allow additional time to review and submit further comments related to this document, which is not posted to the project website with the DEIA. (We note that the Noise Impact Assessment Report was not posted with the DEIA either for some reason.)</p> <p>Tables 5-17 and 5-18 of the DEIA identify the maximum concentrations of each contaminant considered, and the receptor at which those maximum concentrations are predicted to occur. However, it is not clear if other receptors in the study area are predicted to have contaminant concentrations under Future Build Conditions that exceed the standard, but might not be 'the maximum'. For example, Table 2-33 of the Existing Conditions Report identifies that the standard limit for NO₂ (1hr) under the CAAQS (2025) is 83 ug/m³. Table 5-17 of the DEIA only notes that the cumulative maximum concentration of NO₂ (1hr) is predicted for receptor SR19 at 94 ug/m³ (approx. 13% over the standard). Are there other receptors in the study area that are predicted to have concentrations between 83 and 94 ug/m³? We suggest that a table similar to Table 5-16 be prepared for the air quality receptors, listing all receptors that are predicted to have a contaminant concentration exceeding the standard under Future Build based on the air quality assessment. This information could help the proponent to identify where air quality impacts could be feasibly mitigated with a noise/air quality barrier, such as SmogStop Barrier.</p> <p>Section 5.2.3.2.3 of the DEIA indicates noise barriers are recommended for the</p>	<p>If you have any other questions, please feel free to reach out to the Project Team at your earliest convenience. You can reach the Project Team via email at projectteam@bradfordbypass.ca, toll free at 1-877-247-6036, or by visiting the Project Website at www.bradfordbypass.ca.</p> <p>Sincerely,</p> <p>The Bradford Bypass Project Team Email: projectteam@bradfordbypass.ca Toll-Free: 1 (877) 247-6036</p>

					<p>residential subdivision west of County Rd 4 (NSA05) and the residential subdivision straddling the Holland River (NSA11). For reasons noted above, it is not clear from the air quality assessment summary provided in the DEIA if these subdivisions are also expected to experience contaminant concentrations in excess of government standards. These noise barriers should be evaluated as noise/air quality barriers to simultaneously mitigate noise and air quality impacts, in accordance with MTO's Environmental Guide for Noise (2022).</p> <p>In light of the above, we urge the ministry to incorporate the following commitments in the EIA to be implemented through further design and construction as they pertain to Noise, Air Quality, Climate Change and Human Health in Table 5.26:</p> <ul style="list-style-type: none"> ○ NOISE-5.00 ADD: Mitigation/Protection/Monitoring: Where a noise assessment is to be updated as per NOISE-5.01, and in optimizing the noise barrier design for NSA05 and NSA11 as per NOISE-5.02, evaluate the feasibility of using noise/air barriers to simultaneously mitigate for noise and elevated concentrations of air pollutants. ○ AQ-1.00 ADD: Mitigation/Protection/Monitoring: Implementation of noise/air quality barriers within the Study Area to reduce concentrations of contaminants on critical and sensitive receptors ○ CC-2.00 ADD: Issues/Concerns/Potential Effects: Emissions from diesel/gasoline powered vehicles; Mitigation/ Protection/ Monitoring: Implementation of noise/air quality barriers within the Study Area to

CT-DraftEIAR-48	To: Project Team From: [REDACTED]	Email: [REDACTED]	Draft EIAR	June 23, 2023	<p>Submitted by email to ProjectTeam@BradfordBypass.ca By June 30, 2023</p> <p>To whom it may concern,</p> <p>We have many concerns with this project, the process it is following, and this report is no different. Please answer our questions below.</p> <p>2. Timing and consultation are inadequate. You have provided an un-editable PDF and 30 days for a 576 page report. This follows the pattern of terrible public information and consultation. Will you extend the consultation period?</p> <p>3. Explain how a provincial highway was transformed into a very expensive regional road variant with five interchanges and two 400 series highway connections, paid for by all Ontario taxpayers. This is inconsistent with the MTO's mandate to provide long distance travel solutions. We maintain that there are better and cheaper, faster to implement, regional road and transit solutions that should be pursued, even if the Bypass does get built.</p> <p>3. We would like to see the traffic studies in their entirety. An environmental assessment used to be grounded in a demonstration of need and justification. The MTO has provided neither as it pertains to this particular project and at this time. There is no evidence that local traffic solutions MTO purports to be solving (actually a local traffic issue and not MTO's mandate) are best served by this potentially \$4 billion highway.</p>	<p>Hello [REDACTED]</p> <p>Thank you for your interest in the Bradford Bypass Preliminary Design Study and project-specific assessment of environmental impacts, undertaken in accordance with Ontario Regulation 697/21.</p> <p>1. Time and consultation are inadequate. You have provided an un-editable PDF and 30 days for a 576 page report. This follows the pattern of terrible public information and consultation. Will you extend the consultation period?</p> <p>The process of planning the Bradford Bypass has included – and will continue to include – consultation with the public and Indigenous communities to ensure the project moves forward in an environmentally responsible way that is responsive to the needs and concerns of communities.</p> <p>In accordance with Ontario Regulation 697/21, an initial Draft Environmental Impact Assessment Report (EIAR) -- which documents the results of the studies undertaken for various environmental disciplines, proposed mitigation measures and environmental commitments to protect the environment -- was published for public review starting on June 1 and continuing until June 30, 2023. In addition, the Ministry has been providing Indigenous communities and stakeholders various opportunities for meaningful consultation since the project was re-initiated in September 2020 including two Public Information Centres.</p> <p>Additional archaeological investigations, which are necessary to complete the impact assessment in accordance with regulations, have recently been finalized and incorporated into an Updated Draft Environmental Impact Assessment Report. This updated report has been posted for an additional 30-day consultation period. The Updated Draft EIAR posting includes the information from the initial draft to ensure stakeholders can review additional information in full context of the project.</p>	No

					<p>a. Please share the links and the methodology, transparently, so that people can understand what travel time savings MTO is referring to. We have absolutely no idea because your write up is incredibly vague about the start and end of the routes used for analysis. For instance this meaningless babble from pg. 334:</p> <p><small>On average, between the various origin-destination pairs using the Bradford Bypass drivers in the peak direction during the peak period, would save up to 17m or 23 minutes of travel time when connecting between highway 400 and highway 404 compared to existing routes in the 10 build scenario.</small></p> <p>a. What year do your studies indicate that the Bypass will be congested at peak rush hour times?</p> <p>4. The Draft Environmental Impact Assessment report shows on pg. 212 the Bypass touching the southern portion of the Lower Landing (AKA BaGv-42), a significant historical and archaeological site at a significant meander on the East Holland River. MTO has moved the highway 150 m to the south of the technically preferred route, which would have completely run over the Lower Landing (pg 148). But the Draft IA states, "the southern portion of the site ... will be impacted by construction" (pg 395). The Draft Environmental Conditions Report indicated that a Stage 3 archaeological assessment "was required" (pg 225); the Draft IA report says that the Stage 3 was completed, and that Stage 4 is required. The Project team's website says, "Currently, additional archaeological investigations are being completed to finalize the impact assessments in accordance with Ontario Regulation 697/21 and are not included in this posting. This information will be available for additional public and Indigenous community review once completed." So the archeological work is not finished. And yet the route has been chosen. Property owners near the history-rich Lower Landing that are</p>	<p>The Updated Draft Environmental Impact Assessment Report is available for review on the Project Website (https://www.bradfordbypass.ca/study-process/) until August 14, 2023.</p> <p>2. Explain how a provincial highway was transformed into a very expensive regional road variant with five interchanges and two 400 series highway connections, paid for by all Ontario taxpayers. This is inconsistent with the MTO's mandate to provide long distance travel solutions. We maintain that there are better and cheaper, faster to implement, regional road and transit solutions that should be pursued, even if the Bypass does get built.</p> <p>The project is being assessed with consideration of the Ministry's mandate to provide for the safe, efficient movement of people and goods between regions and urban areas. In addition, the Project Team has consulted with local and regional municipalities, and the traffic analysis for the proposed Bradford Bypass has considered the planned local transportation and transit improvements to be implemented by others.</p> <p>3. We would like to see the traffic studies in their entirety. An environmental assessment used to be grounded in a demonstration of need and justification. The MTO has provided neither as it pertains to this particular project and at this time. There is no evidence that local traffic solutions MTO purports to be solving (actually a local traffic issue and not MTO's mandate) are best served by this potentially \$4 billion highway.</p> <p>The Bradford Bypass project has been assessed in accordance with Ontario Regulation 697/21. Consistent with the Regulation, the Project Team completed an update to the description of environmental conditions previously documented in the 2002 Approved Environmental Assessment (EA) for the project. This update included a review and assessment of the existing traffic conditions which was documented in the</p>

					<p>receiving expropriation notifications. We are staunchly opposed to this violation of this site particularly absent the stage 4 evaluation of the Lower Landing and the endorsement of the First Nations.</p>  <p><i>Highway is still too close to the Lower Landing. The Lower Landing is in the area of WC-25 in the image above. This clip of a map shows Provincially significant wetlands (orange); unevaluated wetlands (blue); cold water fish habitat (black) and warm (pink); Original / full map available on pg 55 of Draft IA report.</i></p> <p>a. As stewards of these lands and water for time immemorial, additional time should be given to allow First Nation community members to fully digest the lengthy report. Georgina Island First Nation asked that this site be avoided in 1998, 25 years ago, stating, "It is obvious that there are other routes, which can be used to connect these major highways, and we hope that another will be selected." Is Ontario still ignoring this request?</p> <p>a. Have First Nations been consulted about this part of the plan? Please provide written evidence</p>	<p>Environmental Conditions Report (ECR). The ECR was finalized in October 2022 following a public review period, and is available on the Project website.</p> <p>Significant population growth is projected for both Simcoe County and the Regional Municipality of York. Even with all currently planned transportation and transit investments, road congestion will continue to increase across the Greater Golden Horseshoe (GGH) including within the Bradford Bypass Study Area.</p> <p>The purpose of the Bradford Bypass is to relieve congestion on existing local roads between Highway 400 and Highway 404 and provide a northern freeway connection between Highways 400 and 404. On average, between the various origin-destination pairs using the Bradford Bypass, drivers in the peak direction during the peak period, would save up to 73% or 33 minutes of travel time when connecting between Highway 400 and Highway 404 compared to existing routes in the No Build scenario.</p> <p>a. Please share the links and the methodology, transparently, so that people can understand what travel time savings MTO is referring to. We have absolutely no idea because your write up is incredibly vague about the start and end of the routes used for analysis.</p> <p>b. What year do your studies indicate that the Bypass will be congested at peak rush hour times?</p> <p>As detailed in the Draft EIAR (Section 2.4.1), an Aimsun model was created to assess the existing traffic conditions for the road network in the Study Area. The model study area encompasses the Highway 400 corridor from south of Simcoe County Road 88 to north of Highway 89, as well as the Highway 404 corridor from south of Green Lane East to its terminal at Woodbine Avenue (Table 4-3 and 4-4 of the Draft EIAR).</p>

					<p>of their approval of this route.</p> <p>5. Species at Risk a. Table 2-2 lays out the 12 species at risk present or very likely to be present. For instance, Blandings Turtles are likely affected as they are likely in the area. The only commitment we see is to do detailed study later on. This is a good example of study following decision or destruction, and is in violation of standard EA practices. There are no commitments to the protection of species at risk in this document.</p> <p>a. There is a requirement for the Minister of the Department of Fisheries and Oceans to consider, when making certain decisions related to the fish and fish habitat protection (and pollution prevention) provisions of the Act, the Indigenous knowledge of the Indigenous peoples of Canada that has been provided to the Minister (34.1(1) (g) of the Fisheries Act); and,</p> <p>a. Requirement to protect the confidentiality of Indigenous knowledge that is provided to the Minister in confidence, except under limited circumstances (subsection 61.2 (1) of the Fisheries Act)."</p> <p>a. The Draft IA report identifies that the Williams Treaties FN reported American Eel https://www.dfo-mpo.gc.ca/species-especies/publications/sara-lep/eel-anquille/index-eng.html and Northern Sunfish in the Holland River. This must be further investigated with new fieldwork. The American Eel is in decline and gets Federal protection. Ontario's Species at Risk legislation doesn't work anymore so it's all up to the Federal enforcement.</p>	<p>The model for this area was developed using pre-pandemic traffic volumes to identify peak hour volumes within the Study Area. This model has been calibrated and validated as it closely resembled actual operating conditions.</p> <p>As detailed in Section 4.4 of the Draft EIAR, traffic is assessed through modelling to identify Level Of Service (LOS). Having confirmed the model was consistent with current (base) conditions, and therefore appropriate to assess future conditions and design alternatives, the model was used to assess LOS under future 2031 and 2041 conditions. To assess future conditions, the model was updated to include all road network and transit improvements planned within the Study Area, and, forecast traffic volumes based on the projected growth within the Study Area.</p> <p>Modeling results demonstrated that under the No Build (no Bradford Bypass) scenario, local roads were forecasted to exceed capacity by 2031 but saw significant relief under the Build (with Bradford Bypass) scenario. Alternative alignments for the Bradford Bypass were then compared within the model, including the 2002 Approved EA alignment and interchange locations and an updated preferred interchange location alternative developed by the Project Team.</p> <p>The alternative Build scenarios showed the mainline operations on the Bradford Bypass in 2031 would operate at acceptable LOS D in the interim four lane configuration. By expanding to the ultimate 8 lane configuration (implementing another general purpose lane and an HOV lane in each direction by 2041), LOS on the mainline improves to LOS B or C and accommodates the additional traffic forecast by 2041.</p> <p>On average, between the various origin-destination pairs modeled in the peak periods, drivers are expected to save up to 73% or 33 minutes of travel time connecting between Highway 400 and Highway 404 compared to existing local routes.</p> <p>For further information about the Traffic Study please refer to Section 4.4 of the Draft EIAR.</p>

					<p>1. What is Ontario going to do to stand by Canada's obligations to First Nations treaty and consultation rights?</p> <p>1. Will the American Eel's presence be investigated with new fieldwork?</p> <p>6. There are many concerns related to surface water and groundwater.</p> <p>a. Please confirm our understanding that there has been no discussion of, and that there are no studies looking at impacts to Lake Simcoe.</p> <p>a. The Groundwater Protection and Well Monitoring plan, which this Draft IA refers to, discusses the need to dewater the site for the building of piles for the elevated bridge sections of the highway. The Draft IA report says, "Construction dewatering activities have been identified as the primary risk to groundwater fed water wells in the Study Area," p 295. There is no credible groundwater protection plan. There are many suggestions for how to keep it clean but there are few to no commitments.</p> <p>a. HOW exactly is the province (MoECP) going to monitor groundwater discharges to ensure they meet Ontario's water quality standards?</p> <p>a. What penalties are contractors going to face for violating the discharge requirements?</p> <p>a. If penalties are not enough to compel adherence, what next?</p> <p>a. How is the public to have confidence that contaminated water will not be discharged to the Holland Rivers and Lake Simcoe?</p> <p>a. Please confirm if monitoring will continue, or not, as this statement is totally vague: "It is expected that each unassessed monitoring well will continue to be monitored and assessed during the subsequent detail design phase of the project" P. 79.</p>	<p>4. The Draft Environmental Impact Assessment report shows on pg. 212 the Bypass touching the southern portion of the Lower Landing (AKA BaGv-42), a significant historical and archaeological site at a significant meander on the East Holland River. MTO has moved the highway 150 m to the south of the technically preferred route, which would have completely run over the Lower Landing (pg 148). But the Draft IA states, "the southern portion of the site ... will be impacted by construction" (pg 395). The Draft Environmental Conditions Report indicated that a Stage 3 archaeological assessment "was required" (pg 225); the Draft IA report says that the Stage 3 was completed, and that Stage 4 is required. The Project team's website says, "Currently, additional archaeological investigations are being completed to finalize the impact assessments in accordance with Ontario Regulation 697/21 and are not included in this posting. This information will be available for additional public and Indigenous community review once completed." So the archaeological work is not finished. And yet the route has been chosen. Property owners near the history-rich Lower Landing that are receiving expropriation notifications. We are staunchly opposed to this violation of this site particularly absent the stage 4 evaluation of the Lower Landing and the endorsement of the First Nations.</p> <p>a. As stewards of these lands and water for time immemorial, additional time should be given to allow First Nation community members to fully digest the lengthy report. Georgina Island First Nation asked that this site be avoided in 1998, 25 years ago, stating, "It is obvious that there are other routes, which can be used to connect these major highways, and we hope that another will be selected." Is Ontario still ignoring this request.</p>

CT_Draft EIAR-49	To: Project Team From: [REDACTED]	Email: [REDACTED]	Draft EIAR	June 23, 2023	<p>[REDACTED]</p> <p>June 23, 2023</p> <p>Dear Sirs,</p> <p>RE: COMMENTS ON DRAFT IMPACT ASSESSMENT REPORT - Bradford Bypass</p> <p>We have many concerns with this project, the process it is following, and this report is no different. Please answer our questions below.</p> <p>1. Timing and consultation are inadequate. You have provided an un-editable PDF and 30 days for a 576 page report. This follows the pattern of terrible public information and consultation. Will you extend the consultation period?</p> <p>2. Explain how a provincial highway was transformed into a very expensive regional road variant with five interchanges and two 400 series highway connections, paid for by all Ontario taxpayers. This is inconsistent with the MTO's mandate to provide long distance travel solutions. We maintain that there are better and cheaper, faster to implement, regional road and transit solutions that should be pursued, even if the Bypass does get built.</p> <p>3. We would like to see the traffic studies in their entirety. An</p>	<p>Hello [REDACTED]</p> <p>Thank you for your interest in the Bradford Bypass Preliminary Design Study and project-specific assessment of environmental impacts, undertaken in accordance with Ontario Regulation 697/21.</p> <p>1. Time and consultation are inadequate. You have provided an un-editable PDF and 30 days for a 576 page report. This follows the pattern of terrible public information and consultation. Will you extend the consultation period?</p> <p>The process of planning the Bradford Bypass has included -- and will continue to include -- consultation with the public and Indigenous communities to ensure the project moves forward in an environmentally responsible way that is responsive to the needs and concerns of communities.</p> <p>In accordance with Ontario Regulation 697/21, an initial Draft Environmental Impact Assessment Report (EIAR) -- which documents the results of the studies undertaken for various environmental disciplines, proposed mitigation measures and environmental commitments to protect the environment -- was published for public review starting on June 1 and continuing until June 30, 2023. In addition, the Ministry has been providing Indigenous communities and stakeholders various opportunities for meaningful consultation since the project was re-initiated in September 2020 including two Public Information Centres.</p> <p>Additional archaeological investigations, which are necessary to complete the impact assessment in accordance with regulations, have recently been finalized and incorporated into an Updated Draft Environmental Impact Assessment Report. This updated report has been posted for an additional 30-day consultation period. The Updated Draft EIAR posting includes the information from the initial draft to ensure stakeholders can review additional information in full context of the project.</p>	No

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIAR Edits Required? (Yes/No? If yes, specify edit)
					<p>environmental assessment used to be grounded in a demonstration of need and justification. The MTO has provided neither as it pertains to this particular project and at this time. There is no evidence that local traffic solutions MTO purports to be solving (actually a local traffic issue and not MTO's mandate) are best served by this potentially \$4 billion highway.</p> <p>a. Please share the links and the methodology, transparently, so that people can understand what travel time savings MTO is referring to. We have absolutely no idea because your write up is incredibly vague about the start and end of the routes used for analysis. For instance this meaningless babble from pg. 334:</p> <p>b. What year do your studies indicate that the Bypass will be congested at peak rush hour times?</p> <p>4. The Draft Environmental Impact Assessment report shows on pg. 212 the Bypass touching the southern portion of the Lower Landing (AKA BaGv-42), a significant historical and archaeological site at a significant meander on the East Holland River. MTO has moved the highway 150 m to the south of the technically preferred route, which would have completely run over the Lower Landing (pg 148). But the Draft IA states, "the southern portion of the site ... will be impacted by construction" (pg 395). The Draft Environmental Conditions Report indicated that a Stage 3 archaeological assessment "was required" (pg 225); the Draft IA report says that the Stage 3 was completed, and that Stage 4 is required. The Project team's website says, "Currently, additional archaeological investigations are being completed to finalize the impact assessments in</p>	<p>The Updated Draft Environmental Impact Assessment Report is available for review on the Project Website (https://www.bradfordbypass.ca/study-process/) until August 14, 2023.</p> <p>11. Explain how a provincial highway was transformed into a very expensive regional road variant with five interchanges and two 400 series highway connections, paid for by all Ontario taxpayers. This is inconsistent with the MTO's mandate to provide long distance travel solutions. We maintain that there are better and cheaper, faster to implement, regional road and transit solutions that should be pursued, even if the Bypass does get built.</p> <p>The project is being assessed with consideration of the Ministry's mandate to provide for the safe, efficient movement of people and goods between regions and urban areas. In addition, the Project Team has consulted with local and regional municipalities, and the traffic analysis for the proposed Bradford Bypass has considered the planned local transportation and transit improvements to be implemented by others.</p> <p>12. We would like to see the traffic studies in their entirety. An environmental assessment used to be grounded in a demonstration of need and justification. The MTO has provided neither as it pertains to this particular project and at this time. There is no evidence that local traffic solutions MTO purports to be solving (actually a local traffic issue and not MTO's mandate) are best served by this potentially \$4 billion highway.</p> <p>The Bradford Bypass project has been assessed in accordance with Ontario Regulation 697/21. Consistent with the Regulation, the Project Team completed an update to the description of environmental conditions previously documented in the 2002 Approved Environmental Assessment (EA) for the project. This update included a review and assessment of the existing traffic conditions which was documented in the Environmental Conditions Report (ECR). The ECR was finalized in October 2022 following a public review period, and is available on the Project website.</p>

					<p><i>accordance with Ontario Regulation 697/21 and are not included in this posting. This information will be available for additional public and Indigenous community review once completed." So the archeological work is not finished. And yet the route has been chosen.</i> Property owners near the history-rich Lower Landing that are receiving expropriation notifications. We are staunchly opposed to this violation of this site particularly absent the stage 4 evaluation of the Lower Landing and the endorsement of the First Nations.</p> <p><i>Highway is still too close to the Lower Landing. The Lower Landing is in the area of WC-25 in the image above. This clip of a map shows Provincially significant wetlands (orange); unevaluated wetlands (blue); cold water fish habitat (black) and warm (pink); Original / full map available on pg 55 of Draft IA report.</i></p> <p>a. As stewards of these lands and water for time immemorial, additional time should be given to allow First Nation community members to fully digest the lengthy report. Georgina Island First Nation asked that this site be avoided in 1998, 25 years ago, stating, "It is obvious that there are other routes, which can be used to connect these major highways, and we hope that another will be selected." Is Ontario still ignoring this request?</p> <p>b. Have First Nations been consulted about this part of the plan? Please provide written evidence of their approval of this route.</p> <p>5. Species at Risk a. Table 2-2 lays out the 12 species at risk present or very likely to</p>	<p>Significant population growth is projected for both Simcoe County and the Regional Municipality of York. Even with all currently planned transportation and transit investments, road congestion will continue to increase across the Greater Golden Horseshoe (GGH) including within the Bradford Bypass Study Area.</p> <p>The purpose of the Bradford Bypass is to relieve congestion on existing local roads between Highway 400 and Highway 404 and provide a northern freeway connection between Highways 400 and 404. On average, between the various origin-destination pairs using the Bradford Bypass, drivers in the peak direction during the peak period, would save up to 73% or 33 minutes of travel time when connecting between Highway 400 and Highway 404 compared to existing routes in the No Build scenario.</p> <p>a. Please share the links and the methodology, transparently, so that people can understand what travel time savings MTO is referring to. We have absolutely no idea because your write up is incredibly vague about the start and end of the routes used for analysis.</p> <p>b. What year do your studies indicate that the Bypass will be congested at peak rush hour times?</p> <p>As detailed in the Draft EIAR (Section 2.4.1), an Aimsun model was created to assess the existing traffic conditions for the road network in the Study Area. The model study area encompasses the Highway 400 corridor from south of Simcoe County Road 88 to north of Highway 89, as well as the Highway 404 corridor from south of Green Lane East to its terminal at Woodbine Avenue (Table 4-3 and 4-4 of the Draft EIAR).</p> <p>The model for this area was developed using pre-pandemic traffic volumes to identify peak hour volumes within the Study Area. This model has been calibrated and validated as it closely resembled actual operating conditions.</p>

					<p>be present. For instance, Blandings Turtles are likely affected as they are likely in the area. The only commitment we see is to do detailed study later on. This is a good example of study following decision or destruction, and is in violation of standard EA practices. There are no commitments to the protection of species at risk in this document.</p> <p>b. There is a requirement for the Minister of the Department of Fisheries and Oceans to consider, when making certain decisions related to the fish and fish habitat protection (and pollution prevention) provisions of the Act, the Indigenous knowledge of the Indigenous peoples of Canada that has been provided to the Minister (34.1(1) (g) of the Fisheries Act); and,</p> <p>c. Requirement to protect the confidentiality of Indigenous knowledge that is provided to the Minister in confidence, except under limited circumstances (subsection 61.2 (1) of the Fisheries Act)."</p> <p>d. The Draft IA report identifies that the Williams Treaties FN reported American Eel https://www.dfo-mpo.gc.ca/species-especes/publications/sara-lep/eel-anquille/index-eng.html and Northern Sunfish in the Holland River. This must be further investigated with new fieldwork. The American Eel is in decline and gets Federal protection. Ontario's Species at Risk legislation doesn't work anymore so it's all up to the Federal enforcement.</p> <p>i. What is Ontario going to do to stand by Canada's obligations to First Nations treaty and consultation rights?</p> <p>ii. Will the American Eel's presence be investigated with new fieldwork?</p>	<p>As detailed in Section 4.4 of the Draft EIAR, traffic is assessed through modelling to identify Level Of Service (LOS). Having confirmed the model was consistent with current (base) conditions, and therefore appropriate to assess future conditions and design alternatives, the model was used to assess LOS under future 2031 and 2041 conditions. To assess future conditions, the model was updated to include all road network and transit improvements planned within the Study Area, and, forecast traffic volumes based on the projected growth within the Study Area.</p> <p>Modeling results demonstrated that under the No Build (no Bradford Bypass) scenario, local roads were forecasted to exceed capacity by 2031 but saw significant relief under the Build (with Bradford Bypass) scenario. Alternative alignments for the Bradford Bypass were then compared within the model, including the 2002 Approved EA alignment and interchange locations and an updated preferred interchange location alternative developed by the Project Team.</p> <p>The alternative Build scenarios showed the mainline operations on the Bradford Bypass in 2031 would operate at acceptable LOS D in the interim four lane configuration. By expanding to the ultimate 8 lane configuration (implementing another general purpose lane and an HOV lane in each direction by 2041), LOS on the mainline improves to LOS B or C and accommodates the additional traffic forecast by 2041.</p> <p>On average, between the various origin-destination pairs modeled in the peak periods, drivers are expected to save up to 73% or 33 minutes of travel time connecting between Highway 400 and Highway 404 compared to existing local routes.</p> <p>For further information about the Traffic Study please refer to Section 4.4 of the Draft EIAR.</p> <p>13. The Draft Environmental Impact Assessment report shows on pg. 212 the Bypass touching the southern portion of the Lower Landing (AKA BaGv-42), a significant historical and archaeological site at a significant meander on the East Holland River. MTO has moved the highway 150 m to</p>

						<p>The project has undertaken an Air Quality Impact Assessment to explore pollutant emissions and dispersion modelling in an effort to predict the contribution of the project to future ambient pollutant concentrations. This contribution, added to background concentration levels, allows prediction of the cumulative impact of the proposed project and all other contributors to air pollution. Concentration levels are compared to provincial and federal ambient air quality criteria and standards to assist in the evaluation of project-specific mitigation needs and options.</p> <p>Areas of concentrated emission impact are influenced by traffic volumes along a given segment of roadway. The implementation of the Bradford Bypass is expected to redistribute traffic from local roads and freeway corridors surrounding the proposed Bradford Bypass. Reductions in traffic volumes are observed on corridors including Highway 11/1 (Bridge Street), Bathurst Street, Holland Landing Road, Yonge Street, Queensville Sideroad, Doane Road, Mount Albert Road, Green Lane, and Simcoe County Road 88/Holland Street, among other roads, which benefits the community of Bradford, Town of Bradford West Gwillimbury, by alleviating congestion during peak hours.</p> <p>The Project Team is currently utilizing the National Air Pollution Surveillance air quality monitoring stations nearest to the Study Area to assess air quality levels. The nearest monitoring station is in Newmarket.</p> <p>Land has been designated for the Bradford Bypass since the 2002 approved EA was completed. As noted above, consultation is an integral component of the Preliminary Design stage and project-specific assessment of environmental impacts and is critical to a project's success. The ministry is actively consulting and engaging with private landowners, developers and school boards within the Study Area. Additional information regarding the assessment of potential air quality impacts have been summarized in Section 2.2.4 and Section 5.2.4 of the Draft EIAR.</p> <p>If you have any other questions, please feel free to reach out to the Project Team at your earliest convenience. You can reach the Project Team via email at projectteam@bradfordbypass.ca, toll free at 1-877-</p>

CT-DraftEIAR-50	To: Project Team From: [REDACTED]	Email: [REDACTED]	Draft EIAR Comments	June 23, 2023	<p>Dear Sirs and Madames,</p> <p>COMMENTS ON DRAFT IMPACT ASSESSMENT REPORT - BRADFORD BYPASS</p> <p>I have many vital concerns about this project that require answers. Firstly, your Public Consultation Period does not comply with what a Public Consultation should be! The time factor of 30 days is minimal to go through the 500 page report and not being able to easily send edits to the pdf file. Secondly, noone, neither the MTO or their Consultant, has even tried to do a Cost Benefit Analysis analyzing other alternative Regional Roads available to accomplish the end result of connecting the 400 to the 404 in order to alleviate any congestion in Bradford and connect 2 highways through this type of Corridor. Instead the highway will have 5 interchanges that cross over Significant Wetlands and Diminishing Prime Holland Marsh Farmlands and Culturally Significant Indigenous historical routes. Also the building of this highway and its interchanges will most definitely destroy and impact Species at Risk and Harm under the Federal Laws. Thirdly, there is no justification or current data such as current traffic data outlining that this \$4 billion dollar Ford and Mulroney pushed highway will solve any traffic issues. Any data I have seen from NGOs pertaining to traffic issues could be solved by upgrading current Regional Roads for less cost and minimizing environment impact in the Lake Simcoe watershed. Please, provide and reference your Table of Results and Calculations stating that 33 minutes would be saved in travel time when connecting the 400 and 404. Please show data in form of a Table or Figure regarding the Bypass and Peak Rush-</p>	Response drafted in CT-DraftEIAR-50 Cont. below.	No

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIAR Edits Required? (Yes/No? If yes, specify edit)
					<p>hour times. Also, a comparison should be made if other routes were upgraded for this same result! Not sure why the MTO hasn't considered upgrading existing roads already available to meet this end result. THIS IS A VERY IMPORTANT QUESTION NEEDING A PROFESSIONAL MTO ANSWER WITH DATA BACKING IT UP.</p> <p>Fourthly, how can MTO start expropriation of lane in the Lower Landing when the Proper Stage 4 assessment of the area wrt archeological assessment. The MTO has moved the highway 150 meters to the South and has already made their decisions disregarding PUBLIC CONSULTATION AND PUBLIC CONCERNS ESPECIALLY FROM THE INDIGENOUS COMMUNITIES.Reg. 697/21 still needs to be completed. The report should better stipulate this fi di g has not been properly investigated! MTO and their Consultant should practice good Environmental Integrity and Due Diligence before stating issues that need resolutions or investigation! All because Ford and Mulroney back this highway and want it as their Political Legacy doesn't mean Engineers and Scientist working on this project should take shortcuts or not provide accurate, referenced and viable data! As respect to the undermined Indigenous community, more Indigenous Public Consultation time is required for them to state the importance of this area and to also state that there are other less invasive environmental and historical a d archeological options. I never see any data comparing any other Site as an option! Fifthly, the 12 species at Risk shouldn't be taken lightly! MTO and their Consultants should see that they will be in violation of the Federal Laws pertaining to this and decisions made with the Consultation of Indigenous</p>

					<p>People. The First Nation's have their Treaty and Rights. Ford and Mulroney cannot Plough through them! Where is the extensive report stating this area does not comply with the Federal Laws. The American Eel and Northern Sunfish should raise flags! Sixthly, what about surface and groundwater runoff? Have you worked with the MOECP wrt monitoring or the impacts of this highway on the Lake Simcoe and Holland Landing watersheds? As a Consultant to the MTO, have you identified any environmental impacts of this highways wrt damages or violations to groundwater discharge? Finally could you provide the Final Costs of this highway? Its start and projected completion date taking into consideration the Federal Laws that will stall it and the Public Consultation timeliness. And most of all, what are the cumulative Health Effects as a result of this highway? That should have been a BIG PART FOR PUBLIC CONSUTATION! Air pollution causing more asthma in adults and infants or more cardiopulmonary episodes should be reported and referenced. Cancer causing pollutants should be identified and reported and referenced.</p> <p>Please reply to these questions immediately and extend the Public Consultation time so we can l fkrn other people of this report.</p> <p>Regards</p>  <p>Sent from my Galaxy</p>

CT-DraftEIAR-50 Cont.	To: Project Team From: [REDACTED]	Email: [REDACTED]	Draft EIAR	June 23, 2023	<p>Dear Sirs and Madames,</p> <p>Please see my comments below with respect to the Bradford Bypass Report Review Consultation:</p> <p>1.) The Public Consultation timeline is too short to review a 500 page report..</p> <p>2.) No where in the report is there reference to other local road options to connect the 400 and 404 where road upgrades and widening could be considered. Have you considered another alternative, cheaper and environmentally friendlier route?</p> <p>3.) Is the \$4 billion dollar price tag on the Bradford Bypass worth the money to achieve the projected 33 minutes of saved time traveling?</p> <p>4.) Has a price tag been put on the loss of the Significant Wetlands, Farmlands and Greenspace allocated for the Bradford Bypass? These may be intangible but a dollar value can be put on their losses in terms of farm food production, soil and greenspace carbon sequestering, flood mitigation, surface and groundwater filtering and cleansing through the Holland Landing and Lake Simcoe watersheds, trees capturing carbon dioxide and releasing oxygen, wildlife corridor between Newmarket and East Gwillimbury, buffer of land needed for farming, etc. This is only a partial list of benefits of the area. Have you considered this?</p> <p>5.) Have you considered the protection of the culturally, historically and archeologically sensitive lands by the Indigenous Community taking in consideration the First Nation's Treaty and Rights?</p>	<p>Hello [REDACTED]</p> <p>Thank you for your interest in the Bradford Bypass Preliminary Design Study and project-specific assessment of environmental impacts, undertaken in accordance with Ontario Regulation 697/21.</p> <p>As noted in the response from the Ministry on July 20, 2023, the Project Team has provided responses to your questions from June 23, 2023 below.</p> <p>1. The Public Consultation timeline is too short to review a 500 page report.</p> <p>The process of planning the Bradford Bypass has included – and will continue to include – consultation with the public and Indigenous communities to ensure the project moves forward in an environmentally responsible way that is responsive to the needs and concerns of communities.</p> <p>In accordance with Ontario Regulation 697/21, an initial Draft Environmental Impact Assessment Report (EIAR) -- which documents the results of the studies undertaken for various environmental disciplines, proposed mitigation measures and environmental commitments to protect the environment – was published for public review from starting on June 1 and continuing until June 30, 2023. In addition, the Ministry has been providing Indigenous communities and stakeholders various opportunities for meaningful consultation since the project was re-initiated in September 2020 including two Public Information Centres.</p> <p>Additional archaeological investigations, which are necessary to complete the impact assessment in accordance with regulations have been finalized and incorporated into an updated Draft Environmental Impact Assessment Report. This updated report has been posted for an additional 30-day consultation period. The Updated Draft EIAR posting includes the information from the initial draft to ensure stakeholders can review additional information in full context of the project. As the initial Draft EIAR and the Updated Draft were available for public review for a total of 60 days,</p>	No

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIAR Edits Required? (Yes/No? If yes, specify edit)
					<p>6.) Have you considered potential violations of Federal and Provincial Laws in the future with respect to destroying habitats of the named Species at Risk and increased land and water pollution from the salt runoff from the highway into the Holland Marsh and Lake Simcoe watersheds? Have you considered the Dollar value loss from the degradation of the environment as a result of the highway situated in the significant wetlands and the Holland Marsh and Lake Simcoe Watersheds and vital farmlands.</p> <p>7.) Have you considered the dollar value loss on the impact of the highway on Human Health with negative effects such as more cases of Asthma, Cardiopulmonary episodes and Cancer from the toxins added to the air from car and truck combustion emissions which equates to more hospital visits and degradation of the health of tax paying Ontarians.</p> <p>8.) Have you considered Climate Change impacts and the addition of more Greenhouse Gasses (GHG) by the highway during a time when GHGs and pollution should be minimized.</p> <p>I would appreciate these questions answered.</p> <p>Regards, [REDACTED]</p> <p>Sent from my Galaxy</p>	<p>an extension of the public review period is not being considered at this time.</p> <p>The Updated Draft Environmental Impact Assessment Report was available for review on the Project Website (https://www.bradfordbypass.ca/study-process/) until August 14, 2023.</p> <p>2. No where in the report is there reference to other local road options to connect the 400 and 404 where road upgrades and widening could be considered. Have you considered another alternative, cheaper and environmentally friendlier route?</p> <p>The Bradford Bypass has been proposed as a response to the dramatic growth in population and travel demand anticipated within the Study Area, including the forecasted increase in congestion on key east-west roadways linking Highway 400 to Highway 404. The purpose of the Bradford Bypass is to relieve congestion on existing local roads between Highway 400 and Highway 404 and provide a northern freeway connection between Highways 400 and 404. The technically preferred route chosen for the Bradford Bypass was based on the 2002 approved Environmental Assessment (EA) Study and minimizes the environmental footprint wherever possible.</p> <p>As part of the 2002 EA, the Bradford Bypass evaluated alternatives from a broad range of potential solutions to address several transportation problems and to address significant opportunities identified in York Region and Simcoe County. The need for this freeway was confirmed as the only reasonable solution that would make a significant contribution towards addressing the problem as the population in York Region and Simcoe County grows. The 2002 EA approved alignment is technically preferred for a freeway in terms of highway network expansion, ease of construction, relationship to provincial and municipal land use planning and the preferred route is already included in Official and Transportation Master Plans, as well as the Places to Grow Act), as well as having fewer negative impacts to residential and natural areas when compared to other route options considered.</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIAR Edits Required? (Yes/No? If yes, specify edit)
						<p>The Bradford Corridor was selected as the preferred corridor over Highway 89/Ravenshoe Road as it was beyond the maximum north limit of 10th Line / Boag Road which was assessed in a previous EA study and was determined that a Management Area or river crossing north of this would entail unacceptable environmental impact, which lead to the withdrawal of the Highway 89 EA studies in 1986-87.</p> <p>The Bradford Corridor was selected as the preferred corridor over the southern alternatives as there was no south alternative that met the primary purpose of the study to reduce out-of-way travel. The south limit was established as Highway 88 and Queensville Sideroad.</p> <p>The original purpose of the Bradford Bypass per the 2002 Approved EA was to address the "east-west" long-distance travel demand crossover between Highway 400 and Highway 404 which is a provincial responsibility and distinct from the locally generated trips which use a municipal road to access the provincial network. As noted in the report, the location of the transportation link is related to potential network benefits, with local service being secondary benefit.</p> <p>While the town of Bradford owns a closed Road allowance east of Artesian Industrial Parkway for 8th Line to Holland River, Hochreiter Road itself is a private road. This connection would not address the primary purpose of the Bradford Bypass to address provincial responsibilities to connect Highway 400 and Highway 404. The local benefit of this route is likely outweighed by improvement to capacity of Bridge Street. A bridge across 8th Line would still require out-of-way travel, which this study is looking to reduce, to connect to provincial transportation facilities. Improvements are likely required on Bathurst Street and Queensville Sideroad. Significant additional property impact (similar to the Bradford Bypass) would be required for a new corridor connection from 8th Line straight to Highway 404.</p> <p>For more information on the 2002 EA, please see the enclosed linked: https://www.bradfordbypass.ca/wp-content/uploads/2020/09/BBP-RoutePlanningEA-1997.pdf</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIAR Edits Required? (Yes/No? If yes, specify edit)
						<p>Further to the conclusion of the 2002 EA, as part of this Preliminary Design study, a traffic analysis was completed and the result of the review has reviewed and confirmed the conclusions the need of the highway of the original route planning study. As detailed in prior responses, the Project Team has completed a review and update of environmental conditions described in the previous studies for the Project. This review and update analysis has included the review of existing traffic conditions and s, modelling of future forecast traffic conditions and it has been confirmed that updates to regional and municipal roads alone will not address the transportation needs within the Study Area.</p> <p>Additionally, a feasibility assessment was conducted evaluating nine interchange location scenarios to determine the best interchange configuration through the Bradford Bypass corridor. The evaluation was conducted in accordance with satisfying the study objective to improve connectivity of the study area between Highway 400 and Highway 404, facilitating the improvement of traffic operations and movement of goods. Consideration included interchange utilization, overall network delay, out of way travel, environmental considerations and constraints, and preliminary costs. It was determined that interchanges at 10th Sideroad, County Road 4, Bathurst Street, 2nd Concession Road, and Leslie Street would be included as part of the Study.</p> <p>3. Is the \$4 billion dollar price tag on the Bradford Bypass worth the money to achieve the projected 33 minutes of saved time traveling?</p> <p>As we bring this project to market, we want to ensure we can retain the best value for the project. As such, the ministry will not be releasing cost estimates prior to the award of contracts to protect the procurement processes.</p> <p>As noted in the response above, the Bradford Bypass has been proposed as a response to this dramatic growth in population and travel demand in the area, including the forecasted increase in congestion on key</p>

						<p>east-west roadways linking Highway 400 to Highway 404.</p> <p>Areas of concentrated emission impact are influenced by traffic volumes along a given segment of roadway. The implementation of the Bradford Bypass is expected to redistribute traffic from local roads surrounding the proposed Bradford Bypass to the new corridor and greater freeway network. Reductions in traffic volumes are observed on corridors including Highway 11/1 (Bridge Street), Bathurst Street, Holland Landing Road, Yonge Street, Queensville Sideroad, Doane Road, Mount Albert Road, Green Lane, and Simcoe County Road 88/Holland Street, among other roads. The alleviation of traffic on local roads benefits the area including but not limited to Town of Bradford West Gwillimbury, community of Holland Landing, Town of East Gwillimbury, and northern King Township by alleviating congestion during peak hours.</p> <p>4. Has a price tag been put on the loss of the Significant Wetlands, Farmlands and Greenspace allocated for the Bradford Bypass? These may be intangible but a dollar value can be put on their losses in terms of farm food production, soil and greenspace carbon sequestering, flood mitigation, surface and groundwater filtering and cleansing through the Holland Landing and Lake Simcoe watersheds, trees capturing carbon dioxide and releasing oxygen, wildlife corridor between Newmarket and East Gwillimbury, buffer of land needed for farming, etc. This is only a partial list of benefits of the area. Have you considered this?</p> <p>This government takes environmental protection seriously and is implementing a path forward that will ensure environmental protections are not compromised while building this much needed project quickly and safely. Current and future work on the Bradford Bypass project will continue to be subject to all conditions under Ontario Regulation 697/21.</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIAR Edits Required? (Yes/No? If yes, specify edit)
						<p>The project includes 15 environmental studies to update and document environmental conditions, identify, and evaluate potential impacts of the project and recommend mitigation measures to reduce potential impacts and meet current environmental legislative requirements. Each study has been summarized in the Updated Draft EIAR, including the recommended mitigation measures and monitoring activities that will be carried forward to the next phase of the project.</p> <p>5. Have you considered the protection of the culturally, historically and archeologically sensitive lands by the Indigenous Community taking in consideration the First Nation's Treaty and Rights?</p> <p>The Ministry is actively consulting and engaging with Indigenous communities, municipalities, environmental agencies, and concerned stakeholders throughout the Bradford Bypass Project.</p> <p>The Project Team is engaging with and considers input provided by the following Indigenous communities:</p> <ul style="list-style-type: none"> ▪ Alderville First Nation ▪ Beausoleil First Nation ▪ Chippewas of Georgina Island First Nation ▪ Chippewas of Rama First Nation ▪ Curve Lake First Nation ▪ Hiawatha First Nation ▪ Mississaugas of Scugog Island First Nation ▪ Kawartha Nishnawbe First Nation ▪ Georgian Bay Métis Council, and ▪ Huron-Wendat Nation <p>A Cultural Heritage Resource Assessment Report (CHRAR) was prepared to identify all potential Built Heritage Resources and Cultural Heritage Landscapes located within the Study Area. It includes a preliminary assessment of the potential impacts from proposed project activities on identified Built Heritage Resources</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIAR Edits Required? (Yes/No? If yes, specify edit)
						<p>and Cultural Heritage Landscapes and provides recommendations on next steps and mitigations to conserve the identified cultural heritage resources.</p> <p>Identified potential Built Heritage Resources and Cultural Heritage Landscapes anticipated to be impacted by the project are currently under further evaluation. Cultural Heritage Evaluation Reports are being completed to confirm the cultural heritage value of these properties. For properties determined to have cultural heritage value, Heritage Impact Assessments will be prepared to further assess impacts and recommend alternatives and mitigation measures to avoid or reduce impacts to their cultural heritage value.</p> <p>Archaeological investigations within the Study Area are being completed in accordance with the Ministry of Citizenship and Multiculturalism's Standards and Guidelines for Consultant Archaeologists. Indigenous community representatives continue to be involved in field investigations for archaeological work for the project. Avoidance and Protection of the archaeological resources is in keeping with Ministry of Citizenship and Multiculturalism's Standards and Guidelines for Consultant Archaeologists (Ontario Government 2011) and associated documentation, in addition to Ministry's policies regarding the engagement of community field liaisons and receives strong consideration as a way to show respect to Indigenous communities' heritage and point of view.</p> <p>Stage 3 work was completed in June 2023 and is documented in the the Updated Draft Environmental Impact Assessment Report which was available for review on the Project Website (https://www.bradfordbypass.ca/study-process/) until August 14, 2023.</p> <p>6. Have you considered potential violations of Federal and Provincial Laws in the future with respect to destroying habitats of the named Species at Risk and increased land and water pollution from the salt runoff from the highway into the Holland Marsh and Lake Simcoe watersheds? Have you considered the Dollar value loss from the degradation of</p>

						<p>the environment as a result of the highway situated in the significant wetlands and the Holland Marsh and Lake Simcoe Watersheds and vital farmlands.</p> <p>As part of the Preliminary Design and in accordance with O. Reg. 697/21, the ministry is required to follow all relevant provincial and federal legislative requirements, standards, and practices as they apply to the design, construction, and operation of the project to ensure environmental protection. This includes but is not limited to the <i>Federal Fisheries Act</i>, <i>Endangered Species Act</i>, <i>Species at Risk Act</i>, <i>Canadian Navigable Waters Act</i> (CNWA), Permits to Take Water (PTTW)/Environmental Activity and Sector Registry (EASR) Registration for Groundwater. Further details will be confirmed during subsequent Detail Design and Construction phases.</p> <p>All environmental requirements including consultation with regulatory agencies and obtaining permits and approvals for the project, are undertaken to ensure the final alignment and design of the Bradford Bypass is determined through a decision-making process that would be consistent with the expectations of the <i>Environmental Assessment Act</i>.</p> <p>In addition, the ministry will work to understand and avoid where possible potential impacts to Species at Risk (SAR) within the study area. Should potential impacts be confirmed to endangered or threatened species, the ministry will work with the Ministry of the Environment, Conservation and Parks (MECP) to obtain required permit(s) under the <i>Ontario Endangered Species Act</i> (ESA), which may include mitigation and / or monitoring conditions, and consultation requirements. At this time, it is anticipated that all potential impacts to SAR will be managed through the conditions of a future permit under the Ontario ESA.</p> <p>The Drainage and Hydrology Assessment for the Preliminary Design has been undertaken to satisfy relevant provincial and regulatory legislative requirements. As the project falls within the jurisdiction of the Lake Simcoe Region Conservation Authority (LSRCA), MTO is assessing impacts with respect to the <i>Lake Simcoe Protection Act</i> and the Lake Simcoe</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIAR Edits Required? (Yes/No? If yes, specify edit)
						<p>Protection Plan through consideration of water quality and quantity, stormwater management, groundwater management, landscaping and ecological restoration measures; as well as fluvial geomorphological designs for watercourses, erosion and sediment control and spills prevention and protection measures. Some examples may include enhanced grassed swales and flat bottom grassed swales which provide water quality control of runoff where Stormwater Management Ponds are not feasible. The grassed swales can incorporate flow check dams to promote infiltration, to increase pollutant retention and to slow down flow velocities. For those stormwater management facilities that may occur within the jurisdiction of the Nottawasaga Valley Conservation Authority (NVCA) and potentially influence the sub-watershed, MTO is considering NVCA water quantity and quality control guidelines.</p> <p>Furthermore, appropriate mitigation measures to prevent salt and treated sand from entering watercourses and salt-sensitive areas will be proposed based on various factors including the use of MTO's Salt Management Plan and the Ministry of Environment, Conservation and Parks (MECP) Guidelines on Snow Disposal and De-icing Operations in Ontario. The MTO Salt Management Plan outlines salt management operational practices and strategies and Best Management Practices (BMP) in terms of equipment, best practices, materials, storage, testing, storm response, application rules, snow and ice control trainings, snow removal and disposal, and technology review. This includes implementing a balanced approach to the highway salt application based on the amount of snow precipitation and highway conditions.</p> <p>In areas that are particularly sensitive, salt management measures may be necessary to mitigate environmental effects of road salt in accordance with the study objectives utilizing the Code of Practice for Environmental Management of Road Salts released by Environment Canada. The Code of Practice for Environmental Management of Road Salts can be viewed here: https://www.canada.ca/en/environment-climate-change/services/pollutants/road-salts/code-practice-environmental-management.html.</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIAR Edits Required? (Yes/No? If yes, specify edit)
						<p>In addition, snow removal and disposal will be utilized in accordance with the MECP Guidelines on Snow Disposal and De-icing Operations in Ontario. Further details on MECP's Guidelines on Snow Disposal and De-icing Operations in Ontario can be found here: https://www.ontario.ca/page/guidelines-snow-disposal-and-de-icing-operations-ontario#:~:text=Ministry%20Approval,If%20special%20circumstances&text=As%20a%20general%20rule%2C%20the,be%20approved%20for%20ir ect%20disposal.</p> <p>Results of the above studies, including recommended mitigation measures and commitments to future work, are summarized in the Updated Draft Environmental Impact Assessment Reports (EIAR), which was available on the Project Website for public review until August 14, 2023.</p> <p>Project commitments and anticipated permits and approvals identified in the studies will be carried forward to subsequent Detail Design and construction phases.</p> <p>7. Have you considered the dollar value loss on the impact of the highway on Human Health with negative effects such as more cases of Asthma, Cardiopulmonary episodes and Cancer from the toxins added to the air from car and truck combustion emissions which equates to more hospital visits and degradation of the health of tax paying Ontarians.</p> <p>The Project Team has undertaken a human health scoping assessment to identify potential positive and negative health impacts and can be used to help inform mitigation measures. The human health scoping assessment report provides a baseline profile of the Study Area, which includes age, education, income, population demographics, occupation, housing status, affordable housing, obesity, disease and mental health, and information on the movement of people (e.g. walkability and transit scores, mode of transportation, commuting duration).</p> <p>The human health scoping assessment is summarized in Section 5.2.7 of the Draft EIAR.</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIAR Edits Required? (Yes/No? If yes, specify edit)
						<p>The project has also undertaken an Air Quality Impact Assessment, to explore pollutant emissions and dispersion modelling in an effort to predict the contribution of the project to future ambient pollutant concentrations. This contribution, added to background concentration levels, allows prediction of the cumulative impact of the proposed project and all other contributors to air pollution. Concentration levels are compared to provincial and federal ambient air quality criteria and standards to assist in the evaluation of project-specific mitigation needs and options.</p> <p>Areas of concentrated emission impact are influenced by traffic volumes along a given segment of roadway. The implementation of the Bradford Bypass is expected to redistribute traffic from local roads surrounding the proposed Bradford Bypass to the new corridor and greater freeway network. Reductions in traffic volumes are observed on corridors including Highway 11/1 (Bridge Street), Bathurst Street, Holland Landing Road, Yonge Street, Queensville Sideroad, Doane Road, Mount Albert Road, Green Lane, and Simcoe County Road 88/Holland Street, among other roads. The alleviation of traffic on local roads benefits the area including but not limited to Town of Bradford West Gwillimbury, community of Holland Landing, Town of East Gwillimbury, and northern King Township by alleviating congestion during peak hours.</p> <p>The Project Team is currently utilizing the National Air Pollution Surveillance air quality monitoring stations nearest to the Study Area to assess air quality levels. Five years of existing data sets were analyzed from stations within the region, and the complete data set from the closest station or most representative station for each contaminant of concern was selected to represent the background air quality for the Study Area. Due to the proximity of the Study Area to the Toronto Area, monitoring stations within the City of Toronto were given preference as the one of the most representative locations for the air quality contaminants of concern. As such, Roadside Wallberg – University of Toronto monitoring station, North Downsview monitoring station, Gage Institute monitoring station (all located approximately 38 – 53 km from the Study Area) were used. The nearest monitoring station is in Newmarket. Additional information</p>

						<p>regarding the assessment of potential air quality impacts have been summarized in Section 2.2.4 and Section 5.2.4 of the Draft EIA.</p> <p>8. Have you considered Climate Change impacts and the addition of more Greenhouse Gasses (GHG) by the highway during a time when GHGs and pollution should be minimized.</p> <p>The Project Team has undertaken a Qualitative Climate Change Assessment to assess potential impacts and suggest mitigation options for consideration. The assessment was completed accordance with MECP's Climate Change Guide (Considering Climate Change in the Environmental Assessment Process, 2017), and considers the project's resilience or vulnerability of the undertaking to changing climatic conditions. Findings are summarized in Section 2.2.6 and 5.2.6 of the Draft EIA.</p> <p>Total greenhouse gas emissions were calculated using a combination of MOVES emission rates and total annual vehicle usage projections for the project sources of air quality contaminant emissions.</p> <p>The project contributions of greenhouse gas in the Future Build year (2041), for a posted speed of 100 kilometres per hour, were compared to the 2019 CO₂eq contributions from the Ontario Transportation sector. The Project greenhouse gas contributions are less than 6% compared to the total Transportation 2019 CO₂eq emissions.</p> <p>Please see below the response to your questions from June 26, 2023.</p> <p>1. Removing Greenbelt lands including Provincially Significant Wetlands from the Holland Marsh as well as some of its specialty crop areas. In fact, almost 70% of the land within the study area for this highway is prime agricultural land (class 1-3).</p> <p>As part of the Preliminary Design, the Project Team considered all impacts and will continue to work with</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIAR Edits Required? (Yes/No? If yes, specify edit)
						<p>environmental agencies, municipalities, and other concerned stakeholders to identify measures to avoid or mitigate the potential impacts of placing new or expanded provincial highways within areas of the existing and enhanced Greenbelt lands.</p> <p>The Greenbelt Plan acknowledges the necessity of building infrastructure. The Plan allows for existing, expanded or new infrastructure in the Greenbelt if the infrastructure serves the significant population growth expected in southern Ontario.</p> <p>Potential impacts to agricultural lands as a result of the Project have been assessed with regards to the loss of agricultural land, loss of prime agricultural land, creation of severed parcels, and increased fragmentation of the land base on the designated agricultural lands. These potential impacts cannot be avoided. There are also potential impacts to adjacent agricultural lands and communities based on the proposed locations of the interchanges and by the proposed highway lighting.</p> <p>The first method of addressing potential impacts is to avoid the potential impact. In this study, the proposed future development of the Bradford Bypass lands will be a permanent use with portions of the Bradford Bypass being located within designated agricultural areas. As a result, there will be designated agricultural lands lost due to the project, which cannot be avoided.</p> <p>When avoidance is not possible, the next priority is to minimize impacts to the extent feasible. The minimization of impacts may be achieved during the design process and through proactive planning measures that provide for the separation of land uses. The Updated Technically Preferred Route has taken into consideration the 2002 Approved Environmental Assessment by maintaining parts of the original alignment and employing similar techniques to minimize the corridor footprint and impact the fewest agricultural buildings, investment and agricultural operations, thereby minimizing the potential impacts to the agricultural land base, agricultural operations, and the agricultural system.</p> <p>When avoidance techniques and minimizing potential impact to agriculture have not achieved the desired</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIAR Edits Required? (Yes/No? If yes, specify edit)
						<p>effect the next priority is to mitigate any further impact. Potential mitigation measures may include:</p> <ul style="list-style-type: none"> - The use of salt management plans to reduce the amount of salt require for de-icing - The use of adequate fencing or berms and vegetated features between different land uses to reduce the potential for trespassing and potential vandalism - The use of plantings/vegetation as screens and buffers to reduce visual impacts and sounds - Implementation of surface and/ or groundwater monitoring in areas where agricultural operations make use of surface or groundwater as part of their normal farm practices - Construct or replace agricultural buildings to mitigate the loss of agricultural buildings - Provide new wells or other water access for any potential groundwater disruption <p>It should also be noted that there are opportunities for local agricultural operations with the future development of the Bradford Bypass lands. The future development of the Bradford Bypass lands will bring people closer to the agricultural areas and specialty crop areas, market garden, field vegetable areas which will result in increased potential for expanding sales of local vegetable crops from the farm markets.</p> <p>Additional details on impacts to agricultural lands and proposed mitigation measures and monitoring activities are included in Section 5.2.2 of the Updated Draft EIAR, available on the Project Website:</p> <p>https://www.bradfordbypass.ca/study-process/</p> <p>2. Potential habitat destruction for twelve species at risk including the Blanding's turtle without any commitment to protect these species, their habitat or even to reduce damage. A commitment to do a future study is not good enough.</p> <p>Targeted surveys for all species at risk with potential to occur in the Study Area will be required during future phases of work. These future studies will inform the</p>

						<p>need for any permits, authorizations, mitigation or compensation under the Endangered Species Act.</p> <p>The Updated Draft EIAR requires consideration and review of all recommendations throughout the corridor during future phases of work. This approach is necessary and standard practice for planning projects in that design is an iterative approach and this project is only completing design to a preliminary level. During future phases of work, additional design will be completed and may include refinements to the design as details are developed with greater accuracy. Limiting the future design phases by making certain elements of the project non-discretionary at the Preliminary Design stage limits the potential for future work to explore opportunities for further reducing impacts and / or increasing mitigation and offsetting measures.</p> <p>For Blanding's Turtle specifically, candidate habitat associated with the Holland River and Holland River East Branch open water and wetland communities has been identified within the Study Area. Blanding's Turtle may be impacted while moving in between habitats if these species enter the construction work area.</p> <p>As part of this phase of the project, preliminary mitigation and avoidance measures for the potential impacts to turtles are included in the Draft EIAR and include:</p> <ul style="list-style-type: none"> If stockpiles of gravel and sandy substrates or the removal of these substrates in the vicinity of turtle habitat are required during the active turtle season (April 1 to October 15), turtle exclusion fencing should be installed in accordance with the Reptile and Amphibian Exclusion Fencing Best Management Practices (Ministry of the Environment, Conservation and Parks, 2020) around stockpiles or area of disturbance prior to April 1. Fencing should be installed immediately after stockpiles are created if after April 1. It is recommended that culverts be designed to provide openness ratios that would allow for the passage of small mammal and/or herpetofauna where possible. An openness ratio of 0.4 would permit usage by medium-sized mammals, while the minimum openness ratio to be considered

						<p>should be 0.25, which would permit usage by reptiles such as turtles (Credit Valley Conservation, 2017).</p> <ul style="list-style-type: none"> Avoid work within areas of candidate turtle overwintering habitat during the turtle overwintering period (October 31 to April 1), whenever possible. <p>These proposed mitigation measures will be further refined as the project proceeds to Detail Design and impacts are assessed in more detail.</p> <p>For further information on potential impacts to Species at Risk and proposed mitigation and avoidance measures, please refer to Section 5.1.1 of the Draft Environmental Impact Assessment Report.</p> <p>3. Destruction and damage to a significant Indigenous site, the Lower Landing. The report outlines how a portion of this site will be impacted by construction. Georgina Island has been on record since 1998 that they want this site completely protected. This site is more significant than 95% of existing Canadian heritage sites; therefore, this site must be protected in its entirety and First Nations must be properly engaged as per the United Nations Declaration on the Rights of Indigenous People.</p> <p>Field investigations for Stage 2 and Stage 3 works have been completed and additional details have been provided in the Updated Draft Environmental Impact Assessment Report.</p> <p>The required Stage 4 Archaeological Assessment of BaGv-42 will be completed during future phases of work for the project and will be carried out in accordance with the Ministry of Citizenship and Multiculturalism Standards and Guidelines for Consultant Archaeologists (Ontario Government 2011). No ground disturbing activities will occur at this site until the Stage 4 assessment has been conducted.</p>

						<p>As recommended by the cultural heritage resource assessment undertaken by the Project Team, the Holland River watershed was identified as a Cultural Heritage Landscape requiring further research and evaluation to determine if it possesses cultural heritage value or interest. This further assessment will be completed in a Cultural Heritage Evaluation Report (CHER), and if the CHER determines that the Holland River Watershed meets the criteria in Ontario Regulation 9/06 or Ontario Regulation 10/06 of the Ontario Heritage Act, and may be adversely impacted by the Updated Technically Preferred Route, a Heritage Impact Assessment will be prepared to fully assess impacts on the resource's identified heritage attributes and propose alternatives and mitigation to conserve the property's Cultural Heritage Value or Interest. These commitments are included in Section 5.3.2 of the Updated Draft EIAR.</p> <p>Consultation is an integral component of the Preliminary Design stage, the project-specific assessment of environmental impacts process, and for future project phases, and is critical to a project's success. The ministry is actively consulting and engaging with Indigenous communities throughout the Bradford Bypass Project.</p> <p>Comments from Indigenous communities are accepted at any time in the study process.</p> <p>4. Impacts to Lake Simcoe which have not been studied at all despite its headwaters in the Holland Marsh Wetland complex will be the receiver of pollutants and salt thanks to the Bypass.</p> <p>As the project falls within the jurisdiction of the Lake Simcoe Region Conservation Authority (LSRCA), pertaining to Ontario Regulation 179/06, the ministry has assessed impacts with respect to the <i>Lake Simcoe Protection Act</i> and the Lake Simcoe Protection Plan through consideration of water quality and quantity, stormwater management, groundwater management, landscaping and ecological restoration measures; as well as fluvial geomorphological designs for watercourses, erosion and sediment control and spills prevention and protection measures.</p>

						<p>Appropriate mitigation measures to prevent salt and treated sand from entering watercourses and salt-sensitive areas will be proposed based on various factors including the use of MTO's Salt Management Plan and the Ministry of Environment, Conservation and Parks (MECP) Guidelines on Snow Disposal and De-icing Operations in Ontario. The MTO Salt Management Plan outlines salt management operational practices and strategies and Best Management Practices (BMP) in terms of equipment, best practices, materials, storage, testing, storm response, application rules, snow and ice control trainings, snow removal and disposal, and technology review. This includes implementing a balanced approach to the highway salt application based on the amount of snow precipitation and highway conditions.</p> <p>In areas that are particularly sensitive, salt management measures may be necessary to mitigate environmental effects of road salt in accordance with the study objectives utilizing the Code of Practice for Environmental Management of Road Salts released by Environment Canada. The Code of Practice for Environmental Management of Road Salts can be viewed here: https://www.canada.ca/en/environment-climate-change/services/pollutants/road-salts/code-practice-environmental-management.html.</p> <p>In addition, snow removal and disposal will be utilized in accordance with the MECP Guidelines on Snow Disposal and De-icing Operations in Ontario. Further details on MECP's Guidelines on Snow Disposal and De-icing Operations in Ontario can be found here: https://www.ontario.ca/page/guidelines-snow-disposal-and-de-icing-operations-ontario#:~:text=Ministry%20Approval,If%20special%20circumstances&text=As%20a%20general%20rule%2C%20the,be%20approved%20for%20direct%20disposal.</p> <p>5. Impacts to people's health particularly around air pollution and the contamination of wells and groundwater. Considering that traffic related air pollution is well known to be a contributor to many diseases including cancers, heart disease and respiratory</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIAR Edits Required? (Yes/No? If yes, specify edit)
						<p>disease, a cumulative health impact study is required.</p> <p>The human health scoping implications of the project such as air quality, noise, land use, traffic congestion and safety, economic, social cohesion, and neighborhood resources have been summarized in Section 2.2.7 and Section 5.2.7 of the Updated Draft EIAR. To better understand the human health implications due to the Project as a next step, it is recommended for MTO to continue to consider the human health factors identified in this report and provide recommendations to enhance potential positive impacts and mitigate potential negative health impacts. Specifically, conducting a Screening-Level Human Health Risk Assessment of potential air quality impacts is recommended in order to evaluate and characterize Project-related air quality impacts to health.</p> <p>The project has undertaken an Air Quality Impact Assessment to explore pollutant emissions and dispersion modelling in an effort to predict the contribution of the project to future ambient pollutant concentrations. This contribution, added to background concentration levels, allows prediction of the cumulative impact of the proposed project and all other contributors to air pollution. Concentration levels are compared to provincial and federal ambient air quality criteria and standards to assist in the evaluation of project-specific mitigation needs and options.</p> <p>Areas of concentrated emission impact are influenced by traffic volumes along a given segment of roadway. The implementation of the Bradford Bypass is expected to redistribute traffic from local roads surrounding the proposed Bradford Bypass to the new corridor and greater freeway network. Reductions in traffic volumes are observed on corridors including Highway 11/1 (Bridge Street), Bathurst Street, Holland Landing Road, Yonge Street, Queensville Sideroad, Doane Road, Mount Albert Road, Green Lane, and Simcoe County Road 88/Holland Street, among other roads. The alleviation of traffic on local roads benefits the area including but not limited to Town of Bradford West Gwillimbury, community of Holland Landing, Town of East Gwillimbury, and northern King Township by alleviating congestion during peak hours.</p>

						<p>Recognizing the potential impacts to groundwater and private wells in the Study Area, the Project Team has completed and initial assessment of the groundwater and surficial soils within the Study Area and documented the findings in a Hydrogeological Data Report. In addition, a Water Well Survey was completed and included a review of available secondary should information as well as data from stakeholders in the Study Area regarding their existing water wells.</p> <p>Additional well surveys and a detailed assessment of potential groundwater interference will be completed during future phases of the project. A Construction Dewatering Plan will also be prepared to identify potential impacts to groundwater and measures to be implemented to avoid or mitigate the impacts. In addition, all groundwater taking must adhere to the municipal, regional, provincial and federal policies and any permits or approvals required for the Project will be obtained prior to construction.</p> <p>Impacts to groundwater and proposed mitigation measures and monitoring activities are also summarized in the Updated Draft EIAR (Section 5.1.4).</p> <p>6. Increase in greenhouse gas emissions without a cumulative impact assessment on regional climate.</p> <p>The Project Team has undertaken a Qualitative Climate Change Assessment to assess potential impacts and suggest mitigation options for consideration. The assessment was completed accordance with MECP's Climate Change Guide (Considering Climate Change in the Environmental Assessment Process, 2017), and considers the project's resilience or vulnerability of the undertaking to changing climatic conditions. Findings are summarized in Section 5.2.6 of the Draft EIAR.</p> <p>7. Extend the consultation time past 30 days and give at least 120 days for the public, affected municipalities, Indigenous communities and Indigenous governments time to understand and respond to this lengthy report</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIAR Edits Required? (Yes/No? If yes, specify edit)
						<p>The process of planning the Bradford Bypass has included -- and will continue to include -- consultation with the public and Indigenous communities to ensure the project move forward in an environmentally responsible way that is responsive to the needs and concerns of communities.</p> <p>In accordance with Ontario Regulation 697/21, an initial Draft EIAR -- which documents the results of the studies undertaken for various environmental disciplines, proposed mitigation measures and environmental commitments to protect the environment -- was published for public review from starting on June 1 and continuing until June 30, 2023. In addition, the Ministry has been providing Indigenous communities and stakeholders various opportunities for meaningful consultation since the project was re-initiated in September 2020 including two Public Information Centres.</p> <p>Additional archaeological investigations, which are necessary to complete the impact assessment in accordance with the regulation, have recently been finalized and incorporated into an updated Draft EIAR. This updated report was posted for an additional 30-day consultation period. The Updated Draft EIAR posting includes the information from the initial draft to ensure stakeholders can review additional information in full context of the project.</p> <p>The Updated EIAR was made available on the Project website for an additional 30-day consultation period, from July 13, 2023 until August 14, 2023. The updated draft EIAR posting includes the information from the initial draft to ensure stakeholders can review additional information in full context of the project. As the initial Draft EIAR and the Updated Draft were available for public review for a total of 60 days, an extension of the public review period is not being considered at this time.</p> <p>8. Mandate a cumulative health impact assessment that will outline specifically the public health costs of this highway due to air pollution, groundwater contamination and</p>

						<p>with Williams Treaties First Nations and MECP have been documented in the Fish and Fish Habitat Report and Section 2.1.2 of the Updated Draft EIAR.</p> <p>No records of aquatic Species at Risk that are afforded protection under the Species at Risk Act or Endangered Species Act are known to occur in the watercourses where culverts are anticipated to be installed. AECOM ecologists conducted a detailed fish and fish habitat assessment of the water features in the vicinity of the Study Area between September 14-18, 2020, with spring field investigations occurring over multiple days in June 2021. Field investigations were also completed in the spring of 2022 due to changes to the Study Area boundary that required further review for potential fish habitat. Based on these investigations, no Species at Risk were discovered in the Study Area. Regardless, the presence or absence of all aquatic Species at Risk will be re-confirmed in subsequent design phases through additional field investigations.</p> <p>11. Commitment to protect the Lower Landing in its entirety from any site alteration</p> <p>In accordance with the Ministry's cultural heritage conservation process and the Ministry's obligations under the Standards and Guidelines for Conservation of Provincial Heritage Properties, 2010 (S&Gs) issued under section 25.2 of the Ontario Heritage Act (OHA) the Ministry has completed a Cultural Heritage Resource Assessment Report (CHRAR) to identify known and potential built heritage resources and cultural heritage landscapes within the Study Area, assess potential impacts and project alternatives and recommend mitigations and next steps. The cultural heritage resource assessment has informed the analysis of environmental conditions undertaken for this project and recorded in the Environmental Conditions Report and the Environmental Impact Assessment Report.</p> <p>The assessment has identified the Holland River watershed as having potential cultural heritage value or interest (CHVI). As recommended in the Environmental Impact Assessment Report (EIAR) and the CHRAR, a cultural heritage evaluation is being undertaken to determine CHVI for the property. This includes research</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIAR Edits Required? (Yes/No? If yes, specify edit)
						<p>and evaluation to determine if the property meets criteria in Ontario Regulation 9/06 and/or Ontario Regulation 10/06 of the Ontario Heritage Act to be considered a Provincial Heritage Property or a Provincial Heritage Property of Provincial Significance. Research includes, but is not limited to, review of heritage property databases, field review, archives, museums, planning offices and other facilities, archaeological reports, other relevant reports or studies, information from community engagement including input from Indigenous communities, oral histories etc. to provide the historic context of the property including the history of Indigenous communities and post-contact communities.</p> <p>For properties, including the Holland River Watershed, that are determined by the Ministry to meet the criteria in O. Reg. 9/06 or O. Reg. 10/06 of the Ontario Heritage Act and that may be adversely impacted by the Updated Technically Preferred Route, a Heritage Impact Assessment (HIA) will be prepared to fully assess impacts and propose alternatives and mitigation to conserve the property's CHVI. In accordance with F.5 of the S&Gs, and as committed in Section 5.3.2.2 of the EIAR, if the Ministry determines that a property, including the Holland River Watershed, is a provincial heritage property of provincial significance, the Ministry must obtain the consent of the Minister of Citizenship and Multiculturalism before removing or demolishing buildings or structures on the property, or before transferring the property from provincial control. The Minister of Citizenship and Multiculturalism may not grant consent or may grant consent, with or without conditions, where the Minister is of the opinion that all alternatives to the removal, demolition or the transfer of the property have been considered by the Ministry, including alternatives that would not adversely affect the property, and the best alternative in all the circumstances has been adopted. The Minister, as a condition of consent, may require that such reasonable steps as the Minister may specify be taken to minimize or mitigate adverse effects on the property resulting from the removal, demolition or the transfer of the property.</p> <p>12. Detailed study about the impacts this highway will have on Lake Simcoe in</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIAR Edits Required? (Yes/No? If yes, specify edit)
						<p>particular how it could impact the fisheries as well as the harvesting rights of Indigenous people and their water quality.</p> <p>The Ministry has been and will continue to consult with Indigenous communities regarding potential impacts to their Aboriginal and Treaty Rights.</p> <p>The project has been assessed in accordance with the Interim Environmental Guide for Fisheries and the Protocol for Protecting Fish and Fish Habitat on Provincial Transportation Undertakings. Following the completion of the impact assessment, it was determined that many of the potential negative effects of the proposed works could be avoided or mitigated at many locations. However, due to the number and size of some of the required new crossings it is anticipated that not all negative effects could be avoided or mitigated entirely. At this time, it is assumed that a Request for Review will need to be submitted to Fisheries and Oceans Canada during Detail Design/ prior to construction.</p> <p>For more information on impacts to Lake Simcoe, please refer to the response to Question 4.</p> <p>If you have any other questions, please feel free to reach out to the Project Team at your earliest convenience. You can reach the Project Team via email at projectteam@bradfordbypass.ca, toll free at 1-877-247-6036, or by visiting the Project Website at www.bradfordbypass.ca.</p> <p>Sincerely,</p> <p>The Bradford Bypass Project Team Email: projectteam@bradfordbypass.ca Toll-Free: 1 (877) 247-6036</p>

CT-DraftEIAR-51	To: Project Team From: [REDACTED]	Email: [REDACTED]	Holland River	June 26, 2023	<p>Hi, did the routing of the highway change near the East arm of the Holland River?</p> <p>It now seems very close to the best landing and takeoff area for floatplanes and I wanted to make sure that you know this, and I was hoping to know the minimum obstacle clearance altitude of the highway when I perform a westbound takeoff adjacent to the golf course and then turn follow the river northbound over the highway. Will there also be power lines or light posts?</p> <p>This is the safest area to land/takeoff floatplanes due to the length/width of the takeoff area, depth of water, less boat traffic since it is before the marinas, direction of takeoff/landing run aligned with most common wind direction, and noise abatement since there are no houses on the river there or under the current approach/departure paths. It would be a significant loss of safety and noise abatement if approaches and departures to this area became obstructed so that aircraft cannot approach/ depart this landing area as safely as they currently can.</p> <p>Regards, [REDACTED]</p>	Response Draft in CT-DraftEIAR-51 Cont. below.

CT-DraftyEIA R-51 Cont.	To: Project Team From: [REDACTED]	Email: [REDACTED] [REDACTED]	2 nd Concession	June 26, 2023	<p>What happened to the Full Interchange at 2nd Concession that was on previous maps but is now omitted from the current map on your webpage?</p> <p>If you don't put one there you are going to cause a traffic nightmare with an abundance of vehicles going west from Holland Landing and new subdivisions to the Bathurst interchange which crosses a single lane bridge, you may have to put in multiple traffic lights on Queensville and possibly cause the need to twin the bridge which is extremely long to prevent flooding.</p> <p>Have you studied the affect not having an interchange at 2nd Concession will have for local traffic on Queensville sideroad?</p> <p>Regards, [REDACTED]</p>	<i>Response Draft in CT-DraftEIA R-51 Cont. below.</i>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIAR Edits Required? (Yes/No? If yes, specify edit)
CT-DraftEIAR-51 Cont.	To: Project Team From: [REDACTED]	Email: [REDACTED]	2 nd Concession	June 26, 2023	<p>My apologies about the last email, I was looking at the East Gwillimbury map that omits the interchange, but your website still has it, I am right to assume the 2nd concession interchange is 100% confirmed?</p> <p>Thanks, [REDACTED]</p>	<p>Hello [REDACTED]</p> <p>Thank you for your interest in the Bradford Bypass Preliminary Design Study and project-specific assessment of environmental impacts, undertaken in accordance with Ontario Regulation 697/21.</p> <p>Please see below the responses to your questions from June 26, 2023.</p> <p>Design refinements for the highway alignment and river crossing for the Holland River East Branch involved consideration for the commitments and recommendations from the 2002 Approved Environmental Assessment. This included environmental conditions related to scour and erosion, in-water impacts to fisheries, considerations for navigation, economic and community considerations, and cultural environment impacts for archaeological resources, and considerations to minimize impacts to both Albert's Marina and Silver Lakes Golf Club.</p> <p>Based on the evaluation, it was recommended that Alternative 2 be carried forward as the preferred alignment design at this location. Alternative 2 will realign the highway by approximately 150 metres to the south, which avoids the identified Riverbend archaeological site (BaGv-42). The anticipated impact to the meandering river is less than other alternatives for both temporary and permanent impacts from the construction and placement of bridge piers. Alternative 2 has substantially less permanent in-water footprint impacts relative to the 2002 Approved Environmental Assessment Design (Base Case). Furthermore, commitments from the 2002 Approved Environmental Assessment to mitigate impacts to adjacent properties are met.</p> <p>.</p> <p>For more information about the Holland River East Branch alignment, please refer to section 3.1.2 of the Updated Draft EIAR.</p>	No

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIAR Edits Required? (Yes/No? If yes, specify edit)
						<p>Light poles on Bradford Bypass structures will be designed to Ministry standards using convention luminaires from the Ministry Designated Sources of Materials list. There is no proposed illumination on the Holland River structures.</p> <p>The interchange at 2nd Concession Road is currently part of the Updated Technically Preferred Route for the Bradford Bypass.</p> <p>The Project Team appreciates the information you have noted regarding your floatplane and view of the recommended alignment and structures at the Holland River and Holland River East Branch. The Ministry recognizes that there are upstream limits to navigation at Bridge Street/Yonge Street (Holland River) and Queensville Sideroad West (Holland River East Branch) that may limit further upstream access for boat vessel types.</p> <p>The Project Team has designed bridges over the Holland River and Holland River East Branch, which are listed as Scheduled Waters, in compliance with the <i>Canadian Navigable Waters Act</i> (CNWA). Per the Act, the Project Team is actively engaging with Transport Canada and is providing an opportunity for the public to provide input into the design of the bridges.</p> <p>The minimum vertical and horizontal bridge clearances of the main span of the bridges under the Holland River and Holland River East Branch have been determined.</p> <p>The preliminary 8.0 m (~26') vertical (from High Water Level) and 25.0 m (~82') horizontal bridge clearance over the Holland River and Holland River East Branch was determined as a reasonable improvement to the acceptable 6.86 m (22.5') vertical clearance above water level 219.1 m (718.83') Geological Survey of Canada (GSC) and 19.8 m (65') horizontal clearance provided by the Canadian Coast Guard in the 1997 EA (letter dated April 7, 1995).</p> <p>The preliminary 8.0 m vertical clearance exceeds the required Trent-Severn Canal minimum overhead fixed bridge clearance of 6.1 m (20') per Parks Canada's navigational data. Furthermore, the 8.0 m vertical clearance exceeds the minimum bridge clearances of</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIAR Edits Required? (Yes/No? If yes, specify edit)
						<p>the Atherley Narrows Bridge (7.0 m, 22.8') and Muskoka Road Bridge (6.7 m, 22.0') on the north side of Lake Simcoe, and the CNR Bridge (6.9 m, 22.7') and Gamebridge Bridge (6.7 m, 22.0') on the east side of Lake Simcoe which provide access to the Trent-Severn Canal on either side of Lake Simcoe. The 8.0 m preliminary vertical clearance also exceeds the minimum bridge clearance under the J.D. MacDonald Bridge (7.8 m, 25.6') and Highway 401 Bridge (7.5 m, 24.5') providing access to the Trent-Severn Canal at Lake Ontario.</p> <p>Similarly, the preliminary 8.0 m vertical clearance exceeds the required Rideau Canal minimum overhead fixed bridge clearance of 6.7 m (22'). Furthermore, the 8.0 m vertical clearance exceeds the minimum bridge clearances of the first fixed bridge in Ottawa (7.9 m, 25.6') providing access to the Rideau Canal at the Ottawa River, and at Highway 401 bridge (6.7 m , 22.0') providing access to Rideau Canal in Kingston.</p> <p>Design of the bridges will be further refined during future phases of the work for Project and permanent navigational aids and signage will be developed. Before the bridges can be constructed, approval from Transport Canada will be required and construction conditions are expected to include notification to users of the waterways and installation of temporary navigational aids and signage to protect the public on the waterway.</p> <p>If you have any other questions, please feel free to reach out to the Project Team at your earliest convenience. CT_Draft EIAR-52 Cont.	To: Project Team From: [REDACTED]	Email: <lbowman@ecojjustice.ca>	Air Dispersion Modelling	June 26, 2023	<p>Hello,</p> <p>This report does not make any sense. It indicates that MOVES 3.0 "default" VMT (vehicle type) data was used to run the calculations. MOVES 3.0 requires VMT data to be input into the model, there is no "default" vehicle inventory data. For example the EPA explains how the model works as follows:</p> <p>As stated in Section 2.2, EPA believes VMT inputs have the greatest impact on the results of a state or local GHG or energy consumption analysis. Regardless of calculation type, MOVES requires VMT as an input. MOVES estimates emissions based on travel activity multiplied by emission factors. MOVES will multiply the VMT from each vehicle source type, on each road type, by the corresponding emission factors to generate an emissions inventory.36 MPOs or state DOTs may have VMT estimates that can be used in MOVES. If VMT data are not available locally, other sources of VMT and vehicle population data are available. For a historical year, one source of VMT data is the Federal Highway Administration's Highway Performance Monitoring System (HPMS).37 For a future year, travel activity information for a GHG analysis can be estimated using a variety of methods. Future VMT can be estimated by applying a growth rate to historical VMT, or with a commercially available sketch planning tool, or a traditional four-step travel demand model. For example, in EPA's Travel Efficiency Assessment</p>	<p>Hello [REDACTED]</p> <p>Thank you for your interest in the Bradford Bypass Preliminary Design Study and project-specific assessment of environmental impacts, undertaken in accordance with Ontario Regulation 697/21.</p> <p>Please see below the responses to your questions from June 26, 2023.</p> <p>The Updated Draft Environmental Impact Assessment Report has been posted for an additional 30-day consultation period. The Updated Draft EIAR posting includes the information from the initial draft to ensure stakeholders can review additional information in full context of the project.</p> <p>The Updated Draft Environmental Impact Assessment Report is available for review on the Project Website (https://www.bradfordbypass.ca/study-process/) until August 14, 2023.</p> <p>The Project Team conducted MOVES modelling to determine an emission factor of mass of each contaminant per vehicle mile travelled (VMT) using a variety of vehicle types with an assumed percentage distribution of each vehicle type which would be expected on the roads represented within the study area. Table 4-1 in the Air Quality Report shows the MOVES input data used to model mass of contaminant per VMT emission factors for each road type in the Study Area. Appendix B shows the emission rates given to each contaminant based on the MOVES output data which was also provided and can be found in Appendix C. VMT data was determined outside of MOVES using a combination of Annual Average Daily Traffic (AADT) values and associated road lengths which was then applied to the MOVES emission factors. Appendix E of the report shows the AADT volumes used for each road link.</p> <p>If you have any other questions, please feel free to reach out to the Project Team at your earliest convenience. You can reach the Project Team via email at projectteam@bradfordbypass.ca, toll free at 1-877-</p>	No

CT-DraftEIAR-54	To: Project Team From: [REDACTED]	Email: JIM HUNTER [REDACTED]		June 26, 2023	<p>Hi Project Team,</p> <p>Extending and widening GREEN LANE to SIX LANES to Highway 400 including service roads , bridges and traffic circles is economically a much better idea that will cost less and does not use up any farm land, wetland or have any major river crossings. It will better serve and reduce the local and provincial traffic. People from Oak Ridges, Aurora, Newmarket , Whitchurch, King Township and East Gwillimbury are not going to drive to the planned Bradford Bypass as it is not close to the centre of population.</p> <p>Where are the results of the Origin Destination Survey that was requested?</p> <p>Where is the Study covering Local Network Improvements?</p> <p>Where is the Study covering Sources of Upstream Pollution in the Holland Marsh?</p> <p>Where are the Summary of Changes to local planning that have been made since the Bradford Bypass was originally planned such as property released for development owned by the Rice Group?</p> <p>Yours very truly, [REDACTED]</p> <p>Sent from my iPad</p>	<p>Hello [REDACTED]</p> <p>Thank you for your interest in the Bradford Bypass Preliminary Design Study and project-specific assessment of environmental impacts, undertaken in accordance with Ontario Regulation 697/21.</p> <p>The Project Team completed an update to the description of environmental conditions previously documented in the 2002 Approved Environmental Assessment (EA) for the project. This update included a review and assessment of the existing traffic conditions which was documented in the Environmental Conditions Report (ECR). The ECR was finalized in October 2022 following a public review period, and is available on the Project website. For more information on the Environmental Conditions of the Study Area, please refer to Section 2 of the Updated Draft Environmental Impact Assessment Report (EIAR)</p> <p>As detailed in the Draft EIAR (Section 2.4.1), an Aimsun model was created to assess the existing traffic conditions for the road network in the Study Area. The model study area encompasses the Highway 400 corridor from south of Simcoe County Road 88 to north of Highway 89, as well as the Highway 404 corridor from south of Green Lane East to its terminal at Woodbine Avenue (Table 4-3 and 4-4 of the Draft EIAR).</p> <p>The model for this area was developed using pre-pandemic traffic volumes to identify peak hour volumes within the Study Area. This model has been calibrated and validated as it closely resembled actual operating conditions.</p> <p>As detailed in Section 4.4 of the Draft EIAR, traffic is assessed through modelling to identify Level Of Service (LOS). Having confirmed the model was consistent with current (base) conditions, and therefore appropriate to assess future conditions and design alternatives, the model was used to assess LOS under future 2031 and 2041 conditions. To assess future conditions, the model was updated to include all local road network and transit improvements planned within the Study Area</p>	No

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIA Edits Required? (Yes/No? If yes, specify edit)
						<p>and forecast traffic volumes based on the projected growth within the Study Area. For more information on updates to local road networks, refer to section 1.5.4 of the Draft EIA.</p> <p>Modeling results demonstrated that under the No Build (no Bradford Bypass) scenario, local roads were forecast to exceed capacity by 2031 but saw significant relief under the Build (with Bradford Bypass) scenario. Alternatives for the Bradford Bypass were then compared within the model by running different, including the 2002 Approved EA alignment and interchange locations and an updated preferred interchange location alternative developed by the Project Team.</p> <p>The alternative Build scenarios showed the mainline operations on the Bradford Bypass in 2031 would operate at LOS D. By implementing another general purpose lane and an HOV lane in each direction by 2041, LOS on the mainline improves to LOS B or C and accommodates the additional traffic forecast by 2041.</p> <p>On average, between the various origin-destination pairs modeled in the peak periods, drivers are expected to save up to 73% or 33 minutes of travel time connecting between Highway 400 and Highway 404 compared to existing local routes.</p> <p>The Holland Marsh Wetland Complex extends beyond the Bradford Bypass corridors and consists of over 3,000 hectares (ha) of designated wetland area. Currently the Bradford Bypass corridor will cross approximately 12.73 ha which accounts for only 4 percent of the entire Provincially Significant Wetland (PSW) area. The crossing locations were chosen because they are consistent with the Ministry's effort to minimize impacts to this sensitive wetland and are among the narrowest portions of Holland Marsh. A portion of the crossing will be accommodated on an elevated structure in order to provide marine navigation clearance over the Holland River and Holland River East Branch below.</p> <p>The Project Team will continue to carefully consider all impacts to wetland areas and will continue to work with</p>

CT-DraftEIAR-55	To: Project Team From: [REDACTED]	Email: [REDACTED]	Draft EIAR Comments	June 26, 2023	<p>June 26, 2023 Submitted by email to ProjectTeam@BradfordBypass.ca</p> <p>Dear Sirs,</p> <p>We have many concerns with this project, the process it is following, and this report is no different. Please answer our questions below.</p> <ol style="list-style-type: none"> 1. Timing and consultation are inadequate. You have provided an un-editable PDF and 30 days for a 576 page report. This follows the pattern of terrible public information and consultation. Will you extend the consultation period? 2. Explain how a provincial highway was transformed into a very expensive regional road variant with five interchanges and two 400 series highway connections, paid for by all Ontario taxpayers. This is inconsistent with the MTO's mandate to provide long distance travel solutions. We maintain that there are better and cheaper, faster to implement, regional road and transit solutions that should be pursued, even if the Bypass does get built. 3. We would like to see the traffic studies in their entirety. An environmental assessment used to be grounded in a demonstration of need and justification. The MTO has provided neither as it pertains to this particular project and at this time. There is no evidence that local traffic solutions MTO purports to be solving (actually a local traffic issue and not MTO's mandate) are 	<p>Hello [REDACTED]</p> <p>Thank you for your interest in the Bradford Bypass Preliminary Design Study and project-specific assessment of environmental impacts, undertaken in accordance with Ontario Regulation 697/21.</p> <p>1. Time and consultation are inadequate. You have provided an un-editable PDF and 30 days for a 576 page report. This follows the pattern of terrible public information and consultation. Will you extend the consultation period?</p> <p>The process of planning the Bradford Bypass has included – and will continue to include – consultation with the public and Indigenous communities to ensure the project moves forward in an environmentally responsible way that is responsive to the needs and concerns of communities.</p> <p>In accordance with Ontario Regulation 697/21, an initial Draft Environmental Impact Assessment Report (EIAR) -- which documents the results of the studies undertaken for various environmental disciplines, proposed mitigation measures and environmental commitments to protect the environment -- was published for public review starting on June 1 and continuing until June 30, 2023. In addition, the Ministry has been providing Indigenous communities and stakeholders various opportunities for meaningful consultation since the project was re-initiated in September 2020 including two Public Information Centres.</p> <p>Additional archaeological investigations, which are necessary to complete the impact assessment in accordance with regulations, have recently been finalized and incorporated into an Updated Draft Environmental Impact Assessment Report. This updated report has been posted for an additional 30-day consultation period. The Updated Draft EIAR posting includes the information from the initial draft to ensure stakeholders can review additional information in full context of the project. As the initial Draft EIAR and the Updated Draft were available for public review</p>	No

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIAR Edits Required? (Yes/No? If yes, specify edit)
					<p>best served by this potentially \$4 billion highway.</p> <p>a. Please share the links and the methodology, transparently, so that people can understand what travel time savings MTO is referring to. We have absolutely no idea because your write up is incredibly vague about the start and end of the routes used for analysis. For instance this meaningless babble from pg. 334:</p> <p><small>On average, between the various origin-destination pairs using the Bradford Bypass drivers in the peak direction during the peak period, would save up to 77% or 34 minutes of travel time when connecting between highway 400 and highway 404 compared to existing routes in the No Build scenario.</small></p> <p>b. What year do your studies indicate that the Bypass will be congested at peak rush hour times?</p> <p>4. The Draft Environmental Impact Assessment report shows on pg. 212 the Bypass touching the southern portion of the Lower Landing (AKA BaGv-42), a significant historical and archaeological site at a significant meander on the East Holland River. MTO has moved the highway 150 m to the south of the technically preferred route, which would have completely run over the Lower Landing (pg 148). But the Draft IA states, "the southern portion of the site ... will be impacted by construction" (pg 395). The Draft Environmental Conditions Report indicated that a Stage 3 archaeological assessment "was required" (pg 225); the Draft IA report says that the Stage 3 was completed, and that Stage 4 is required. The Project team's website says, "Currently, additional archaeological investigations are being completed to finalize the impact assessments in accordance with Ontario Regulation 697/21 and are not included in this posting. This information will be available for additional public and Indigenous community review once completed." So the archeological work is not finished. And yet the route has been chosen. Property owners near the</p>	<p>for a total of 60 days, an extension of the public review period is not being considered at this time.</p> <p>The Updated Draft Environmental Impact Assessment Report was available for review on the Project Website (https://www.bradfordbypass.ca/study-process/) until August 14, 2023.</p> <p>2. Explain how a provincial highway was transformed into a very expensive regional road variant with five interchanges and two 400 series highway connections, paid for by all Ontario taxpayers. This is inconsistent with the MTO's mandate to provide long distance travel solutions. We maintain that there are better and cheaper, faster to implement, regional road and transit solutions that should be pursued, even if the Bypass does get built.</p> <p>The project is being assessed with consideration of the Ministry's mandate to provide for the safe, efficient movement of people and goods between regions and urban areas. In addition, the Project Team has consulted with local and regional municipalities, and the traffic analysis for the proposed Bradford Bypass has considered the planned local transportation and transit improvements to be implemented by others.</p> <p>The original route planning study (2002 Approved Environmental Assessment – EA) concluded that additional relief from congestion in this Study Area could only be accommodated through the protection and implementation of a provincial right of way.</p> <p>As part of the 2002 Approved EA, the Bradford Bypass evaluated alternatives from a broad range of potential solutions to address several transportation problems and to address significant opportunities identified in York Region and Simcoe County. The need for this freeway was confirmed as the only reasonable solution that would make a significant contribution towards addressing the problem as the population in York Region and Simcoe County grows. The 2002 Approved EA approved alignment is technically preferred for a freeway in terms of highway network expansion, ease</p>

					<p>history-rich Lower Landing that are receiving expropriation notifications. We are staunchly opposed to this violation of this site particularly absent the stage 4 evaluation of the Lower Landing and the endorsement of the First Nations.</p>  <p><i>Highway is still too close to the Lower Landing. The Lower Landing is in the area of WC-25 in the image above. This clip of a map shows Provincially significant wetlands (orange); unevaluated wetlands (blue); cold water fish habitat (black) and warm (pink); Original / full map available on pg 55 of Draft IA report.</i></p> <p>a. As stewards of these lands and water for time immemorial, additional time should be given to allow First Nation community members to fully digest the lengthy report. Georgina Island First Nation asked that this site be avoided in 1998, 25 years ago, stating, "It is obvious that there are other routes, which can be used to connect these major highways, and we hope that another will be selected." Is Ontario still ignoring this request?</p> <p>b. Have First Nations been consulted about this part of the plan? Please provide written evidence of their approval of this route.</p> <p>5. Species at Risk</p> <p>a. Table 2-2 lays out the 12 species at risk present or very likely to be present. For instance, Blandings Turtles are likely affected as they are likely in the area. The only commitment we see is to do detailed study later on. This is a good</p>	<p>of construction, relationship to provincial and municipal land use planning and the preferred route is already included in Official and Transportation Master Plans, as well as the Places to Grow Act), as well as having fewer negative impacts to residential and natural areas when compared to other route options considered.</p> <p>For more information on the Analysis and Evaluation of alternatives, refer to Section 2.1.6 of the 2002 Approved EA, which can be found in the enclosed link: https://www.bradfordbypass.ca/wp-content/uploads/2020/09/BBP-RoutePlanningEA-1997.pdf</p> <p>Further to the conclusion of the 2002 Approved EA, as part of this Preliminary Design study, a traffic analysis was completed and the result of the review has confirmed the need of the highway. This analysis included the review of existing traffic conditions and modelling of future forecast traffic conditions and it has been confirmed that updates to regional and municipal roads alone will not address the transportation needs within the Study Area.</p> <p>Additionally, a feasibility assessment was conducted evaluating nine interchange location scenarios to determine the best interchange configuration through the Bradford Bypass corridor. The evaluation was conducted in accordance with satisfying the study objective to improve connectivity of the study area between Highway 400 and Highway 404, facilitating the improvement of traffic operations and movement of goods. Consideration included interchange utilization, overall network delay, out of way travel, environmental considerations and constraints, and preliminary costs. It was determined that interchanges at 10th Sideroad, County Road 4, Bathurst Street, 2nd Concession Road, and Leslie Street would be included as part of the Study.</p> <p>3. We would like to see the traffic studies in their entirety. An environmental assessment used to be grounded in a demonstration of need and justification. The MTO has</p>

					<p>example of study following decision or destruction, and is in violation of standard EA practices. There are no commitments to the protection of species at risk in this document.</p> <p>b. There is a requirement for the Minister of the Department of Fisheries and Oceans to consider, when making certain decisions related to the fish and fish habitat protection (and pollution prevention) provisions of the Act, the Indigenous knowledge of the Indigenous peoples of Canada that has been provided to the Minister (34.1(1) (g) of the Fisheries Act); and,</p> <p>c. Requirement to protect the confidentiality of Indigenous knowledge that is provided to the Minister in confidence, except under limited circumstances (subsection 61.2 (1) of the Fisheries Act)."</p> <p>d. The Draft IA report identifies that the Williams Treaties FN reported American Eel https://www.dfo-mpo.gc.ca/species-especes/publications/sara-lep/eel-anquille/index-eng.html and Northern Sunfish in the Holland River. This must be further investigated with new fieldwork. The American Eel is in decline and gets Federal protection. Ontario's Species at Risk legislation doesn't work anymore so it's all up to the Federal enforcement.</p> <p>i. What is Ontario going to do to stand by Canada's obligations to First Nations treaty and consultation rights?</p> <p>j. Will the American Eel's presence be investigated with new fieldwork?</p> <p>6. There are many concerns related to surface water and groundwater.</p> <p>a. Please confirm our understanding that there has been no discussion of, and that there are no studies looking at impacts to Lake Simcoe.</p>	<p>provided neither as it pertains to this particular project and at this time. There is no evidence that local traffic solutions MTO purports to be solving (actually a local traffic issue and not MTO's mandate) are best served by this potentially \$4 billion highway.</p> <p>The Bradford Bypass project has been assessed in accordance with Ontario Regulation 697/21. Consistent with the Regulation, the Project Team completed an update to the description of environmental conditions previously documented in the 2002 Approved Environmental Assessment (EA) for the project. This update included a review and assessment of the existing traffic conditions which was documented in the Environmental Conditions Report (ECR). The ECR was finalized in October 2022 following a public review period, and is available on the Project website.</p> <p>Significant population growth is projected for both Simcoe County and the Regional Municipality of York. Even with all currently planned transportation and transit investments, road congestion will continue to increase across the Greater Golden Horseshoe (GGH) including within the Bradford Bypass Study Area.</p> <p>The purpose of the Bradford Bypass is to relieve congestion on existing local roads between Highway 400 and Highway 404 and provide a northern freeway connection between Highways 400 and 404.</p> <p>Modeling results demonstrated that under the No Build (no Bradford Bypass) scenario, local roads were forecasted to exceed capacity by 2031 but saw significant relief under the Build (with Bradford Bypass) scenario. Alternative alignments for the Bradford Bypass were then compared within the model, including the 2002 Approved EA alignment and interchange locations and an updated preferred interchange location alternative developed by the Project Team.</p> <p>On average, between the various origin-destination pairs using the Bradford Bypass, drivers in the peak direction during the peak period, would save up to 73% or 33 minutes of travel time when connecting between Highway 400 and Highway 404 compared to existing routes in the No Build scenario.</p>

					<p>b. The Groundwater Protection and Well Monitoring plan, which this Draft IA refers to, discusses the need to dewater the site for the building of piles for the elevated bridge sections of the highway. The Draft IA report says, "Construction dewatering activities have been identified as the primary risk to groundwater fed water wells in the Study Area," p 295. There is no credible groundwater protection plan. There are many suggestions for how to keep it clean but there are few to no commitments.</p> <p>c. HOW exactly is the province (MoECP) going to monitor groundwater discharges to ensure they meet Ontario's water quality standards?</p> <p>d. What penalties are contractors going to face for violating the discharge requirements?</p> <p>e. If penalties are not enough to compel adherence, what next?</p> <p>f. How is the public to have confidence that contaminated water will not be discharged to the Holland Rivers and Lake Simcoe?</p> <p>g. Please confirm if monitoring will continue, or not, as this statement is totally vague: "It is expected that each unassessed monitoring well will continue to be monitored and assessed during the subsequent detail design phase of the project" P. 79.</p> <p>h. Explain what kind of environmental impact would make this project stop; or is any impact acceptable?</p> <p>i. Please confirm that the only financial support for affected well owners whose water quality is affected by the construction is the province providing them with a temporary water supply until the well owner fixes their well.</p> <p>j. Does this meager bit of help get extended to those who did not provide baseline information about their well water?</p>	<p>The development of the analysis and key results from the Traffic Study have been summarized in the Draft Environmental Impact Assessment Report and the Updated Draft Environmental Impact Assessment Report (EIAR), which were available for public review and comment from June 1, 2023 to June 30, 2023 and July 14, 2023 to August 14, 2023, respectively. The information in the draft EIAR includes the origin and destination locations that were reviewed to determine the average travel time savings during the AM and PM peak hours. Similar to the process undertaken for MTO preliminary design studies, the Traffic Study will be finalized upon study completion and will be available if requested.</p> <p>a. Please share the links and the methodology, transparently, so that people can understand what travel time savings MTO is referring to. We have absolutely no idea because your write up is incredibly vague about the start and end of the routes used for analysis.</p> <p>b. What year do your studies indicate that the Bypass will be congested at peak rush hour times?</p> <p>As detailed in the Draft EIAR (Section 2.4.1), an Aimsun model was created to assess the existing traffic conditions for the road network in the Study Area. The model study area encompasses the Highway 400 corridor from south of Simcoe County Road 88 to north of Highway 89, as well as the Highway 404 corridor from south of Green Lane East to its terminal at Woodbine Avenue (Table 4-3 and 4-4 of the Draft EIAR).</p> <p>The model for this area was developed using pre-pandemic traffic volumes to identify peak hour volumes within the Study Area. This model has been calibrated and validated as it closely resembled actual operating conditions.</p>

					<p>i. Is there any effort being made to reach more than 12% of respondents to MTO's well water survey?</p> <p>7. How much is this project going to cost?</p> <p>8. When will the Bradford Bypass be completed?</p> <p>9. It is unclear how many lanes are being constructed at which times. Please clarify.</p> <p>10. There is no cumulative health impact assessment to understand how traffic related air pollution, known to increase risks of cancers, leukemia, heart and lung disease, will impact the communities surrounding the route. There is also no mention of the cumulative impacts on our climate from construction and higher rates of car travel on this highway.</p> <p>a. How will you be informing people living along the route about the increased risk of traffic related air pollution and its effects on human health?</p> <p>b. Will you put air quality monitors in Bradford?</p> <p>c. How do you explain the fact that you are NOT monitoring air quality in Bradford, and using the closest site, Newmarket?</p> <p>d. The Final Environmental Conditions Report identified numerous planned residential developments right beside the highway, including a planned new school. Have the land owners / developers / school boards received any information that tells them how bad the air quality is going to be there?</p> <p>11. Traffic modeling to produce the air dispersion model is not robust or transparent. In order to understand</p>	<p>As detailed in Section 4.4 of the Draft EIAR, traffic is assessed through modelling to identify Level Of Service (LOS). Having confirmed the model was consistent with current (base) conditions, and therefore appropriate to assess future conditions and design alternatives, the model was used to assess LOS under future 2031 and 2041 conditions. To assess future conditions, the model was updated to include all road network and transit improvements planned within the Study Area, and, forecast traffic volumes based on the projected growth within the Study Area.</p> <p>The alternative Build scenarios showed the mainline operations on the Bradford Bypass in 2031 would operate at acceptable LOS D in the interim four lane configuration. The model indicates that by expanding to the ultimate 8 lane configuration (implementing another general purpose lane and an HOV lane in each direction by 2041), LOS on the mainline improves to LOS B or C and accommodates the additional traffic forecast by 2041.</p> <p>For further information about the Traffic Study please refer to the response to Question #3 and Section 4.4 of the Updated Draft EIAR.</p> <p>4. The Draft Environmental Impact Assessment report shows on pg. 212 the Bypass touching the southern portion of the Lower Landing (AKA BaGv-42), a significant historical and archaeological site at a significant meander on the East Holland River. MTO has moved the highway 150 m to the south of the technically preferred route, which would have completely run over the Lower Landing (pg 148). But the Draft IA states, "the southern portion of the site ... will be impacted by construction" (pg 395). The Draft Environmental Conditions Report indicated that a Stage 3 archaeological assessment "was required" (pg 225); the Draft IA report says that the Stage 3 was completed, and that Stage 4 is required. The Project team's website says, "Currently, additional archaeological investigations are being completed to finalize the impact assessments in accordance with Ontario</p>

					<p>traffic related air pollution, relevant vehicle types and assumptions need to be used. The air dispersion modeling report simply indicates that MOVES3 default data was used - but the EPA has emphasized the need to include relevant vehicle type inputs into the model.</p> <p>The air modeling report and supporting reports fail to disclose the % of diesel truck traffic, or the component of that traffic that includes trucks dating from 2006 or earlier which comprise a significant component of air pollution load. The air dispersion modeling report states that the vehicle type distributions were based on MOVES3.0 default database inputs even though there are no such inputs. It also says that the 24 hour traffic distribution was assumed to be equal to the AADT distribution. However the consultant appeared to use different AADT distributions for different scenarios without explanation and the distributions differed significantly as between build and no build scenarios. Mitigation in the form of frequent diesel heavy truck vehicle emission inspections should be included as a mitigation measure to ensure that newer vehicle emissions systems are not being tampered with. The air dispersion modeling report indicates that ethanol based fuels were excluded even though this goes against EPA recommendations for using the model. The report lacks transparency about assumptions made about future vehicle fleet characteristics for both passenger vehicles and heavy trucks.</p> <p>The comparison of build with no-build is not valid because the values in Appendix E of the traffic modeling report show that there was an erroneous assumption that there would be significantly less truck traffic in the build scenario compared to</p>	<p><i>Regulation 697/21 and are not included in this posting. This information will be available for additional public and Indigenous community review once completed.</i> So the archeological work is not finished. And yet the route has been chosen. Property owners near the history-rich Lower Landing that are receiving expropriation notifications. We are staunchly opposed to this violation of this site particularly absent the stage 4 evaluation of the Lower Landing and the endorsement of the First Nations.</p> <ol style="list-style-type: none"> As stewards of these lands and water for time immemorial, additional time should be given to allow First Nation community members to fully digest the lengthy report. Georgina Island First Nation asked that this site be avoided in 1998, 25 years ago, stating, "It is obvious that there are other routes, which can be used to connect these major highways, and we hope that another will be selected." Is Ontario still ignoring this request. Have First Nations be consulted about this part of the plan? Please provide written evidence of their approval of this route. <p>Field investigations for Stage 2 and Stage 3 works have been completed and additional details are included in the Updated Draft Environmental Impact Assessment Report available on the Project Website (https://www.bradfordbypass.ca/study-process/) for public review until August 14, 2023.</p> <p>The required Stage 4 Archaeological Assessment of BaGv-42 will be completed during future phases of work for the project and will be carried out in accordance with the Ministry of Citizenship and Multiculturalism Standards and Guidelines for Consultant Archaeologists (Ontario Government 2011). No ground disturbing activities will occur at this site until the Stage 4 assessment has been conducted.</p>

					<p>the no-build scenario. There is no valid scientifically-based justification for this. Further, if there is an increase in truck traffic along 404 - as the model predicts - then sensitive receptors along highway 404 need to be included in a health impact study. Instead, impacts on traffic along the 400/404 corridors were excluded and the "air quality study area" was restricted to the bypass corridor itself without any explanation or justification.</p> <p>It is egregious that MTO did not conduct locally relevant air quality monitoring for background in Bradford, River Drive Park, Queensville and along the 404/400 corridors for traffic related air pollutants. Such baseline monitoring is generally inexpensive and could have been easily obtained. Using existing monitors in Innisfil, Newmarket and other distant and irrelevant locations is not justifiable. For the air dispersion modeling, MTO appears to be relying on these distant locations (eg. Egbert) for preparation of the wind rose as well, even though meteorological conditions in the study area may be markedly different. MTO also did not identify numerous recreational and daycare facilities adjacent to the Bradford Bypass corridor which were identified by Simcoe County Greenbelt. The study did not include the cumulative effects of future planned industrial uses along the Bypass corridor and along the 400/404 corridor which may significantly impact people's health along the route. The evaluation did not use 2022 World Health Organization criteria for contaminants which are much lower and more up-to-date than the CAAQS or the AAQCs. We disagree that the AAQCs and CAAQS represent the "lowest concentrations at which an adverse effect may be experienced" as they are</p>	<p>In accordance with Ontario Regulation 697/21, the Project Team completed site specific Stage 3 archaeological assessments for areas within the Study Area that were identified as having archaeological potential in accordance with the Stage 2 archaeological assessments.</p> <p>It is common practice for Stage 4 archaeology work to be completed during Detail Design. Limiting the impact to Stage 4 archaeological sites where feasible is one of the Project Team's main priorities. As a result, the Project Team will determine the exact impact limits to archaeological sites during subsequent design phases of the project. To avoid unnecessary excavation, the Project Team will then undertake the Stage 4 archaeological assessments. Any Stage 4 field work that will be undertaken must engage interested Indigenous communities.</p> <p>As recommended by the cultural heritage resource assessment undertaken by the Project Team, the Holland River watershed was identified as a Cultural Heritage Landscape requiring further research and evaluation to determine if it possesses cultural heritage value or interest. This further assessment will be completed in a Cultural Heritage Evaluation Report (CHER), and if the CHER determines that the Holland River Watershed meets the criteria in Ontario Regulation 9/06 or Ontario Regulation 10/06 of the Ontario Heritage Act, and may be adversely impacted by the Updated Technically Preferred Route, a Heritage Impact Assessment will be prepared to fully assess impacts on the resource's identified heritage attributes and propose alternatives and mitigation to conserve the property's Cultural Heritage Value or Interest. These commitments are included in Section 5.3.2 of the Updated Draft EIAR.</p> <p>Consultation is an integral component of the Preliminary Design stage, the project-specific assessment of environmental impacts process, and for future project phases, and is critical to a project's success. The ministry is actively consulting and engaging with Indigenous communities throughout the Bradford Bypass Project.</p>

					<p>not based on up-to-date understandings of the health impacts of air contaminants including pre-term births and neurodevelopmental and other impacts. These are described in the report by the Canadian Association of Physicians for the Environment (April 2022) Mobilizing Evidence report. The report predicts significant exceedances for NO2 and benzo(a)pyrene even with the apparently non-conservative assumptions for diesel truck traffic used in the full build out scenario compared to the no-build scenario. The adverse health impacts of NO2 exceedances may be extremely severe and will impact on the <i>Charter</i> rights and human rights of residents in the study area and beyond without justification for the need for the project.</p> <p>Susan Baues [REDACTED]</p>	<p>The Project Team is engaging with and considers input provided by the following Indigenous communities:</p> <ul style="list-style-type: none"> - Alderville First Nation - Beausoleil First Nation - Chippewas of Georgina Island First Nation - Chippewas of Rama First Nation - Curve Lake First Nation - Hiawatha First Nation - Mississaugas of Scugog Island First Nation - Kawartha Nishnawbe First Nation - Georgian Bay Métis Council, and - Huron-Wendat Nation <p>Comments from Indigenous communities are accepted at any time in the study process.</p> <p>5. Table 2-2 lays out the 12 species present or very likely to be present. For instance, Blandings Turtles are likely affected as they are likely in the area. The only commitment we see is to do a detailed study later on. This is a good example of study following decision or destruction, and is in violation of the standard EA practices. There are no commitments to the protection of species at risk in this document.</p> <p>Targeted surveys for all species at risk with potential to occur in the Study Area will be required during future phases of work. These future studies will inform the need for any permits, authorizations, mitigation or compensation under the Endangered Species Act.</p> <p>The Updated Draft EIAR requires consideration and review of all recommendations throughout the corridor during future phases of work. This approach is necessary and standard practice for planning projects in that design is an iterative approach and this project is only completing design to a preliminary level. During future phases of work, additional design will be completed and may include refinements to the design as details are developed with greater accuracy. Limiting the future design phases by making certain elements of the project non-discretionary at the preliminary design stage limits the potential for future work to explore opportunities for further reducing impacts and / or increasing mitigation and offsetting measures.</p>

						<p>For Blanding's Turtle specifically, candidate habitat associated with the Holland River and Holland River East Branch open water and wetland communities has been identified within the Study Area. Blanding's Turtle may be impacted while moving in between habitats if these species enter the construction work area.</p> <p>As part of this phase of the project, preliminary mitigation and avoidance measures for the potential impacts to turtles are included in the Draft EIA and include:</p> <ul style="list-style-type: none"> • If stockpiles of gravel and sandy substrates or the removal of these substrates in the vicinity of turtle habitat are required during the active turtle season (April 1 to October 15), turtle exclusion fencing should be installed in accordance with the Reptile and Amphibian Exclusion Fencing Best Management Practices (Ministry of the Environment, Conservation and Parks, 2020) around stockpiles or area of disturbance prior to April 1. Fencing should be installed immediately after stockpiles are created if after April 1. • It is recommended that culverts be designed to provide openness ratios that would allow for the passage of small mammal and/or herpetofauna where possible. An openness ratio of 0.4 would permit usage by medium-sized mammals, while the minimum openness ratio to be considered should be 0.25, which would permit usage by reptiles such as turtles (Credit Valley Conservation, 2017). • Avoid work within areas of candidate turtle overwintering habitat during the turtle overwintering period (October 31 to April 1), whenever possible. <p>These preliminary mitigation measures will be further refined as the project proceeds to Detail Design and impacts are assessed in more detail.</p> <p>For further detail on potential impacts to Species at Risk and proposed mitigation and avoidance measures, please refer to Section 5.1.1 of the Draft Environmental Impact Assessment Report.</p>

						<p>Highway 400/404 corridors were included in the Air Quality Impact Assessment. The full air quality study area is shown in Figure 2-9 of the Updated Draft EIAR and demonstrates that the air quality study area included emission sources within the boundary of assessment, including but not limited to Highway 400 (500 m south of Rural Rd. 88 to 500 m north of Concession Rd. 11), Highway 404 (500 m south of Queensville Sideroad E to 500 m north of Boag Road), the entirety of the proposed Bradford Bypass, Bridge Street, Holland Street W, 10th Sideroad, Young Street/Barrie Street, and Queensville Sideroad.</p> <p>Traffic distributions and truck traffic: The same Average Annual Daily Traffic (AADT) were used for all scenarios. AADT values for each air quality emission source vary between the three scenarios evaluated based on projected existing traffic within the study area, and future no-build and build traffic projections however the same 24-hour traffic distribution percentages were applied. Three representative 24-hour distribution percentages were applied to the air quality emission sources. These were applied to a given source of emission depending on the type of road in question, e.g. a "Leslie St." 24-hour distribution was applied to air quality emission sources which were categorized as community arterial roads; a "HWY 400" 24-hour distribution was applied to air quality emission sources categorized as highways; and, a "2nd Concession Rd" 24-hour distribution was applied to rural roads. These same 24-hr distributions were applied to the assigned source for all three scenarios of evaluation (existing conditions, future no-build, and future build). Fuel usage distribution [i.e. diesel, gasoline, CNG, etc.] and vehicle age distribution within each vehicle type category were modelled based on MOVES3.0 default fuel use and age distribution database inputs assigned to the year of evaluation. Heavy truck traffic was included in the modelling with a percentage assigned to each air quality emission source anticipated from this vehicle type.</p> <p>Health Impacts, Critical Receptors and Background/Study Area Monitoring Data:</p>

						<p>The human health scoping implications of the project such as air quality, noise, land use, traffic congestion and safety, economic, social cohesion, and neighborhood resources have been summarized in Section 2.2.7 and Section 5.2.7 of the Updated Draft EIAI.</p> <p>The Project Team is aware some critical receptors have been identified as 'missing' by a number of stakeholders. Having reviewed the data, these 'missing' receptors were included as residences in the Air Quality Impact Assessment. Potential impacts at the 'missing' receptors within the Air Quality Impact Assessment Study Area are reflected in the assessment by other, nearby critical receptors and receptors identified on Figure 2-9 and 2-10 of the Updated Draft EIAI.</p> <p>The approach to identifying representative air quality levels is conservative and often ensures the worst-case conditions are reflected so as to not under-represent conditions within a study area; i.e. background air quality contaminant levels included within the assessment may be representative or higher than expected for the area in question.</p> <p>While it is recognized that localized in-situ monitoring may provide more accurate data, use of existing monitoring stations within the NAPS network for statistically relevant background monitoring data is a generally accepted and conservative methodology for provincial environmental impact air quality assessments. Stations selected for the background air quality assessment were chosen based on total data availability over a most recent five-year period as a minimum of 12 months of daily and hourly data is required to ensure statistical relevance. Stations were also selected based on their proximity to the air quality study area with the meteorological station selected as representative of the air quality study area within 15 km north-west of the air quality study area. Stations must also be a relative representation of similar types of existing sources of air quality emission in the study area and it is notable that the meteorological station selected as representative of air quality in the study area was provided by the MECI in site-specific MET data requested for the project modelling.</p> <p>If you have any other questions, please feel free to reach out to the Project Team at your earliest</p>

CT-DraftEIAR-58	To: Project Team From: [REDACTED]	Email: [REDACTED]	Consultation	June 27, 2023	<p>Dear Minister Davidson,</p> <p>I am contacting you regarding the proposed Bradford Bypass.</p> <p>It has come to my attention that the public has been given 30 days from June 1-30 to comment on the province's 576-page draft environmental impact report. Time is running out very quickly. This is not enough time for people to read, assess and comment on the report. People have not been given enough time to understand how this project could impact them. Many people are just finding out about it through the media today.</p> <p>I would like it to be known that I feel a federal assessment of the potential impacts of and alternatives to the Bradford Bypass should be conducted.</p> <p>There are many problems with the proposed Bradford Bypass which it would seem the Ontario government is ignoring.</p> <p>The preliminary Environmental Assessment predicted severe water quality impacts to groundwater and surface water in the Lake Simcoe watershed, to which there has been no mitigation plan. The Bradford Bypass would cut across some of the best agricultural land in Ontario, destroy sensitive wildlife habitat in Greenbelt lands and harmfully impact one of Ontario's largest remaining wetlands. Indigenous communities have not been properly consulted and their sacred ground concerns are being ignored.</p> <p>There are other alternatives to the Bradford Bypass which have not been given consideration. This Bypass will encourage more traffic rather than less. More vehicles equals more greenhouse gas emissions, and more pollution.</p>	<p><i>Comment noted. No response required as the Project Team was cc'd on this email to Minister Davidson.</i></p>

					<p>The Bradford Bypass, a proposed 16.2km highway, is estimated to cost between \$2 - \$4 billion. Could that money not be better used? Our public health system could definitely benefit from that kind of money or perhaps a better transit system.</p> <p>Please record me as being strongly opposed to the proposed Bradford Bypass. I would request that you extend the 30 day deadline as many people are just finding out about it today from a newspaper article and media coverage.</p> <p>I respectfully request that the Federal government step in and request that more time be given for the public to consider the impacts of this bypass in our province.</p> <p>Thank you.</p> <p>Sincerely,</p> <p></p>

CT-DraftEIAR-60	To: Project Team From: [REDACTED]	Email: [REDACTED]		June 28, 2023	<p>To whom it may concern,</p> <p>I have some concerns about those with residences in close proximity to the bypass.</p> <p>1. What effect does the bypass have on the shallow wells in the area. I attended one of the information meetings put on by those who have unanswered questions about the bypass and this was a concern. I recently had a well company check our water pump and in conversation he said the bypass would most certainly affect the local water level. If a shallow well is contaminated or runs dry as a result of the bypass who pays for the drilling and/or treatment of a the well? What guarantees do well owners have that there will not be negative repercussions from the bypass?</p> <p>2. What are the effects of air pollution from the bypass to those in close proximity? This was also raised as a concern at the public meeting.</p> <p>3. I asked at the last Online PIC to be given the traffic studies that were used to explain the time saving that the premier and Ms Mulronney refer to. I was told those studies were on going, but not given any data. If this is the case, why are time saving being stated when there does not appear to be scientific evidence to validate them. I recall that one of the presenters in the PIC also stated the specific time savings. Did that team member pull the numbers from mid air or are there completed studies to justify them using these numbers? If they exist, May I have a copy of them?</p> <p>4. The PIC presentation was long and had a lot of information for a lay person to absorb in a few hours. It was held in November and I received responses to my questions almost 12 weeks later. Surely a local meeting with questions and answers would better inform the public. It is fine to have the online PIC as a supplement but it is not efficient in educating the public on local issues. Will the project team commit to local in</p>	<p>Hello [REDACTED]</p> <p>Thank you for your interest in the Bradford Bypass Preliminary Design Study and project-specific assessment of environmental impacts, undertaken in accordance with Ontario Regulation 697/21.</p> <p>1. What effect does the bypass have on the shallow wells in the area? If a shallow well is contaminated or runs dry as a result of the bypass who pays for the drilling and/or treatment of a the well? What guarantees do well owners have that there will not be negative repercussions from the bypass?</p> <p>Recognizing the potential impacts to groundwater and private wells in the Study Area, the Project Team has completed an initial assessment of the groundwater and surficial soils within the Study Area and documented the findings in a Hydrogeological Data Report. In addition, a Water Well Survey was completed and included a review of available secondary source information as well as data from stakeholders in the Study Area regarding their existing water wells.</p> <p>Additional well surveys and a detailed assessment of potential groundwater interference will be completed during future phases of the project. A Construction Dewatering Plan will also be prepared to identify potential impacts to groundwater and measures to be implemented to avoid or mitigate the impacts. In addition, all groundwater taking must adhere to the municipal, regional, provincial and federal policies and any permits or approvals required for the Project will be obtained prior to construction.</p> <p>Upon receipt of a well complaint, an investigation will be conducted as per the Ministry of the Environment, Conservation and Parks policies and a qualified expert will undertake and/or oversee the following:</p> <p>1. Collect a water well sample at the complainant's water well, prior to any treatment systems ('raw'), after allowing the distribution system to flow for approximately 5 minutes and submit the</p>	No

					<p>person public meetings? I would hope this process is not just a formality where the team can just check a box off saying we have consulted, when it should be an exercise in making the wider public aware.</p> <p>Thanks for your time. I look forward to a prompt response to the above concerns.</p> <p></p> <p>Sent from my iPad</p>	<p>water sample to a qualified laboratory for an analysis of the general chemistry suite of water quality parameters completed during pre-construction analysis</p> <ol style="list-style-type: none"> 2. Compare the results of the analysis of the water sample to any pre-construction water sampling analysis (if available) for the residential well 3. Investigate and provide a professional opinion regarding the claimed impact to the well or well water; and 4. Provide a detailed written opinion as to whether the water sampling analysis results demonstrate that the construction or dewatering activities may have caused an adverse effect on the well's water supply. <p>If the well issue is confirmed to be a result of the project's activities, MTO will provide a letter to explaining the outcome of the well investigation and detail the recommended mitigation measures (including lowering / replacement of pump inlet, well rehab, new well installed or local watermain connection if available) to remediate the issue. A temporary drinking water supply will be provided and connected to the resident if the project activities are found to be responsible, at the expense of the MTO, until remediation measures have resolved the issue.</p> <p>For more information about the Groundwater Protection and Well Monitoring Plan, please refer to Section 5.1.4 of the Draft EIAR.</p> <p>2. What are the effects of air pollution from the bypass to those in close proximity?</p> <p>The human health implications of the project such as air quality, noise, land use, traffic congestion and safety, economic, social cohesion and neighborhood resources have been summarized in Section 2.2.7 and Section 5.2.7 of the Updated Draft Environmental Impact Assessment Report (EIAR) which is available on the Project Website for public review until August 14, 2023.</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIAR Edits Required? (Yes/No? If yes specify edits)
						<p>The project has undertaken an Air Quality Impact Assessment to explore pollutant emissions and dispersion modelling in an effort to predict the contribution of the project to future ambient pollutant concentrations. This contribution, added to background concentration levels, allows prediction of the cumulative impact of the proposed project and all other contributors to air pollution. Concentration levels are compared to provincial and federal ambient air quality criteria and standards to assist in the evaluation of project-specific mitigation needs and options.</p> <p>Areas of concentrated emission impact are influenced by traffic volumes along a given segment of roadway. The implementation of the Bradford Bypass is expected to redistribute traffic from local roads surrounding the proposed Bradford Bypass to the new corridor and greater freeway network. Reductions in traffic volumes are observed on corridors including Highway 11/1 (Bridge Street), Bathurst Street, Holland Landing Road, Yonge Street, Queensville Sideroad, Doane Road, Mount Albert Road, Green Lane, and Simcoe County Road 88/Holland Street, among other roads. The alleviation of traffic on local roads benefits the area including but not limited to Town of Bradford West Gwillimbury, community of Holland Landing, Town of East Gwillimbury, and northern King Township by alleviating congestion during peak hours.</p> <p>Tables 5-17 and 5-18 of the Draft EIAR, along with the air and noise information provided in the EIAR, are intended to provide a summary of the work completed to understand the potential impacts associated with the project.</p> <p>3. I asked at the last Online PIC to be given the traffic studies that were used to explain the time saving that the premier and Ms Mulroney refer to. I was told those studies were ongoing, but not given any data. If this is the case, why are time saving being stated when there does not appear to be scientific evidence to validate them. 						<p>them using these numbers? If they exist, May I have a copy of them?</p> <p>As detailed in Section 4.4 of the Draft EIAR, traffic is assessed through modelling to identify Level of Service (LOS).</p> <p>The model for this area was developed using pre-pandemic traffic volumes to identify peak hour volumes within the Study Area. This model has been calibrated and validated as it closely resembled actual operating conditions.</p> <p>Having confirmed the model was consistent with current (base) conditions, and therefore appropriate to assess future conditions and design alternatives, the model was used to assess LOS under future 2031 and 2041 conditions. To assess future conditions, the model was updated to include all road network and transit improvements planned within the Study Area, and, forecast traffic volumes based on the projected growth within the Study Area.</p> <p>Modeling results demonstrated that under the No Build (no Bradford Bypass) scenario, local roads were forecasted to exceed capacity by 2031 but saw significant relief under the Build (with Bradford Bypass) scenario. Alternative alignments for the Bradford Bypass were then compared within the model, including the 2002 Approved EA alignment and interchange locations and an updated preferred interchange location alternative developed by the Project Team.</p> <p>The alternative Build scenarios showed the mainline operations on the Bradford Bypass in 2031 would operate at acceptable LOS D in the interim four lane configuration. By expanding to the ultimate 6 lane configuration (implementing another general-purpose lane and an HOV lane in each direction by 2041), LOS on the mainline improves to LOS B or C and accommodates the additional traffic forecast by 2041.</p> <p>On average, between the various origin-destination pairs modeled in the peak periods, drivers are expected to save up to 73% or 33 minutes of travel time connecting between</p>

CT-DraftEIAR-62	To: Scot Davidson, Project Team From: [REDACTED]	Email: [REDACTED] [REDACTED]	Draft EIAR Comments	June 27, 2023	<p>Dear Honourable Scot Davidson,</p> <p>I am writing today because I want to express my concern about the Bradford Bypass. Recently, the Project Team released a Draft Environmental Impact Assessment Report for the Bradford Bypass. I think you should know that there are glaring omissions and severe concerns in this report including:</p> <ol style="list-style-type: none"> 1. Removing Greenbelt lands including Provincially Significant Wetlands from the Holland Marsh as well as some of its specialty crop areas. In fact, almost 70% of the land within the study area for this highway is prime agricultural land (class 1-3). 2. Potential habitat destruction for twelve species at risk including the Blanding's turtle without any commitment to protect these species, their habitat or even to reduce damage. A commitment to do a future study is not good enough. 3. Destruction and damage to a significant Indigenous site, the Lower Landing. The report outlines how a portion of this site will be impacted by construction. Georgina Island has been on record since 1998 that they want this site completely protected. This site is more significant than 95% of existing Canadian heritage sites; therefore, this site must be protected in its entirety and First Nations must be properly engaged as per the United Nations Declaration on the Rights of Indigenous People. 4. Impacts to Lake Simcoe which have not been studied at all despite its headwaters in the Holland Marsh Wetland complex will be the receiver of pollutants and salt thanks to the Bypass. 5. Impacts to people's health particularly around air pollution and the contamination of wells and groundwater. Considering that traffic 	<p>Hello [REDACTED]</p> <p>Thank you for your interest in the Bradford Bypass Preliminary Design Study and project-specific assessment of environmental impacts, undertaken in accordance with Ontario Regulation 697/21. Please see responses to your concerns and questions received on June 27, 2023 below:</p> <p>1. Removing Greenbelt lands including Provincially Significant Wetlands from the Holland Marsh as well as some of its specialty crop areas. In fact, almost 70% of the land within the study area for this highway is prime agricultural land (class 1-3).</p> <p>As part of the Preliminary Design, the Project Team considered all impacts and will continue to work with environmental agencies, municipalities, and other concerned stakeholders to identify measures to avoid or mitigate the potential impacts of placing new or expanded provincial highways within areas of the existing and enhanced Greenbelt lands.</p> <p>The Greenbelt Plan acknowledges the necessity of building infrastructure. The Plan allows for existing, expanded or new infrastructure in the Greenbelt if the infrastructure serves the significant population growth expected in southern Ontario.</p> <p>Potential impacts to agricultural lands as a result of the Project have been assessed with regards to the loss of agricultural land, loss of prime agricultural land, creation of severed parcels, and increased fragmentation of the land base on the designated agricultural lands. These potential impacts cannot be avoided. There are also potential impacts to adjacent agricultural lands and communities based on the proposed locations of the interchanges and by the proposed highway lighting.</p> <p>The first method of addressing potential impacts is to avoid the potential impact. In this study, the proposed future development of the Bradford Bypass lands will be a permanent use with portions of the Bradford Bypass being located within designated agricultural areas. As a result, there will be designated agricultural lands lost due to the project, which cannot be avoided.</p>	No

					<p>related air pollution is well known to be a contributor to many diseases including cancers, heart disease and respiratory disease, a cumulative health impact study is required.</p> <p>6. Increase in greenhouse gas emissions without a cumulative impact assessment on regional climate.</p> <p>As a concerned citizen, I would like you to support the asks from the Ministry of Transportation:</p> <ul style="list-style-type: none"> Extend the consultation time past 30 days and give at least 120 days for the public, affected municipalities, Indigenous communities and Indigenous governments time to understand and respond to this lengthy report; Mandate a cumulative health impact assessment that will outline specifically the public health costs of this highway due to air pollution, groundwater contamination and increased greenhouse gas emissions due to induced demand; Detailed commitments on protection of species at risk and their habitat within the study area; Commitment to do further field studies about the presence of American Eel and Northern Sunfish - two species that have Indigenous significance and have not been included in your reports; Commitment to protect the Lower Landing in its entirety from any site alteration; Detailed study about the impacts this highway will have on Lake Simcoe in particular how it could impact the fisheries as well as the harvesting rights of Indigenous people and their water quality. <p>I appreciate your consideration in this matter and look forward to your response,</p>	<p>When avoidance is not possible, the next priority is to minimize impacts to the extent feasible. The minimization of impacts may be achieved during the design process and through proactive planning measures that provide for the separation of land uses. The Updated Technically Preferred Route has taken into consideration the 2002 Approved Environmental Assessment by maintaining parts of the original alignment and employing similar techniques to minimize the corridor footprint and impact the fewest agricultural buildings, investment and agricultural operations, thereby minimizing the potential impacts to the agricultural land base, agricultural operations, and the agricultural system.</p> <p>When avoidance techniques and minimizing potential impact to agriculture have not achieved the desired effect the next priority is to mitigate any further impact. Potential mitigation measures may include:</p> <ul style="list-style-type: none"> The use of salt management plans to reduce the amount of salt require for de-icing The use of adequate fencing or berms and vegetated features between different land uses to reduce the potential for trespassing and potential vandalism The use of plantings/vegetation as screens and buffers to reduce visual impacts and sounds Implementation of surface and/ or groundwater monitoring in areas where agricultural operations make use of surface or groundwater as part of their normal farm practices Construct or replace agricultural buildings to mitigate the loss of agricultural buildings Provide new wells or other water access for any potential groundwater disruption <p>It should also be noted that there are opportunities for local agricultural operations with the future development of the Bradford Bypass lands. The future development of the Bradford Bypass lands will bring people closer to the agricultural areas and specialty crop areas, market garden, field vegetable areas which will result in increased potential for expanding sales of local vegetable crops from the farm markets.</p>

						<p>Additional details on impacts to agricultural lands and proposed mitigation measures and monitoring activities are included in Section 5.2.2 of the Updated Draft EIAR, available on the Project Website:</p> <p>https://www.bradfordbypass.ca/study-process/</p> <p>2. Potential habitat destruction for twelve species at risk including the Blanding's turtle without any commitment to protect these species, their habitat or even to reduce damage. A commitment to do a future study is not good enough.</p> <p>Targeted surveys for all species at risk with potential to occur in the Study Area will be required during future phases of work. These future studies will inform the need for any permits, authorizations, mitigation or compensation under the Endangered Species Act.</p> <p>The Updated Draft EIAR requires consideration and review of all recommendations throughout the corridor during future phases of work. This approach is necessary and standard practice for planning projects in that design is an iterative approach and this project is only completing design to a preliminary level. During future phases of work, additional design will be completed and may include refinements to the design as details are developed with greater accuracy. Limiting the future design phases by making certain elements of the project non-discretionary at the Preliminary Design stage limits the potential for future work to explore opportunities for further reducing impacts and / or increasing mitigation and offsetting measures.</p> <p>For Blanding's Turtle specifically, candidate habitat associated with the Holland River and Holland River East Branch open water and wetland communities has been identified within the Study Area. Blanding's Turtle may be impacted while moving in between habitats if these species enter the construction work area.</p> <p>As part of this phase of the project, preliminary mitigation and avoidance measures for the potential impacts to turtles are included in the Draft EIAR and include:</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIAR Edits Required? (Yes/No? If yes specify edits)
						<ul style="list-style-type: none"> If stockpiles of gravel and sandy substrates or the removal of these substrates in the vicinity of turtle habitat are required during the active turtle season (April 1 to October 15), turtle exclusion fencing should be installed in accordance with the Reptile and Amphibian Exclusion Fencing Best Management Practices (Ministry of the Environment, Conservation and Parks, 2020) around stockpiles or area of disturbance prior to April 1. Fencing should be installed immediately after stockpiles are created if after April 1. It is recommended that culverts be designed to provide openness ratios that would allow for the passage of small mammal and/or herpetofauna where possible. An openness ratio of 0.4 would permit usage by medium-sized mammals, while the minimum openness ratio to be considered should be 0.25, which would permit usage by reptiles such as turtles (Credit Valley Conservation, 2017). Avoid work within areas of candidate turtle overwintering habitat during the turtle overwintering period (October 31 to April 1), whenever possible. <p>These proposed mitigation measures will be further refined as the project proceeds to Detail Design and impacts are assessed in more detail.</p> <p>For further information on potential impacts to Species at Risk and proposed mitigation and avoidance measures, please refer to Section 5.1.1 of the Draft Environmental Impact Assessment Report.</p> <p>3. Destruction and damage to a significant Indigenous site, the Lower Landing. The report outlines how a portion of this site will be impacted by construction. Georgina Island has been on record since 1998 that they want this site completely protected. This site is more significant than 95% of existing Canadian heritage sites; therefore, this site must be protected in its entirety and First Nations must be properly engaged as per the United Nations Declaration on the Rights of Indigenous People.</p>

						<p>Field investigations for Stage 2 and Stage 3 works have been completed and additional details have been provided in the Updated Draft Environmental Impact Assessment Report.</p> <p>The required Stage 4 Archaeological Assessment of BaGv-42 will be completed during future phases of work for the project and will be carried out in accordance with the Ministry of Citizenship and Multiculturalism Standards and Guidelines for Consultant Archaeologists (Ontario Government 2011). No ground disturbing activities will occur at this site until the Stage 4 assessment has been conducted.</p> <p>As recommended by the cultural heritage resource assessment undertaken by the Project Team, the Holland River watershed was identified as a Cultural Heritage Landscape requiring further research and evaluation to determine if it possesses cultural heritage value or interest. This further assessment will be completed in a Cultural Heritage Evaluation Report (CHER), and if the CHER determines that the Holland River Watershed meets the criteria in Ontario Regulation 9/06 or Ontario Regulation 10/06 of the Ontario Heritage Act, and may be adversely impacted by the Updated Technically Preferred Route, a Heritage Impact Assessment will be prepared to fully assess impacts on the resource's identified heritage attributes and propose alternatives and mitigation to conserve the property's Cultural Heritage Value or Interest. These commitments are included in Section 5.3.2 of the Updated Draft EIA.</p> <p>Consultation is an integral component of the Preliminary Design stage, the project-specific assessment of environmental impacts process, and for future project phases, and is critical to a project's success. The ministry is actively consulting and engaging with Indigenous communities throughout the Bradford Bypass Project.</p> <p>Comments from Indigenous communities are accepted at any time in the study process.</p> <p>4. Impacts to Lake Simcoe which have not been studied at all despite its headwaters in the Holland Marsh Wetland complex will be the</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIAR Edits Required? (Yes/No? If yes specify edits)
						<p>receiver of pollutants and salt thanks to the Bypass.</p> <p>As the project falls within the jurisdiction of the Lake Simcoe Region Conservation Authority (LSRCA), pertaining to Ontario Regulation 179/06, the ministry has assessed impacts with respect to the <i>Lake Simcoe Protection Act</i> and the Lake Simcoe Protection Plan through consideration of water quality and quantity, stormwater management, groundwater management, landscaping and ecological restoration measures; as well as fluvial geomorphological designs for watercourses, erosion and sediment control and spills prevention and protection measures.</p> <p>Appropriate mitigation measures to prevent salt and treated sand from entering watercourses and salt-sensitive areas will be proposed based on various factors including the use of MTO's Salt Management Plan and the Ministry of Environment, Conservation and Parks (MECP) Guidelines on Snow Disposal and De-icing Operations in Ontario. The MTO Salt Management Plan outlines salt management operational practices and strategies and Best Management Practices (BMP) in terms of equipment, best practices, materials, storage, testing, storm response, application rules, snow and ice control trainings, snow removal and disposal, and technology review. This includes implementing a balanced approach to the highway salt application based on the amount of snow precipitation and highway conditions.</p> <p>In areas that are particularly sensitive, salt management measures may be necessary to mitigate environmental effects of road salt in accordance with the study objectives utilizing the Code of Practice for Environmental Management of Road Salts released by Environment Canada. The Code of Practice for Environmental Management of Road Salts can be viewed here: https://www.canada.ca/en/environment-climate-change/services/pollutants/road-salts/code-practice-environmental-management.html.</p> <p>In addition, snow removal and disposal will be utilized in accordance with the MECP Guidelines on Snow Disposal and De-icing Operations in Ontario. Further details on MECP's Guidelines on Snow Disposal and De-icing</p>

						<p>Operations in Ontario can be found here: https://www.ontario.ca/page/guidelines-snow-disposal-and-de-icing-operations-ontario#:~:text=Ministry%20Approval,if%20special%20circumstances&text=As%20a%20general%20rule%2C%20the.be%20approved%20for%20direct%20disposal.</p> <p>5. Impacts to people's health particularly around air pollution and the contamination of wells and groundwater. Considering that traffic related air pollution is well known to be a contributor to many diseases including cancers, heart disease and respiratory disease, a cumulative health impact study is required.</p> <p>The human health scoping implications of the project such as air quality, noise, land use, traffic congestion and safety, economic, social cohesion, and neighborhood resources have been summarized in Section 2.2.7 and Section 5.2.7 of the Updated Draft EIAR. To better understand the human health implications due to the Project as a next step, it is recommended for MTO to continue to consider the human health factors identified in this report and provide recommendations to enhance potential positive impacts and mitigate potential negative health impacts. Specifically, conducting a Screening-Level Human Health Risk Assessment of potential air quality impacts is recommended in order to evaluate and characterize Project-related air quality impacts to health.</p> <p>The project has undertaken an Air Quality Impact Assessment to explore pollutant emissions and dispersion modelling in an effort to predict the contribution of the project to future ambient pollutant concentrations. This contribution, added to background concentration levels, allows prediction of the cumulative impact of the proposed project and all other contributors to air pollution. Concentration levels are compared to provincial and federal ambient air quality criteria and standards to assist in the evaluation of project-specific mitigation needs and options.</p> <p>Areas of concentrated emission impact are influenced by traffic volumes along a given segment of roadway. The implementation of the Bradford Bypass is expected to</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIAR Edits Required? (Yes/No? If yes specify edits)
						<p>redistribute traffic from local roads surrounding the proposed Bradford Bypass to the new corridor and greater freeway network. Reductions in traffic volumes are observed on corridors including Highway 11/1 (Bridge Street), Bathurst Street, Holland Landing Road, Yonge Street, Queensville Sideroad, Doane Road, Mount Albert Road, Green Lane, and Simcoe County Road 88/Holland Street, among other roads. The alleviation of traffic on local roads benefits the area including but not limited to Town of Bradford West Gwillimbury, community of Holland Landing, Town of East Gwillimbury, and northern King Township by alleviating congestion during peak hours.</p> <p>Recognizing the potential impacts to groundwater and private wells in the Study Area, the Project Team has completed and initial assessment of the groundwater and surficial soils within the Study Area and documented the findings in a Hydrogeological Data Report. In addition, a Water Well Survey was completed and included a review of available secondary should information as well as data from stakeholders in the Study Area regarding their existing water wells.</p> <p>Additional well surveys and a detailed assessment of potential groundwater interference will be completed during future phases of the project. A Construction Dewatering Plan will also be prepared to identify potential impacts to groundwater and measures to be implemented to avoid or mitigate the impacts. In addition, all groundwater taking must adhere to the municipal, regional, provincial and federal policies and any permits or approvals required for the Project will be obtained prior to construction.</p> <p>Impacts to groundwater and proposed mitigation measures and monitoring activities are also summarized in the Updated Draft EIAR (Section 5.1.4).</p> <p>6. Increase in greenhouse gas emissions without a cumulative impact assessment on regional climate.</p> <p>The Project Team has undertaken a Qualitative Climate Change Assessment to assess potential impacts and suggest mitigation options for consideration. The assessment was completed accordance with MECP's</p>

						<p>Updated Draft were available for public review for a total of 60 days, an extension of the public review period is not being considered at this time.</p> <p>8. Mandate a cumulative health impact assessment that will outline specifically the public health costs of this highway due to air pollution, groundwater contamination and increased greenhouse gas emissions due to induced demand</p> <p>As noted in the response to Question #5, the human health implications of the project such as air quality, noise, land use, traffic congestion and safety, economic, social cohesion, and neighborhood resources have been summarized in Section 2.2.7 and Section 5.2.7 of the Draft EIAR and the Project Team will continue to evaluate and characterize project-related air quality impacts to health and provide recommendations to enhance potential positive impacts and mitigate potential negative health impacts.</p> <p>9. Detailed commitments on protection of species at risk and their habitat within the study area</p> <p>As noted above in the response to Question #2, details on Species at Risk and proposed mitigation measures and monitoring commitments are documented in Section 5.1.1 of the Updated Draft EIAR.</p> <p>10. Commitment to do further field studies about the presence of American Eel and Northern Sunfish - two species that have Indigenous significance and have not been included in your reports</p> <p>It was noted in discussion with William Treaties First Nations on December 1, 2022, that they had observed both American Eel (<i>Anguilla rostrata</i>; Endangered Species Act – Endangered, Species at Risk Act – Not at Risk) and Northern Sunfish (<i>Lepomis peltastes</i>; Endangered Species Act – Special Concern, Species at Risk Act – Special Concern) in the Holland River.</p> <p>Subsequently, the Project Team consulted with the Ministry of the Environment, Conservation and Parks, in</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIA Edits Required? (Yes/No? If yes specify edits)
						<p>March 2023 and was advised that the Ministry of Environment, Conservation and Parks records have no documented observations of the American Eel or Northern Sunfish in the Study Area. They also noted that the Northern Sunfish is a species of special concern and does not have a permitting status with the Ministry of the Environment, Conservation and Parks, and therefore would not be reported. These discussions with Williams Treaties First Nations and MECP have been documented in the Fish and Fish Habitat Report and Section 2.1.2 of the Updated Draft EIA.</p> <p>No records of aquatic Species at Risk that are afforded protection under the Species at Risk Act or Endangered Species Act are known to occur in the watercourses where culverts are anticipated to be installed. AECOM ecologists conducted a detailed fish and fish habitat assessment of the water features in the vicinity of the Study Area between September 14-18, 2020, with spring field investigations occurring over multiple days in June 2021. Field investigations were also completed in the spring of 2022 due to changes to the Study Area boundary that required further review for potential fish habitat. Based on these investigations, no Species at Risk were discovered in the Study Area. Regardless, the presence or absence of all aquatic Species at Risk will be re-confirmed in subsequent design phases through additional field investigations.</p> <p>11. Commitment to protect the Lower Landing in its entirety from any site alteration</p> <p>In accordance with the Ministry's cultural heritage conservation process and the Ministry's obligations under the Standards and Guidelines for Conservation of Provincial Heritage Properties, 2010 (S&Gs) issued under section 25.2 of the Ontario Heritage Act (OHA) the Ministry has completed a Cultural Heritage Resource Assessment Report (CHRAR) to identify known and potential built heritage resources and cultural heritage landscapes within the Study Area, assess potential impacts and project alternatives and recommend mitigations and next steps. The cultural heritage resource assessment has informed the analysis of environmental conditions undertaken for this project and recorded in the Environmental Conditions Report and the Environmental Impact Assessment Report.</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIAR Edits Required? (Yes/No? If yes specify edits)
						<p>The assessment has identified the Holland River watershed as having potential cultural heritage value or interest (CHVI). As recommended in the Environmental Impact Assessment Report (EIAR) and the CHRAR, a cultural heritage evaluation is being undertaken to determine CHVI for the property. This includes research and evaluation to determine if the property meets criteria in Ontario Regulation 9/06 and/or Ontario Regulation 10/06 of the Ontario Heritage Act to be considered a Provincial Heritage Property or a Provincial Heritage Property of Provincial Significance. Research includes, but is not limited to, review of heritage property databases, field review, archives, museums, planning offices and other facilities, archaeological reports, other relevant reports or studies, information from community engagement including input from Indigenous communities, oral histories etc. to provide the historic context of the property including the history of Indigenous communities and post-contact communities.</p> <p>For properties, including the Holland River Watershed, that are determined by the Ministry to meet the criteria in O. Reg. 9/06 or O. Reg. 10/06 of the Ontario Heritage Act and that may be adversely impacted by the Updated Technically Preferred Route, a Heritage Impact Assessment (HIA) will be prepared to fully assess impacts and propose alternatives and mitigation to conserve the property's CHVI. In accordance with F.5 of the S&Gs, and as committed in Section 5.3.2.2 of the EIAR, if the Ministry determines that a property, including the Holland River Watershed, is a provincial heritage property of provincial significance, the Ministry must obtain the consent of the Minister of Citizenship and Multiculturalism before removing or demolishing buildings or structures on the property, or before transferring the property from provincial control. The Minister of Citizenship and Multiculturalism may not grant consent or may grant consent, with or without conditions, where the Minister is of the opinion that all alternatives to the removal, demolition or the transfer of the property have been considered by the Ministry, including alternatives that would not adversely affect the property, and the best alternative in all the circumstances has been adopted. The Minister, as a condition of consent, may require that such reasonable steps as the Minister may specify be taken to minimize or mitigate adverse</p>

						<p>effects on the property resulting from the removal, demolition or the transfer of the property.</p> <p>12. Detailed study about the impacts this highway will have on Lake Simcoe in particular how it could impact the fisheries as well as the harvesting rights of Indigenous people and their water quality.</p> <p>The Ministry has been and will continue to consult with Indigenous communities regarding potential impacts to their Aboriginal and Treaty Rights.</p> <p>The project has been assessed in accordance with the Interim Environmental Guide for Fisheries and the Protocol for Protecting Fish and Fish Habitat on Provincial Transportation Undertakings. Following the completion of the impact assessment, it was determined that many of the potential negative effects of the proposed works could be avoided or mitigated at many locations. However, due to the number and size of some of the required new crossings it is anticipated that not all negative effects could be avoided or mitigated entirely. At this time, it is assumed that a Request for Review will need to be submitted to Fisheries and Oceans Canada during Detail Design/ prior to construction.</p> <p>For more information on impacts to Lake Simcoe, please refer to the response to Question 4.</p> <p>Please see below the responses to your questions from June 28, 2023.</p> <p>1. Time and consultation are inadequate. You have provided an un-editable PDF and 30 days for a 576 page report. This follows the pattern of terrible public information and consultation. Will you extend the consultation period?</p> <p>The process of planning the Bradford Bypass has included -- and will continue to include -- consultation with the public and Indigenous communities to ensure the project moves forward in an environmentally responsible way that is responsive to the needs and concerns of communities.</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIAR Edits Required? (Yes/No? If yes specify edits)
						<p>In accordance with Ontario Regulation 697/21, an initial Draft Environmental Impact Assessment Report (EIAR) -- which documents the results of the studies undertaken for various environmental disciplines, proposed mitigation measures and environmental commitments to protect the environment -- was published for public review starting on June 1 and continuing until June 30, 2023. In addition, the Ministry has been providing Indigenous communities and stakeholders various opportunities for meaningful consultation since the project was re-initiated in September 2020 including two Public Information Centres. Additional archaeological investigations, which are necessary to complete the impact assessment in accordance with regulations, have recently been finalized and incorporated into an Updated Draft Environmental Impact Assessment Report. This updated report has been posted for an additional 30-day consultation period. The Updated Draft EIAR posting includes the information from the initial draft to ensure stakeholders can review additional information in full context of the project. As the initial Draft EIAR and the Updated Draft were available for public review for a total of 60 days, an extension of the public review period is not being considered at this time. The Updated Draft Environmental Impact Assessment Report was available for review on the Project Website (https://www.bradfordbypass.ca/study-process/) until August 14, 2023.</p> <p>2. Explain how a provincial highway was transformed into a very expensive regional road variant with five interchanges and two 400 series highway connections, paid for by all Ontario taxpayers. This is inconsistent with the MTO's mandate to provide long distance travel solutions. We maintain that there are better and cheaper, faster to implement, regional road and transit solutions that should be pursued, even if the Bypass does get built.</p> <p>The project is being assessed with consideration of the Ministry's mandate to provide for the safe, efficient movement of people and goods between regions and urban areas. In addition, the Project Team has consulted with local and regional municipalities, and the traffic analysis for the proposed Bradford Bypass has considered the planned local transportation and transit improvements to be implemented by others.</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIAR Edits Required? (Yes/No? If yes specify edits)
						<p>The original route planning study (2002 Approved Environmental Assessment – EA) concluded that additional relief from congestion in this Study Area could only be accommodated through the protection and implementation of a provincial right of way.</p> <p>As part of the 2002 Approved EA, the Bradford Bypass evaluated alternatives from a broad range of potential solutions to address several transportation problems and to address significant opportunities identified in York Region and Simcoe County. The need for this freeway was confirmed as the only reasonable solution that would make a significant contribution towards addressing the problem as the population in York Region and Simcoe County grows. The 2002 Approved EA approved alignment is technically preferred for a freeway in terms of highway network expansion, ease of construction, relationship to provincial and municipal land use planning and the preferred route is already included in Official and Transportation Master Plans, as well as the Places to Grow Act), as well as having fewer negative impacts to residential and natural areas when compared to other route options considered.</p> <p>For more information on the Analysis and Evaluation of alternatives, refer to Section 2.1.6 of the 2002 Approved EA, which can be found in the enclosed link: https://www.bradfordbypass.ca/wp-content/uploads/2020/09/BBP-RoutePlanningEA-1997.pdf</p> <p>Further to the conclusion of the 2002 Approved EA, as part of this Preliminary Design study, a traffic analysis was completed and the result of the review has confirmed the need of the highway. This analysis included the review of existing traffic conditions and modelling of future forecast traffic conditions and it has been confirmed that updates to regional and municipal roads alone will not address the transportation needs within the Study Area.</p> <p>Additionally, a feasibility assessment was conducted evaluating nine interchange location scenarios to determine the best interchange configuration through the Bradford Bypass corridor. The evaluation was conducted in accordance with satisfying the study objective to improve connectivity of the study area between Highway</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIAR Edits Required? (Yes/No? If yes specify edits)
						<p>400 and Highway 404, facilitating the improvement of traffic operations and movement of goods. Consideration included interchange utilization, overall network delay, out of way travel, environmental considerations and constraints, and preliminary costs. It was determined that interchanges at 10th Sideroad, County Road 4, Bathurst Street, 2nd Concession Road, and Leslie Street would be included as part of the Study.</p> <p>3. We would like to see the traffic studies in their entirety. An environmental assessment used to be grounded in a demonstration of need and justification. The MTO has provided neither as it pertains to this particular project and at this time. There is no evidence that local traffic solutions MTO purports to be solving (actually a local traffic issue and not MTO's mandate) are best served by this potentially \$4 billion highway.</p> <p>The Bradford Bypass project has been assessed in accordance with Ontario Regulation 697/21. Consistent with the Regulation, the Project Team completed an update to the description of environmental conditions previously documented in the 2002 Approved Environmental Assessment (EA) for the project. This update included a review and assessment of the existing traffic conditions which was documented in the Environmental Conditions Report (ECR). The ECR was finalized in October 2022 following a public review period, and is available on the Project website. Significant population growth is projected for both Simcoe County and the Regional Municipality of York. Even with all currently planned transportation and transit investments, road congestion will continue to increase across the Greater Golden Horseshoe (GGH) including within the Bradford Bypass Study Area. The purpose of the Bradford Bypass is to relieve congestion on existing local roads between Highway 400 and Highway 404 and provide a northern freeway connection between Highways 400 and 404. Modeling results demonstrated that under the No Build (no Bradford Bypass) scenario, local roads were forecasted to exceed capacity by 2031 but saw significant relief under the Build (with Bradford Bypass) scenario. Alternative alignments for the Bradford Bypass were then compared</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIAR Edits Required? (Yes/No? If yes specify edits)
						<p>within the model, including the 2002 Approved EA alignment and interchange locations and an updated preferred interchange location alternative developed by the Project Team.</p> <p>On average, between the various origin-destination pairs using the Bradford Bypass, drivers in the peak direction during the peak period, would save up to 73% or 33 minutes of travel time when connecting between Highway 400 and Highway 404 compared to existing routes in the No Build scenario.</p> <p>The development of the analysis and key results from the Traffic Study have been summarized in the Draft Environmental Impact Assessment Report and the Updated Draft Environmental Impact Assessment Report (EIAR), which were available for public review and comment from June 1, 2023 to June 30, 2023 and July 14, 2023 to August 14, 2023, respectively. The information in the draft EIAR includes the origin and destination locations that were reviewed to determine the average travel time savings during the AM and PM peak hours. Similar to the process undertaken for MTO preliminary design studies, the Traffic Study will be finalized upon study completion and will be available if requested.</p> <p>a. Please share the links and the methodology, transparently, so that people can understand what travel time savings MTO is referring to. We have absolutely no idea because your write up is incredibly vague about the start and end of the routes used for analysis.</p> <p>b. What year do your studies indicate that the Bypass will be congested at peak rush hour times?</p> <p>As detailed in the Draft EIAR (Section 2.4.1), an Aimsun model was created to assess the existing traffic conditions for the road network in the Study Area. The model study area encompasses the Highway 400 corridor from south of Simcoe County Road 88 to north of Highway 89, as well as the Highway 404 corridor from south of Green Lane East to its terminal at Woodbine Avenue (Table 4-3 and 4-4 of the Draft EIAR).</p> <p>The model for this area was developed using pre-pandemic traffic volumes to identify peak hour volumes within the Study Area. This model has been calibrated</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIAR Edits Required? (Yes/No? If yes specify edits)
						<p>and validated as it closely resembled actual operating conditions.</p> <p>As detailed in Section 4.4 of the Draft EIAR, traffic is assessed through modelling to identify Level Of Service (LOS). Having confirmed the model was consistent with current (base) conditions, and therefore appropriate to assess future conditions and design alternatives, the model was used to assess LOS under future 2031 and 2041 conditions. To assess future conditions, the model was updated to include all road network and transit improvements planned within the Study Area, and, forecast traffic volumes based on the projected growth within the Study Area.</p> <p>The alternative Build scenarios showed the mainline operations on the Bradford Bypass in 2031 would operate at acceptable LOS D in the interim four lane configuration. The model indicates that by expanding to the ultimate 8 lane configuration (implementing another general purpose lane and an HOV lane in each direction by 2041), LOS on the mainline improves to LOS B or C and accommodates the additional traffic forecast by 2041.</p> <p>For further information about the Traffic Study please refer to the response to Question #3 and Section 4.4 of the Updated Draft EIAR.</p> <p>4. The Draft Environmental Impact Assessment report shows on pg. 212 the Bypass touching the southern portion of the Lower Landing (AKA BaGv-42), a significant historical and archaeological site at a significant meander on the East Holland River. MTO has moved the highway 150 m to the south of the technically preferred route, which would have completely run over the Lower Landing (pg 148). But the Draft IA states," the southern portion of the site will be impacted by construction" (pg 395). The Draft Environmental Conditions Report indicated that a Stage 3 archaeological assessment "was required" (pg 225); the Draft IA report says that the Stage 3 was completed, and that Stage 4 is required. The Project team's website says, "Currently, additional archaeological investigations are being completed to finalize the impact assessments in accordance with Ontario Regulation 697/21 and are not included in this posting. This information will be available for additional</p>

						<p><i>public and Indigenous community review once completed.</i>" So the archeological work is not finished. And yet the route has been chosen. Property owners near the history-rich Lower Landing that are receiving expropriation notifications. We are staunchly opposed to this violation of this site particularly absent the stage 4 evaluation of the Lower Landing and the endorsement of the First Nations.</p> <ol style="list-style-type: none"> As stewards of these lands and water for time immemorial, additional time should be given to allow First Nation community members to fully digest the lengthy report. Georgina Island First Nation asked that this site be avoided in 1998, 25 years ago, stating, "It is obvious that there are other routes, which can be used to connect these major highways, and we hope that another will be selected." Is Ontario still ignoring this request. Have First Nations be consulted about this part of the plan? Please provide written evidence of their approval of this route. <p>Field investigations for Stage 2 and Stage 3 works have been completed and additional details are included in the Updated Draft Environmental Impact Assessment Report available on the Project Website (https://www.bradfordbypass.ca/study-process/) for public review until August 14, 2023.</p> <p>The required Stage 4 Archaeological Assessment of BaGv-42 will be completed during future phases of work for the project and will be carried out in accordance with the Ministry of Citizenship and Multiculturalism Standards and Guidelines for Consultant Archaeologists (Ontario Government 2011). No ground disturbing activities will occur at this site until the Stage 4 assessment has been conducted.</p> <p>In accordance with Ontario Regulation 697/21, the Project Team completed site specific Stage 3 archaeological assessments for areas within the Study Area that were identified as having archaeological potential in accordance with the Stage 2 archaeological assessments.</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIAR Edits Required? (Yes/No? If yes specify edits)
						<p>It is common practice for Stage 4 archaeology work to be completed during Detail Design. Limiting the impact to Stage 4 archaeological sites where feasible is one of the Project Team's main priorities. As a result, the Project Team will determine the exact impact limits to archaeological sites during subsequent design phases of the project. To avoid unnecessary excavation, the Project Team will then undertake the Stage 4 archaeological assessments. Any Stage 4 field work that will be undertaken must engage interested Indigenous communities.</p> <p>As recommended by the cultural heritage resource assessment undertaken by the Project Team, the Holland River watershed was identified as a Cultural Heritage Landscape requiring further research and evaluation to determine if it possesses cultural heritage value or interest. This further assessment will be completed in a Cultural Heritage Evaluation Report (CHER), and if the CHER determines that the Holland River Watershed meets the criteria in Ontario Regulation 9/06 or Ontario Regulation 10/06 of the Ontario Heritage Act, and may be adversely impacted by the Updated Technically Preferred Route, a Heritage Impact Assessment will be prepared to fully assess impacts on the resource's identified heritage attributes and propose alternatives and mitigation to conserve the property's Cultural Heritage Value or Interest. These commitments are included in Section 5.3.2 of the Updated Draft EIAR.</p> <p>Consultation is an integral component of the Preliminary Design stage, the project-specific assessment of environmental impacts process, and for future project phases, and is critical to a project's success. The ministry is actively consulting and engaging with Indigenous communities throughout the Bradford Bypass Project. The Project Team is engaging with and considers input provided by the following Indigenous communities:</p> <ul style="list-style-type: none"> - Alderville First Nation - Beausoleil First Nation - Chippewas of Georgina Island First Nation - Chippewas of Rama First Nation - Curve Lake First Nation - Hiawatha First Nation - Mississaugas of Scugog Island First Nation - Kawartha Nishnawbe First Nation - Georgian Bay Métis Council, and - Huron-Wendat Nation 	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIAI Edits Required? (Yes/No? If yes specify edits)
						<p>Comments from Indigenous communities are accepted at any time in the study process.</p> <p>5. Table 2-2 lays out the 12 species present or very likely to be present. For instance, Blandings Turtles are likely affected as they are likely in the area. The only commitment we see is to do a detailed study later on. This is a good example of study following decision or destruction, and is in violation of the standard EA practices. There are no commitments to the protection of species at risk in this document.</p> <p>Targeted surveys for all species at risk with potential to occur in the Study Area will be required during future phases of work. These future studies will inform the need for any permits, authorizations, mitigation or compensation under the Endangered Species Act.</p> <p>The Updated Draft EIAI requires consideration and review of all recommendations throughout the corridor during future phases of work. This approach is necessary and standard practice for planning projects in that design is an iterative approach and this project is only completing design to a preliminary level. During future phases of work, additional design will be completed and may include refinements to the design as details are developed with greater accuracy. Limiting the future design phases by making certain elements of the project non-discretionary at the preliminary design stage limits the potential for future work to explore opportunities for further reducing impacts and / or increasing mitigation and offsetting measures.</p> <p>For Blanding's Turtle specifically, candidate habitat associated with the Holland River and Holland River East Branch open water and wetland communities has been identified within the Study Area. Blanding's Turtle may be impacted while moving in between habitats if these species enter the construction work area.</p> <p>As part of this phase of the project, preliminary mitigation and avoidance measures for the potential impacts to turtles are included in the Draft EIAI and include:</p> <ul style="list-style-type: none"> If stockpiles of gravel and sandy substrates or the removal of these substrates in the vicinity of turtle habitat are required during the active turtle season (April 1 to October 15), turtle exclusion fencing should be installed in accordance with the Reptile and Amphibian Exclusion Fencing Best 	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIAR Edits Required? (Yes/No? If yes specify edits)
						<p>Management Practices (Ministry of the Environment, Conservation and Parks, 2020) around stockpiles or area of disturbance prior to April 1. Fencing should be installed immediately after stockpiles are created if after April 1.</p> <ul style="list-style-type: none"> It is recommended that culverts be designed to provide openness ratios that would allow for the passage of small mammal and/or herpetofauna where possible. An openness ratio of 0.4 would permit usage by medium-sized mammals, while the minimum openness ratio to be considered should be 0.25, which would permit usage by reptiles such as turtles (Credit Valley Conservation, 2017). Avoid work within areas of candidate turtle overwintering habitat during the turtle overwintering period (October 31 to April 1), whenever possible. <p>These preliminary mitigation measures will be further refined as the project proceeds to Detail Design and impacts are assessed in more detail.</p> <p>For further detail on potential impacts to Species at Risk and proposed mitigation and avoidance measures, please refer to Section 5.1.1 of the Draft Environmental Impact Assessment Report.</p> <ol style="list-style-type: none"> The Draft IA report identifies that the Williams Treaties FN reported American Eel and Northern Sunfish in the Holland River. This must be further investigated with new fieldwork. The American Eel is in decline and gets Federal protection. Ontario's Species at Risk legislation doesn't work anymore so it's all up to the federal enforcement. What is Ontario going to do to stand by Canada's obligations to First Nation treaty and consultation rights? Will the American Eel's presence be investigated with new field work. <p>It was noted in discussion with William Treaties First Nations on December 1, 2022, that they had observed both American Eel (<i>Anguilla rostrata</i>; Endangered Species Act – Endangered, Species at Risk Act – Not at Risk) and Northern Sunfish (<i>Lepomis peltastes</i>; Endangered Species</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIAR Edits Required? (Yes/No? If yes specify edits)
						<p>Act – Special Concern, Species at Risk Act – Special Concern) in the Holland River.</p> <p>Subsequently, the Project Team consulted with the Ministry of the Environment, Conservation and Parks, in March 2023 and was advised that the Ministry of Environment, Conservation and Parks records have no documented observances of the American Eel or Northern Sunfish in the Study Area. They also noted that the Northern Sunfish is a species of special concern and does not have a permitting status with the Ministry of the Environment, Conservation and Parks, and therefore would not be reported. These discussions with Williams Treaties First Nations and MECP have been documented in the Fish and Fish Habitat Report and Section 2.1.2 of the Updated Draft EIAR.</p> <p>No records of aquatic Species at Risk that are afforded protection under the Species at Risk Act or Endangered Species Act are known to occur in the watercourses where culverts are anticipated to be installed. AECOM ecologists conducted a detailed fish and fish habitat assessment of the water features in the vicinity of the Study Area between September 14-18, 2020, with spring field investigations occurring over multiple days in June 2021. Field investigations were also completed in the spring of 2022 due to changes to the Study Area boundary that required further review for potential fish habitat. Based on these investigations, no Species at Risk were discovered in the Study Area. Regardless, the presence or absence of all aquatic Species at Risk will be re-confirmed in subsequent design phases through additional field investigations.</p> <p>6. Please confirm our understanding that has been no discussion of, and that there are no studies looking at impacts to Lake Simcoe.</p> <p>As the project falls within the jurisdiction of the Lake Simcoe Region Conservation Authority (LSRCA), pertaining to Ontario Regulation 179/06, the ministry has assessed impacts with respect to the <i>Lake Simcoe Protection Act</i> and the Lake Simcoe Protection Plan through consideration of water quality and quantity, stormwater management, groundwater management, landscaping and ecological restoration measures; as well as fluvial geomorphological designs for watercourses, erosion and sediment control and spills prevention and protection measures.</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIAI Edits Required? (Yes/No? If yes specify edits)
						<p>a. The Groundwater Protection and Well Monitoring plan, which this Draft IA refers to, discusses the need to dewater the site for the building of piles for elevated bridge sections of the highway. The Draft IA report says, "Construction dewatering activities have been identified as the primary risk to groundwater fed water wells in the Study Area." There is no credible groundwater protection water. There are many suggestions for how to keep it clean but there are few to no commitments.</p> <p>Commitments, preliminary mitigation measures and monitoring activities related to groundwater are documented in Section 5.1.4 of the Draft EIAI, and will be carried forward to subsequent phases of the project. The risk of spills during construction of the project will be primarily limited to petroleum products from machinery (fuels and lubricants). The use of best management practices for handling of hydrocarbons according to the Ministry of Environment, Conservation and Parks and the Technical Standards and Safety Authority of the Ministry of Government Services will reduce the potential of environmental adverse effects associated with petroleum product handling and uses. Spillage of petroleum products must be immediately remediated according to these standards such that groundwater quality is not impacted. Mitigation plans will be generated during future phases of work for the project and for any excavation and structure construction within areas of medium to high significant groundwater recharge areas as shown near the Holland River and Holland River East Branch. Mitigation plans would be specific to each excavation and structure construction and include erosion and sediment control, dewatering treatment and discharge piping away or towards from Significant Groundwater Recharge Areas, or municipal sewer discharge requirements. Dewatering discharge shall be directed away from Well Head Protection areas if excavation and dewatering activities are occurring within them.</p> <p>For more information about the Groundwater Protection and Well Monitoring Plan please refer to Section 5.1.4 of the Updated Draft EIAI.</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIAR Edits Required? (Yes/No? If yes specify edits)
						<p>b. How exactly is the province going to monitor groundwater discharges to ensure they meet Ontario's water quality standards?</p> <p>c. What penalties are contractors going to face for violating the discharge requirements?</p> <p>d. If penalties are not enough to compel adherence, what next?</p> <p>e. How is the public to have confidence that contaminated water will not be discharged to the Holland Rivers and Lake Simcoe?</p> <p>f. Please confirm is monitoring will continue or not, as this statement is totally vague: "It is expected that each unassessed monitoring well will continue to be monitored and assessed during the subsequent detail design phase of the project."</p> <p>The Groundwater Monitoring Program includes groundwater level monitoring and groundwater quality monitoring to establish the pre-construction baseline conditions for comparison of data collected during and post-construction.</p> <p>During the Preliminary Design study, Golder Associates Ltd. (Golder) installed monitoring wells during the ongoing geotechnical investigations. Monitoring is expected to be completed within these same monitoring wells during all future phases of work for the Project, including construction. Residential monitoring wells will also be part of this program if they fall within the Radius of Influence of the excavation dewatering and permission to enter is granted to gain access to monitor the well. Detail Design will inform the need for further groundwater investigations. Penalties for discharging any deleterious substance or material to the lands will vary based on the federal, provincial or municipal legislation that might be violated. Beyond legislated penalties, contractor behavior is monitored by the Ministry and poor behavior may result in additional financial or reputational impacts. The Ministry's process for selecting contractors to support future phases of the work for the project also includes consideration of past performance and assessment of the contractors understanding of the project and sensitivities</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIAR Edits Required? (Yes/No? If yes specify edits)
						<p>within the Study Area. Commitments, preliminary mitigation measures and monitoring activities related to groundwater are documented in Section 5.1.4 of the Draft EIAR, and will be carried forward to subsequent phases of the project.</p> <p>g. Explain what kind of environmental impact would make the project stop; or is any impact acceptable?</p> <p>This government takes environmental protection seriously and is implementing a path forward that will ensure environmental protections are not compromised while building this much needed project quickly and safely. Current work on the Bradford Bypass project will continue to be subject to all conditions under Ontario Regulation 697/21.</p> <p>In accordance with Ontario Regulation 697/21, the Project Team has undertaken several environmental impact assessments to identify and document the potential impacts, proposed mitigation measures, and environmental commitments, which are summarized in the Environmental Impact Assessment Report (EIAR). The Ministry of Transportation must also comply with all current federal and provincial environmental requirements. This includes consultation as set out in the regulation and obtaining permits and approvals for the project prior to the start of construction. Obtaining these permits and approvals, which are mechanisms to help protect the environment, confirms that the ministry has met or surpassed the environmental requirements.</p> <p>h. Please confirm that the only financial support for affected well owners whose water quality is affected by the construction is the province providing them with a temporary water supply until the well owner fixes their well.</p> <p>i. Does this meager bit of help extend to those who did not provide baseline information about their well water?</p> <p>j. If there any effort being made to reach more than 12% of respondents to MTO's well water survey?</p> <p>MTO will work with owners of water wells who experience issues to determine if the issue is the result of Bradford Bypass project activities.</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIAR Edits Required? (Yes/No? If yes specify edits)
						<p>If the well issue is confirmed to be a result of the project's activities, the Ministry will provide a letter to the property owner explaining the outcome of the well investigation and detail the recommended mitigation measures (including lowering / replacement of pump inlet, well rehab, new well installed or local watermain connection if available) the Ministry will undertake to remediate the issue. A temporary drinking water supply will be provided and connected to the resident if the project activities are found to be responsible, at the expense of the Ministry, until remediation measures have resolved the issue.</p> <p>A water well survey was completed for the project to determine the pre-construction assessment of private well supplies in the vicinity of the Study Area noted above.</p> <p>Where no response was provided from Property Owners as part of the water well survey, an additional attempt shall be undertaken during Detail Design to contact these owners via mail, email, phone calls, site visit, etc. This information will be used to provide a baseline for water wells prior to the proposed construction to determine existing water quality and quantity of each property.</p> <p>7. How much is this project going to cost?</p> <p>As we bring this project to market, we want to ensure we can retain the best value for the project. As such, the ministry will not be releasing cost estimates prior to the award of contracts to protect the procurement processes.</p> <p>8. When will the Bradford Bypass be completed?</p> <p>The Preliminary Design phase is anticipated to be completed in 2023. Detail Design and Construction Phases will follow.</p> <p>9. It is unclear how many lanes are being constructed at which times. Please clarify.</p> <p>The Ontario government is committed to fully funding the construction of the Bradford Bypass and is following through on its promise to improve and invest in the province's transportation corridors to get people moving within the region, connect people to jobs, make life easier and support a strong economy.</p> <p>A four-lane configuration is planned to be constructed first with two general purpose lanes in each direction. To plan for the future, the Ministry is also considering the design of an ultimate eight-lane design for the Bradford Bypass. The ultimate, eight-lane configuration for the project will feature</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIAI Edits Required? (Yes/No? If yes specify edits)
						<p>three general purpose lanes and one HOV lanes in each direction.</p> <p>10. There is no cumulative health impact assessment to understand how traffic related air pollution, known to increase risks of cancers, leukemia, heart and lung disease, will impact the communities surrounding the route. There is also no mention of the cumulative impacts on our climate from construction and higher rates of car travel on this highway.</p> <ul style="list-style-type: none"> a. How will you be informing people living along the route about the increased risk of traffic related air pollution and its effects on human health? b. Will you put air quality monitors in Bradford? c. How do you explain the fact that you are NOT monitoring air quality in Bradford, and using the closest site, Newmarket? d. The Final Environmental Conditions Report identified numerous planned residential developments right beside the highway, including a planned new school. Have the land owners / developers / school boards received any information that tells them how bad the air quality is going to be there? <p>The human health scoping implications of the project such as air quality, noise, land use, traffic congestion and safety, economic, social cohesion, and neighborhood resources have been summarized in Section 2.2.7 and Section 5.2.7 of the Draft EIAI. To better understand the human health implications due to the Project as a next step, it is recommended for MTO to continue to consider the human health factors identified in this report and provide recommendations to enhance potential positive impacts and mitigate potential negative health impacts. Specifically, conducting a Screening-Level Human Health Risk Assessment of potential air quality impacts is recommended in order to evaluate and characterize Project-related air quality impacts to health.</p> <p>The project has undertaken an Air Quality Impact Assessment to explore pollutant emissions and dispersion modelling in an effort to predict the contribution of the</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIAR Edits Required? (Yes/No? If yes specify edits)
						<p>project to future ambient pollutant concentrations. This contribution, added to background concentration levels, allows prediction of the cumulative impact of the proposed project and all other contributors to air pollution.</p> <p>Concentration levels are compared to provincial and federal ambient air quality criteria and standards to assist in the evaluation of project-specific mitigation needs and options.</p> <p>Areas of concentrated emission impact are influenced by traffic volumes along a given segment of roadway. The implementation of the Bradford Bypass is expected to redistribute traffic from local roads and freeway corridors surrounding the proposed Bradford Bypass. Reductions in traffic volumes are observed on corridors including Highway 11/1 (Bridge Street), Bathurst Street, Holland Landing Road, Yonge Street, Queensville Sideroad, Doane Road, Mount Albert Road, Green Lane, and Simcoe County Road 88/Holland Street, among other roads, which benefits the community of Bradford, Town of Bradford West Gwillimbury, by alleviating congestion during peak hours.</p> <p>The Project Team is currently utilizing the National Air Pollution Surveillance air quality monitoring stations to assess air quality levels. Five years of existing data sets were analyzed from stations within the region, and the complete data set from the closest station or most representative station for each contaminant of concern was selected to represent the background air quality for the Study Area. Due to the proximity of the Study Area to the Toronto Area, monitoring stations within the City of Toronto were given preference as the one of the most representative locations for the air quality contaminants of concern. As such, Roadside Wallberg – University of Toronto monitoring station, North Downsview monitoring station, Gage Institute monitoring station (all located approximately 38 – 53 km from the Study Area) were used. The nearest monitoring station is in Newmarket.</p> <p>Additional information regarding the assessment of potential air quality impacts have been summarized in Section 2.2.4 and Section 5.2.4 of the Draft EIAR.</p> <p>Land has been designated for the Bradford Bypass since the 2002 Approved EA was completed. As noted above, consultation is an integral component of the Preliminary Design stage and project-specific assessment of environmental impacts and is critical to a project's success. The ministry is actively consulting and engaging</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIAR Edits Required? (Yes/No? If yes specify edits)
						<p>with private landowners, developers and school boards within the Study Area. Engagement and consultation has included having a project website and telephone line, having a project contact list for regular project updates, providing notices and correspondence via email, mail, and Ontario Government Notices in local newspapers, hosting public information centres and online events, and holding meetings with Indigenous communities, municipalities, environmental agencies, and stakeholders. More information on the project consultation activities are included in Section 7 of the Updated Draft EIAR.</p> <p>11. Traffic modeling to produce the air dispersion model is not robust or transparent. The air modeling report and supporting reports fail to disclose the % of diesel truck traffic, or the component of that traffic that includes trucks dating from 2006 or earlier which comprise a significant component of air pollution load. The comparison of build with no-build is not valid because the values in Appendix E of the traffic modeling report show that there was an erroneous assumption that there would be significantly less truck traffic in the build scenario compared to the no-build scenario. There is no valid scientifically-based justification for this. Further, if there is an increase in truck traffic along 404 - as the model predicts - then sensitive receptors along highway 404 need to be included in a health impact study. Instead, impacts on traffic along the 400/404 corridors were excluded and the "air quality study area" was restricted to the bypass corridor itself without any explanation or justification. It is egregious that MTO did not conduct locally relevant air quality monitoring for background in Bradford, River Drive Park, Queensville and along the 404/400 corridors for traffic related air pollutants. Such baseline monitoring is generally inexpensive and could have been easily obtained. The study did not include the cumulative effects of future planned industrial uses along the Bypass corridor and along the 400/404 corridor which may significantly impact people's health along the route. The evaluation did not use 2022 World</p>

						<p>Health Organization criteria for contaminants which are much lower and more up-to date than the CAAQS or the AAQCs. We disagree that the AAQCs and CAAQS represent the “lowest concentrations at which an adverse effect may be experienced” as they are not based on up-to-date understandings of the health impacts of air contaminants including pre-term births and neurodevelopmental and other impacts. The report predicts significant exceedances for NO₂ and benzo(a)pyrene even with the apparently non-conservative assumptions for diesel truck traffic used in the full build out scenario compared to the no-build scenario. The adverse health impacts of NO₂ exceedances may be extremely severe and will impact on the Charter rights and human rights of residents in the study area and beyond without justification for the need for the project.</p> <p>Study Area, MOVES3 data, vehicles and assumptions: In order to model relevant vehicle types within the Air Quality Impact Assessment Study Area, MOVES3 data was input to the model and refinements were made to exclude fuel types such as ethanol given these fuels are not readily available for use in Ontario. Fuel inputs utilized in MOVES3.0 modelling at the time of the assessment included: Fuel Type IDs 1, 2, 3 and 9. ID 5 (ethanol) was not included as flex fuel cars and fuelling stations are not readily available in Ontario. The specific source type fractions utilized for various vehicle types applied within the project study area and the related fraction of expected vehicle usage for both passenger-class vehicles and heavy-class vehicles, including the distribution of vehicle types in the heavy truck vehicle category, were combined to create representative vehicle emission for vehicle class that can reasonable be expected to be in use in 2041. Highway 400/404 corridors were included in the Air Quality Impact Assessment. The full air quality study area is shown in Figure 2-9 of the Updated Draft EIAR and demonstrates that the air quality study area included emission sources within the boundary of assessment, including but not limited to Highway 400 (500 m south of Rural Rd. 88 to 500 m north of Concession Rd. 11), Highway 404 (500 m south of Queensville Sideroad E to 500 m north of Boag Road), the entirety of the proposed</p>

						<p>Bradford Bypass, Bridge Street, Holland Street W, 10th Sideroad, Young Street/Barrie Street, and Queensville Sideroad.</p> <p>Traffic distributions and truck traffic: The same Average Annual Daily Traffic (AADT) were used for all scenarios. AADT values for each air quality emission source vary between the three scenarios evaluated based on projected existing traffic within the study area, and future no-build and build traffic projections however the same 24-hour traffic distribution percentages were applied. Three representative 24-hour distribution percentages were applied to the air quality emission sources. These were applied to a given source of emission depending on the type of road in question, e.g. a "Leslie St." 24-hour distribution was applied to air quality emission sources which were categorized as community arterial roads; a "HWY 400" 24-hour distribution was applied to air quality emission sources categorized as highways; and, a "2nd Concession Rd" 24-hour distribution was applied to rural roads. These same 24-hr distributions were applied to the assigned source for all three scenarios of evaluation (existing conditions, future no-build, and future build).</p> <p>Fuel usage distribution [i.e. diesel, gasoline, CNG, etc.] and vehicle age distribution within each vehicle type category were modelled based on MOVES3.0 default fuel use and age distribution database inputs assigned to the year of evaluation. Heavy truck traffic was included in the modelling with a percentage assigned to each air quality emission source anticipated from this vehicle type.</p> <p>Health Impacts, Critical Receptors and Background/Study Area Monitoring Data: The human health scoping implications of the project such as air quality, noise, land use, traffic congestion and safety, economic, social cohesion, and neighborhood resources have been summarized in Section 2.2.7 and Section 5.2.7 of the Updated Draft EIAR.</p> <p>The Project Team is aware some critical receptors have been identified as 'missing' by a number of stakeholders. Having reviewed the data, these 'missing' receptors were included as residences in the Air Quality Impact Assessment. Potential impacts at the 'missing' receptors</p>

						<p>within the Air Quality Impact Assessment Study Area are reflected in the assessment by other, nearby critical receptors and receptors identified on Figure 2-9 and 2-10 of the Updated Draft EIAR.</p> <p>The approach to identifying representative air quality levels is conservative and often ensures the worst-case conditions are reflected so as to not under-represent conditions within a study area; i.e. background air quality contaminant levels included within the assessment may be representative or higher than expected for the area in question.</p> <p>While it is recognized that localized in-situ monitoring may provide more accurate data, use of existing monitoring stations within the NAPS network for statistically relevant background monitoring data is a generally accepted and conservative methodology for provincial environmental impact air quality assessments. Stations selected for the background air quality assessment were chosen based on total data availability over a most recent five-year period as a minimum of 12 months of daily and hourly data is required to ensure statistical relevance. Stations were also selected based on their proximity to the air quality study area with the meteorological station selected as representative of the air quality study area within 15 km north-west of the air quality study area. Stations must also be a relative representation of similar types of existing sources of air quality emission in the study area and it is notable that the meteorological station selected as representative of air quality in the study area was provided by the MECP in site-specific MET data requested for the project modelling.</p> <p>12. Many alternatives have not been considered, including: extending and widening Green Lane to six lanes to Highway 400 including service roads, bridges and traffic circles is economically a much better idea that will cost less and does not use up any farm land, wetland or have any major river crossings. It will better serve and reduce the local and provincial traffic. Nobody from King Township, Whitchurch, Oak Ridges, Aurora, Newmarket and East Gwillimbury is going to drive north of Queensville to use the bypass that is being</p>

						<p>planned as it is not in the center of the population. Where are the results of the Origin Destination Study that was requested? Where is the Study for Local Network Improvements that was requested? Where is the study covering upstream pollution?</p> <p>The Project Team completed an update to the description of environmental conditions previously documented in the 2002 Approved Environmental Assessment (EA) for the project. This update included a review and assessment of the existing traffic conditions which was documented in the Environmental Conditions Report (ECR). The ECR was finalized in October 2022 following a public review period and is available on the Project website. For more information on the Environmental Conditions of the Study Area, please refer to Section 2 of the Updated Draft EIAR</p> <p>The Holland Marsh Wetland Complex extends beyond the Bradford Bypass corridors and consists of over 3,000 hectares (ha) of designated wetland area. Currently the Bradford Bypass corridor will cross approximately 12.73 ha which accounts for only 4 percent of the entire Provincially Significant Wetland (PSW) area. The crossing locations were chosen because they are consistent with the Ministry's effort to minimize impacts to this sensitive wetland and are among the narrowest portions of Holland Marsh. A portion of the crossing will be accommodated on an elevated structure in order to provide marine navigation clearance over the Holland River and Holland River East Branch below. The Project team is carrying forward commitments made in the 2002-approved EA to span all provincially significant wetlands within the study limits.</p> <p>The Project Team will continue to carefully consider all impacts to wetland areas and will continue to work with Indigenous communities, environmental agencies, municipalities, and other concerned stakeholders to identify principles and recommendations for mitigating the impacts of placing new or expanded provincial highways within wetland areas. The Bradford Bypass Project will continue to look at opportunities to minimize impacts to these wetlands through engineering refinements.</p> <p>For more information on the assessment of alternative routes, please refer to the response to question #3.</p>

CT-DraftEIAR-63	To: Project Team From: [REDACTED]	Email: [REDACTED]	Draft EIAR Comments	June 27, 2023	We enclose our comments and request a read receipt. [REDACTED]	<p>Hello [REDACTED]</p> <p>Thank you for your interest in the Bradford Bypass Preliminary Design Study and project-specific assessment of environmental impacts, undertaken in accordance with Ontario Regulation 697/21.</p> <p>1. Time and consultation are inadequate. You have provided an un-editable PDF and 30 days for a 576 page report. This follows the pattern of terrible public information and consultation. Will you extend the consultation period?</p> <p>The process of planning the Bradford Bypass has included -- and will continue to include -- consultation with the public and Indigenous communities to ensure the project moves forward in an environmentally responsible way that is responsive to the needs and concerns of communities. In accordance with Ontario Regulation 697/21, an initial Draft Environmental Impact Assessment Report (EIAR) -- which documents the results of the studies undertaken for various environmental disciplines, proposed mitigation measures and environmental commitments to protect the environment -- was published for public review starting on June 1 and continuing until June 30, 2023. In addition, the Ministry has been providing Indigenous communities and stakeholders various opportunities for meaningful consultation since the project was re-initiated in September 2020 including two Public Information Centres. Additional archaeological investigations, which are necessary to complete the impact assessment in accordance with regulations, have recently been finalized and incorporated into an Updated Draft Environmental Impact Assessment Report. This updated report has been posted for an additional 30-day consultation period. The Updated Draft EIAR posting includes the information from the initial draft to ensure stakeholders can review additional information in full context of the project. As the initial Draft EIAR and the Updated Draft were available for public review for a total of 60 days, an extension of the public review period is not being considered at this time.</p> <p>The Updated Draft Environmental Impact Assessment Report was available for review on the Project Website (https://www.bradfordbypass.ca/study-process/) until August 14, 2023.</p>	No.

						<p>2. Explain how a provincial highway was transformed into a very expensive regional road variant with five interchanges and two 400 series highway connections, paid for by all Ontario taxpayers. This is inconsistent with the MTO's mandate to provide long distance travel solutions. We maintain that there are better and cheaper, faster to implement, regional road and transit solutions that should be pursued, even if the Bypass does get built.</p> <p>The project is being assessed with consideration of the Ministry's mandate to provide for the safe, efficient movement of people and goods between regions and urban areas. In addition, the Project Team has consulted with local and regional municipalities, and the traffic analysis for the proposed Bradford Bypass has considered the planned local transportation and transit improvements to be implemented by others.</p> <p>The original route planning study (2002 Approved Environmental Assessment – EA) concluded that additional relief from congestion in this Study Area could only be accommodated through the protection and implementation of a provincial right of way.</p> <p>As part of the 2002 Approved EA, the Bradford Bypass evaluated alternatives from a broad range of potential solutions to address several transportation problems and to address significant opportunities identified in York Region and Simcoe County. The need for this freeway was confirmed as the only reasonable solution that would make a significant contribution towards addressing the problem as the population in York Region and Simcoe County grows. The 2002 Approved EA approved alignment is technically preferred for a freeway in terms of highway network expansion, ease of construction, relationship to provincial and municipal land use planning and the preferred route is already included in Official and Transportation Master Plans, as well as the Places to Grow Act), as well as having fewer negative impacts to residential and natural areas when compared to other route options considered.</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIAR Edits Required? (Yes/No? If yes specify edits)
						<p>For more information on the Analysis and Evaluation of alternatives, refer to Section 2.1.6 of the 2002 Approved EA, which can be found in the enclosed link: https://www.bradfordbypass.ca/wp-content/uploads/2020/09/BBP-RoutePlanningEA-1997.pdf</p> <p>Further to the conclusion of the 2002 Approved EA, as part of this Preliminary Design study, a traffic analysis was completed and the result of the review has confirmed the need of the highway. This analysis included the review of existing traffic conditions and modelling of future forecast traffic conditions and it has been confirmed that updates to regional and municipal roads alone will not address the transportation needs within the Study Area.</p> <p>Additionally, a feasibility assessment was conducted evaluating nine interchange location scenarios to determine the best interchange configuration through the Bradford Bypass corridor. The evaluation was conducted in accordance with satisfying the study objective to improve connectivity of the study area between Highway 400 and Highway 404, facilitating the improvement of traffic operations and movement of goods. Consideration included interchange utilization, overall network delay, out of way travel, environmental considerations and constraints, and preliminary costs. It was determined that interchanges at 10th Sideroad, County Road 4, Bathurst Street, 2nd Concession Road, and Leslie Street would be included as part of the Study.</p> <p>3. We would like to see the traffic studies in their entirety. An environmental assessment used to be grounded in a demonstration of need and justification. The MTO has provided neither as it pertains to this particular project and at this time. There is no evidence that local traffic solutions MTO purports to be solving (actually a local traffic issue and not MTO's mandate) are best served by this potentially \$4 billion highway.</p> <p>The Bradford Bypass project has been assessed in accordance with Ontario Regulation 697/21. Consistent with the Regulation, the Project Team completed an update to the description of environmental conditions previously documented in the 2002 Approved</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIAR Edits Required? (Yes/No? If yes specify edits)
						<p>Environmental Assessment (EA) for the project. This update included a review and assessment of the existing traffic conditions which was documented in the Environmental Conditions Report (ECR). The ECR was finalized in October 2022 following a public review period, and is available on the Project website.</p> <p>Significant population growth is projected for both Simcoe County and the Regional Municipality of York. Even with all currently planned transportation and transit investments, road congestion will continue to increase across the Greater Golden Horseshoe (GGH) including within the Bradford Bypass Study Area.</p> <p>The purpose of the Bradford Bypass is to relieve congestion on existing local roads between Highway 400 and Highway 404 and provide a northern freeway connection between Highways 400 and 404.</p> <p>Modeling results demonstrated that under the No Build (no Bradford Bypass) scenario, local roads were forecasted to exceed capacity by 2031 but saw significant relief under the Build (with Bradford Bypass) scenario. Alternative alignments for the Bradford Bypass were then compared within the model, including the 2002 Approved EA alignment and interchange locations and an updated preferred interchange location alternative developed by the Project Team.</p> <p>On average, between the various origin-destination pairs using the Bradford Bypass, drivers in the peak direction during the peak period, would save up to 73% or 33 minutes of travel time when connecting between Highway 400 and Highway 404 compared to existing routes in the No Build scenario.</p> <p>The development of the analysis and key results from the Traffic Study have been summarized in the Draft Environmental Impact Assessment Report and the Updated Draft Environmental Impact Assessment Report (EIAR), which were available for public review and comment from June 1, 2023 to June 30, 2023 and July 14, 2023 to August 14, 2023, respectively. The information in the draft EIAR includes the origin and destination locations that were reviewed to determine the average travel time savings during the AM and PM peak hours. Similar to the process undertaken for MTO preliminary design studies, the Traffic Study will be finalized upon study completion and will be available if requested.</p> <p>a. Please share the links and the methodology, transparently, so that</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIAR Edits Required? (Yes/No? If yes specify edits)
						<p>people can understand what travel time savings MTO is referring to. We have absolutely no idea because your write up is incredibly vague about the start and end of the routes used for analysis.</p> <p>b. What year do your studies indicate that the Bypass will be congested at peak rush hour times?</p> <p>As detailed in the Draft EIAR (Section 2.4.1), an Aimsun model was created to assess the existing traffic conditions for the road network in the Study Area. The model study area encompasses the Highway 400 corridor from south of Simcoe County Road 88 to north of Highway 89, as well as the Highway 404 corridor from south of Green Lane East to its terminal at Woodbine Avenue (Table 4-3 and 4-4 of the Draft EIAR).</p> <p>The model for this area was developed using pre-pandemic traffic volumes to identify peak hour volumes within the Study Area. This model has been calibrated and validated as it closely resembled actual operating conditions.</p> <p>As detailed in Section 4.4 of the Draft EIAR, traffic is assessed through modelling to identify Level Of Service (LOS). Having confirmed the model was consistent with current (base) conditions, and therefore appropriate to assess future conditions and design alternatives, the model was used to assess LOS under future 2031 and 2041 conditions. To assess future conditions, the model was updated to include all road network and transit improvements planned within the Study Area, and, forecast traffic volumes based on the projected growth within the Study Area.</p> <p>The alternative Build scenarios showed the mainline operations on the Bradford Bypass in 2031 would operate at acceptable LOS D in the interim four lane configuration. The model indicates that by expanding to the ultimate 8 lane configuration (implementing another general purpose lane and an HOV lane in each direction by 2041), LOS on the mainline improves to LOS B or C and accommodates the additional traffic forecast by 2041.</p> <p>For further information about the Traffic Study please refer to the response to Question #3 and Section 4.4 of the Updated Draft EIAR.</p>

						<p>4. The Draft Environmental Impact Assessment report shows on pg. 212 the Bypass touching the southern portion of the Lower Landing (AKA BaGv-42), a significant historical and archaeological site at a significant meander on the East Holland River. MTO has moved the highway 150 m to the south of the technically preferred route, which would have completely run over the Lower Landing (pg 148). But the Draft IA states, "the southern portion of the site ... will be impacted by construction" (pg 395). The Draft Environmental Conditions Report indicated that a Stage 3 archaeological assessment "was required" (pg 225); the Draft IA report says that the Stage 3 was completed, and that Stage 4 is required. The Project team's website says, <i>"Currently, additional archaeological investigations are being completed to finalize the impact assessments in accordance with Ontario Regulation 697/21 and are not included in this posting. This information will be available for additional public and Indigenous community review once completed."</i> So the archeological work is not finished. And yet the route has been chosen. Property owners near the history-rich Lower Landing that are receiving expropriation notifications. We are staunchly opposed to this violation of this site particularly absent the stage 4 evaluation of the Lower Landing and the endorsement of the First Nations.</p> <p>a. As stewards of these lands and water for time immemorial, additional time should be given to allow First Nation community members to fully digest the lengthy report. Georgina Island First Nation asked that this site be avoided in 1998, 25 years ago, stating, "It is obvious that there are other routes, which can be used to connect these major highways, and we hope that another will be selected." Is Ontario still ignoring this request.</p> <p>b. Have First Nations be consulted about this part of the plan? Please provide</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIAR Edits Required? (Yes/No? If yes specify edits)
						<p>written evidence of their approval of this route.</p> <p>Field investigations for Stage 2 and Stage 3 works have been completed and additional details are included in the Updated Draft Environmental Impact Assessment Report available on the Project Website (https://www.bradfordbypass.ca/study-process/) for public review until August 14, 2023.</p> <p>The required Stage 4 Archaeological Assessment of BaGv-42 will be completed during future phases of work for the project and will be carried out in accordance with the Ministry of Citizenship and Multiculturalism Standards and Guidelines for Consultant Archaeologists (Ontario Government 2011). No ground disturbing activities will occur at this site until the Stage 4 assessment has been conducted.</p> <p>In accordance with Ontario Regulation 697/21, the Project Team completed site specific Stage 3 archaeological assessments for areas within the Study Area that were identified as having archaeological potential in accordance with the Stage 2 archaeological assessments.</p> <p>It is common practice for Stage 4 archaeology work to be completed during Detail Design. Limiting the impact to Stage 4 archaeological sites where feasible is one of the Project Team's main priorities. As a result, the Project Team will determine the exact impact limits to archaeological sites during subsequent design phases of the project. To avoid unnecessary excavation, the Project Team will then undertake the Stage 4 archaeological assessments. Any Stage 4 field work that will be undertaken must engage interested Indigenous communities.</p> <p>As recommended by the cultural heritage resource assessment undertaken by the Project Team, the Holland River watershed was identified as a Cultural Heritage Landscape requiring further research and evaluation to determine if it possesses cultural heritage value or interest. This further assessment will be completed in a Cultural Heritage Evaluation Report (CHER), and if the CHER determines that the Holland River Watershed meets the criteria in Ontario Regulation 9/06 or Ontario Regulation 10/06 of the Ontario Heritage Act, and may be adversely impacted by the Updated Technically Preferred Route, a Heritage Impact Assessment will be prepared to fully assess impacts on the resource's identified heritage</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIA Edits Required? (Yes/No? If yes specify edits)
						<p>attributes and propose alternatives and mitigation to conserve the property's Cultural Heritage Value or Interest. These commitments are included in Section 5.3.2 of the Updated Draft EIA.</p> <p>Consultation is an integral component of the Preliminary Design stage, the project-specific assessment of environmental impacts process, and for future project phases, and is critical to a project's success. The ministry is actively consulting and engaging with Indigenous communities throughout the Bradford Bypass Project. The Project Team is engaging with and considers input provided by the following Indigenous communities:</p> <ul style="list-style-type: none"> - Alderville First Nation - Beausoleil First Nation - Chippewas of Georgina Island First Nation - Chippewas of Rama First Nation - Curve Lake First Nation - Hiawatha First Nation - Mississaugas of Scugog Island First Nation - Kawartha Nishnawbe First Nation - Georgian Bay Métis Council, and - Huron-Wendat Nation <p>Comments from Indigenous communities are accepted at any time in the study process.</p> <p>5. Table 2-2 lays out the 12 species present or very likely to be present. For instance, Blandings Turtles are likely affected as they are likely in the area. The only commitment we see is to do a detailed study later on. This is a good example of study following decision or destruction, and is in violation of the standard EA practices. There are no commitments to the protection of species at risk in this document.</p> <p>Targeted surveys for all species at risk with potential to occur in the Study Area will be required during future phases of work. These future studies will inform the need for any permits, authorizations, mitigation or compensation under the Endangered Species Act.</p> <p>The Updated Draft EIA requires consideration and review of all recommendations throughout the corridor during future phases of work. This approach is necessary and standard practice for planning projects in that design is an iterative approach and this project is only completing design to a preliminary level. During future phases of work,</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIAR Edits Required? (Yes/No? If yes specify edits)
						<p>additional design will be completed and may include refinements to the design as details are developed with greater accuracy. Limiting the future design phases by making certain elements of the project non-discretionary at the preliminary design stage limits the potential for future work to explore opportunities for further reducing impacts and / or increasing mitigation and offsetting measures. For Blanding's Turtle specifically, candidate habitat associated with the Holland River and Holland River East Branch open water and wetland communities has been identified within the Study Area. Blanding's Turtle may be impacted while moving in between habitats if these species enter the construction work area.</p> <p>As part of this phase of the project, preliminary mitigation and avoidance measures for the potential impacts to turtles are included in the Draft EIAR and include:</p> <ul style="list-style-type: none"> • If stockpiles of gravel and sandy substrates or the removal of these substrates in the vicinity of turtle habitat are required during the active turtle season (April 1 to October 15), turtle exclusion fencing should be installed in accordance with the Reptile and Amphibian Exclusion Fencing Best Management Practices (Ministry of the Environment, Conservation and Parks, 2020) around stockpiles or area of disturbance prior to April 1. Fencing should be installed immediately after stockpiles are created if after April 1. • It is recommended that culverts be designed to provide openness ratios that would allow for the passage of small mammal and/or herpetofauna where possible. An openness ratio of 0.4 would permit usage by medium-sized mammals, while the minimum openness ratio to be considered should be 0.25, which would permit usage by reptiles such as turtles (Credit Valley Conservation, 2017). • Avoid work within areas of candidate turtle overwintering habitat during the turtle overwintering period (October 31 to April 1), whenever possible. <p>These preliminary mitigation measures will be further refined as the project proceeds to Detail Design and impacts are assessed in more detail.</p> <p>For further detail on potential impacts to Species at Risk and proposed mitigation and avoidance measures, please refer to Section 5.1.1 of the Draft Environmental Impact Assessment Report.</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIA Edits Required? (Yes/No? If yes specify edits)
						<p>a. The Draft IA report identifies that the Williams Treaties FN reported American Eel and Northern Sunfish in the Holland River. This must be further investigated with new fieldwork. The American Eel is in decline and gets Federal protection. Ontario's Species at Risk legislation doesn't work anymore so it's all up to the federal enforcement.</p> <p>b. What is Ontario going to do to stand by Canada's obligations to First Nation treaty and consultation rights?</p> <p>c. Will the American Eel's presence be investigated with new field work.</p> <p>It was noted in discussion with William Treaties First Nations on December 1, 2022, that they had observed both American Eel (<i>Anguilla rostrata</i>; Endangered Species Act – Endangered, Species at Risk Act – Not at Risk) and Northern Sunfish (<i>Lepomis peltastes</i>; Endangered Species Act – Special Concern, Species at Risk Act – Special Concern) in the Holland River.</p> <p>Subsequently, the Project Team consulted with the Ministry of the Environment, Conservation and Parks, in March 2023 and was advised that the Ministry of Environment, Conservation and Parks records have no documented observances of the American Eel or Northern Sunfish in the Study Area. They also noted that the Northern Sunfish is a species of special concern and does not have a permitting status with the Ministry of the Environment, Conservation and Parks, and therefore would not be reported. These discussions with Williams Treaties First Nations and MECP have been documented in the Fish and Fish Habitat Report and Section 2.1.2 of the Updated Draft EIA.</p> <p>No records of aquatic Species at Risk that are afforded protection under the Species at Risk Act or Endangered Species Act are known to occur in the watercourses where culverts are anticipated to be installed. AECOM ecologists conducted a detailed fish and fish habitat assessment of the water features in the vicinity of the Study Area between September 14-18, 2020, with spring field investigations occurring over multiple days in June 2021. Field investigations were also completed in the spring of</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIAR Edits Required? (Yes/No? If yes specify edits)
						<p>2022 due to changes to the Study Area boundary that required further review for potential fish habitat. Based on these investigations, no Species at Risk were discovered in the Study Area. Regardless, the presence or absence of all aquatic Species at Risk will be re-confirmed in subsequent design phases through additional field investigations.</p> <p>6. Please confirm our understanding that has been no discussion of, and that there are no studies looking at impacts to Lake Simcoe.</p> <p>As the project falls within the jurisdiction of the Lake Simcoe Region Conservation Authority (LSRCA), pertaining to Ontario Regulation 179/06, the ministry has assessed impacts with respect to the <i>Lake Simcoe Protection Act</i> and the Lake Simcoe Protection Plan through consideration of water quality and quantity, stormwater management, groundwater management, landscaping and ecological restoration measures; as well as fluvial geomorphological designs for watercourses, erosion and sediment control and spills prevention and protection measures.</p> <p>a. The Groundwater Protection and Well Monitoring plan, which this Draft IA refers to, discusses the need to dewater the site for the building of piles for elevated bridge sections of the highway. The Draft IA report says, "Construction dewatering activities have been identified as the primary risk to groundwater fed water wells in the Study Area." There is no credible groundwater protection water. There are many suggestions for how to keep it clean but there are few to no commitments.</p> <p>Commitments, preliminary mitigation measures and monitoring activities related to groundwater are documented in Section 5.1.4 of the Draft EIAR, and will be carried forward to subsequent phases of the project.</p> <p>The risk of spills during construction of the project will be primarily limited to petroleum products from machinery (fuels and lubricants). The use of best management practices for handling of hydrocarbons according to the Ministry of Environment, Conservation and Parks and the</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIAR Edits Required? (Yes/No? If yes specify edits)
						<p>Technical Standards and Safety Authority of the Ministry of Government Services will reduce the potential of environmental adverse effects associated with petroleum product handling and uses. Spillage of petroleum products must be immediately remediated according to these standards such that groundwater quality is not impacted. Mitigation plans will be generated during future phases of work for the project and for any excavation and structure construction within areas of medium to high significant groundwater recharge areas as shown near the Holland River and Holland River East Branch. Mitigation plans would be specific to each excavation and structure construction and include erosion and sediment control, dewatering treatment and discharge piping away or towards from Significant Groundwater Recharge Areas, or municipal sewer discharge requirements. Dewatering discharge shall be directed away from Well Head Protection areas if excavation and dewatering activities are occurring within them.</p> <p>For more information about the Groundwater Protection and Well Monitoring Plan please refer to Section 5.1.4 of the Updated Draft EIAR.</p> <p>b. How exactly is the province going to monitor groundwater discharges to ensure they meet Ontario's water quality standards?</p> <p>c. What penalties are contractors going to face for violating the discharge requirements?</p> <p>d. If penalties are not enough to compel adherence, what next?</p> <p>e. How is the public to have confidence that contaminated water will not be discharged to the Holland Rivers and Lake Simcoe?</p> <p>f. Please confirm is monitoring will continue or not, as this statement is totally vague: "It is expected that each unassessed monitoring well will continue to be monitored and assessed during the subsequent detail design phase of the project."</p> <p>The Groundwater Monitoring Program includes groundwater level monitoring and groundwater quality</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIAR Edits Required? (Yes/No? If yes specify edits)
						<p>monitoring to establish the pre-construction baseline conditions for comparison of data collected during and post-construction.</p> <p>During the Preliminary Design study, Golder Associates Ltd. (Golder) installed monitoring wells during the ongoing geotechnical investigations. Monitoring is expected to be completed within these same monitoring wells during all future phases of work for the Project, including construction. Residential monitoring wells will also be part of this program if they fall within the Radius of Influence of the excavation dewatering and permission to enter is granted to gain access to monitor the well. Detail Design will inform the need for further groundwater investigations. Penalties for discharging any deleterious substance or material to the lands will vary based on the federal, provincial or municipal legislation that might be violated. Beyond legislated penalties, contractor behavior is monitored by the Ministry and poor behavior may result in additional financial or reputational impacts. The Ministry's process for selecting contractors to support future phases of the work for the project also includes consideration of past performance and assessment of the contractors understanding of the project and sensitivities within the Study Area. Commitments, preliminary mitigation measures and monitoring activities related to groundwater are documented in Section 5.1.4 of the Draft EIAR, and will be carried forward to subsequent phases of the project.</p> <p>g. Explain what kind of environmental impact would make the project stop; or is any impact acceptable?</p> <p>This government takes environmental protection seriously and is implementing a path forward that will ensure environmental protections are not compromised while building this much needed project quickly and safely. Current work on the Bradford Bypass project will continue to be subject to all conditions under Ontario Regulation 697/21.</p> <p>In accordance with Ontario Regulation 697/21, the Project Team has undertaken several environmental impact assessments to identify and document the potential impacts, proposed mitigation measures, and environmental commitments, which are summarized in the Environmental Impact Assessment Report (EIAR).</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIAR Edits Required? (Yes/No? If yes specify edits)
						<p>The Ministry of Transportation must also comply with all current federal and provincial environmental requirements. This includes consultation as set out in the regulation and obtaining permits and approvals for the project prior to the start of construction. Obtaining these permits and approvals, which are mechanisms to help protect the environment, confirms that the ministry has met or surpassed the environmental requirements.</p> <p>h. Please confirm that the only financial support for affected well owners whose water quality is affected by the construction is the province providing them with a temporary water supply until the well owner fixes their well.</p> <p>i. Does this meager bit of help extend to those who did not provide baseline information about their well water?</p> <p>j. If there any effort being made to reach more than 12% of respondents to MTO's well water survey?</p> <p>MTO will work with owners of water wells who experience issues to determine if the issue is the result of Bradford Bypass project activities.</p> <p>If the well issue is confirmed to be a result of the project's activities, the Ministry will provide a letter to the property owner explaining the outcome of the well investigation and detail the recommended mitigation measures (including lowering / replacement of pump inlet, well rehab, new well installed or local watermain connection if available) the Ministry will undertake to remediate the issue. A temporary drinking water supply will be provided and connected to the resident if the project activities are found to be responsible, at the expense of the Ministry, until remediation measures have resolved the issue.</p> <p>A water well survey was completed for the project to determine the pre-construction assessment of private well supplies in the vicinity of the Study Area noted above.</p> <p>Where no response was provided from Property Owners as part of the water well survey, an additional attempt shall be undertaken during Detail Design to contact these owners via mail, email, phone calls, site visit, etc. This information will be used to provide a baseline for water wells prior to the proposed construction to determine existing water quality and quantity of each property.</p>

						<p>7. How much is this project going to cost?</p> <p>As we bring this project to market, we want to ensure we can retain the best value for the project. As such, the ministry will not be releasing cost estimates prior to the award of contracts to protect the procurement processes.</p> <p>8. When will the Bradford Bypass be completed?</p> <p>The Preliminary Design phase is anticipated to be completed in 2023. Detail Design and Construction Phases will follow.</p> <p>9. It is unclear how many lanes are being constructed at which times. Please clarify.</p> <p>The Ontario government is committed to fully funding the construction of the Bradford Bypass and is following through on its promise to improve and invest in the province's transportation corridors to get people moving within the region, connect people to jobs, make life easier and support a strong economy.</p> <p>A four-lane configuration is planned to be constructed first with two general purpose lanes in each direction. To plan for the future, the Ministry is also considering the design of an ultimate eight-lane design for the Bradford Bypass. The ultimate, eight-lane configuration for the project will feature three general purpose lanes and one HOV lanes in each direction.</p> <p>10. There is no cumulative health impact assessment to understand how traffic related air pollution, known to increase risks of cancers, leukemia, heart and lung disease, will impact the communities surrounding the route. There is also no mention of the cumulative impacts on our climate from construction and higher rates of car travel on this highway.</p> <p>a. How will you be informing people living along the route about the increased risk of traffic related air pollution and its effects on human health?</p> <p>b. Will you put air quality monitors in Bradford?</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIAI Edits Required? (Yes/No? If yes specify edits)
						<p>c. How do you explain the fact that you are NOT monitoring air quality in Bradford, and using the closest site, Newmarket?</p> <p>d. The Final Environmental Conditions Report identified numerous planned residential developments right beside the highway, including a planned new school. Have the land owners / developers / school boards received any information that tells them how bad the air quality is going to be there?</p> <p>The human health scoping implications of the project such as air quality, noise, land use, traffic congestion and safety, economic, social cohesion, and neighborhood resources have been summarized in Section 2.2.7 and Section 5.2.7 of the Draft EIAI. To better understand the human health implications due to the Project as a next step, it is recommended for MTO to continue to consider the human health factors identified in this report and provide recommendations to enhance potential positive impacts and mitigate potential negative health impacts. Specifically, conducting a Screening-Level Human Health Risk Assessment of potential air quality impacts is recommended in order to evaluate and characterize Project-related air quality impacts to health.</p> <p>The project has undertaken an Air Quality Impact Assessment to explore pollutant emissions and dispersion modelling in an effort to predict the contribution of the project to future ambient pollutant concentrations. This contribution, added to background concentration levels, allows prediction of the cumulative impact of the proposed project and all other contributors to air pollution.</p> <p>Concentration levels are compared to provincial and federal ambient air quality criteria and standards to assist in the evaluation of project-specific mitigation needs and options.</p> <p>Areas of concentrated emission impact are influenced by traffic volumes along a given segment of roadway. The implementation of the Bradford Bypass is expected to redistribute traffic from local roads and freeway corridors surrounding the proposed Bradford Bypass. Reductions in traffic volumes are observed on corridors including Highway 11/1 (Bridge Street), Bathurst Street, Holland Landing Road, Yonge Street, Queensville Sideroad, Doane Road, Mount Albert Road, Green Lane, and</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIAI Edits Required? (Yes/No? If yes specify edits)
						<p>Simcoe County Road 88/Holland Street, among other roads, which benefits the community of Bradford, Town of Bradford West Gwillimbury, by alleviating congestion during peak hours.</p> <p>The Project Team is currently utilizing the National Air Pollution Surveillance air quality monitoring stations to assess air quality levels. Five years of existing data sets were analyzed from stations within the region, and the complete data set from the closest station or most representative station for each contaminant of concern was selected to represent the background air quality for the Study Area. Due to the proximity of the Study Area to the Toronto Area, monitoring stations within the City of Toronto were given preference as the one of the most representative locations for the air quality contaminants of concern. As such, Roadside Wallberg – University of Toronto monitoring station, North Downsview monitoring station, Gage Institute monitoring station (all located approximately 38 – 53 km from the Study Area) were used. The nearest monitoring station is in Newmarket. Additional information regarding the assessment of potential air quality impacts have been summarized in Section 2.2.4 and Section 5.2.4 of the Draft EIAI.</p> <p>Land has been designated for the Bradford Bypass since the 2002 Approved EA was completed. As noted above, consultation is an integral component of the Preliminary Design stage and project-specific assessment of environmental impacts and is critical to a project's success. The ministry is actively consulting and engaging with private landowners, developers and school boards within the Study Area. Engagement and consultation has included having a project website and telephone line, having a project contact list for regular project updates, providing notices and correspondence via email, mail, and Ontario Government Notices in local newspapers, hosting public information centres and online events, and holding meetings with Indigenous communities, municipalities, environmental agencies, and stakeholders. More information on the project consultation activities are included in Section 7 of the Updated Draft EIAI.</p> <p>11. Traffic modeling to produce the air dispersion model is not robust or transparent. The air modeling report and supporting reports fail to disclose the % of diesel truck traffic, or the component of that traffic that includes trucks dating from 2006 or earlier which comprise a</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIAR Edits Required? (Yes/No? If yes specify edits)
						<p>significant component of air pollution load. The comparison of build with no-build is not valid because the values in Appendix E of the traffic modeling report show that there was an erroneous assumption that there would be significantly less truck traffic in the build scenario compared to the no-build scenario. There is no valid scientifically-based justification for this. Further, if there is an increase in truck traffic along 404 - as the model predicts - then sensitive receptors along highway 404 need to be included in a health impact study. Instead, impacts on traffic along the 400/404 corridors were excluded and the "air quality study area" was restricted to the bypass corridor itself without any explanation or justification. It is egregious that MTO did not conduct locally relevant air quality monitoring for background in Bradford, River Drive Park, Queensville and along the 404/400 corridors for traffic related air pollutants. Such baseline monitoring is generally inexpensive and could have been easily obtained. The study did not include the cumulative effects of future planned industrial uses along the Bypass corridor and along the 400/404 corridor which may significantly impact people's health along the route. The evaluation did not use 2022 World Health Organization criteria for contaminants which are much lower and more up-to date than the CAAQS or the AAQCs. We disagree that the AAQCs and CAAQCs represent the "lowest concentrations at which an adverse effect may be experienced" as they are not based on up-to-date understandings of the health impacts of air contaminants including pre-term births and neurodevelopmental and other impacts. The report predicts significant exceedances for NO2 and benzo(a)pyrene even with the apparently non-conservative assumptions for diesel truck traffic used in the full build out scenario compared to the no-build scenario. The adverse health impacts of NO2 exceedances may be extremely severe and will impact on the Charter rights and human rights</p>

						<p>of residents in the study area and beyond without justification for the need for the project.</p> <p>Study Area, MOVES3 data, vehicles and assumptions: In order to model relevant vehicle types within the Air Quality Impact Assessment Study Area, MOVES3 data was input to the model and refinements were made to exclude fuel types such as ethanol given these fuels are not readily available for use in Ontario. Fuel inputs utilized in MOVES3.0 modelling at the time of the assessment included: Fuel Type IDs 1, 2, 3 and 9. ID 5 (ethanol) was not included as flex fuel cars and fuelling stations are not readily available in Ontario. The specific source type fractions utilized for various vehicle types applied within the project study area and the related fraction of expected vehicle usage for both passenger-class vehicles and heavy-class vehicles, including the distribution of vehicle types in the heavy truck vehicle category, were combined to create representative vehicle emission for vehicle class that can reasonable be expected to be in use in 2041. Highway 400/404 corridors were included in the Air Quality Impact Assessment. The full air quality study area is shown in Figure 2-9 of the Updated Draft EIAR and demonstrates that the air quality study area included emission sources within the boundary of assessment, including but not limited to Highway 400 (500 m south of Rural Rd. 88 to 500 m north of Concession Rd. 11), Highway 404 (500 m south of Queensville Sideroad E to 500 m north of Boag Road), the entirety of the proposed Bradford Bypass, Bridge Street, Holland Street W, 10th Sideroad, Young Street/Barrie Street, and Queensville Sideroad.</p> <p>Traffic distributions and truck traffic: The same Average Annual Daily Traffic (AADT) were used for all scenarios. AADT values for each air quality emission source vary between the three scenarios evaluated based on projected existing traffic within the study area, and future no-build and build traffic projections however the same 24-hour traffic distribution percentages were applied. Three representative 24-hour distribution percentages were applied to the air quality emission sources. These were applied to a given source of emission depending on the type of road in question, e.g. a "Leslie St." 24-hour distribution was applied to air quality emission sources which were categorized as community</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIAR Edits Required? (Yes/No? If yes specify edits)
						<p>arterial roads; a "HWY 400" 24-hour distribution was applied to air quality emission sources categorized as highways; and, a "2nd Concession Rd" 24-hour distribution was applied to rural roads. These same 24-hr distributions were applied to the assigned source for all three scenarios of evaluation (existing conditions, future no-build, and future build).</p> <p>Fuel usage distribution [i.e. diesel, gasoline, CNG, etc.] and vehicle age distribution within each vehicle type category were modelled based on MOVES3.0 default fuel use and age distribution database inputs assigned to the year of evaluation. Heavy truck traffic was included in the modelling with a percentage assigned to each air quality emission source anticipated from this vehicle type.</p> <p>Health Impacts, Critical Receptors and Background/Study Area Monitoring Data: The human health scoping implications of the project such as air quality, noise, land use, traffic congestion and safety, economic, social cohesion, and neighborhood resources have been summarized in Section 2.2.7 and Section 5.2.7 of the Updated Draft EIAR.</p> <p>The Project Team is aware some critical receptors have been identified as 'missing' by a number of stakeholders. Having reviewed the data, these 'missing' receptors were included as residences in the Air Quality Impact Assessment. Potential impacts at the 'missing' receptors within the Air Quality Impact Assessment Study Area are reflected in the assessment by other, nearby critical receptors and receptors identified on Figure 2-9 and 2-10 of the Updated Draft EIAR.</p> <p>The approach to identifying representative air quality levels is conservative and often ensures the worst-case conditions are reflected so as to not under-represent conditions within a study area; i.e. background air quality contaminant levels included within the assessment may be representative or higher than expected for the area in question.</p> <p>While it is recognized that localized in-situ monitoring may provide more accurate data, use of existing monitoring stations within the NAPS network for statistically relevant background monitoring data is a generally accepted and</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIAR Edits Required? (Yes/No? If yes specify edits)
						<p>conservative methodology for provincial environmental impact air quality assessments. Stations selected for the background air quality assessment were chosen based on total data availability over a most recent five-year period as a minimum of 12 months of daily and hourly data is required to ensure statistical relevance. Stations were also selected based on their proximity to the air quality study area with the meteorological station selected as representative of the air quality study area within 15 km north-west of the air quality study area. Stations must also be a relative representation of similar types of existing sources of air quality emission in the study area and it is notable that the meteorological station selected as representative of air quality in the study area was provided by the MECP in site-specific MET data requested for the project modelling.</p> <p>12. Many alternatives have not been considered, including: extending and widening Green Lane to six lanes to Highway 400 including service roads, bridges and traffic circles is economically a much better idea that will cost less and does not use up any farm land, wetland or have any major river crossings. It will better serve and reduce the local and provincial traffic. Nobody from King Township, Whitchurch, Oak Ridges, Aurora, Newmarket and East Gwillimbury is going to drive north of Queensville to use the bypass that is being planned as it is not in the center of the population. Where are the results of the Origin Destination Study that was requested? Where is the Study for Local Network Improvements that was requested? Where is the study covering upstream pollution?</p> <p>The Project Team completed an update to the description of environmental conditions previously documented in the 2002 Approved Environmental Assessment (EA) for the project. This update included a review and assessment of the existing traffic conditions which was documented in the Environmental Conditions Report (ECR). The ECR was finalized in October 2022 following a public review period and is available on the Project website. For more information on the Environmental Conditions of the Study Area, please refer to Section 2 of the Updated Draft EIAR</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIAR Edits Required? (Yes/No? If yes specify edits)
						<p>The Holland Marsh Wetland Complex extends beyond the Bradford Bypass corridors and consists of over 3,000 hectares (ha) of designated wetland area. Currently the Bradford Bypass corridor will cross approximately 12.73 ha which accounts for only 4 percent of the entire Provincially Significant Wetland (PSW) area. The crossing locations were chosen because they are consistent with the Ministry's effort to minimize impacts to this sensitive wetland and are among the narrowest portions of Holland Marsh. A portion of the crossing will be accommodated on an elevated structure in order to provide marine navigation clearance over the Holland River and Holland River East Branch below. The Project team is carrying forward commitments made in the 2002-approved EA to span all provincially significant wetlands within the study limits.</p> <p>The Project Team will continue to carefully consider all impacts to wetland areas and will continue to work with Indigenous communities, environmental agencies, municipalities, and other concerned stakeholders to identify principles and recommendations for mitigating the impacts of placing new or expanded provincial highways within wetland areas. The Bradford Bypass Project will continue to look at opportunities to minimize impacts to these wetlands through engineering refinements.</p> <p>For more information on the assessment of alternative routes, please refer to the response to question #3.</p> <p>If you have any other questions, please feel free to reach out to the Project Team at your earliest convenience. You can reach the Project Team via email at projectteam@bradfordbypass.ca, toll free at 1-877-247-6036, or by visiting the Project Website at www.bradfordbypass.ca.</p> <p>Sincerely,</p> <p>The Bradford Bypass Project Team Email: projectteam@bradfordbypass.ca Toll-Free: 1 (877) 247-6036</p>

CT-DraftEIAR-64	To: Project Team From: [REDACTED]	Email: [REDACTED]	Draft EIAR	June 27, 2023	<p>Dear Sirs,</p> <p>We have many concerns with this project, the process it is following, and this report is no different. Please answer our questions below.</p> <ol style="list-style-type: none"> 1. Timing and consultation are inadequate. You have provided an un-editable PDF and 30 days for a 576 page report. This follows the pattern of terrible public information and consultation. Will you extend the consultation period? 2. Explain how a provincial highway was transformed into a very expensive regional road variant with five interchanges and two 400 series highway connections, paid for by all Ontario taxpayers. This is inconsistent with the MTO's mandate to provide long distance travel solutions. We maintain that there are better and cheaper, faster to implement, regional road and transit solutions that should be pursued, even if the Bypass does get built. 3. We would like to see the traffic studies in their entirety. An environmental assessment used to be grounded in a demonstration of need and justification. The MTO has provided neither as it pertains to this particular project and at this time. There is no evidence that local traffic solutions MTO purports to be solving (actually a local traffic issue and not MTO's mandate) are best served by this potentially \$4 billion highway. <ol style="list-style-type: none"> a. Please share the links and the methodology, transparently, so that people can understand what travel time savings MTO is referring to. We have absolutely no idea because your write up is incredibly vague about the start and end of the routes used for analysis. For instance this meaningless babble from 	<p>Hello [REDACTED]</p> <p>Thank you for your interest in the Bradford Bypass Preliminary Design Study and project-specific assessment of environmental impacts, undertaken in accordance with Ontario Regulation 697/21.</p> <p>1. Time and consultation are inadequate. You have provided an un-editable PDF and 30 days for a 576 page report. This follows the pattern of terrible public information and consultation. Will you extend the consultation period?</p> <p>The process of planning the Bradford Bypass has included -- and will continue to include -- consultation with the public and Indigenous communities to ensure the project moves forward in an environmentally responsible way that is responsive to the needs and concerns of communities. In accordance with Ontario Regulation 697/21, an initial Draft Environmental Impact Assessment Report (EIAR) -- which documents the results of the studies undertaken for various environmental disciplines, proposed mitigation measures and environmental commitments to protect the environment -- was published for public review starting on June 1 and continuing until June 30, 2023. In addition, the Ministry has been providing Indigenous communities and stakeholders various opportunities for meaningful consultation since the project was re-initiated in September 2020 including two Public Information Centres. Additional archaeological investigations, which are necessary to complete the impact assessment in accordance with regulations, have recently been finalized and incorporated into an Updated Draft Environmental Impact Assessment Report. This updated report has been posted for an additional 30-day consultation period. The Updated Draft EIAR posting includes the information from the initial draft to ensure stakeholders can review additional information in full context of the project. As the initial Draft EIAR and the Updated Draft were available for public review for a total of 60 days, an extension of the public review period is not being considered at this time.</p> <p>The Updated Draft Environmental Impact Assessment Report was available for review on the Project Website (https://www.bradfordbypass.ca/study-process/) until August 14, 2023.</p>	No

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIAR Edits Required? (Yes/No? If yes specify edits)
					<p>pg. 334:</p> <p><i>On average, between the various origin-destination pairs using the Bradford Bypass in the peak direction during the peak period, would save up to 73% or 35 minutes of travel time when connecting between Highway 403 and Highway 404 compared to existing routes or the no build scenario.</i></p> <p>b. What year do your studies indicate that the Bypass will be congested at peak rush hour times?</p> <p>4. The Draft Environmental Impact Assessment report shows on pg. 212 the Bypass touching the southern portion of the Lower Landing (AKA BaGv-42), a significant historical and archaeological site at a significant meander on the East Holland River. MTO has moved the highway 150 m to the south of the technically preferred route, which would have completely run over the Lower Landing (pg 148). The Draft Environmental Conditions Report indicated that a Stage 3 archaeological assessment "was required" (pg 225); the Draft IA report says that the Stage 3 was completed, and that Stage 4 is required. The Project team's website says, "<i>Currently, additional archaeological investigations are being completed to finalize the impact assessments in accordance with Ontario Regulation 697/21 and are not included in this posting. This information will be available for additional public and Indigenous community review once completed.</i>" The Draft IA states, "the southern portion of the site ... will be impacted by construction. Stage 4 Archaeological Assessment excavation plans will be submitted to the Ministry of Citizenship and Multiculturalism and Indigenous communities prior to the Stage 4 excavation being conducted," (pg 395).</p> <p>So the archeological work is not finished. And yet the route has been chosen. Property owners near the history-rich Lower Landing that are receiving expropriation notifications. We are staunchly opposed to this violation of this site particularly absent the completed stage 4 archaeological assessment of the Lower</p>	<p>2. Explain how a provincial highway was transformed into a very expensive regional road variant with five interchanges and two 400 series highway connections, paid for by all Ontario taxpayers. This is inconsistent with the MTO's mandate to provide long distance travel solutions. We maintain that there are better and cheaper, faster to implement, regional road and transit solutions that should be pursued, even if the Bypass does get built.</p> <p>The project is being assessed with consideration of the Ministry's mandate to provide for the safe, efficient movement of people and goods between regions and urban areas. In addition, the Project Team has consulted with local and regional municipalities, and the traffic analysis for the proposed Bradford Bypass has considered the planned local transportation and transit improvements to be implemented by others.</p> <p>The original route planning study (2002 Approved Environmental Assessment – EA) concluded that additional relief from congestion in this Study Area could only be accommodated through the protection and implementation of a provincial right of way.</p> <p>As part of the 2002 Approved EA, the Bradford Bypass evaluated alternatives from a broad range of potential solutions to address several transportation problems and to address significant opportunities identified in York Region and Simcoe County. The need for this freeway was confirmed as the only reasonable solution that would make a significant contribution towards addressing the problem as the population in York Region and Simcoe County grows. The 2002 Approved EA approved alignment is technically preferred for a freeway in terms of highway network expansion, ease of construction, relationship to provincial and municipal land use planning and the preferred route is already included in Official and Transportation Master Plans, as well as the Places to Grow Act), as well as having fewer negative impacts to residential and natural areas when compared to other route options considered.</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIAR Edits Required? (Yes/No? If yes specify edits)
					<p>Landing and the endorsement of the First Nations. Thanks [REDACTED]</p>	<p>For more information on the Analysis and Evaluation of alternatives, refer to Section 2.1.6 of the 2002 Approved EA, which can be found in the enclosed link: https://www.bradfordbypass.ca/wp-content/uploads/2020/09/BBP-RoutePlanningEA-1997.pdf</p> <p>Further to the conclusion of the 2002 Approved EA, as part of this Preliminary Design study, a traffic analysis was completed and the result of the review has confirmed the need of the highway. This analysis included the review of existing traffic conditions and modelling of future forecast traffic conditions and it has been confirmed that updates to regional and municipal roads alone will not address the transportation needs within the Study Area.</p> <p>Additionally, a feasibility assessment was conducted evaluating nine interchange location scenarios to determine the best interchange configuration through the Bradford Bypass corridor. The evaluation was conducted in accordance with satisfying the study objective to improve connectivity of the study area between Highway 400 and Highway 404, facilitating the improvement of traffic operations and movement of goods. Consideration included interchange utilization, overall network delay, out of way travel, environmental considerations and constraints, and preliminary costs. It was determined that interchanges at 10th Sideroad, County Road 4, Bathurst Street, 2nd Concession Road, and Leslie Street would be included as part of the Study.</p> <p>3. We would like to see the traffic studies in their entirety. An environmental assessment used to be grounded in a demonstration of need and justification. The MTO has provided neither as it pertains to this particular project and at this time. There is no evidence that local traffic solutions MTO purports to be solving (actually a local traffic issue and not MTO's mandate) are best served by this potentially \$4 billion highway.</p> <p>The Bradford Bypass project has been assessed in accordance with Ontario Regulation 697/21. Consistent with the Regulation, the Project Team completed an update to the description of environmental conditions previously documented in the 2002 Approved</p>

						<p>Environmental Assessment (EA) for the project. This update included a review and assessment of the existing traffic conditions which was documented in the Environmental Conditions Report (ECR). The ECR was finalized in October 2022 following a public review period, and is available on the Project website.</p> <p>Significant population growth is projected for both Simcoe County and the Regional Municipality of York. Even with all currently planned transportation and transit investments, road congestion will continue to increase across the Greater Golden Horseshoe (GGH) including within the Bradford Bypass Study Area.</p> <p>The purpose of the Bradford Bypass is to relieve congestion on existing local roads between Highway 400 and Highway 404 and provide a northern freeway connection between Highways 400 and 404.</p> <p>Modeling results demonstrated that under the No Build (no Bradford Bypass) scenario, local roads were forecasted to exceed capacity by 2031 but saw significant relief under the Build (with Bradford Bypass) scenario. Alternative alignments for the Bradford Bypass were then compared within the model, including the 2002 Approved EA alignment and interchange locations and an updated preferred interchange location alternative developed by the Project Team.</p> <p>On average, between the various origin-destination pairs using the Bradford Bypass, drivers in the peak direction during the peak period, would save up to 73% or 33 minutes of travel time when connecting between Highway 400 and Highway 404 compared to existing routes in the No Build scenario.</p> <p>The development of the analysis and key results from the Traffic Study have been summarized in the Draft Environmental Impact Assessment Report and the Updated Draft Environmental Impact Assessment Report (EIAR), which were available for public review and comment from June 1, 2023 to June 30, 2023 and July 14, 2023 to August 14, 2023, respectively. The information in the draft EIAR includes the origin and destination locations that were reviewed to determine the average travel time savings during the AM and PM peak hours. Similar to the process undertaken for MTO preliminary design studies,</p>

						<p>the Traffic Study will be finalized upon study completion and will be available if requested.</p> <p>a. Please share the links and the methodology, transparently, so that people can understand what travel time savings MTO is referring to. We have absolutely no idea because your write up is incredibly vague about the start and end of the routes used for analysis.</p> <p>b. What year do your studies indicate that the Bypass will be congested at peak rush hour times?</p> <p>As detailed in the Draft EIAR (Section 2.4.1), an Aimsun model was created to assess the existing traffic conditions for the road network in the Study Area. The model study area encompasses the Highway 400 corridor from south of Simcoe County Road 88 to north of Highway 89, as well as the Highway 404 corridor from south of Green Lane East to its terminal at Woodbine Avenue (Table 4-3 and 4-4 of the Draft EIAR).</p> <p>The model for this area was developed using pre-pandemic traffic volumes to identify peak hour volumes within the Study Area. This model has been calibrated and validated as it closely resembled actual operating conditions.</p> <p>As detailed in Section 4.4 of the Draft EIAR, traffic is assessed through modelling to identify Level Of Service (LOS). Having confirmed the model was consistent with current (base) conditions, and therefore appropriate to assess future conditions and design alternatives, the model was used to assess LOS under future 2031 and 2041 conditions. To assess future conditions, the model was updated to include all road network and transit improvements planned within the Study Area, and, forecast traffic volumes based on the projected growth within the Study Area.</p> <p>The alternative Build scenarios showed the mainline operations on the Bradford Bypass in 2031 would operate at acceptable LOS D in the interim four lane configuration. The model indicates that by expanding to the ultimate 8 lane configuration (implementing another general purpose</p>

						<p>lane and an HOV lane in each direction by 2041), LOS on the mainline improves to LOS B or C and accommodates the additional traffic forecast by 2041.</p> <p>For further information about the Traffic Study please refer to the response to Question #3 and Section 4.4 of the Updated Draft EIAR.</p> <p>4. The Draft Environmental Impact Assessment report shows on pg. 212 the Bypass touching the southern portion of the Lower Landing (AKA BaGv-42), a significant historical and archaeological site at a significant meander on the East Holland River. MTO has moved the highway 150 m to the south of the technically preferred route, which would have completely run over the Lower Landing (pg 148). But the Draft IA states," the southern portion of the site ... will be impacted by construction" (pg 395). The Draft Environmental Conditions Report indicated that a Stage 3 archaeological assessment "was required" (pg 225); the Draft IA report says that the Stage 3 was completed, and that Stage 4 is required. The Project team's website says, "Currently, additional archaeological investigations are being completed to finalize the impact assessments in accordance with Ontario Regulation 697/21 and are not included in this posting. This information will be available for additional public and Indigenous community review once completed." So the archeological work is not finished. And yet the route has been chosen. Property owners near the history-rich Lower Landing that are receiving expropriation notifications. We are staunchly opposed to this violation of this site particularly absent the stage 4 evaluation of the Lower Landing and the endorsement of the First Nations.</p> <p>a. As stewards of these lands and water for time immemorial, additional time should be given to allow First Nation community members to fully digest the lengthy report. Georgina Island First Nation asked that this site be avoided in 1998, 25 years ago, stating, "It is</p>

					<p>2. Explain how a provincial highway was transformed into a very expensive regional road variant with five interchanges and two 400 series highway connections, paid for by all Ontario taxpayers. This is inconsistent with the MTO's mandate to provide long distance travel solutions. We maintain that there are better and cheaper, faster to implement, regional road and transit solutions that should be pursued, even if the Bypass does get built.</p> <p>3. We would like to see the traffic studies in their entirety. An environmental assessment used to be grounded in a demonstration of need and justification. The MTO has provided neither as it pertains to this particular project and at this time. There is no evidence that local traffic solutions MTO purports to be solving (actually a local traffic issue and not MTO's mandate) are best served by this potentially \$4 billion highway.</p> <p>a. Please share the links and the methodology, transparently, so that people can understand what travel time savings MTO is referring to. We have absolutely no idea because your write up is incredibly vague about the start and end of the routes used for analysis. For instance this meaningless babble from pg. 334:</p> <p><small>On average, between the various origin-destination pairs using the Bradford Bypass, drivers in the peak direction during the peak period, would save up to 77% or 35 minutes of travel time when connecting between Highway 400 and highway 404 compared to existing routes in the No Build scenario.</small></p> <p>b. What year do your studies indicate that the Bypass will be congested at peak rush hour times?</p> <p>4. The Draft Environmental Impact Assessment report shows on pg. 212 the Bypass touching the southern portion of the Lower Landing (AKA BaGv-42), a significant historical and archaeological site at a significant meander on the East Holland River. MTO has moved the highway 150 m to the south of the technically preferred route, which would have completely run over the Lower Landing (pg 148). But the Draft IA states, "the southern portion of</p>	<p>(https://www.bradfordbypass.ca/study-process/) until August 14, 2023.</p> <p>2. Explain how a provincial highway was transformed into a very expensive regional road variant with five interchanges and two 400 series highway connections, paid for by all Ontario taxpayers. This is inconsistent with the MTO's mandate to provide long distance travel solutions. We maintain that there are better and cheaper, faster to implement, regional road and transit solutions that should be pursued, even if the Bypass does get built.</p> <p>The project is being assessed with consideration of the Ministry's mandate to provide for the safe, efficient movement of people and goods between regions and urban areas. In addition, the Project Team has consulted with local and regional municipalities, and the traffic analysis for the proposed Bradford Bypass has considered the planned local transportation and transit improvements to be implemented by others.</p> <p>The original route planning study (2002 Approved Environmental Assessment – EA) concluded that additional relief from congestion in this Study Area could only be accommodated through the protection and implementation of a provincial right of way.</p> <p>As part of the 2002 Approved EA, the Bradford Bypass evaluated alternatives from a broad range of potential solutions to address several transportation problems and to address significant opportunities identified in York Region and Simcoe County. The need for this freeway was confirmed as the only reasonable solution that would make a significant contribution towards addressing the problem as the population in York Region and Simcoe County grows. The 2002 Approved EA approved alignment is technically preferred for a freeway in terms of highway network expansion, ease of construction, relationship to provincial and municipal land use planning and the preferred route is already included in Official and Transportation Master Plans, as well as the Places to Grow Act), as well as having fewer negative impacts to</p>

					<p>the site ... will be impacted by construction" (pg 395). The Draft Environmental Conditions Report indicated that a Stage 3 archaeological assessment "was required" (pg 225); the Draft IA report says that the Stage 3 was completed, and that Stage 4 is required. The Project team's website says, "Currently, additional archaeological investigations are being completed to finalize the impact assessments in accordance with Ontario Regulation 697/21 and are not included in this posting. This information will be available for additional public and Indigenous community review once completed." So the archeological work is not finished. And yet the route has been chosen. Property owners near the history-rich Lower Landing that are receiving expropriation notifications. We are staunchly opposed to this violation of this site particularly absent the stage 4 evaluation of the Lower Landing and the endorsement of the First Nations.</p>  <p>Highway is still too close to the Lower Landing. The Lower Landing is in the area of WC-25 in the image above. This clip of a map shows Provincially significant wetlands (orange); unevaluated wetlands (blue); cold water fish habitat (black) and warm (pink); Original / full map available on pg 55 of Draft IA report.</p> <p>a. As stewards of these lands and water for time immemorial, additional time should be given to allow First Nation community members to fully digest the lengthy report. Georgina Island First Nation asked that this site be avoided in 1998, 25 years ago, stating, "It is obvious that there are other routes, which can be used to connect these major highways, and we hope</p>	<p>residential and natural areas when compared to other route options considered.</p> <p>For more information on the Analysis and Evaluation of alternatives, refer to Section 2.1.6 of the 2002 Approved EA, which can be found in the enclosed link: https://www.bradfordbypass.ca/wp-content/uploads/2020/09/BBP-RoutePlanningEA-1997.pdf</p> <p>Further to the conclusion of the 2002 Approved EA, as part of this Preliminary Design study, a traffic analysis was completed and the result of the review has confirmed the need of the highway. This analysis included the review of existing traffic conditions and modelling of future forecast traffic conditions and it has been confirmed that updates to regional and municipal roads alone will not address the transportation needs within the Study Area.</p> <p>Additionally, a feasibility assessment was conducted evaluating nine interchange location scenarios to determine the best interchange configuration through the Bradford Bypass corridor. The evaluation was conducted in accordance with satisfying the study objective to improve connectivity of the study area between Highway 400 and Highway 404, facilitating the improvement of traffic operations and movement of goods. Consideration included interchange utilization, overall network delay, out of way travel, environmental considerations and constraints, and preliminary costs. It was determined that interchanges at 10th Sideroad, County Road 4, Bathurst Street, 2nd Concession Road, and Leslie Street would be included as part of the Study.</p> <p>3. We would like to see the traffic studies in their entirety. An environmental assessment used to be grounded in a demonstration of need and justification. The MTO has provided neither as it pertains to this particular project and at this time. There is no evidence that local traffic solutions MTO purports to be solving (actually a local traffic issue and not MTO's mandate) are best served by this potentially \$4 billion highway.</p> <p>The Bradford Bypass project has been assessed in accordance with Ontario Regulation 697/21. Consistent</p>

					<p>that another will be selected." Is Ontario still ignoring this request?</p> <p>b. Have First Nations been consulted about this part of the plan? Please provide written evidence of their approval of this route.</p> <p>5. Species at Risk</p> <p>a. Table 2-2 lays out the 12 species at risk present or very likely to be present. For instance, Blandings Turtles are likely affected as they are likely in the area. The only commitment we see is to do detailed study later on. This is a good example of study following decision or destruction, and is in violation of standard EA practices. There are no commitments to the protection of species at risk in this document.</p> <p>b. There is a requirement for the Minister of the Department of Fisheries and Oceans to consider, when making certain decisions related to the fish and fish habitat protection (and pollution prevention) provisions of the Act, the Indigenous knowledge of the Indigenous peoples of Canada that has been provided to the Minister (34.1(1) (g) of the Fisheries Act); and,</p> <p>c. Requirement to protect the confidentiality of Indigenous knowledge that is provided to the Minister in confidence, except under limited circumstances (subsection 61.2 (1) of the Fisheries Act)."</p> <p>d. The Draft IA report identifies that the Williams Treaties FN reported American Eel https://www.dfo-mpo.gc.ca/species-especes/publications/sara-lep/eel-anquille/index-eng.html and Northern Sunfish in the Holland River. This must be further investigated with new fieldwork. The American Eel is in decline and gets Federal protection. Ontario's Species at Risk legislation doesn't work anymore so it's all up to the Federal enforcement.</p> <p>i. What is Ontario going to do to stand by Canada's obligations to First Nations treaty and consultation rights?</p>	<p>with the Regulation, the Project Team completed an update to the description of environmental conditions previously documented in the 2002 Approved Environmental Assessment (EA) for the project. This update included a review and assessment of the existing traffic conditions which was documented in the Environmental Conditions Report (ECR). The ECR was finalized in October 2022 following a public review period, and is available on the Project website.</p> <p>Significant population growth is projected for both Simcoe County and the Regional Municipality of York. Even with all currently planned transportation and transit investments, road congestion will continue to increase across the Greater Golden Horseshoe (GGH) including within the Bradford Bypass Study Area.</p> <p>The purpose of the Bradford Bypass is to relieve congestion on existing local roads between Highway 400 and Highway 404 and provide a northern freeway connection between Highways 400 and 404.</p> <p>Modeling results demonstrated that under the No Build (no Bradford Bypass) scenario, local roads were forecasted to exceed capacity by 2031 but saw significant relief under the Build (with Bradford Bypass) scenario. Alternative alignments for the Bradford Bypass were then compared within the model, including the 2002 Approved EA alignment and interchange locations and an updated preferred interchange location alternative developed by the Project Team.</p> <p>On average, between the various origin-destination pairs using the Bradford Bypass, drivers in the peak direction during the peak period, would save up to 73% or 33 minutes of travel time when connecting between Highway 400 and Highway 404 compared to existing routes in the No Build scenario.</p> <p>The development of the analysis and key results from the Traffic Study have been summarized in the Draft Environmental Impact Assessment Report and the Updated Draft Environmental Impact Assessment Report (EIAR), which were available for public review and comment from June 1, 2023 to June 30, 2023 and July 14, 2023 to August 14, 2023, respectively. The information in the draft EIAR includes the origin and destination locations</p>

					<p>ii. Will the American Eel's presence be investigated with new fieldwork?</p> <p>6. There are many concerns related to surface water and groundwater.</p> <p>a. Please confirm our understanding that there has been no discussion of, and that there are no studies looking at impacts to Lake Simcoe.</p> <p>b. The Groundwater Protection and Well Monitoring plan, which this Draft IA refers to, discusses the need to dewater the site for the building of piles for the elevated bridge sections of the highway. The Draft IA report says, "Construction dewatering activities have been identified as the primary risk to groundwater fed water wells in the Study Area," p 295. There is no credible groundwater protection plan. There are many suggestions for how to keep it clean but there are few to no commitments.</p> <p>c. HOW exactly is the province (MoECP) going to monitor groundwater discharges to ensure they meet Ontario's water quality standards?</p> <p>d. What penalties are contractors going to face for violating the discharge requirements?</p> <p>e. If penalties are not enough to compel adherence, what next?</p> <p>f. How is the public to have confidence that contaminated water will not be discharged to the Holland Rivers and Lake Simcoe?</p> <p>g. Please confirm if monitoring will continue, or not, as this statement is totally vague: "It is expected that each unassessed monitoring well will continue to be monitored and assessed during the subsequent detail design phase of the project" P. 79.</p> <p>h. Explain what kind of environmental impact would make this project stop; or is any impact acceptable?</p> <p>i. Please confirm that the only financial support for affected well owners whose water quality is affected by the construction is the province providing them with a temporary water supply until the well owner fixes their well.</p>	<p>that were reviewed to determine the average travel time savings during the AM and PM peak hours. Similar to the process undertaken for MTO preliminary design studies, the Traffic Study will be finalized upon study completion and will be available if requested.</p> <p>a. Please share the links and the methodology, transparently, so that people can understand what travel time savings MTO is referring to. We have absolutely no idea because your write up is incredibly vague about the start and end of the routes used for analysis.</p> <p>b. What year do your studies indicate that the Bypass will be congested at peak rush hour times?</p> <p>As detailed in the Draft EIAR (Section 2.4.1), an Aimsun model was created to assess the existing traffic conditions for the road network in the Study Area. The model study area encompasses the Highway 400 corridor from south of Simcoe County Road 88 to north of Highway 89, as well as the Highway 404 corridor from south of Green Lane East to its terminal at Woodbine Avenue (Table 4-3 and 4-4 of the Draft EIAR).</p> <p>The model for this area was developed using pre-pandemic traffic volumes to identify peak hour volumes within the Study Area. This model has been calibrated and validated as it closely resembled actual operating conditions.</p> <p>As detailed in Section 4.4 of the Draft EIAR, traffic is assessed through modelling to identify Level Of Service (LOS). Having confirmed the model was consistent with current (base) conditions, and therefore appropriate to assess future conditions and design alternatives, the model was used to assess LOS under future 2031 and 2041 conditions. To assess future conditions, the model was updated to include all road network and transit improvements planned within the Study Area, and, forecast traffic volumes based on the projected growth within the Study Area.</p> <p>The alternative Build scenarios showed the mainline operations on the Bradford Bypass in 2031 would operate</p>

					<p>i.Does this meager bit of help get extended to those who did not provide baseline information about their well water?</p> <p>ii.Is there any effort being made to reach more than 12% of respondents to MTO's well water survey?</p> <p>7. How much is this project going to cost?</p> <p>8. When will the Bradford Bypass be completed?</p> <p>9. It is unclear how many lanes are being constructed at which times. Please clarify.</p> <p>10. There is no cumulative health impact assessment to understand how traffic related air pollution, known to increase risks of cancers, leukemia, heart and lung disease, will impact the communities surrounding the route. There is also no mention of the cumulative impacts on our climate from construction and higher rates of car travel on this highway.</p> <p>a. How will you be informing people living along the route about the increased risk of traffic related air pollution and its effects on human health?</p> <p>b. Will you put air quality monitors in Bradford?</p> <p>c. How do you explain the fact that you are NOT monitoring air quality in Bradford, and using the closest site, Newmarket?</p> <p>d. The Final Environmental Conditions Report identified numerous planned residential developments right beside the highway, including a planned new school. Have the land owners / developers / school boards received any information that tells them how bad the air quality is going to be there?</p> <p>11. Traffic modeling to produce the air dispersion model is not robust or transparent. In order to understand traffic related air pollution, relevant vehicle types and assumptions need to be used. The air dispersion modeling report simply indicates that MOVES3 default data was used – but</p>	<p>at acceptable LOS D in the interim four lane configuration. The model indicates that by expanding to the ultimate 8 lane configuration (implementing another general purpose lane and an HOV lane in each direction by 2041), LOS on the mainline improves to LOS B or C and accommodates the additional traffic forecast by 2041.</p> <p>For further information about the Traffic Study please refer to the response to Question #3 and Section 4.4 of the Updated Draft EIAR.</p> <p>4. The Draft Environmental Impact Assessment report shows on pg. 212 the Bypass touching the southern portion of the Lower Landing (AKA BaGv-42), a significant historical and archaeological site at a significant meander on the East Holland River. MTO has moved the highway 150 m to the south of the technically preferred route, which would have completely run over the Lower Landing (pg 148). But the Draft IA states," the southern portion of the site ... will be impacted by construction" (pg 395). The Draft Environmental Conditions Report indicated that a Stage 3 archaeological assessment "was required" (pg 225); the Draft IA report says that the Stage 3 was completed, and that Stage 4 is required. The Project team's website says, "Currently, additional archaeological investigations are being completed to finalize the impact assessments in accordance with Ontario Regulation 697/21 and are not included in this posting. This information will be available for additional public and Indigenous community review once completed." So the archeological work is not finished. And yet the route has been chosen. Property owners near the history-rich Lower Landing that are receiving expropriation notifications. We are staunchly opposed to this violation of this site particularly absent the stage 4 evaluation of the Lower Landing and the endorsement of the First Nations.</p> <p>a. 					<p>the EPA has emphasized the need to include relevant vehicle type inputs into the model.</p> <p>The air modeling report and supporting reports fail to disclose the % of diesel truck traffic, or the component of that traffic that includes trucks dating from 2006 or earlier which comprise a significant component of air pollution load. The air dispersion modeling report states that the vehicle type distributions were based on MOVES3.0 default database inputs even though there are no such inputs. It also says that the 24 hour traffic distribution was assumed to be equal to the AADT distribution. However the consultant appeared to use different AADT distributions for different scenarios without explanation and the distributions differed significantly as between build and no build scenarios. Mitigation in the form of frequent diesel heavy truck vehicle emission inspections should be included as a mitigation measure to ensure that newer vehicle emissions systems are not being tampered with. The air dispersion modeling report indicates that ethanol based fuels were excluded even though this goes against EPA recommendations for using the model. The report lacks transparency about assumptions made about future vehicle fleet characteristics for both passenger vehicles and heavy trucks. The comparison of build with no-build is not valid because the values in Appendix E of the traffic modeling report show that there was an erroneous assumption that there would be significantly less truck traffic in the build scenario compared to the no-build scenario. There is no valid scientifically-based justification for this. Further, if there is an increase in truck traffic along 404 – as the model</p>	<p>lengthy report. Georgina Island First Nation asked that this site be avoided in 1998, 25 years ago, stating, "It is obvious that there are other routes, which can be used to connect these major highways, and we hope that another will be selected." Is Ontario still ignoring this request.</p> <p>b. Have First Nations be consulted about this part of the plan? Please provide written evidence of their approval of this route.</p> <p>Field investigations for Stage 2 and Stage 3 works have been completed and additional details are included in the Updated Draft Environmental Impact Assessment Report available on the Project Website (https://www.bradfordbypass.ca/study-process/) for public review until August 14, 2023.</p> <p>The required Stage 4 Archaeological Assessment of BaGv-42 will be completed during future phases of work for the project and will be carried out in accordance with the Ministry of Citizenship and Multiculturalism Standards and Guidelines for Consultant Archaeologists (Ontario Government 2011). No ground disturbing activities will occur at this site until the Stage 4 assessment has been conducted.</p> <p>In accordance with Ontario Regulation 697/21, the Project Team completed site specific Stage 3 archaeological assessments for areas within the Study Area that were identified as having archaeological potential in accordance with the Stage 2 archaeological assessments.</p> <p>It is common practice for Stage 4 archaeology work to be completed during Detail Design. Limiting the impact to Stage 4 archaeological sites where feasible is one of the Project Team's main priorities. As a result, the Project Team will determine the exact impact limits to archaeological sites during subsequent design phases of the project. To avoid unnecessary excavation, the Project Team will then undertake the Stage 4 archaeological assessments. Any Stage 4 field work that will be undertaken must engage interested Indigenous communities.</p>

					<p>predicts – then sensitive receptors along highway 404 need to be included in a health impact study. Instead, impacts on traffic along the 400/404 corridors were excluded and the “air quality study area” was restricted to the bypass corridor itself without any explanation or justification.</p> <p>It is egregious that MTO did not conduct locally relevant air quality monitoring for background in Bradford, River Drive Park, Queensville and along the 404/400 corridors for traffic related air pollutants. Such baseline monitoring is generally inexpensive and could have been easily obtained. Using existing monitors in Innisfil, Newmarket and other distant and irrelevant locations is not justifiable. For the air dispersion modeling, MTO appears to be relying on these distant locations (eg. Egbert) for preparation of the wind rose as well, even though meteorological conditions in the study area may be markedly different. MTO also did not identify numerous recreational and daycare facilities adjacent to the Bradford Bypass corridor which were identified by Simcoe County Greenbelt Coalition. The study did not include the cumulative effects of future planned industrial uses along the Bypass corridor and along the 400/404 corridor which may significantly impact people’s health along the route. The evaluation did not use 2022 World Health Organization criteria for contaminants which are much lower and more up-to-date than the CAAQS or the AAQCs. We disagree that the AAQCs and CAAQS represent the “lowest concentrations at which an adverse effect may be experienced” as they are not based on up-to-date understandings of the health impacts of air contaminants including pre-term births and neurodevelopmental and other</p>	<p>As recommended by the cultural heritage resource assessment undertaken by the Project Team, the Holland River watershed was identified as a Cultural Heritage Landscape requiring further research and evaluation to determine if it possesses cultural heritage value or interest. This further assessment will be completed in a Cultural Heritage Evaluation Report (CHER), and if the CHER determines that the Holland River Watershed meets the criteria in Ontario Regulation 9/06 or Ontario Regulation 10/06 of the Ontario Heritage Act, and may be adversely impacted by the Updated Technically Preferred Route, a Heritage Impact Assessment will be prepared to fully assess impacts on the resource’s identified heritage attributes and propose alternatives and mitigation to conserve the property’s Cultural Heritage Value or Interest. These commitments are included in Section 5.3.2 of the Updated Draft EIAR.</p> <p>Consultation is an integral component of the Preliminary Design stage, the project-specific assessment of environmental impacts process, and for future project phases, and is critical to a project’s success. The ministry is actively consulting and engaging with Indigenous communities throughout the Bradford Bypass Project.</p> <p>The Project Team is engaging with and considers input provided by the following Indigenous communities:</p> <ul style="list-style-type: none"> - Alderville First Nation - Beausoleil First Nation - Chippewas of Georgina Island First Nation - Chippewas of Rama First Nation - Curve Lake First Nation - Hiawatha First Nation - Mississaugas of Scugog Island First Nation - Kawartha Nishnawbe First Nation - Georgian Bay Métis Council, and - Huron-Wendat Nation <p>Comments from Indigenous communities are accepted at any time in the study process.</p> <p>5. Table 2-2 lays out the 12 species present or very likely to be present. For instance, Blandings Turtles are likely affected as they are likely in the area. The only commitment we see</p>

					<p>impacts. These are described in the report by the Canadian Association of Physicians for the Environment (April 2022) Mobilizing Evidence report. The report predicts significant exceedances for NO2 and benzo(a)pyrene even with the apparently non-conservative assumptions for diesel truck traffic used in the full build out scenario compared to the no-build scenario. The adverse health impacts of NO2 exceedances may be extremely severe and will impact on the <i>Charter</i> rights and human rights of residents in the study area and beyond without justification for the need for the project.</p> <p>Figure 8-1-1: Isocentration Contours for NO₂ in the Future Build Scenario</p>  <p>Figure 8-2: Isocentration Contours for NO₂ in the Future No-Build Scenario</p>  <p>Source: Air Quality Impact Assessment Report – AECOM. The Air Quality Impact Assessment concluded that: Impacts from the Future Build Conditions with the new Bradford Bypass on a cumulative basis within the Air Quality Study Area increases in comparison to a No-Build scenario for several contaminants and their respective averaging periods. This is predominately due to increased traffic</p>	<p>is to do a detailed study later on. This is a good example of study following decision or destruction, and is in violation of the standard EA practices. There are no commitments to the protection of species at risk in this document.</p> <p>Targeted surveys for all species at risk with potential to occur in the Study Area will be required during future phases of work. These future studies will inform the need for any permits, authorizations, mitigation or compensation under the Endangered Species Act.</p> <p>The Updated Draft EIAR requires consideration and review of all recommendations throughout the corridor during future phases of work. This approach is necessary and standard practice for planning projects in that design is an iterative approach and this project is only completing design to a preliminary level. During future phases of work, additional design will be completed and may include refinements to the design as details are developed with greater accuracy. Limiting the future design phases by making certain elements of the project non-discretionary at the preliminary design stage limits the potential for future work to explore opportunities for further reducing impacts and / or increasing mitigation and offsetting measures.</p> <p>For Blanding's Turtle specifically, candidate habitat associated with the Holland River and Holland River East Branch open water and wetland communities has been identified within the Study Area. Blanding's Turtle may be impacted while moving in between habitats if these species enter the construction work area.</p> <p>As part of this phase of the project, preliminary mitigation and avoidance measures for the potential impacts to turtles are included in the Draft EIAR and include:</p> <ul style="list-style-type: none"> If stockpiles of gravel and sandy substrates or the removal of these substrates in the vicinity of turtle habitat are required during the active turtle season (April 1 to October 15), turtle exclusion fencing should be installed in accordance with the Reptile and Amphibian Exclusion Fencing Best Management Practices (Ministry of the Environment, Conservation and Parks, 2020) around stockpiles or area of disturbance prior to

					<p>along the Bradford Bypass, where in a No-Build scenario this traffic is dispersed along Holland Street and Bridget Street and within communities to the south of the Air Quality Study Area (for example, demonstrated in the traffic reporting related to this project). This included significant increases in NO₂, SO₂, PM_{2.5}, Acetaldehyde, Benzo(a)pyrene, and formaldehyde and some increases in CO. Maximum concentrations which are relevant for acute events also show significant increases, for example a 49% increase in SO₂ and more than 50% increases in fine and large particulates, acetaldehyde, formaldehyde etc. for critical receptor number 19 (other receptors' models were not displayed in a comparable manner). The results indicated that for NO₂, 1 hour averages 80% of the hours in the future build scenario would have a cumulative concentration above the CAAQS limit of 79 ppm and a 100% of hours would exceed the AAQC for benzo(a)pyrene. In relation to GHGs, the MTO failed to incorporate induced demand in the future build scenario to calculate additional vehicle kilometers traveled that would be induced by the highway, and failed to give a transparent total vehicle assumption or a vehicle emissions factor. In any event the air quality impact assessment predicts that the proposed highway would be a significant contributor to regional GHG emissions even without incorporating the effect of induced demand. No mitigation measures are proposed to address the increase in greenhouse gas emissions from the project which will lead to catastrophic climate disaster for all of humanity and the planet.</p> <p>12. Extending and widening GREEN LANE to SIX LANES to highway 400 including service roads, bridges and traffic circles is</p>	<p>April 1. Fencing should be installed immediately after stockpiles are created if after April 1.</p> <ul style="list-style-type: none"> It is recommended that culverts be designed to provide openness ratios that would allow for the passage of small mammal and/or herpetofauna where possible. An openness ratio of 0.4 would permit usage by medium-sized mammals, while the minimum openness ratio to be considered should be 0.25, which would permit usage by reptiles such as turtles (Credit Valley Conservation, 2017). Avoid work within areas of candidate turtle overwintering habitat during the turtle overwintering period (October 31 to April 1), whenever possible. <p>These preliminary mitigation measures will be further refined as the project proceeds to Detail Design and impacts are assessed in more detail.</p> <p>For further detail on potential impacts to Species at Risk and proposed mitigation and avoidance measures, please refer to Section 5.1.1 of the Draft Environmental Impact Assessment Report.</p> <p>a. The Draft IA report identifies that the Williams Treaties FN reported American Eel and Northern Sunfish in the Holland River. This must be further investigated with new fieldwork. The American Eel is in decline and gets Federal protection. Ontario's Species at Risk legislation doesn't work anymore so it's all up to the federal enforcement.</p> <p>b. What is Ontario going to do to stand by Canada's obligations to First Nation treaty and consultation rights?</p> <p>c. Will the American Eel's presence be investigated with new field work.</p> <p>It was noted in discussion with William Treaties First Nations on December 1, 2022, that they had observed both American Eel (<i>Anguilla rostrata</i>; Endangered Species Act – Endangered, Species at Risk Act – Not at Risk) and Northern Sunfish (<i>Lepomis peltastes</i>; Endangered Species</p>

					<p>economically a much better idea that will cost less and does not use up any farm land, wetland or have any major river crossings. It will better serve and reduce the local and provincial traffic. Nobody from King Township, Whitchurch, Oak Ridges, Aurora, Newmarket and East Gwillimbury is going to drive north of Queensville to use the bypass that is being planned as it is not in the center of the population. Where are the results of the Origin Destination Study that was requested? Where is the Study for Local Network Improvements that was requested.? Where is the study covering upstream pollution.?</p> <p>We look forward to hearing back from the project team with answers to our questions. Enjoy the day,</p> <p>[REDACTED]</p>	<p>Act – Special Concern, Species at Risk Act – Special Concern) in the Holland River.</p> <p>Subsequently, the Project Team consulted with the Ministry of the Environment, Conservation and Parks, in March 2023 and was advised that the Ministry of Environment, Conservation and Parks records have no documented observances of the American Eel or Northern Sunfish in the Study Area. They also noted that the Northern Sunfish is a species of special concern and does not have a permitting status with the Ministry of the Environment, Conservation and Parks, and therefore would not be reported. These discussions with Williams Treaties First Nations and MECP have been documented in the Fish and Fish Habitat Report and Section 2.1.2 of the Updated Draft EIAR.</p> <p>No records of aquatic Species at Risk that are afforded protection under the Species at Risk Act or Endangered Species Act are known to occur in the watercourses where culverts are anticipated to be installed. AECOM ecologists conducted a detailed fish and fish habitat assessment of the water features in the vicinity of the Study Area between September 14-18, 2020, with spring field investigations occurring over multiple days in June 2021. Field investigations were also completed in the spring of 2022 due to changes to the Study Area boundary that required further review for potential fish habitat. Based on these investigations, no Species at Risk were discovered in the Study Area. Regardless, the presence or absence of all aquatic Species at Risk will be re-confirmed in subsequent design phases through additional field investigations.</p> <p>6. Please confirm our understanding that has been no discussion of, and that there are no studies looking at impacts to Lake Simcoe.</p> <p>As the project falls within the jurisdiction of the Lake Simcoe Region Conservation Authority (LSRCA), pertaining to Ontario Regulation 179/06, the ministry has assessed impacts with respect to the <i>Lake Simcoe Protection Act</i> and the Lake Simcoe Protection Plan through consideration of water quality and quantity, stormwater management, groundwater management, landscaping and ecological restoration measures; as well as fluvial geomorphological designs for watercourses,</p>

						<p>erosion and sediment control and spills prevention and protection measures.</p> <p>a. The Groundwater Protection and Well Monitoring plan, which this Draft IA refers to, discusses the need to dewater the site for the building of piles for elevated bridge sections of the highway. The Draft IA report says, "Construction dewatering activities have been identified as the primary risk to groundwater fed water wells in the Study Area." There is no credible groundwater protection water. There are many suggestions for how to keep it clean but there are few to no commitments.</p> <p>Commitments, preliminary mitigation measures and monitoring activities related to groundwater are documented in Section 5.1.4 of the Draft EIA, and will be carried forward to subsequent phases of the project.</p> <p>The risk of spills during construction of the project will be primarily limited to petroleum products from machinery (fuels and lubricants). The use of best management practices for handling of hydrocarbons according to the Ministry of Environment, Conservation and Parks and the Technical Standards and Safety Authority of the Ministry of Government Services will reduce the potential of environmental adverse effects associated with petroleum product handling and uses. Spillage of petroleum products must be immediately remediated according to these standards such that groundwater quality is not impacted.</p> <p>Mitigation plans will be generated during future phases of work for the project and for any excavation and structure construction within areas of medium to high significant groundwater recharge areas as shown near the Holland River and Holland River East Branch. Mitigation plans would be specific to each excavation and structure construction and include erosion and sediment control, dewatering treatment and discharge piping away or towards from Significant Groundwater Recharge Areas, or municipal sewer discharge requirements. Dewatering discharge shall be directed away from Well Head Protection areas if excavation and dewatering activities are occurring within them.</p>

						<p>For more information about the Groundwater Protection and Well Monitoring Plan please refer to Section 5.1.4 of the Updated Draft EIAR.</p> <ul style="list-style-type: none"> b. How exactly is the province going to monitor groundwater discharges to ensure they meet Ontario's water quality standards? c. What penalties are contractors going to face for violating the discharge requirements? d. If penalties are not enough to compel adherence, what next? e. How is the public to have confidence that contaminated water will not be discharged to the Holland Rivers and Lake Simcoe? f. Please confirm is monitoring will continue or not, as this statement is totally vague: "It is expected that each unassessed monitoring well will continue to be monitored and assessed during the subsequent detail design phase of the project." <p>The Groundwater Monitoring Program includes groundwater level monitoring and groundwater quality monitoring to establish the pre-construction baseline conditions for comparison of data collected during and post-construction.</p> <p>During the Preliminary Design study, Golder Associates Ltd. (Golder) installed monitoring wells during the ongoing geotechnical investigations. Monitoring is expected to be completed within these same monitoring wells during all future phases of work for the Project, including construction. Residential monitoring wells will also be part of this program if they fall within the Radius of Influence of the excavation dewatering and permission to enter is granted to gain access to monitor the well. Detail Design will inform the need for further groundwater investigations. Penalties for discharging any deleterious substance or material to the lands will vary based on the federal, provincial or municipal legislation that might be violated. Beyond legislated penalties, contractor behavior</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIAR Edits Required? (Yes/No? If yes specify edits)
						<p>is monitored by the Ministry and poor behavior may result in additional financial or reputational impacts. The Ministry's process for selecting contractors to support future phases of the work for the project also includes consideration of past performance and assessment of the contractors understanding of the project and sensitivities within the Study Area. Commitments, preliminary mitigation measures and monitoring activities related to groundwater are documented in Section 5.1.4 of the Draft EIAR, and will be carried forward to subsequent phases of the project.</p> <p>g. Explain what kind of environmental impact would make the project stop; or is any impact acceptable?</p> <p>This government takes environmental protection seriously and is implementing a path forward that will ensure environmental protections are not compromised while building this much needed project quickly and safely. Current work on the Bradford Bypass project will continue to be subject to all conditions under Ontario Regulation 697/21.</p> <p>In accordance with Ontario Regulation 697/21, the Project Team has undertaken several environmental impact assessments to identify and document the potential impacts, proposed mitigation measures, and environmental commitments, which are summarized in the Environmental Impact Assessment Report (EIAR).</p> <p>The Ministry of Transportation must also comply with all current federal and provincial environmental requirements. This includes consultation as set out in the regulation and obtaining permits and approvals for the project prior to the start of construction. Obtaining these permits and approvals, which are mechanisms to help protect the environment, confirms that the ministry has met or surpassed the environmental requirements.</p> <p>h. Please confirm that the only financial support for affected well owners whose water quality is affected by the construction is the province providing them with a temporary water supply until the well owner fixes their well.</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIAR Edits Required? (Yes/No? If yes specify edits)
						<p>i. Does this meager bit of help extend to those who did not provide baseline information about their well water?</p> <p>j. If there any effort being made to reach more than 12% of respondents to MTO's well water survey?</p> <p>MTO will work with owners of water wells who experience issues to determine if the issue is the result of Bradford Bypass project activities.</p> <p>If the well issue is confirmed to be a result of the project's activities, the Ministry will provide a letter to the property owner explaining the outcome of the well investigation and detail the recommended mitigation measures (including lowering / replacement of pump inlet, well rehab, new well installed or local watermain connection if available) the Ministry will undertake to remediate the issue. A temporary drinking water supply will be provided and connected to the resident if the project activities are found to be responsible, at the expense of the Ministry, until remediation measures have resolved the issue.</p> <p>A water well survey was completed for the project to determine the pre-construction assessment of private well supplies in the vicinity of the Study Area noted above. Where no response was provided from Property Owners as part of the water well survey, an additional attempt shall be undertaken during Detail Design to contact these owners via mail, email, phone calls, site visit, etc. This information will be used to provide a baseline for water wells prior to the proposed construction to determine existing water quality and quantity of each property.</p> <p>7. How much is this project going to cost?</p> <p>As we bring this project to market, we want to ensure we can retain the best value for the project. As such, the ministry will not be releasing cost estimates prior to the award of contracts to protect the procurement processes.</p> <p>8. When will the Bradford Bypass be completed?</p> <p>The Preliminary Design phase is anticipated to be completed in 2023. Detail Design and Construction Phases will follow.</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIAR Edits Required? (Yes/No? If yes specify edits)
						<p>9. It is unclear how many lanes are being constructed at which times. Please clarify.</p> <p>The Ontario government is committed to fully funding the construction of the Bradford Bypass and is following through on its promise to improve and invest in the province's transportation corridors to get people moving within the region, connect people to jobs, make life easier and support a strong economy.</p> <p>A four-lane configuration is planned to be constructed first with two general purpose lanes in each direction. To plan for the future, the Ministry is also considering the design of an ultimate eight-lane design for the Bradford Bypass. The ultimate, eight-lane configuration for the project will feature three general purpose lanes and one HOV lanes in each direction.</p> <p>10. There is no cumulative health impact assessment to understand how traffic related air pollution, known to increase risks of cancers, leukemia, heart and lung disease, will impact the communities surrounding the route. There is also no mention of the cumulative impacts on our climate from construction and higher rates of car travel on this highway.</p> <ol style="list-style-type: none"> How will you be informing people living along the route about the increased risk of traffic related air pollution and its effects on human health? Will you put air quality monitors in Bradford? How do you explain the fact that you are NOT monitoring air quality in Bradford, and using the closest site, Newmarket? The Final Environmental Conditions Report identified numerous planned residential developments right beside the highway, including a planned new school. Have the land owners / developers / school boards received any information that tells them how bad the air quality is going to be there? 	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIAI Edits Required? (Yes/No? If yes specify edits)
						<p>The human health scoping implications of the project such as air quality, noise, land use, traffic congestion and safety, economic, social cohesion, and neighborhood resources have been summarized in Section 2.2.7 and Section 5.2.7 of the Draft EIAI. To better understand the human health implications due to the Project as a next step, it is recommended for MTO to continue to consider the human health factors identified in this report and provide recommendations to enhance potential positive impacts and mitigate potential negative health impacts. Specifically, conducting a Screening-Level Human Health Risk Assessment of potential air quality impacts is recommended in order to evaluate and characterize Project-related air quality impacts to health.</p> <p>The project has undertaken an Air Quality Impact Assessment to explore pollutant emissions and dispersion modelling in an effort to predict the contribution of the project to future ambient pollutant concentrations. This contribution, added to background concentration levels, allows prediction of the cumulative impact of the proposed project and all other contributors to air pollution. Concentration levels are compared to provincial and federal ambient air quality criteria and standards to assist in the evaluation of project-specific mitigation needs and options.</p> <p>Areas of concentrated emission impact are influenced by traffic volumes along a given segment of roadway. The implementation of the Bradford Bypass is expected to redistribute traffic from local roads and freeway corridors surrounding the proposed Bradford Bypass. Reductions in traffic volumes are observed on corridors including Highway 11/1 (Bridge Street), Bathurst Street, Holland Landing Road, Yonge Street, Queensville Sideroad, Doane Road, Mount Albert Road, Green Lane, and Simcoe County Road 88/Holland Street, among other roads, which benefits the community of Bradford, Town of Bradford West Gwillimbury, by alleviating congestion during peak hours.</p> <p>The Project Team is currently utilizing the National Air Pollution Surveillance air quality monitoring stations to assess air quality levels. Five years of existing data sets were analyzed from stations within the region, and the complete data set from the closest station or most representative station for each contaminant of concern</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIA Edits Required? (Yes/No? If yes specify edits)
						<p>was selected to represent the background air quality for the Study Area. Due to the proximity of the Study Area to the Toronto Area, monitoring stations within the City of Toronto were given preference as the one of the most representative locations for the air quality contaminants of concern. As such, Roadside Wallberg – University of Toronto monitoring station, North Downsview monitoring station, Gage Institute monitoring station (all located approximately 38 – 53 km from the Study Area) were used. The nearest monitoring station is in Newmarket. Additional information regarding the assessment of potential air quality impacts have been summarized in Section 2.2.4 and Section 5.2.4 of the Draft EIA.</p> <p>Land has been designated for the Bradford Bypass since the 2002 Approved EA was completed. As noted above, consultation is an integral component of the Preliminary Design stage and project-specific assessment of environmental impacts and is critical to a project's success. The ministry is actively consulting and engaging with private landowners, developers and school boards within the Study Area. Engagement and consultation has included having a project website and telephone line, having a project contact list for regular project updates, providing notices and correspondence via email, mail, and Ontario Government Notices in local newspapers, hosting public information centres and online events, and holding meetings with Indigenous communities, municipalities, environmental agencies, and stakeholders. More information on the project consultation activities are included in Section 7 of the Updated Draft EIA.</p> <p>11. Traffic modeling to produce the air dispersion model is not robust or transparent. The air modeling report and supporting reports fail to disclose the % of diesel truck traffic, or the component of that traffic that includes trucks dating from 2006 or earlier which comprise a significant component of air pollution load. The comparison of build with no-build is not valid because the values in Appendix E of the traffic modeling report show that there was an erroneous assumption that there would be significantly less truck traffic in the build scenario compared to the no-build scenario. There is no valid scientifically-based</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIAR Edits Required? (Yes/No? If yes specify edits)
						<p>justification for this. Further, if there is an increase in truck traffic along 404 - as the model predicts - then sensitive receptors along highway 404 need to be included in a health impact study. Instead, impacts on traffic along the 400/404 corridors were excluded and the "air quality study area" was restricted to the bypass corridor itself without any explanation or justification. It is egregious that MTO did not conduct locally relevant air quality monitoring for background in Bradford, River Drive Park, Queensville and along the 404/400 corridors for traffic related air pollutants. Such baseline monitoring is generally inexpensive and could have been easily obtained. The study did not include the cumulative effects of future planned industrial uses along the Bypass corridor and along the 400/404 corridor which may significantly impact people's health along the route. The evaluation did not use 2022 World Health Organization criteria for contaminants which are much lower and more up-to date than the CAAQS or the AAQCs. We disagree that the AAQCs and CAAQS represent the "lowest concentrations at which an adverse effect may be experienced" as they are not based on up-to-date understandings of the health impacts of air contaminants including pre-term births and neurodevelopmental and other impacts. The report predicts significant exceedances for NO2 and benzo(a)pyrene even with the apparently non-conservative assumptions for diesel truck traffic used in the full build out scenario compared to the no-build scenario. The adverse health impacts of NO2 exceedances may be extremely severe and will impact on the Charter rights and human rights of residents in the study area and beyond without justification for the need for the project.</p> <p>Study Area, MOVES3 data, vehicles and assumptions: In order to model relevant vehicle types within the Air Quality Impact Assessment Study Area, MOVES3 data was input to the model and refinements were made to exclude fuel types such as ethanol given these fuels are not readily available for use in Ontario. Fuel inputs utilized</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIAR Edits Required? (Yes/No? If yes specify edits)
						<p>in MOVES3.0 modelling at the time of the assessment included: Fuel Type IDs 1, 2, 3 and 9. ID 5 (ethanol) was not included as flex fuel cars and fuelling stations are not readily available in Ontario. The specific source type fractions utilized for various vehicle types applied within the project study area and the related fraction of expected vehicle usage for both passenger-class vehicles and heavy-class vehicles, including the distribution of vehicle types in the heavy truck vehicle category, were combined to create representative vehicle emission for vehicle class that can reasonable be expected to be in use in 2041.</p> <p>Highway 400/404 corridors were included in the Air Quality Impact Assessment. The full air quality study area is shown in Figure 2-9 of the Updated Draft EIAR and demonstrates that the air quality study area included emission sources within the boundary of assessment, including but not limited to Highway 400 (500 m south of Rural Rd. 88 to 500 m north of Concession Rd. 11), Highway 404 (500 m south of Queensville Sideroad E to 500 m north of Boag Road), the entirety of the proposed Bradford Bypass, Bridge Street, Holland Street W, 10th Sideroad, Young Street/Barrie Street, and Queensville Sideroad.</p> <p>Traffic distributions and truck traffic: The same Average Annual Daily Traffic (AADT) were used for all scenarios. AADT values for each air quality emission source vary between the three scenarios evaluated based on projected existing traffic within the study area, and future no-build and build traffic projections however the same 24-hour traffic distribution percentages were applied. Three representative 24-hour distribution percentages were applied to the air quality emission sources. These were applied to a given source of emission depending on the type of road in question, e.g. a "Leslie St." 24-hour distribution was applied to air quality emission sources which were categorized as community arterial roads; a "HWY 400" 24-hour distribution was applied to air quality emission sources categorized as highways; and, a "2nd Concession Rd" 24-hour distribution was applied to rural roads. These same 24-hr distributions were applied to the assigned source for all three scenarios of evaluation (existing conditions, future no-build, and future build).</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIAI Edits Required? (Yes/No? If yes specify edits)
						<p>Fuel usage distribution [i.e. diesel, gasoline, CNG, etc.] and vehicle age distribution within each vehicle type category were modelled based on MOVES3.0 default fuel use and age distribution database inputs assigned to the year of evaluation. Heavy truck traffic was included in the modelling with a percentage assigned to each air quality emission source anticipated from this vehicle type.</p> <p>Health Impacts, Critical Receptors and Background/Study Area Monitoring Data: The human health scoping implications of the project such as air quality, noise, land use, traffic congestion and safety, economic, social cohesion, and neighborhood resources have been summarized in Section 2.2.7 and Section 5.2.7 of the Updated Draft EIAI.</p> <p>The Project Team is aware some critical receptors have been identified as 'missing' by a number of stakeholders. Having reviewed the data, these 'missing' receptors were included as residences in the Air Quality Impact Assessment. Potential impacts at the 'missing' receptors within the Air Quality Impact Assessment Study Area are reflected in the assessment by other, nearby critical receptors and receptors identified on Figure 2-9 and 2-10 of the Updated Draft EIAI.</p> <p>The approach to identifying representative air quality levels is conservative and often ensures the worst-case conditions are reflected so as to not under-represent conditions within a study area; i.e. background air quality contaminant levels included within the assessment may be representative or higher than expected for the area in question.</p> <p>While it is recognized that localized in-situ monitoring may provide more accurate data, use of existing monitoring stations within the NAPS network for statistically relevant background monitoring data is a generally accepted and conservative methodology for provincial environmental impact air quality assessments. Stations selected for the background air quality assessment were chosen based on total data availability over a most recent five-year period as a minimum of 12 months of daily and hourly data is required to ensure statistical relevance. Stations were also selected based on their proximity to the air quality study area with the meteorological station selected as</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIA Edits Required? (Yes/No? If yes specify edits)
						<p>representative of the air quality study area within 15 km north-west of the air quality study area. Stations must also be a relative representation of similar types of existing sources of air quality emission in the study area and it is notable that the meteorological station selected as representative of air quality in the study area was provided by the MECP in site-specific MET data requested for the project modelling.</p> <p>12. Extending and widening GREEN LANE to SIX LANES to highway 400 including service roads, bridges and traffic circles is economically a much better idea that will cost less and does not use up any farm land, wetland or have any major river crossings. It will better serve and reduce the local and provincial traffic. Nobody from King Township, Whitchurch, Oak Ridges, Aurora, Newmarket and East Gwillimbury is going to drive north of Queensville to use the bypass that is being planned as it is not in the center of the population. Where are the results of the Origin Destination Study that was requested? Where is the Study for Local Network Improvements that was requested.? Where is the study covering upstream pollution.?</p> <p>The Project Team completed an update to the description of environmental conditions previously documented in the 2002 Approved Environmental Assessment (EA) for the project. This update included a review and assessment of the existing traffic conditions which was documented in the Environmental Conditions Report (ECR). The ECR was finalized in October 2022 following a public review period and is available on the Project website. For more information on the Environmental Conditions of the Study Area, please refer to Section 2 of the Updated Draft EIA</p> <p>The Holland Marsh Wetland Complex extends beyond the Bradford Bypass corridors and consists of over 3,000 hectares (ha) of designated wetland area. Currently the Bradford Bypass corridor will cross approximately 12.73 ha which accounts for only 4 percent of the entire</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIAR Edits Required? (Yes/No? If yes specify edits)
						<p>Provincially Significant Wetland (PSW) area. The crossing locations were chosen because they are consistent with the Ministry's effort to minimize impacts to this sensitive wetland and are among the narrowest portions of Holland Marsh. A portion of the crossing will be accommodated on an elevated structure in order to provide marine navigation clearance over the Holland River and Holland River East Branch below. The Project team is carrying forward commitments made in the 2002-approved EA to span all provincially significant wetlands within the study limits.</p> <p>The Project Team will continue to carefully consider all impacts to wetland areas and will continue to work with Indigenous communities, environmental agencies, municipalities, and other concerned stakeholders to identify principles and recommendations for mitigating the impacts of placing new or expanded provincial highways within wetland areas. The Bradford Bypass Project will continue to look at opportunities to minimize impacts to these wetlands through engineering refinements.</p> <p>For more information on the assessment of alternative routes, please refer to the response to question #3.</p> <p>Please see below the responses to your questions from June 28, 2023.</p> <p>1. Removing Greenbelt lands including Provincially Significant Wetlands from the Holland Marsh as well as some of its specialty crop areas. In fact, almost 70% of the land within the study area for this highway is prime agricultural land (class 1-3).</p> <p>As part of the Preliminary Design, the Project Team considered all impacts and will continue to work with environmental agencies, municipalities, and other concerned stakeholders to identify measures to avoid or mitigate the potential impacts of placing new or expanded provincial highways within areas of the existing and enhanced Greenbelt lands.</p> <p>The Greenbelt Plan acknowledges the necessity of building infrastructure. The Plan allows for existing, expanded or new infrastructure in the Greenbelt if the</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIA Edits Required? (Yes/No? If yes specify edits)
						<p>infrastructure serves the significant population growth expected in southern Ontario.</p> <p>Potential impacts to agricultural lands as a result of the Project have been assessed with regards to the loss of agricultural land, loss of prime agricultural land, creation of severed parcels, and increased fragmentation of the land base on the designated agricultural lands. These potential impacts cannot be avoided. There are also potential impacts to adjacent agricultural lands and communities based on the proposed locations of the interchanges and by the proposed highway lighting.</p> <p>The first method of addressing potential impacts is to avoid the potential impact. In this study, the proposed future development of the Bradford Bypass lands will be a permanent use with portions of the Bradford Bypass being located within designated agricultural areas. As a result, there will be designated agricultural lands lost due to the project, which cannot be avoided.</p> <p>When avoidance is not possible, the next priority is to minimize impacts to the extent feasible. The minimization of impacts may be achieved during the design process and through proactive planning measures that provide for the separation of land uses. The Updated Technically Preferred Route has taken into consideration the 2002 Approved Environmental Assessment by maintaining parts of the original alignment and employing similar techniques to minimize the corridor footprint and impact the fewest agricultural buildings, investment and agricultural operations, thereby minimizing the potential impacts to the agricultural land base, agricultural operations, and the agricultural system.</p> <p>When avoidance techniques and minimizing potential impact to agriculture have not achieved the desired effect the next priority is to mitigate any further impact. Potential mitigation measures may include:</p> <ul style="list-style-type: none"> - The use of salt management plans to reduce the amount of salt require for de-icing - The use of adequate fencing or berms and vegetated features between different land uses to reduce the potential for trespassing and potential vandalism 	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIA Edits Required? (Yes/No? If yes specify edits)
						<ul style="list-style-type: none"> - The use of plantings/vegetation as screens and buffers to reduce visual impacts and sounds - Implementation of surface and/ or groundwater monitoring in areas where agricultural operations make use of surface or groundwater as part of their normal farm practices - Construct or replace agricultural buildings to mitigate the loss of agricultural buildings - Provide new wells or other water access for any potential groundwater disruption <p>It should also be noted that there are opportunities for local agricultural operations with the future development of the Bradford Bypass lands. The future development of the Bradford Bypass lands will bring people closer to the agricultural areas and specialty crop areas, market garden, field vegetable areas which will result in increased potential for expanding sales of local vegetable crops from the farm markets.</p> <p>Additional details on impacts to agricultural lands and proposed mitigation measures and monitoring activities are included in Section 5.2.2 of the Updated Draft EIA, available on the Project Website:</p> <p>https://www.bradfordbypass.ca/study-process/</p> <p>2. Potential habitat destruction for twelve species at risk including the Blanding's turtle without any commitment to protect these species, their habitat or even to reduce damage. A commitment to do a future study is not good enough.</p> <p>Targeted surveys for all species at risk with potential to occur in the Study Area will be required during future phases of work. These future studies will inform the need for any permits, authorizations, mitigation or compensation under the Endangered Species Act.</p> <p>The Updated Draft EIA requires consideration and review of all recommendations throughout the corridor during future phases of work. This approach is necessary and standard practice for planning projects in that design is an iterative approach and this project is only completing design to a preliminary level. During future phases of work,</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIA Edits Required? (Yes/No? If yes specify edits)
						<p>additional design will be completed and may include refinements to the design as details are developed with greater accuracy. Limiting the future design phases by making certain elements of the project non-discretionary at the Preliminary Design stage limits the potential for future work to explore opportunities for further reducing impacts and / or increasing mitigation and offsetting measures.</p> <p>For Blanding's Turtle specifically, candidate habitat associated with the Holland River and Holland River East Branch open water and wetland communities has been identified within the Study Area. Blanding's Turtle may be impacted while moving in between habitats if these species enter the construction work area.</p> <p>As part of this phase of the project, preliminary mitigation and avoidance measures for the potential impacts to turtles are included in the Draft EIA and include:</p> <ul style="list-style-type: none"> • If stockpiles of gravel and sandy substrates or the removal of these substrates in the vicinity of turtle habitat are required during the active turtle season (April 1 to October 15), turtle exclusion fencing should be installed in accordance with the Reptile and Amphibian Exclusion Fencing Best Management Practices (Ministry of the Environment, Conservation and Parks, 2020) around stockpiles or area of disturbance prior to April 1. Fencing should be installed immediately after stockpiles are created if after April 1. • It is recommended that culverts be designed to provide openness ratios that would allow for the passage of small mammal and/or herpetofauna where possible. An openness ratio of 0.4 would permit usage by medium-sized mammals, while the minimum openness ratio to be considered should be 0.25, which would permit usage by reptiles such as turtles (Credit Valley Conservation, 2017). • Avoid work within areas of candidate turtle overwintering habitat during the turtle overwintering period (October 31 to April 1), whenever possible. <p>These proposed mitigation measures will be further refined as the project proceeds to Detail Design and impacts are assessed in more detail.</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIAR Edits Required? (Yes/No? If yes specify edits)
						<p>For further information on potential impacts to Species at Risk and proposed mitigation and avoidance measures, please refer to Section 5.1.1 of the Draft Environmental Impact Assessment Report.</p> <p>3. Destruction and damage to a significant Indigenous site, the Lower Landing. The report outlines how a portion of this site will be impacted by construction. Georgina Island has been on record since 1998 that they want this site completely protected. This site is more significant than 95% of existing Canadian heritage sites; therefore, this site must be protected in its entirety and First Nations must be properly engaged as per the United Nations Declaration on the Rights of Indigenous People.</p> <p>Field investigations for Stage 2 and Stage 3 works have been completed and additional details have been provided in the Updated Draft Environmental Impact Assessment Report.</p> <p>The required Stage 4 Archaeological Assessment of BaGv-42 will be completed during future phases of work for the project and will be carried out in accordance with the Ministry of Citizenship and Multiculturalism Standards and Guidelines for Consultant Archaeologists (Ontario Government 2011). No ground disturbing activities will occur at this site until the Stage 4 assessment has been conducted.</p> <p>As recommended by the cultural heritage resource assessment undertaken by the Project Team, the Holland River watershed was identified as a Cultural Heritage Landscape requiring further research and evaluation to determine if it possesses cultural heritage value or interest. This further assessment will be completed in a Cultural Heritage Evaluation Report (CHER), and if the CHER determines that the Holland River Watershed meets the criteria in Ontario Regulation 9/06 or Ontario Regulation 10/06 of the Ontario Heritage Act, and may be adversely impacted by the Updated Technically Preferred Route, a Heritage Impact Assessment will be prepared to fully assess impacts on the resource's identified heritage</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIAR Edits Required? (Yes/No? If yes specify edits)
						<p>attributes and propose alternatives and mitigation to conserve the property's Cultural Heritage Value or Interest. These commitments are included in Section 5.3.2 of the Updated Draft EIAR.</p> <p>Consultation is an integral component of the Preliminary Design stage, the project-specific assessment of environmental impacts process, and for future project phases, and is critical to a project's success. The ministry is actively consulting and engaging with Indigenous communities throughout the Bradford Bypass Project.</p> <p>Comments from Indigenous communities are accepted at any time in the study process.</p> <p>4. Impacts to Lake Simcoe which have not been studied at all despite its headwaters in the Holland Marsh Wetland complex will be the receiver of pollutants and salt thanks to the Bypass.</p> <p>As the project falls within the jurisdiction of the Lake Simcoe Region Conservation Authority (LSRCA), pertaining to Ontario Regulation 179/06, the ministry has assessed impacts with respect to the <i>Lake Simcoe Protection Act</i> and the Lake Simcoe Protection Plan through consideration of water quality and quantity, stormwater management, groundwater management, landscaping and ecological restoration measures; as well as fluvial geomorphological designs for watercourses, erosion and sediment control and spills prevention and protection measures.</p> <p>Appropriate mitigation measures to prevent salt and treated sand from entering watercourses and salt-sensitive areas will be proposed based on various factors including the use of MTO's Salt Management Plan and the Ministry of Environment, Conservation and Parks (MECP) Guidelines on Snow Disposal and De-icing Operations in Ontario. The MTO Salt Management Plan outlines salt management operational practices and strategies and Best Management Practices (BMP) in terms of equipment, best practices, materials, storage, testing, storm response, application rules, snow and ice control trainings, snow removal and disposal, and technology review. This includes implementing a balanced approach to the</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIAI Edits Required? (Yes/No? If yes specify edits)
						<p>highway salt application based on the amount of snow precipitation and highway conditions.</p> <p>In areas that are particularly sensitive, salt management measures may be necessary to mitigate environmental effects of road salt in accordance with the study objectives utilizing the Code of Practice for Environmental Management of Road Salts released by Environment Canada. The Code of Practice for Environmental Management of Road Salts can be viewed here: https://www.canada.ca/en/environment-climate-change/services/pollutants/road-salts/code-practice-environmental-management.html.</p> <p>In addition, snow removal and disposal will be utilized in accordance with the MECP Guidelines on Snow Disposal and De-icing Operations in Ontario. Further details on MECP's Guidelines on Snow Disposal and De-icing Operations in Ontario can be found here: https://www.ontario.ca/page/guidelines-snow-disposal-and-de-icing-operations-ontario#:~:text=Ministry%20Approval,if%20special%20circumstances&text=As%20a%20general%20rule%2C%20the.be%20approved%20for%20direct%20disposal.</p> <p>5. Impacts to people's health particularly around air pollution and the contamination of wells and groundwater. Considering that traffic related air pollution is well known to be a contributor to many diseases including cancers, heart disease and respiratory disease, a cumulative health impact study is required.</p> <p>The human health scoping implications of the project such as air quality, noise, land use, traffic congestion and safety, economic, social cohesion, and neighborhood resources have been summarized in Section 2.2.7 and Section 5.2.7 of the Updated Draft EIAI. To better understand the human health implications due to the Project as a next step, it is recommended for MTO to continue to consider the human health factors identified in this report and provide recommendations to enhance potential positive impacts and mitigate potential negative health impacts. Specifically, conducting a Screening-Level Human Health Risk Assessment of potential air quality</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIAR Edits Required? (Yes/No? If yes specify edits)
						<p>impacts is recommended in order to evaluate and characterize Project-related air quality impacts to health.</p> <p>The project has undertaken an Air Quality Impact Assessment to explore pollutant emissions and dispersion modelling in an effort to predict the contribution of the project to future ambient pollutant concentrations. This contribution, added to background concentration levels, allows prediction of the cumulative impact of the proposed project and all other contributors to air pollution. Concentration levels are compared to provincial and federal ambient air quality criteria and standards to assist in the evaluation of project-specific mitigation needs and options.</p> <p>Areas of concentrated emission impact are influenced by traffic volumes along a given segment of roadway. The implementation of the Bradford Bypass is expected to redistribute traffic from local roads surrounding the proposed Bradford Bypass to the new corridor and greater freeway network. Reductions in traffic volumes are observed on corridors including Highway 11/1 (Bridge Street), Bathurst Street, Holland Landing Road, Yonge Street, Queensville Sideroad, Doane Road, Mount Albert Road, Green Lane, and Simcoe County Road 88/Holland Street, among other roads. The alleviation of traffic on local roads benefits the area including but not limited to Town of Bradford West Gwillimbury, community of Holland Landing, Town of East Gwillimbury, and northern King Township by alleviating congestion during peak hours.</p> <p>Recognizing the potential impacts to groundwater and private wells in the Study Area, the Project Team has completed and initial assessment of the groundwater and surficial soils within the Study Area and documented the findings in a Hydrogeological Data Report. In addition, a Water Well Survey was completed and included a review of available secondary should information as well as data from stakeholders in the Study Area regarding their existing water wells.</p> <p>Additional well surveys and a detailed assessment of potential groundwater interference will be completed during future phases of the project. A Construction Dewatering Plan will also be prepared to identify potential impacts to groundwater and measures to be implemented</p>

						<p>project was re-initiated in September 2020 including two Public Information Centres.</p> <p>Additional archaeological investigations, which are necessary to complete the impact assessment in accordance with the regulation, have recently been finalized and incorporated into an updated Draft EIA. This updated report was posted for an additional 30-day consultation period. The Updated Draft EIA posting includes the information from the initial draft to ensure stakeholders can review additional information in full context of the project.</p> <p>The Updated EIA was made available on the Project website for an additional 30-day consultation period, from July 13, 2023 until August 14, 2023. The updated draft EIA posting includes the information from the initial draft to ensure stakeholders can review additional information in full context of the project. As the initial Draft EIA and the Updated Draft were available for public review for a total of 60 days, an extension of the public review period is not being considered at this time.</p> <p>8. Mandate a cumulative health impact assessment that will outline specifically the public health costs of this highway due to air pollution, groundwater contamination and increased greenhouse gas emissions due to induced demand</p> <p>As noted in the response to Question #5, the human health implications of the project such as air quality, noise, land use, traffic congestion and safety, economic, social cohesion, and neighborhood resources have been summarized in Section 2.2.7 and Section 5.2.7 of the Draft EIA and the Project Team will continue to evaluate and characterize project-related air quality impacts to health and provide recommendations to enhance potential positive impacts and mitigate potential negative health impacts.</p> <p>9. Detailed commitments on protection of species at risk and their habitat within the study area</p> <p>As noted above in the response to Question #2, details on Species at Risk and proposed mitigation measures and</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIAI Edits Required? (Yes/No? If yes specify edits)
						<p>monitoring commitments are documented in Section 5.1.1 of the Updated Draft EIAI.</p> <p>10. Commitment to do further field studies about the presence of American Eel and Northern Sunfish - two species that have Indigenous significance and have not been included in your reports</p> <p>It was noted in discussion with William Treaties First Nations on December 1, 2022, that they had observed both American Eel (<i>Anguilla rostrata</i>; Endangered Species Act – Endangered, Species at Risk Act – Not at Risk) and Northern Sunfish (<i>Lepomis peltastes</i>; Endangered Species Act – Special Concern, Species at Risk Act – Special Concern) in the Holland River.</p> <p>Subsequently, the Project Team consulted with the Ministry of the Environment, Conservation and Parks, in March 2023 and was advised that the Ministry of Environment, Conservation and Parks records have no documented observations of the American Eel or Northern Sunfish in the Study Area. They also noted that the Northern Sunfish is a species of special concern and does not have a permitting status with the Ministry of the Environment, Conservation and Parks, and therefore would not be reported. These discussions with Williams Treaties First Nations and MECP have been documented in the Fish and Fish Habitat Report and Section 2.1.2 of the Updated Draft EIAI.</p> <p>No records of aquatic Species at Risk that are afforded protection under the Species at Risk Act or Endangered Species Act are known to occur in the watercourses where culverts are anticipated to be installed. AECOM ecologists conducted a detailed fish and fish habitat assessment of the water features in the vicinity of the Study Area between September 14-18, 2020, with spring field investigations occurring over multiple days in June 2021. Field investigations were also completed in the spring of 2022 due to changes to the Study Area boundary that required further review for potential fish habitat. Based on these investigations, no Species at Risk were discovered in the Study Area. Regardless, the presence or absence of all aquatic Species at Risk will be re-confirmed in</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIAR Edits Required? (Yes/No? If yes specify edits)
						<p>subsequent design phases through additional field investigations.</p> <p>11. Commitment to protect the Lower Landing in its entirety from any site alteration</p> <p>In accordance with the Ministry's cultural heritage conservation process and the Ministry's obligations under the Standards and Guidelines for Conservation of Provincial Heritage Properties, 2010 (S&Gs) issued under section 25.2 of the Ontario Heritage Act (OHA) the Ministry has completed a Cultural Heritage Resource Assessment Report (CHRAR) to identify known and potential built heritage resources and cultural heritage landscapes within the Study Area, assess potential impacts and project alternatives and recommend mitigations and next steps. The cultural heritage resource assessment has informed the analysis of environmental conditions undertaken for this project and recorded in the Environmental Conditions Report and the Environmental Impact Assessment Report.</p> <p>The assessment has identified the Holland River watershed as having potential cultural heritage value or interest (CHVI). As recommended in the Environmental Impact Assessment Report (EIAR) and the CHRAR, a cultural heritage evaluation is being undertaken to determine CHVI for the property. This includes research and evaluation to determine if the property meets criteria in Ontario Regulation 9/06 and/or Ontario Regulation 10/06 of the Ontario Heritage Act to be considered a Provincial Heritage Property or a Provincial Heritage Property of Provincial Significance. Research includes, but is not limited to, review of heritage property databases, field review, archives, museums, planning offices and other facilities, archaeological reports, other relevant reports or studies, information from community engagement including input from Indigenous communities, oral histories etc. to provide the historic context of the property including the history of Indigenous communities and post-contact communities.</p> <p>For properties, including the Holland River Watershed, that are determined by the Ministry to meet the criteria in O. Reg. 9/06 or O. Reg. 10/06 of the Ontario Heritage Act and that may be adversely impacted by the Updated Technically Preferred Route, a Heritage Impact</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIAR Edits Required? (Yes/No? If yes specify edits)
						<p>Assessment (HIA) will be prepared to fully assess impacts and propose alternatives and mitigation to conserve the property's CHVI. In accordance with F.5 of the S&Gs, and as committed in Section 5.3.2.2 of the EIAR, if the Ministry determines that a property, including the Holland River Watershed, is a provincial heritage property of provincial significance, the Ministry must obtain the consent of the Minister of Citizenship and Multiculturalism before removing or demolishing buildings or structures on the property, or before transferring the property from provincial control. The Minister of Citizenship and Multiculturalism may not grant consent or may grant consent, with or without conditions, where the Minister is of the opinion that all alternatives to the removal, demolition or the transfer of the property have been considered by the Ministry, including alternatives that would not adversely affect the property, and the best alternative in all the circumstances has been adopted. The Minister, as a condition of consent, may require that such reasonable steps as the Minister may specify be taken to minimize or mitigate adverse effects on the property resulting from the removal, demolition or the transfer of the property.</p> <p>12. Detailed study about the impacts this highway will have on Lake Simcoe in particular how it could impact the fisheries as well as the harvesting rights of Indigenous people and their water quality.</p> <p>The Ministry has been and will continue to consult with Indigenous communities regarding potential impacts to their Aboriginal and Treaty Rights.</p> <p>The project has been assessed in accordance with the Interim Environmental Guide for Fisheries and the Protocol for Protecting Fish and Fish Habitat on Provincial Transportation Undertakings. Following the completion of the impact assessment, it was determined that many of the potential negative effects of the proposed works could be avoided or mitigated at many locations. However, due to the number and size of some of the required new crossings it is anticipated that not all negative effects could be avoided or mitigated entirely. At this time, it is assumed that a Request for Review will need to be submitted to Fisheries and Oceans Canada during Detail Design/ prior to construction.</p>

Ct-DraftEIAR-67	To: Project Team From: [REDACTED]	Email: [REDACTED]	Draft EIAR	June 27, 2023	Please read the letter attached for my comments. Thank you. [REDACTED]	<p>Hi [REDACTED]</p> <p>Thank you for your interest in the Bradford Bypass Preliminary Design Study and project-specific assessment of environmental impacts, undertaken in accordance with Ontario Regulation 697/21.</p> <p>It is important to note that the Bradford Bypass is only one element of many transportation options being developed by the Ministry of Transportation (MTO) to keep people and goods moving through the region. Connecting the GGH: a Transportation Plan for the Greater Golden Horseshoe, released by the Ontario Ministry of Transportation in March 2022, includes a Vision for Mobility in 2051 that sets out a 30-year vision of a transportation system that provides safe, efficient and convenient options for people and businesses and supports the well-being and economic prosperity of the region into the future. The plan details the Province's historic investments in the transit system that are underway and are planned to support a more sustainable region. Ontario is investing \$70.5 billion over 10 years for public transit, including Ontario's new subway transit plan for the Greater Toronto Area (GTA) and transforming the GO Transit network into a modern, reliable and fully integrated rapid transit network.</p> <p>The plan will also achieve a resilient road network that provides additional capacity in the most gridlocked areas, more efficient freight routes and better route alternatives. This will result in a more robust, reliable and efficient road network that will reduce delays to people and goods.</p> <p>Specifically for the Bradford Bypass, the proposed highway was approved in 2002 after the completion of the Route Planning and Environmental Assessment Study. The ministry has undertaken 15 environmental studies to update and document environmental conditions, identify, and evaluate potential impacts of the project and recommend mitigation measures to address these impacts, including a Qualitative Climate Change Assessment.</p> <p>The assessment was completed accordance with MECP's Climate Change Guide (Considering Climate Change in the Environmental Assessment Process, 2017), and</p>	No

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIAR Edits Required? (Yes/No? If yes specify edits)
						<p>considers the project's resilience or vulnerability of the undertaking to changing climatic conditions. Findings are summarized in Section 5.2.6 of the Draft EIAR.</p> <p>1. Time and consultation are inadequate. You have provided an un-editable PDF and 30 days for a 576 page report. This follows the pattern of terrible public information and consultation. Will you extend the consultation period?</p> <p>The process of planning the Bradford Bypass has included -- and will continue to include -- consultation with the public and Indigenous communities to ensure the project moves forward in an environmentally responsible way that is responsive to the needs and concerns of communities. In accordance with Ontario Regulation 697/21, an initial Draft Environmental Impact Assessment Report (EIAR) -- which documents the results of the studies undertaken for various environmental disciplines, proposed mitigation measures and environmental commitments to protect the environment -- was published for public review starting on June 1 and continuing until June 30, 2023. In addition, the Ministry has been providing Indigenous communities and stakeholders various opportunities for meaningful consultation since the project was re-initiated in September 2020 including two Public Information Centres. Additional archaeological investigations, which are necessary to complete the impact assessment in accordance with regulations, have recently been finalized and incorporated into an Updated Draft Environmental Impact Assessment Report. This updated report has been posted for an additional 30-day consultation period. The Updated Draft EIAR posting includes the information from the initial draft to ensure stakeholders can review additional information in full context of the project. As the initial Draft EIAR and the Updated Draft were available for public review for a total of 60 days, an extension of the public review period is not being considered at this time.</p> <p>The Updated Draft Environmental Impact Assessment Report was available for review on the Project Website (https://www.bradfordbypass.ca/study-process/) until August 14, 2023.</p> <p>2. Explain how a provincial highway was transformed into a very expensive regional road variant with five interchanges and two 400</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIAR Edits Required? (Yes/No? If yes specify edits)
						<p>series highway connections, paid for by all Ontario taxpayers. This is inconsistent with the MTO's mandate to provide long distance travel solutions. We maintain that there are better and cheaper, faster to implement, regional road and transit solutions that should be pursued, even if the Bypass does get built.</p> <p>The project is being assessed with consideration of the Ministry's mandate to provide for the safe, efficient movement of people and goods between regions and urban areas. In addition, the Project Team has consulted with local and regional municipalities, and the traffic analysis for the proposed Bradford Bypass has considered the planned local transportation and transit improvements to be implemented by others.</p> <p>The original route planning study (2002 Approved Environmental Assessment – EA) concluded that additional relief from congestion in this Study Area could only be accommodated through the protection and implementation of a provincial right of way.</p> <p>As part of the 2002 Approved EA, the Bradford Bypass evaluated alternatives from a broad range of potential solutions to address several transportation problems and to address significant opportunities identified in York Region and Simcoe County. The need for this freeway was confirmed as the only reasonable solution that would make a significant contribution towards addressing the problem as the population in York Region and Simcoe County grows. The 2002 Approved EA approved alignment is technically preferred for a freeway in terms of highway network expansion, ease of construction, relationship to provincial and municipal land use planning and the preferred route is already included in Official and Transportation Master Plans, as well as the Places to Grow Act), as well as having fewer negative impacts to residential and natural areas when compared to other route options considered.</p> <p>For more information on the Analysis and Evaluation of alternatives, refer to Section 2.1.6 of the 2002 Approved EA, which can be found in the enclosed link:</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIAR Edits Required? (Yes/No? If yes specify edits)
						<p>https://www.bradfordbypass.ca/wp-content/uploads/2020/09/BBP-RoutePlanningEA-1997.pdf</p> <p>Further to the conclusion of the 2002 Approved EA, as part of this Preliminary Design study, a traffic analysis was completed and the result of the review has confirmed the need of the highway. This analysis included the review of existing traffic conditions and modelling of future forecast traffic conditions and it has been confirmed that updates to regional and municipal roads alone will not address the transportation needs within the Study Area.</p> <p>Additionally, a feasibility assessment was conducted evaluating nine interchange location scenarios to determine the best interchange configuration through the Bradford Bypass corridor. The evaluation was conducted in accordance with satisfying the study objective to improve connectivity of the study area between Highway 400 and Highway 404, facilitating the improvement of traffic operations and movement of goods. Consideration included interchange utilization, overall network delay, out of way travel, environmental considerations and constraints, and preliminary costs. It was determined that interchanges at 10th Sideroad, County Road 4, Bathurst Street, 2nd Concession Road, and Leslie Street would be included as part of the Study.</p> <p>3. We would like to see the traffic studies in their entirety. An environmental assessment used to be grounded in a demonstration of need and justification. The MTO has provided neither as it pertains to this particular project and at this time. There is no evidence that local traffic solutions MTO purports to be solving (actually a local traffic issue and not MTO's mandate) are best served by this potentially \$4 billion highway.</p> <p>The Bradford Bypass project has been assessed in accordance with Ontario Regulation 697/21. Consistent with the Regulation, the Project Team completed an update to the description of environmental conditions previously documented in the 2002 Approved Environmental Assessment (EA) for the project. This update included a review and assessment of the existing traffic conditions which was documented in the</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIAR Edits Required? (Yes/No? If yes specify edits)
						<p>Environmental Conditions Report (ECR). The ECR was finalized in October 2022 following a public review period, and is available on the Project website.</p> <p>Significant population growth is projected for both Simcoe County and the Regional Municipality of York. Even with all currently planned transportation and transit investments, road congestion will continue to increase across the Greater Golden Horseshoe (GGH) including within the Bradford Bypass Study Area.</p> <p>The purpose of the Bradford Bypass is to relieve congestion on existing local roads between Highway 400 and Highway 404 and provide a northern freeway connection between Highways 400 and 404.</p> <p>Modeling results demonstrated that under the No Build (no Bradford Bypass) scenario, local roads were forecasted to exceed capacity by 2031 but saw significant relief under the Build (with Bradford Bypass) scenario. Alternative alignments for the Bradford Bypass were then compared within the model, including the 2002 Approved EA alignment and interchange locations and an updated preferred interchange location alternative developed by the Project Team.</p> <p>On average, between the various origin-destination pairs using the Bradford Bypass, drivers in the peak direction during the peak period, would save up to 73% or 33 minutes of travel time when connecting between Highway 400 and Highway 404 compared to existing routes in the No Build scenario.</p> <p>The development of the analysis and key results from the Traffic Study have been summarized in the Draft Environmental Impact Assessment Report and the Updated Draft Environmental Impact Assessment Report (EIAR), which were available for public review and comment from June 1, 2023 to June 30, 2023 and July 14, 2023 to August 14, 2023, respectively. The information in the draft EIAR includes the origin and destination locations that were reviewed to determine the average travel time savings during the AM and PM peak hours. Similar to the process undertaken for MTO preliminary design studies, the Traffic Study will be finalized upon study completion and will be available if requested.</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIAR Edits Required? (Yes/No? If yes specify edits)
						<p>a. Please share the links and the methodology, transparently, so that people can understand what travel time savings MTO is referring to. We have absolutely no idea because your write up is incredibly vague about the start and end of the routes used for analysis.</p> <p>b. What year do your studies indicate that the Bypass will be congested at peak rush hour times?</p> <p>As detailed in the Draft EIAR (Section 2.4.1), an Aimsun model was created to assess the existing traffic conditions for the road network in the Study Area. The model study area encompasses the Highway 400 corridor from south of Simcoe County Road 88 to north of Highway 89, as well as the Highway 404 corridor from south of Green Lane East to its terminal at Woodbine Avenue (Table 4-3 and 4-4 of the Draft EIAR).</p> <p>The model for this area was developed using pre-pandemic traffic volumes to identify peak hour volumes within the Study Area. This model has been calibrated and validated as it closely resembled actual operating conditions.</p> <p>As detailed in Section 4.4 of the Draft EIAR, traffic is assessed through modelling to identify Level Of Service (LOS). Having confirmed the model was consistent with current (base) conditions, and therefore appropriate to assess future conditions and design alternatives, the model was used to assess LOS under future 2031 and 2041 conditions. To assess future conditions, the model was updated to include all road network and transit improvements planned within the Study Area, and, forecast traffic volumes based on the projected growth within the Study Area.</p> <p>The alternative Build scenarios showed the mainline operations on the Bradford Bypass in 2031 would operate at acceptable LOS D in the interim four lane configuration. The model indicates that by expanding to the ultimate 8 lane configuration (implementing another general purpose lane and an HOV lane in each direction by 2041), LOS on the mainline improves to LOS B or C and accommodates the additional traffic forecast by 2041.</p>

						<p>For further information about the Traffic Study please refer to the response to Question #3 and Section 4.4 of the Updated Draft EIAR.</p> <p>4. The Draft Environmental Impact Assessment report shows on pg. 212 the Bypass touching the southern portion of the Lower Landing (AKA BaGv-42), a significant historical and archaeological site at a significant meander on the East Holland River. MTO has moved the highway 150 m to the south of the technically preferred route, which would have completely run over the Lower Landing (pg 148). But the Draft IA states, "the southern portion of the site will be impacted by construction" (pg 395). The Draft Environmental Conditions Report indicated that a Stage 3 archaeological assessment "was required" (pg 225); the Draft IA report says that the Stage 3 was completed, and that Stage 4 is required. The Project team's website says, "Currently, additional archaeological investigations are being completed to finalize the impact assessments in accordance with Ontario Regulation 697/21 and are not included in this posting. This information will be available for additional public and Indigenous community review once completed." So the archeological work is not finished. And yet the route has been chosen. Property owners near the history-rich Lower Landing that are receiving expropriation notifications. We are staunchly opposed to this violation of this site particularly absent the stage 4 evaluation of the Lower Landing and the endorsement of the First Nations.</p> <p>a. As stewards of these lands and water for time immemorial, additional time should be given to allow First Nation community members to fully digest the lengthy report. Georgina Island First Nation asked that this site be avoided in 1998, 25 years ago, stating, "It is obvious that there are other routes, which can be used to connect these major highways, and we hope that</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIAR Edits Required? (Yes/No? If yes specify edits)
						<p>another will be selected." Is Ontario still ignoring this request.</p> <p>b. Have First Nations be consulted about this part of the plan? Please provide written evidence of their approval of this route.</p> <p>Field investigations for Stage 2 and Stage 3 works have been completed and additional details are included in the Updated Draft Environmental Impact Assessment Report available on the Project Website (https://www.bradfordbypass.ca/study-process/) for public review until August 14, 2023.</p> <p>The required Stage 4 Archaeological Assessment of BaGv-42 will be completed during future phases of work for the project and will be carried out in accordance with the Ministry of Citizenship and Multiculturalism Standards and Guidelines for Consultant Archaeologists (Ontario Government 2011). No ground disturbing activities will occur at this site until the Stage 4 assessment has been conducted.</p> <p>In accordance with Ontario Regulation 697/21, the Project Team completed site specific Stage 3 archaeological assessments for areas within the Study Area that were identified as having archaeological potential in accordance with the Stage 2 archaeological assessments.</p> <p>It is common practice for Stage 4 archaeology work to be completed during Detail Design. Limiting the impact to Stage 4 archaeological sites where feasible is one of the Project Team's main priorities. As a result, the Project Team will determine the exact impact limits to archaeological sites during subsequent design phases of the project. To avoid unnecessary excavation, the Project Team will then undertake the Stage 4 archaeological assessments. Any Stage 4 field work that will be undertaken must engage interested Indigenous communities.</p> <p>As recommended by the cultural heritage resource assessment undertaken by the Project Team, the Holland River watershed was identified as a Cultural Heritage Landscape requiring further research and evaluation to determine if it possesses cultural heritage value or</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIA Edits Required? (Yes/No? If yes specify edits)
						<p>interest. This further assessment will be completed in a Cultural Heritage Evaluation Report (CHER), and if the CHER determines that the Holland River Watershed meets the criteria in Ontario Regulation 9/06 or Ontario Regulation 10/06 of the Ontario Heritage Act, and may be adversely impacted by the Updated Technically Preferred Route, a Heritage Impact Assessment will be prepared to fully assess impacts on the resource's identified heritage attributes and propose alternatives and mitigation to conserve the property's Cultural Heritage Value or Interest. These commitments are included in Section 5.3.2 of the Updated Draft EIA.</p> <p>Consultation is an integral component of the Preliminary Design stage, the project-specific assessment of environmental impacts process, and for future project phases, and is critical to a project's success. The ministry is actively consulting and engaging with Indigenous communities throughout the Bradford Bypass Project.</p> <p>The Project Team is engaging with and considers input provided by the following Indigenous communities:</p> <ul style="list-style-type: none"> - Alderville First Nation - Beausoleil First Nation - Chippewas of Georgina Island First Nation - Chippewas of Rama First Nation - Curve Lake First Nation - Hiawatha First Nation - Mississaugas of Scugog Island First Nation - Kawartha Nishnawbe First Nation - Georgian Bay Métis Council, and - Huron-Wendat Nation <p>Comments from Indigenous communities are accepted at any time in the study process.</p> <p>5. Table 2-2 lays out the 12 species present or very likely to be present. For instance, Blandings Turtles are likely affected as they are likely in the area. The only commitment we see is to do a detailed study later on. This is a good example of study following decision or destruction, and is in violation of the standard EA practices. There are no commitments to the protection of species at risk in this document.</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIAI Edits Required? (Yes/No? If yes specify edits)
						<p>Targeted surveys for all species at risk with potential to occur in the Study Area will be required during future phases of work. These future studies will inform the need for any permits, authorizations, mitigation or compensation under the Endangered Species Act.</p> <p>The Updated Draft EIAI requires consideration and review of all recommendations throughout the corridor during future phases of work. This approach is necessary and standard practice for planning projects in that design is an iterative approach and this project is only completing design to a preliminary level. During future phases of work, additional design will be completed and may include refinements to the design as details are developed with greater accuracy. Limiting the future design phases by making certain elements of the project non-discretionary at the preliminary design stage limits the potential for future work to explore opportunities for further reducing impacts and / or increasing mitigation and offsetting measures.</p> <p>For Blanding's Turtle specifically, candidate habitat associated with the Holland River and Holland River East Branch open water and wetland communities has been identified within the Study Area. Blanding's Turtle may be impacted while moving in between habitats if these species enter the construction work area.</p> <p>As part of this phase of the project, preliminary mitigation and avoidance measures for the potential impacts to turtles are included in the Draft EIAI and include:</p> <ul style="list-style-type: none"> • If stockpiles of gravel and sandy substrates or the removal of these substrates in the vicinity of turtle habitat are required during the active turtle season (April 1 to October 15), turtle exclusion fencing should be installed in accordance with the Reptile and Amphibian Exclusion Fencing Best Management Practices (Ministry of the Environment, Conservation and Parks, 2020) around stockpiles or area of disturbance prior to April 1. Fencing should be installed immediately after stockpiles are created if after April 1. • It is recommended that culverts be designed to provide openness ratios that would allow for the passage of small mammal and/or herpetofauna where possible. An openness ratio of 0.4 would permit usage by medium-sized mammals, while the 	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIAR Edits Required? (Yes/No? If yes specify edits)
						<p>minimum openness ratio to be considered should be 0.25, which would permit usage by reptiles such as turtles (Credit Valley Conservation, 2017).</p> <ul style="list-style-type: none"> Avoid work within areas of candidate turtle overwintering habitat during the turtle overwintering period (October 31 to April 1), whenever possible. <p>These preliminary mitigation measures will be further refined as the project proceeds to Detail Design and impacts are assessed in more detail.</p> <p>For further detail on potential impacts to Species at Risk and proposed mitigation and avoidance measures, please refer to Section 5.1.1 of the Draft Environmental Impact Assessment Report.</p> <p>a. The Draft IA report identifies that the Williams Treaties FN reported American Eel and Northern Sunfish in the Holland River. This must be further investigated with new fieldwork. The American Eel is in decline and gets Federal protection. Ontario's Species at Risk legislation doesn't work anymore so it's all up to the federal enforcement.</p> <p>b. What is Ontario going to do to stand by Canada's obligations to First Nation treaty and consultation rights?</p> <p>c. Will the American Eel's presence be investigated with new field work.</p> <p>It was noted in discussion with William Treaties First Nations on December 1, 2022, that they had observed both American Eel (<i>Anguilla rostrata</i>; Endangered Species Act – Endangered, Species at Risk Act – Not at Risk) and Northern Sunfish (<i>Lepomis peltastes</i>; Endangered Species Act – Special Concern, Species at Risk Act – Special Concern) in the Holland River.</p> <p>Subsequently, the Project Team consulted with the Ministry of the Environment, Conservation and Parks, in March 2023 and was advised that the Ministry of Environment, Conservation and Parks records have no documented observances of the American Eel or Northern Sunfish in the Study Area. They also noted that the</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIAR Edits Required? (Yes/No? If yes specify edits)
						<p>Northern Sunfish is a species of special concern and does not have a permitting status with the Ministry of the Environment, Conservation and Parks, and therefore would not be reported. These discussions with Williams Treaties First Nations and MECP have been documented in the Fish and Fish Habitat Report and Section 2.1.2 of the Updated Draft EIAR.</p> <p>No records of aquatic Species at Risk that are afforded protection under the Species at Risk Act or Endangered Species Act are known to occur in the watercourses where culverts are anticipated to be installed. AECOM ecologists conducted a detailed fish and fish habitat assessment of the water features in the vicinity of the Study Area between September 14-18, 2020, with spring field investigations occurring over multiple days in June 2021. Field investigations were also completed in the spring of 2022 due to changes to the Study Area boundary that required further review for potential fish habitat. Based on these investigations, no Species at Risk were discovered in the Study Area. Regardless, the presence or absence of all aquatic Species at Risk will be re-confirmed in subsequent design phases through additional field investigations.</p> <p>6. Please confirm our understanding that has been no discussion of, and that there are no studies looking at impacts to Lake Simcoe.</p> <p>As the project falls within the jurisdiction of the Lake Simcoe Region Conservation Authority (LSRCA), pertaining to Ontario Regulation 179/06, the ministry has assessed impacts with respect to the <i>Lake Simcoe Protection Act</i> and the Lake Simcoe Protection Plan through consideration of water quality and quantity, stormwater management, groundwater management, landscaping and ecological restoration measures; as well as fluvial geomorphological designs for watercourses, erosion and sediment control and spills prevention and protection measures.</p> <p>a. The Groundwater Protection and Well Monitoring plan, which this Draft IA refers to, discusses the need to dewater the site for the building of piles for elevated bridge sections of the highway. The Draft IA report says, "Construction</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIAR Edits Required? (Yes/No? If yes specify edits)
						<p>dewatering activities have been identified as the primary risk to groundwater fed water wells in the Study Area." There is no credible groundwater protection water. There are many suggestions for how to keep it clean but there are few to no commitments.</p> <p>Commitments, preliminary mitigation measures and monitoring activities related to groundwater are documented in Section 5.1.4 of the Draft EIAR, and will be carried forward to subsequent phases of the project.</p> <p>The risk of spills during construction of the project will be primarily limited to petroleum products from machinery (fuels and lubricants). The use of best management practices for handling of hydrocarbons according to the Ministry of Environment, Conservation and Parks and the Technical Standards and Safety Authority of the Ministry of Government Services will reduce the potential of environmental adverse effects associated with petroleum product handling and uses. Spillage of petroleum products must be immediately remediated according to these standards such that groundwater quality is not impacted.</p> <p>Mitigation plans will be generated during future phases of work for the project and for any excavation and structure construction within areas of medium to high significant groundwater recharge areas as shown near the Holland River and Holland River East Branch. Mitigation plans would be specific to each excavation and structure construction and include erosion and sediment control, dewatering treatment and discharge piping away or towards from Significant Groundwater Recharge Areas, or municipal sewer discharge requirements. Dewatering discharge shall be directed away from Well Head Protection areas if excavation and dewatering activities are occurring within them.</p> <p>For more information about the Groundwater Protection and Well Monitoring Plan please refer to Section 5.1.4 of the Updated Draft EIAR.</p> <p>b. How exactly is the province going to monitor groundwater discharges to</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIAR Edits Required? (Yes/No? If yes specify edits)
						<p>ensure they meet Ontario's water quality standards?</p> <p>c. What penalties are contractors going to face for violating the discharge requirements?</p> <p>d. If penalties are not enough to compel adherence, what next?</p> <p>e. How is the public to have confidence that contaminated water will not be discharged to the Holland Rivers and Lake Simcoe?</p> <p>f. Please confirm is monitoring will continue or not, as this statement is totally vague: "It is expected that each unassessed monitoring well will continue to be monitored and assessed during the subsequent detail design phase of the project."</p> <p>The Groundwater Monitoring Program includes groundwater level monitoring and groundwater quality monitoring to establish the pre-construction baseline conditions for comparison of data collected during and post-construction.</p> <p>During the Preliminary Design study, Golder Associates Ltd. (Golder) installed monitoring wells during the ongoing geotechnical investigations. Monitoring is expected to be completed within these same monitoring wells during all future phases of work for the Project, including construction. Residential monitoring wells will also be part of this program if they fall within the Radius of Influence of the excavation dewatering and permission to enter is granted to gain access to monitor the well. Detail Design will inform the need for further groundwater investigations. Penalties for discharging any deleterious substance or material to the lands will vary based on the federal, provincial or municipal legislation that might be violated. Beyond legislated penalties, contractor behavior is monitored by the Ministry and poor behavior may result in additional financial or reputational impacts. The Ministry's process for selecting contractors to support future phases of the work for the project also includes consideration of past performance and assessment of the contractors understanding of the project and sensitivities within the Study Area. Commitments, preliminary</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIAR Edits Required? (Yes/No? If yes specify edits)
						<p>mitigation measures and monitoring activities related to groundwater are documented in Section 5.1.4 of the Draft EIAR, and will be carried forward to subsequent phases of the project.</p> <p>g. Explain what kind of environmental impact would make the project stop; or is any impact acceptable?</p> <p>This government takes environmental protection seriously and is implementing a path forward that will ensure environmental protections are not compromised while building this much needed project quickly and safely. Current work on the Bradford Bypass project will continue to be subject to all conditions under Ontario Regulation 697/21.</p> <p>In accordance with Ontario Regulation 697/21, the Project Team has undertaken several environmental impact assessments to identify and document the potential impacts, proposed mitigation measures, and environmental commitments, which are summarized in the Environmental Impact Assessment Report (EIAR).</p> <p>The Ministry of Transportation must also comply with all current federal and provincial environmental requirements. This includes consultation as set out in the regulation and obtaining permits and approvals for the project prior to the start of construction. Obtaining these permits and approvals, which are mechanisms to help protect the environment, confirms that the ministry has met or surpassed the environmental requirements.</p> <p>h. Please confirm that the only financial support for affected well owners whose water quality is affected by the construction is the province providing them with a temporary water supply until the well owner fixes their well.</p> <p>i. Does this meager bit of help extend to those who did not provide baseline information about their well water?</p> <p>j. If there any effort being made to reach more than 12% of respondents to MTO's well water survey?</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIAR Edits Required? (Yes/No? If yes specify edits)
						<p>MTO will work with owners of water wells who experience issues to determine if the issue is the result of Bradford Bypass project activities.</p> <p>If the well issue is confirmed to be a result of the project's activities, the Ministry will provide a letter to the property owner explaining the outcome of the well investigation and detail the recommended mitigation measures (including lowering / replacement of pump inlet, well rehab, new well installed or local watermain connection if available) the Ministry will undertake to remediate the issue. A temporary drinking water supply will be provided and connected to the resident if the project activities are found to be responsible, at the expense of the Ministry, until remediation measures have resolved the issue.</p> <p>A water well survey was completed for the project to determine the pre-construction assessment of private well supplies in the vicinity of the Study Area noted above. Where no response was provided from Property Owners as part of the water well survey, an additional attempt shall be undertaken during Detail Design to contact these owners via mail, email, phone calls, site visit, etc. This information will be used to provide a baseline for water wells prior to the proposed construction to determine existing water quality and quantity of each property.</p> <p>7. How much is this project going to cost?</p> <p>As we bring this project to market, we want to ensure we can retain the best value for the project. As such, the ministry will not be releasing cost estimates prior to the award of contracts to protect the procurement processes.</p> <p>8. When will the Bradford Bypass be completed?</p> <p>The Preliminary Design phase is anticipated to be completed in 2023. Detail Design and Construction Phases will follow.</p> <p>9. It is unclear how many lanes are being constructed at which times. Please clarify.</p> <p>The Ontario government is committed to fully funding the construction of the Bradford Bypass and is following through on its promise to improve and invest in the</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIAR Edits Required? (Yes/No? If yes specify edits)
						<p>province's transportation corridors to get people moving within the region, connect people to jobs, make life easier and support a strong economy.</p> <p>A four-lane configuration is planned to be constructed first with two general purpose lanes in each direction. To plan for the future, the Ministry is also considering the design of an ultimate eight-lane design for the Bradford Bypass. The ultimate, eight-lane configuration for the project will feature three general purpose lanes and one HOV lanes in each direction.</p> <p>10. There is no cumulative health impact assessment to understand how traffic related air pollution, known to increase risks of cancers, leukemia, heart and lung disease, will impact the communities surrounding the route. There is also no mention of the cumulative impacts on our climate from construction and higher rates of car travel on this highway.</p> <ul style="list-style-type: none"> a. How will you be informing people living along the route about the increased risk of traffic related air pollution and its effects on human health? b. Will you put air quality monitors in Bradford? c. How do you explain the fact that you are NOT monitoring air quality in Bradford, and using the closest site, Newmarket? d. The Final Environmental Conditions Report identified numerous planned residential developments right beside the highway, including a planned new school. Have the land owners / developers / school boards received any information that tells them how bad the air quality is going to be there? <p>The human health scoping implications of the project such as air quality, noise, land use, traffic congestion and safety, economic, social cohesion, and neighborhood resources have been summarized in Section 2.2.7 and Section 5.2.7 of the Draft EIA. To better understand the human health implications due to the Project as a next step, it is recommended for MTO to continue to consider the human health factors identified in this report and</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIAR Edits Required? (Yes/No? If yes specify edits)
						<p>provide recommendations to enhance potential positive impacts and mitigate potential negative health impacts. Specifically, conducting a Screening-Level Human Health Risk Assessment of potential air quality impacts is recommended in order to evaluate and characterize Project-related air quality impacts to health.</p> <p>The project has undertaken an Air Quality Impact Assessment to explore pollutant emissions and dispersion modelling in an effort to predict the contribution of the project to future ambient pollutant concentrations. This contribution, added to background concentration levels, allows prediction of the cumulative impact of the proposed project and all other contributors to air pollution.</p> <p>Concentration levels are compared to provincial and federal ambient air quality criteria and standards to assist in the evaluation of project-specific mitigation needs and options.</p> <p>Areas of concentrated emission impact are influenced by traffic volumes along a given segment of roadway. The implementation of the Bradford Bypass is expected to redistribute traffic from local roads and freeway corridors surrounding the proposed Bradford Bypass. Reductions in traffic volumes are observed on corridors including Highway 11/1 (Bridge Street), Bathurst Street, Holland Landing Road, Yonge Street, Queensville Sideroad, Doane Road, Mount Albert Road, Green Lane, and Simcoe County Road 88/Holland Street, among other roads, which benefits the community of Bradford, Town of Bradford West Gwillimbury, by alleviating congestion during peak hours.</p> <p>The Project Team is currently utilizing the National Air Pollution Surveillance air quality monitoring stations to assess air quality levels. Five years of existing data sets were analyzed from stations within the region, and the complete data set from the closest station or most representative station for each contaminant of concern was selected to represent the background air quality for the Study Area. Due to the proximity of the Study Area to the Toronto Area, monitoring stations within the City of Toronto were given preference as the one of the most representative locations for the air quality contaminants of concern. As such, Roadside Wallberg – University of Toronto monitoring station, North Downsview monitoring station, Gage Institute monitoring station (all located</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIAR Edits Required? (Yes/No? If yes specify edits)
						<p>approximately 38 – 53 km from the Study Area) were used. The nearest monitoring station is in Newmarket. Additional information regarding the assessment of potential air quality impacts have been summarized in Section 2.2.4 and Section 5.2.4 of the Draft EIAR.</p> <p>Land has been designated for the Bradford Bypass since the 2002 Approved EA was completed. As noted above, consultation is an integral component of the Preliminary Design stage and project-specific assessment of environmental impacts and is critical to a project's success. The ministry is actively consulting and engaging with private landowners, developers and school boards within the Study Area. Engagement and consultation has included having a project website and telephone line, having a project contact list for regular project updates, providing notices and correspondence via email, mail, and Ontario Government Notices in local newspapers, hosting public information centres and online events, and holding meetings with Indigenous communities, municipalities, environmental agencies, and stakeholders. More information on the project consultation activities are included in Section 7 of the Updated Draft EIAR.</p> <p>11. Traffic modeling to produce the air dispersion model is not robust or transparent. The air modeling report and supporting reports fail to disclose the % of diesel truck traffic, or the component of that traffic that includes trucks dating from 2006 or earlier which comprise a significant component of air pollution load. The comparison of build with no-build is not valid because the values in Appendix E of the traffic modeling report show that there was an erroneous assumption that there would be significantly less truck traffic in the build scenario compared to the no-build scenario. There is no valid scientifically-based justification for this. Further, if there is an increase in truck traffic along 404 - as the model predicts - then sensitive receptors along highway 404 need to be included in a health impact study. Instead, impacts on traffic along the 400/404 corridors were excluded and the "air quality study area" was restricted to the bypass corridor itself without any explanation</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIAR Edits Required? (Yes/No? If yes specify edits)
						<p>or justification. It is egregious that MTO did not conduct locally relevant air quality monitoring for background in Bradford, River Drive Park, Queensville and along the 404/400 corridors for traffic related air pollutants. Such baseline monitoring is generally inexpensive and could have been easily obtained. The study did not include the cumulative effects of future planned industrial uses along the Bypass corridor and along the 400/404 corridor which may significantly impact people's health along the route. The evaluation did not use 2022 World Health Organization criteria for contaminants which are much lower and more up-to-date than the CAAQS or the AAQCs. We disagree that the AAQCs and CAAQS represent the "lowest concentrations at which an adverse effect may be experienced" as they are not based on up-to-date understandings of the health impacts of air contaminants including pre-term births and neurodevelopmental and other impacts. The report predicts significant exceedances for NO2 and benzo(a)pyrene even with the apparently non-conservative assumptions for diesel truck traffic used in the full build out scenario compared to the no-build scenario. The adverse health impacts of NO2 exceedances may be extremely severe and will impact on the Charter rights and human rights of residents in the study area and beyond without justification for the need for the project.</p> <p>Study Area, MOVES3 data, vehicles and assumptions: In order to model relevant vehicle types within the Air Quality Impact Assessment Study Area, MOVES3 data was input to the model and refinements were made to exclude fuel types such as ethanol given these fuels are not readily available for use in Ontario. Fuel inputs utilized in MOVES3.0 modelling at the time of the assessment included: Fuel Type IDs 1, 2, 3 and 9. ID 5 (ethanol) was not included as flex fuel cars and fuelling stations are not readily available in Ontario. The specific source type fractions utilized for various vehicle types applied within the project study area and the related fraction of expected vehicle usage for both passenger-class vehicles and heavy-class vehicles, including the distribution of vehicle</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIAI Edits Required? (Yes/No? If yes specify edits)
						<p>types in the heavy truck vehicle category, were combined to create representative vehicle emission for vehicle class that can reasonable be expected to be in use in 2041. Highway 400/404 corridors were included in the Air Quality Impact Assessment. The full air quality study area is shown in Figure 2-9 of the Updated Draft EIAI and demonstrates that the air quality study area included emission sources within the boundary of assessment, including but not limited to Highway 400 (500 m south of Rural Rd. 88 to 500 m north of Concession Rd. 11), Highway 404 (500 m south of Queensville Sideroad E to 500 m north of Boag Road), the entirety of the proposed Bradford Bypass, Bridge Street, Holland Street W, 10th Sideroad, Young Street/Barrie Street, and Queensville Sideroad.</p> <p>Traffic distributions and truck traffic: The same Average Annual Daily Traffic (AADT) were used for all scenarios. AADT values for each air quality emission source vary between the three scenarios evaluated based on projected existing traffic within the study area, and future no-build and build traffic projections however the same 24-hour traffic distribution percentages were applied. Three representative 24-hour distribution percentages were applied to the air quality emission sources. These were applied to a given source of emission depending on the type of road in question, e.g. a "Leslie St." 24-hour distribution was applied to air quality emission sources which were categorized as community arterial roads; a "HWY 400" 24-hour distribution was applied to air quality emission sources categorized as highways; and, a "2nd Concession Rd" 24-hour distribution was applied to rural roads. These same 24-hr distributions were applied to the assigned source for all three scenarios of evaluation (existing conditions, future no-build, and future build).</p> <p>Fuel usage distribution [i.e. diesel, gasoline, CNG, etc.] and vehicle age distribution within each vehicle type category were modelled based on MOVES3.0 default fuel use and age distribution database inputs assigned to the year of evaluation. Heavy truck traffic was included in the modelling with a percentage assigned to each air quality emission source anticipated from this vehicle type.</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIAI Edits Required? (Yes/No? If yes specify edits)
						<p>Health Impacts, Critical Receptors and Background/Study Area Monitoring Data: The human health scoping implications of the project such as air quality, noise, land use, traffic congestion and safety, economic, social cohesion, and neighborhood resources have been summarized in Section 2.2.7 and Section 5.2.7 of the Updated Draft EIAI.</p> <p>The Project Team is aware some critical receptors have been identified as 'missing' by a number of stakeholders. Having reviewed the data, these 'missing' receptors were included as residences in the Air Quality Impact Assessment. Potential impacts at the 'missing' receptors within the Air Quality Impact Assessment Study Area are reflected in the assessment by other, nearby critical receptors and receptors identified on Figure 2-9 and 2-10 of the Updated Draft EIAI.</p> <p>The approach to identifying representative air quality levels is conservative and often ensures the worst-case conditions are reflected so as to not under-represent conditions within a study area; i.e. background air quality contaminant levels included within the assessment may be representative or higher than expected for the area in question.</p> <p>While it is recognized that localized in-situ monitoring may provide more accurate data, use of existing monitoring stations within the NAPS network for statistically relevant background monitoring data is a generally accepted and conservative methodology for provincial environmental impact air quality assessments. Stations selected for the background air quality assessment were chosen based on total data availability over a most recent five-year period as a minimum of 12 months of daily and hourly data is required to ensure statistical relevance. Stations were also selected based on their proximity to the air quality study area with the meteorological station selected as representative of the air quality study area within 15 km north-west of the air quality study area. Stations must also be a relative representation of similar types of existing sources of air quality emission in the study area and it is notable that the meteorological station selected as representative of air quality in the study area was provided by the MECP in site-specific MET data requested for the project modelling.</p>

						<p>12. Many alternatives have not been considered, including: extending and widening Green Lane to six lanes to Highway 400 including service roads, bridges and traffic circles is economically a much better idea that will cost less and does not use up any farm land, wetland or have any major river crossings. It will better serve and reduce the local and provincial traffic. Nobody from King Township, Whitchurch, Oak Ridges, Aurora, Newmarket and East Gwillimbury is going to drive north of Queensville to use the bypass that is being planned as it is not in the center of the population. Where are the results of the Origin Destination Study that was requested? Where is the Study for Local Network Improvements that was requested? Where is the study covering upstream pollution?</p> <p>The Project Team completed an update to the description of environmental conditions previously documented in the 2002 Approved Environmental Assessment (EA) for the project. This update included a review and assessment of the existing traffic conditions which was documented in the Environmental Conditions Report (ECR). The ECR was finalized in October 2022 following a public review period and is available on the Project website. For more information on the Environmental Conditions of the Study Area, please refer to Section 2 of the Updated Draft EIAI.</p> <p>The Holland Marsh Wetland Complex extends beyond the Bradford Bypass corridors and consists of over 3,000 hectares (ha) of designated wetland area. Currently the Bradford Bypass corridor will cross approximately 12.73 ha which accounts for only 4 percent of the entire Provincially Significant Wetland (PSW) area. The crossing locations were chosen because they are consistent with the Ministry's effort to minimize impacts to this sensitive wetland and are among the narrowest portions of Holland Marsh. A portion of the crossing will be accommodated on an elevated structure in order to provide marine navigation clearance over the Holland River and Holland River East Branch below. The Project team is carrying forward commitments made in the 2002-approved EA to span all provincially significant wetlands within the study limits.</p>

Ct-DraftEIAR-62 Cont.	To: Project Team From: [REDACTED]	Email: [REDACTED]	Draft EIAR	June 28, 2023	<p>Dear Sirs,</p> <p>I have many concerns with this project, the process it is following, and this report is no different. Please answer the questions below.</p> <ol style="list-style-type: none"> 1. Timing and consultation are inadequate. You have provided an un-editable PDF and 30 days for a 576 page report. This follows the pattern of terrible public information and consultation. Will you extend the consultation period? 2. Explain how a provincial highway was transformed into a very expensive regional road variant with five interchanges and two 400 series highway connections, paid for by all Ontario taxpayers. This is inconsistent with the MTO's mandate to provide long distance travel solutions. We maintain that there are better and cheaper, faster to implement, regional road and transit solutions that should be pursued, even if the Bypass does get built. 3. We would like to see the traffic studies in their entirety. An environmental assessment used to be grounded in a demonstration of need and justification. The MTO has provided neither as it pertains to this particular project and at this time. There is no evidence that local traffic solutions MTO purports to be solving (actually a local traffic issue and not MTO's mandate) are best served by this potentially \$4 billion highway. <ol style="list-style-type: none"> a. Please share the links and the methodology, transparently, so that people can understand what travel time savings MTO is referring to. We have absolutely no idea because your write up is incredibly vague about the start and end of the routes used for analysis. For instance this meaningless babble from pg. 334: <small>On average, between the various origin-destination pairs using the Bradford Bypass, drivers in the peak direction during the peak period, would save up to 72% or 35 minutes of travel time when connecting between Highway 403 and Highway 404 compared to existing routes in the five study scenarios.</small> b. What year do your studies indicate that the Bypass will be congested at peak rush hour 	Response included in CT-DraftEIAR-62.	No

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIAR Edits Required? (Yes/No? If yes specify edits)
					<p>times?</p> <p>4. The Draft Environmental Impact Assessment report shows on pg. 212 the Bypass touching the southern portion of the Lower Landing (AKA BaGv-42), a significant historical and archaeological site at a significant meander on the East Holland River. MTO has moved the highway 150 m to the south of the technically preferred route, which would have completely run over the Lower Landing (pg 148). The Draft Environmental Conditions Report indicated that a Stage 3 archaeological assessment "was required" (pg 225); the Draft IA report says that the Stage 3 was completed, and that Stage 4 is required. The Project team's website says, "<i>Currently, additional archaeological investigations are being completed to finalize the impact assessments in accordance with Ontario Regulation 697/21 and are not included in this posting. This information will be available for additional public and Indigenous community review once completed.</i>" The Draft IA states, "the southern portion of the site ... will be impacted by construction. Stage 4 Archaeological Assessment excavation plans will be submitted to the Ministry of Citizenship and Multiculturalism and Indigenous communities prior to the Stage 4 excavation being conducted," (pg 395).</p> <p>So the archeological work is not finished. And yet the route has been chosen. Property owners near the history-rich Lower Landing that are receiving expropriation notifications. We are staunchly opposed to this violation of this site particularly absent the completed stage 4 archaeological assessment of the Lower Landing and the endorsement of the First Nations.</p>		

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIAR Edits Required? (Yes/No? If yes specify edits)
					 <p><i>Bradford Bypass is still too close to the Lower Landing. The Lower Landing is in the area of WC-25 in the image above. This clip of a map shows Provincially significant wetlands (orange); unevaluated wetlands (blue); cold water fish habitat (black) and warm (pink); Original / full map available on pg 55 of Draft IA report.</i></p> <p>a. As stewards of these lands and water for time immemorial, additional time should be given to allow First Nation community members to fully digest the lengthy report. Georgina Island First Nation asked that this site be avoided in 1998, 25 years ago, stating, "It is obvious that there are other routes, which can be used to connect these major highways, and we hope that another will be selected." Is Ontario still ignoring this request?</p> <p>b. Have First Nations been consulted about this part of the plan? Please provide written evidence of their approval of this route.</p> <p>5. Species at Risk</p> <p>a. Table 2-2 lays out the 12 species at risk present or very likely to be present. For instance, Blandings Turtles are likely affected as they are likely in the area. The only commitment we see is to do detailed study later on. This is a good example of study following decision or destruction, and is in violation of standard EA practices. There are no commitments to the protection of species at risk in this document.</p> <p>b. There is a requirement for the Minister of the Department of Fisheries and Oceans to consider, when making certain decisions related to the fish and fish habitat protection (and pollution prevention) provisions of the Act, the Indigenous knowledge of the Indigenous</p>		

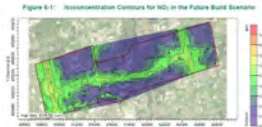

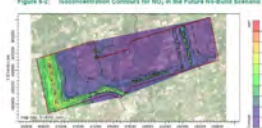

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIAR Edits Required? (Yes/No? If yes specify edits)
					<p>peoples of Canada that has been provided to the Minister (34.1(1) (g) of the Fisheries Act); and,</p> <p>c. Requirement to protect the confidentiality of Indigenous knowledge that is provided to the Minister in confidence, except under limited circumstances (subsection 61.2 (1) of the Fisheries Act)."</p> <p>d. The Draft IA report identifies that the Williams Treaties FN reported American Eel https://www.dfo-mpo.gc.ca/species-especes/publications/sara-lep/ee/anquille/index-eng.html and Northern Sunfish in the Holland River. This must be further investigated with new fieldwork. The American Eel is in decline and gets Federal protection. Ontario's Species at Risk legislation doesn't work anymore so it's all up to the Federal enforcement.</p> <p>i.What is Ontario going to do to stand by Canada's obligations to First Nations treaty and consultation rights?</p> <p>i.Will the American Eel's presence be investigated with new fieldwork?</p> <p>6. There are many concerns related to surface water and groundwater.</p> <p>a. Please confirm our understanding that there has been no discussion of, and that there are no studies looking at impacts to Lake Simcoe.</p> <p>b. The Groundwater Protection and Well Monitoring plan, which this Draft IA refers to, discusses the need to dewater the site for the building of piles for the elevated bridge sections of the highway. The Draft IA report says, "Construction dewatering activities have been identified as the primary risk to groundwater fed water wells in the Study Area," p 295. There is no credible groundwater protection plan. There are many suggestions for how to keep it clean but there are few to no commitments.</p> <p>c. HOW exactly is the province (MoECP) going to monitor groundwater discharges to ensure they meet Ontario's water quality standards?</p>		

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIAR Edits Required? (Yes/No? If yes specify edits)
					<p>d. What penalties are contractors going to face for violating the discharge requirements?</p> <p>e. If penalties are not enough to compel adherence, what next?</p> <p>f. How is the public to have confidence that contaminated water will not be discharged to the Holland Rivers and Lake Simcoe?</p> <p>g. Please confirm if monitoring will continue, or not, as this statement is totally vague: "It is expected that each unassessed monitoring well will continue to be monitored and assessed during the subsequent detail design phase of the project" P. 79.</p> <p>h. Explain what kind of environmental impact would make this project stop; or is any impact acceptable?</p> <p>i. Please confirm that the only financial support for affected well owners whose water quality is affected by the construction is the province providing them with a temporary water supply until the well owner fixes their well.</p> <p>j. Does this meager bit of help get extended to those who did not provide baseline information about their well water?</p> <p>k. Is there any effort being made to reach more than 12% of respondents to MTO's well water survey?</p> <p>7. How much is this project going to cost?</p> <p>8. When will the Bradford Bypass be completed?</p> <p>9. It is unclear how many lanes are being constructed at which times. Please clarify.</p> <p>10. There is no cumulative health impact assessment to understand how traffic related air pollution, known to increase risks of cancers, leukemia, heart and lung disease, will impact the communities surrounding the route. There is also no mention of the cumulative impacts on our climate from construction and higher rates of car travel on this highway.</p> <p>a. How will you be informing people living along the route about the increased risk of traffic</p>		

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIAR Edits Required? (Yes/No? If yes specify edits)
					<p>related air pollution and its effects on human health?</p> <p>b. Will you put air quality monitors in Bradford?</p> <p>c. How do you explain the fact that you are NOT monitoring air quality in Bradford, and using the closest site, Newmarket?</p> <p>d. The Final Environmental Conditions Report identified numerous planned residential developments right beside the highway, including a planned new school. Have the land owners / developers / school boards received any information that tells them how bad the air quality is going to be there?</p> <p>11. Traffic modeling to produce the air dispersion model is not robust or transparent. In order to understand traffic related air pollution, relevant vehicle types and assumptions need to be used. The air dispersion modeling report simply indicates that MOVES3 default data was used - but the EPA has emphasized the need to include relevant vehicle type inputs into the model.</p> <p>The air modeling report and supporting reports fail to disclose the % of diesel truck traffic, or the component of that traffic that includes trucks dating from 2006 or earlier which comprise a significant component of air pollution load. The air dispersion modeling report states that the vehicle type distributions were based on MOVES3.0 default database inputs even though there are no such inputs. It also says that the 24 hour traffic distribution was assumed to be equal to the AADT distribution. However the consultant appeared to use different AADT distributions for different scenarios without explanation and the distributions differed significantly as between build and no build scenarios. Mitigation in the form of frequent diesel heavy truck vehicle emission inspections should be</p>

CT-DraftEIAR-69	To: Project Team From: [REDACTED] Ministry of the Environment, Conservation and Parks	Email:	Requested Reports	June 28, 2023	<p>Hello,</p> <p>As our technical team is reviewing the Bradford Bypass Project material they have requested a few additional documents that are referenced on pages 538 and 539 of the Draft Environmental Impact Assessment Report (AECOM, June 1, 2023). They were unable to locate these documents online;</p> <ol style="list-style-type: none"> 1. Groundwater Protection and Well Monitoring Plan (AECOM, April 2023) 2. Hydrogeological Data Report (AECOM, 2023) 3. Water Well Survey Report (AECOM, 2023) 4. Waste and Excess Materials Management Plan (AECOM, April 2023) 5. Contamination Overview Study – FINAL – Highway 400 – Highway 404 Link (Bradford Bypass W.O. #19-2001) Prepared for MTO (AECOM, 2020) <p>Can you please provide a link to each of the above, to assist in the review?</p> <p>Thank you,</p> <p>[REDACTED]</p>	<p>Hi [REDACTED]</p> <p>The Draft Groundwater Protection and Well Monitoring Plan, Final Hydrogeological Data Report, Final Water Well Survey Report and Final Waste and Excess Materials Management Plan can be downloaded at the following links:</p> <p>https://we.tl/t-Mk7ZAIXDo2</p> <p>https://wettransfer.com/downloads/8e01943c03fb94babdb371edbd089d0020230628175400/a88bc2</p> <p>Please note, the links will expire in 1 week. Also, please note that we have included the Draft Groundwater Protection and Well Monitoring Plan that was previously shared with MECP on March 24, 2023. We have since received comments from MECP and the report is in the process of being revised. Additionally, we have removed the appendices from the Final Water Well Survey Report as our team in the process of redacting personal information. The Project Team can provide the full appendices once redacting is completed.</p> <p>The 2020 Contamination Overview Study is available on the Project Website here: https://www.bradfordbypass.ca/wp-content/uploads/2022/02/RPT-2020-02-14-BBP-Retainer-Contamination-Overview-Study-PUBLIC.pdf</p> <p>Please let us know if you have any further questions.</p> <p>Sincerely,</p> <p>The Bradford Bypass Project Team Email: projectteam@bradfordbypass.ca Toll-Free: 1 (877) 247-6036</p>	No

CT-DraftEIAR-70	To: Project Team From: [REDACTED]	Email: [REDACTED]	Draft EIAR	June 28, 2023	<p>Dear Sirs,</p> <p>I have many concerns with this project, the process it is following, and this report is no different. Please answer our questions below.</p> <ol style="list-style-type: none"> Timing and consultation are inadequate. You have provided an un-editable PDF and 30 days for a 576 page report. This follows the pattern of terrible public information and consultation. Will you extend the consultation period? Explain how a provincial highway was transformed into a very expensive regional road variant with five interchanges and two 400 series highway connections, paid for by all Ontario taxpayers. This is inconsistent with the MTO's mandate to provide long distance travel solutions. We maintain that there are better and cheaper, faster to implement, regional road and transit solutions that should be pursued, even if the Bypass does get built. We would like to see the traffic studies in their entirety. An environmental assessment used to be grounded in a demonstration of need and justification. The MTO has provided neither as it pertains to this particular project and at this time. There is no evidence that local traffic solutions MTO purports to be solving (actually a local traffic issue and not MTO's mandate) are best served by this potentially \$4 billion highway. <ol style="list-style-type: none"> Please share the links and the methodology, transparently, so that people can understand what travel time savings MTO is referring to. We have absolutely no idea because your write up is incredibly vague about the start and end of the routes used for analysis. For instance this meaningless babble from pg. 334: <small>On average, between the various origin-destination pairs using the Bradford Bypass, drivers in the peak direction during the peak period, would save up to 72% or 35 minutes of travel time when connecting between Highway 403 and Highway 404 compared to existing routes in the No Build scenario.</small> 	<p>Hi [REDACTED]</p> <p>Thank you for your interest in the Bradford Bypass Preliminary Design Study and project-specific assessment of environmental impacts, undertaken in accordance with Ontario Regulation 697/21.</p> <ol style="list-style-type: none"> Time and consultation are inadequate. You have provided an un-editable PDF and 30 days for a 576 page report. This follows the pattern of terrible public information and consultation. Will you extend the consultation period? <p>The process of planning the Bradford Bypass has included -- and will continue to include -- consultation with the public and Indigenous communities to ensure the project moves forward in an environmentally responsible way that is responsive to the needs and concerns of communities. In accordance with Ontario Regulation 697/21, an initial Draft Environmental Impact Assessment Report (EIAR) -- which documents the results of the studies undertaken for various environmental disciplines, proposed mitigation measures and environmental commitments to protect the environment -- was published for public review starting on June 1 and continuing until June 30, 2023. In addition, the Ministry has been providing Indigenous communities and stakeholders various opportunities for meaningful consultation since the project was re-initiated in September 2020 including two Public Information Centres.</p> <p>Additional archaeological investigations, which are necessary to complete the impact assessment in accordance with regulations, have recently been finalized and incorporated into an Updated Draft Environmental Impact Assessment Report. This updated report has been posted for an additional 30-day consultation period. The Updated Draft EIAR posting includes the information from the initial draft to ensure stakeholders can review additional information in full context of the project. As the initial Draft EIAR and the Updated Draft were available for public review for a total of 60 days, an extension of the public review period is not being considered at this time.</p> <p>The Updated Draft Environmental Impact Assessment Report was available for review on the Project Website</p>	No

					<p>b. What year do your studies indicate that the Bypass will be congested at peak rush hour times?</p> <p>4. The Draft Environmental Impact Assessment report shows on pg. 212 the Bypass touching the southern portion of the Lower Landing (AKA BaGv-42), a significant historical and archaeological site at a significant meander on the East Holland River. MTO has moved the highway 150 m to the south of the technically preferred route, which would have completely run over the Lower Landing (pg 148). The Draft Environmental Conditions Report indicated that a Stage 3 archaeological assessment "was required" (pg 225); the Draft IA report says that the Stage 3 was completed, and that Stage 4 is required. The Project team's website says, "<i>Currently, additional archaeological investigations are being completed to finalize the impact assessments in accordance with Ontario Regulation 697/21 and are not included in this posting. This information will be available for additional public and Indigenous community review once completed.</i>" The Draft IA states, "the southern portion of the site ... will be impacted by construction. Stage 4 Archaeological Assessment excavation plans will be submitted to the Ministry of Citizenship and Multiculturalism and Indigenous communities prior to the Stage 4 excavation being conducted," (pg 395).</p> <p>So the archeological work is not finished. And yet the route has been chosen. Property owners near the history-rich Lower Landing that are receiving expropriation notifications. We are staunchly opposed to this violation of this site particularly absent the</p>	<p>(https://www.bradfordbypass.ca/study-process/) until August 14, 2023.</p> <p>2. Explain how a provincial highway was transformed into a very expensive regional road variant with five interchanges and two 400 series highway connections, paid for by all Ontario taxpayers. This is inconsistent with the MTO's mandate to provide long distance travel solutions. We maintain that there are better and cheaper, faster to implement, regional road and transit solutions that should be pursued, even if the Bypass does get built.</p> <p>The project is being assessed with consideration of the Ministry's mandate to provide for the safe, efficient movement of people and goods between regions and urban areas. In addition, the Project Team has consulted with local and regional municipalities, and the traffic analysis for the proposed Bradford Bypass has considered the planned local transportation and transit improvements to be implemented by others.</p> <p>The original route planning study (2002 Approved Environmental Assessment – EA) concluded that additional relief from congestion in this Study Area could only be accommodated through the protection and implementation of a provincial right of way.</p> <p>As part of the 2002 Approved EA, the Bradford Bypass evaluated alternatives from a broad range of potential solutions to address several transportation problems and to address significant opportunities identified in York Region and Simcoe County. The need for this freeway was confirmed as the only reasonable solution that would make a significant contribution towards addressing the problem as the population in York Region and Simcoe County grows. The 2002 Approved EA approved alignment is technically preferred for a freeway in terms of highway network expansion, ease of construction, relationship to provincial and municipal land use planning and the preferred route is already included in Official and Transportation Master Plans, as well as the Places to Grow Act), as well as having fewer negative impacts to</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIAR Edits Required? (Yes/No? If yes specify edits)
					<p>completed stage 4 archaeological assessment of the Lower Landing and the endorsement of the First Nations.</p>  <p><i>Bradford Bypass is still too close to the Lower Landing. The Lower Landing is in the area of WC-25 in the image above. This clip of a map shows Provincially significant wetlands (orange); unevaluated wetlands (blue); cold water fish habitat (black) and warm (pink); Original / full map available on pg 55 of Draft IA report.</i></p> <p>a. As stewards of these lands and water for time immemorial, additional time should be given to allow First Nation community members to fully digest the lengthy report. Georgina Island First Nation asked that this site be avoided in 1998, 25 years ago, stating, "It is obvious that there are other routes, which can be used to connect these major highways, and we hope that another will be selected." Is Ontario still ignoring this request?</p> <p>b. Have First Nations been consulted about this part of the plan? Please provide written evidence of their approval of this route.</p> <p>c. It is imperative that the Ontario Government uncover all evidence of burials where the highways are to be built. How this is done must follow affected First Nations' protocols and wishes. These are some thoughts from a non-native resident of the area on the topic:</p> <p>i. These burial sites must be preserved and protected or possibly moved to another location. Identifying registered and unregistered burial sites should be relatively simple for the Ontario Government as the information is readily available from their own ministries, authorities</p>	<p>residential and natural areas when compared to other route options considered.</p> <p>For more information on the Analysis and Evaluation of alternatives, refer to Section 2.1.6 of the 2002 Approved EA, which can be found in the enclosed link: https://www.bradfordbypass.ca/wp-content/uploads/2020/09/BBP-RoutePlanningEA-1997.pdf</p> <p>Further to the conclusion of the 2002 Approved EA, as part of this Preliminary Design study, a traffic analysis was completed and the result of the review has confirmed the need of the highway. This analysis included the review of existing traffic conditions and modelling of future forecast traffic conditions and it has been confirmed that updates to regional and municipal roads alone will not address the transportation needs within the Study Area.</p> <p>Additionally, a feasibility assessment was conducted evaluating nine interchange location scenarios to determine the best interchange configuration through the Bradford Bypass corridor. The evaluation was conducted in accordance with satisfying the study objective to improve connectivity of the study area between Highway 400 and Highway 404, facilitating the improvement of traffic operations and movement of goods. Consideration included interchange utilization, overall network delay, out of way travel, environmental considerations and constraints, and preliminary costs. It was determined that interchanges at 10th Sideroad, County Road 4, Bathurst Street, 2nd Concession Road, and Leslie Street would be included as part of the Study.</p> <p>3. We would like to see the traffic studies in their entirety. An environmental assessment used to be grounded in a demonstration of need and justification. The MTO has provided neither as it pertains to this particular project and at this time. There is no evidence that local traffic solutions MTO purports to be solving (actually a local traffic issue and not MTO's mandate) are best served by this potentially \$4 billion highway.</p> <p>The Bradford Bypass project has been assessed in accordance with Ontario Regulation 697/21. Consistent</p>

					<p>as well as from local governments and churches/cemeteries. While 'registered burial sites' are easy to identify, 'unregistered sites' need to be confirmed and registered as required under Ontario's Funeral, Burial and Cremation Services Act, 2002 while 'Still to be found sites' require sleuthing, historical research and boots on the ground investigation. One of the most extreme requirements that could be requested is for the Ontario Government to perform thorough Ground Penetrating Radar (GPR) surveying of every square foot of the Bradford Bypass. Anomalies called 'targets' would receive special attention via Archaeological digs. Human remains discovered would either be left in place or moved. All work and costs are to be borne by the Ontario government. This solution for 'Still to be found' burial sites is as necessary as the work done and currently being done for the former Residential Schools in Canada.</p> <p>5. Species at Risk</p> <p>a. Table 2-2 lays out the 12 species at risk present or very likely to be present. For instance, Blandings Turtles are likely affected as they are likely in the area. The only commitment we see is to do detailed study later on. This is a good example of study following decision or destruction, and is in violation of standard EA practices. There are no commitments to the protection of species at risk in this document.</p> <p>b. There is a requirement for the Minister of the Department of Fisheries and Oceans to consider, when making certain decisions related to the fish and fish habitat protection (and pollution prevention) provisions of the Act, the Indigenous knowledge of the Indigenous peoples of Canada that has been provided to the Minister (34.1(1) (g) of the Fisheries Act); and,</p> <p>c. Requirement to protect the confidentiality of Indigenous knowledge that is provided to the Minister in confidence, except under limited circumstances (subsection 61.2 (1) of the Fisheries Act)."</p>	<p>with the Regulation, the Project Team completed an update to the description of environmental conditions previously documented in the 2002 Approved Environmental Assessment (EA) for the project. This update included a review and assessment of the existing traffic conditions which was documented in the Environmental Conditions Report (ECR). The ECR was finalized in October 2022 following a public review period, and is available on the Project website.</p> <p>Significant population growth is projected for both Simcoe County and the Regional Municipality of York. Even with all currently planned transportation and transit investments, road congestion will continue to increase across the Greater Golden Horseshoe (GGH) including within the Bradford Bypass Study Area.</p> <p>The purpose of the Bradford Bypass is to relieve congestion on existing local roads between Highway 400 and Highway 404 and provide a northern freeway connection between Highways 400 and 404.</p> <p>Modeling results demonstrated that under the No Build (no Bradford Bypass) scenario, local roads were forecasted to exceed capacity by 2031 but saw significant relief under the Build (with Bradford Bypass) scenario. Alternative alignments for the Bradford Bypass were then compared within the model, including the 2002 Approved EA alignment and interchange locations and an updated preferred interchange location alternative developed by the Project Team.</p> <p>On average, between the various origin-destination pairs using the Bradford Bypass, drivers in the peak direction during the peak period, would save up to 73% or 33 minutes of travel time when connecting between Highway 400 and Highway 404 compared to existing routes in the No Build scenario.</p> <p>The development of the analysis and key results from the Traffic Study have been summarized in the Draft Environmental Impact Assessment Report and the Updated Draft Environmental Impact Assessment Report (EIAR), which were available for public review and comment from June 1, 2023 to June 30, 2023 and July 14, 2023 to August 14, 2023, respectively. The information in the draft EIAR includes the origin and destination locations that were reviewed to determine the average travel time savings during the AM and PM peak hours. Similar to the</p>

					<p>d. The Draft IA report identifies that the Williams Treaties FN reported American Eel https://www.dfo-mpo.gc.ca/species-especies/publications/sara-lep/eel-anquille/index-eng.html and Northern Sunfish in the Holland River. This must be further investigated with new fieldwork. The American Eel is in decline and gets Federal protection. Ontario's Species at Risk legislation doesn't work anymore so it's all up to the Federal enforcement.</p> <p>i. What is Ontario going to do to stand by Canada's obligations to First Nations treaty and consultation rights?</p> <p>i. Will the American Eel's presence be investigated with new fieldwork?</p> <p>6. There are many concerns related to surface water and groundwater.</p> <p>a. Please confirm our understanding that there has been no discussion of, and that there are no studies looking at impacts to Lake Simcoe.</p> <p>b. The Groundwater Protection and Well Monitoring plan, which this Draft IA refers to, discusses the need to dewater the site for the building of piles for the elevated bridge sections of the highway. The Draft IA report says, "Construction dewatering activities have been identified as the primary risk to groundwater fed water wells in the Study Area," p 295. There is no credible groundwater protection plan. There are many suggestions for how to keep it clean but there are few to no commitments.</p> <p>c. HOW exactly is the province (MoECP) going to monitor groundwater discharges to ensure they meet Ontario's water quality standards?</p> <p>d. What penalties are contractors going to face for violating the discharge requirements?</p> <p>e. If penalties are not enough to compel adherence, what next?</p> <p>f. How is the public to have confidence that contaminated water will not be discharged to the Holland Rivers and Lake Simcoe?</p>	<p>process undertaken for MTO preliminary design studies, the Traffic Study will be finalized upon study completion and will be available if requested.</p> <p>a. Please share the links and the methodology, transparently, so that people can understand what travel time savings MTO is referring to. We have absolutely no idea because your write up is incredibly vague about the start and end of the routes used for analysis.</p> <p>b. What year do your studies indicate that the Bypass will be congested at peak rush hour times?</p> <p>As detailed in the Draft EIAR (Section 2.4.1), an Aimsun model was created to assess the existing traffic conditions for the road network in the Study Area. The model study area encompasses the Highway 400 corridor from south of Simcoe County Road 88 to north of Highway 89, as well as the Highway 404 corridor from south of Green Lane East to its terminal at Woodbine Avenue (Table 4-3 and 4-4 of the Draft EIAR).</p> <p>The model for this area was developed using pre-pandemic traffic volumes to identify peak hour volumes within the Study Area. This model has been calibrated and validated as it closely resembled actual operating conditions.</p> <p>As detailed in Section 4.4 of the Draft EIAR, traffic is assessed through modelling to identify Level Of Service (LOS). Having confirmed the model was consistent with current (base) conditions, and therefore appropriate to assess future conditions and design alternatives, the model was used to assess LOS under future 2031 and 2041 conditions. To assess future conditions, the model was updated to include all road network and transit improvements planned within the Study Area, and, forecast traffic volumes based on the projected growth within the Study Area.</p> <p>The alternative Build scenarios showed the mainline operations on the Bradford Bypass in 2031 would operate at acceptable LOS D in the interim four lane configuration. The model indicates that by expanding to the ultimate 8</p>

					<p>g. Please confirm if monitoring will continue, or not, as this statement is totally vague: "It is expected that each unassessed monitoring well will continue to be monitored and assessed during the subsequent detail design phase of the project" P. 79.</p> <p>h. Explain what kind of environmental impact would make this project stop; or is any impact acceptable?</p> <p>i. Please confirm that the only financial support for affected well owners whose water quality is affected by the construction is the province providing them with a temporary water supply until the well owner fixes their well.</p> <p>j. Does this meager bit of help get extended to those who did not provide baseline information about their well water?</p> <p>k. Is there any effort being made to reach more than 12% of respondents to MTO's well water survey?</p> <p>7. How much is this project going to cost?</p> <p>8. When will the Bradford Bypass be completed?</p> <p>9. It is unclear how many lanes are being constructed at which times. Please clarify.</p> <p>10. There is no cumulative health impact assessment to understand how traffic related air pollution, known to increase risks of cancers, leukemia, heart and lung disease, will impact the communities surrounding the route. There is also no mention of the cumulative impacts on our climate from construction and higher rates of car travel on this highway.</p> <p>a. How will you be informing people living along the route about the increased risk of traffic related air pollution and its effects on human health?</p>	<p>lane configuration (implementing another general purpose lane and an HOV lane in each direction by 2041), LOS on the mainline improves to LOS B or C and accommodates the additional traffic forecast by 2041.</p> <p>For further information about the Traffic Study please refer to the response to Question #3 and Section 4.4 of the Updated Draft EIAR.</p> <p>4. The Draft Environmental Impact Assessment report shows on pg. 212 the Bypass touching the southern portion of the Lower Landing (AKA BaGv-42), a significant historical and archaeological site at a significant meander on the East Holland River. MTO has moved the highway 150 m to the south of the technically preferred route, which would have completely run over the Lower Landing (pg 148). But the Draft IA states, "the southern portion of the site ... will be impacted by construction" (pg 395). The Draft Environmental Conditions Report indicated that a Stage 3 archaeological assessment "was required" (pg 225); the Draft IA report says that the Stage 3 was completed, and that Stage 4 is required. The Project team's website says, "Currently, additional archaeological investigations are being completed to finalize the impact assessments in accordance with Ontario Regulation 697/21 and are not included in this posting. This information will be available for additional public and Indigenous community review once completed." So the archeological work is not finished. And yet the route has been chosen. Property owners near the history-rich Lower Landing that are receiving expropriation notifications. We are staunchly opposed to this violation of this site particularly absent the stage 4 evaluation of the Lower Landing and the endorsement of the First Nations.</p> <p>a. As stewards of these lands and water for time immemorial, additional time should be given to allow First Nation community members to fully digest the lengthy report. Georgina Island First Nation asked that this site be avoided in</p>

					<p>b. Will you put air quality monitors in Bradford?</p> <p>c. How do you explain the fact that you are NOT monitoring air quality in Bradford, and using the closest site, Newmarket?</p> <p>d. The Final Environmental Conditions Report identified numerous planned residential developments right beside the highway, including a planned new school. Have the land owners / developers / school boards received any information that tells them how bad the air quality is going to be there?</p> <p>11. Traffic modeling to produce the air dispersion model is not robust or transparent. In order to understand traffic related air pollution, relevant vehicle types and assumptions need to be used. The air dispersion modeling report simply indicates that MOVES3 default data was used - but the EPA has emphasized the need to include relevant vehicle type inputs into the model.</p> <p>The air modeling report and supporting reports fail to disclose the % of diesel truck traffic, or the component of that traffic that includes trucks dating from 2006 or earlier which comprise a significant component of air pollution load. The air dispersion modeling report states that the vehicle type distributions were based on MOVES3.0 default database inputs even though there are no such inputs. It also says that the 24 hour traffic distribution was assumed to be equal to the AADT distribution. However the consultant appeared to use different AADT distributions for different scenarios without explanation and the distributions differed significantly as between build and no build scenarios. Mitigation in the form of frequent diesel heavy truck vehicle emission inspections should be included as a mitigation measure to ensure that newer vehicle emissions systems are not being tampered with. The air dispersion modeling report indicates that ethanol based fuels were excluded even though this goes</p>	<p>1998, 25 years ago, stating, "It is obvious that there are other routes, which can be used to connect these major highways, and we hope that another will be selected." Is Ontario still ignoring this request.</p> <p>b. Have First Nations been consulted about this part of the plan? Please provide written evidence of their approval of this route.</p> <p>Field investigations for Stage 2 and Stage 3 works have been completed and additional details are included in the Updated Draft Environmental Impact Assessment Report available on the Project Website (https://www.bradfordbypass.ca/study-process/) for public review until August 14, 2023.</p> <p>The required Stage 4 Archaeological Assessment of BaGv-42 will be completed during future phases of work for the project and will be carried out in accordance with the Ministry of Citizenship and Multiculturalism Standards and Guidelines for Consultant Archaeologists (Ontario Government 2011). No ground disturbing activities will occur at this site until the Stage 4 assessment has been conducted.</p> <p>In accordance with Ontario Regulation 697/21, the Project Team completed site specific Stage 3 archaeological assessments for areas within the Study Area that were identified as having archaeological potential in accordance with the Stage 2 archaeological assessments.</p> <p>It is common practice for Stage 4 archaeology work to be completed during Detail Design. Limiting the impact to Stage 4 archaeological sites where feasible is one of the Project Team's main priorities. As a result, the Project Team will determine the exact impact limits to archaeological sites during subsequent design phases of the project. To avoid unnecessary excavation, the Project Team will then undertake the Stage 4 archaeological assessments. Any Stage 4 field work that will be undertaken must engage interested Indigenous communities.</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIAR Edits Required? (Yes/No? If yes specify edits)
					<p>against EPA recommendations for using the model. The report lacks transparency about assumptions made about future vehicle fleet characteristics for both passenger vehicles and heavy trucks.</p> <p>The comparison of build with no-build is not valid because the values in Appendix E of the traffic modeling report show that there was an erroneous assumption that there would be significantly less truck traffic in the build scenario compared to the no-build scenario. There is no valid scientifically-based justification for this. Further, if there is an increase in truck traffic along 404 - as the model predicts - then sensitive receptors along highway 404 need to be included in a health impact study. Instead, impacts on traffic along the 400/404 corridors were excluded and the "air quality study area" was restricted to the bypass corridor itself without any explanation or justification.</p> <p>It is egregious that MTO did not conduct locally relevant air quality monitoring for background in Bradford, River Drive Park, Queensville and along the 404/400 corridors for traffic related air pollutants. Such baseline monitoring is generally inexpensive and could have been easily obtained. Using existing monitors in Innisfil, Newmarket and other distant and irrelevant locations is not justifiable. For the air dispersion modeling, MTO appears to be relying on these distant locations (eg. Egbert) for preparation of the wind rose as well, even though meteorological conditions in the study area may be markedly different. MTO also did not identify numerous recreational and daycare facilities adjacent to the Bradford Bypass corridor which were identified by Simcoe County Greenbelt Coalition. The study</p>	<p>As recommended by the cultural heritage resource assessment undertaken by the Project Team, the Holland River watershed was identified as a Cultural Heritage Landscape requiring further research and evaluation to determine if it possesses cultural heritage value or interest. This further assessment will be completed in a Cultural Heritage Evaluation Report (CHER), and if the CHER determines that the Holland River Watershed meets the criteria in Ontario Regulation 9/06 or Ontario Regulation 10/06 of the Ontario Heritage Act, and may be adversely impacted by the Updated Technically Preferred Route, a Heritage Impact Assessment will be prepared to fully assess impacts on the resource's identified heritage attributes and propose alternatives and mitigation to conserve the property's Cultural Heritage Value or Interest. These commitments are included in Section 5.3.2 of the Updated Draft EIAR.</p> <p>Consultation is an integral component of the Preliminary Design stage, the project-specific assessment of environmental impacts process, and for future project phases, and is critical to a project's success. The ministry is actively consulting and engaging with Indigenous communities throughout the Bradford Bypass Project.</p> <p>The Project Team is engaging with and considers input provided by the following Indigenous communities:</p> <ul style="list-style-type: none"> - Alderville First Nation - Beausoleil First Nation - Chippewas of Georgina Island First Nation - Chippewas of Rama First Nation - Curve Lake First Nation - Hiawatha First Nation - Mississaugas of Scugog Island First Nation - Kawartha Nishnawbe First Nation - Georgian Bay Métis Council, and - Huron-Wendat Nation <p>Comments from Indigenous communities are accepted at any time in the study process.</p> <p>5. Table 2-2 lays out the 12 species present or very likely to be present. For instance, Blandings Turtles are likely affected as they are likely in the area. The only commitment we see is to do a detailed study later on. This is a good</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIAR Edits Required? (Yes/No? If yes specify edits)
					<p>did not include the cumulative effects of future planned industrial uses along the Bypass corridor and along the 400/404 corridor which may significantly impact people's health along the route. The evaluation did not use 2022 World Health Organization criteria for contaminants which are much lower and more up-to date than the CAAQS or the AAQCs. We disagree that the AAQCs and CAAQS represent the "lowest concentrations at which an adverse effect may be experienced" as they are not based on up-to-date understandings of the health impacts of air contaminants including pre-term births and neurodevelopmental and other impacts. These are described in the report by the Canadian Association of Physicians for the Environment (April 2022) Mobilizing Evidence report. The report predicts significant exceedances for NO2 and benzo(a)pyrene even with the apparently non-conservative assumptions for diesel truck traffic used in the full build out scenario compared to the no-build scenario. The adverse health impacts of NO2 exceedances may be extremely severe and will impact on the <i>Charter</i> rights and human rights of residents in the study area and beyond without justification for the need for the project.</p>	<p>example of study following decision or destruction, and is in violation of the standard EA practices. There are no commitments to the protection of species at risk in this document.</p> <p>Targeted surveys for all species at risk with potential to occur in the Study Area will be required during future phases of work. These future studies will inform the need for any permits, authorizations, mitigation or compensation under the Endangered Species Act.</p> <p>The Updated Draft EIAR requires consideration and review of all recommendations throughout the corridor during future phases of work. This approach is necessary and standard practice for planning projects in that design is an iterative approach and this project is only completing design to a preliminary level. During future phases of work, additional design will be completed and may include refinements to the design as details are developed with greater accuracy. Limiting the future design phases by making certain elements of the project non-discretionary at the preliminary design stage limits the potential for future work to explore opportunities for further reducing impacts and / or increasing mitigation and offsetting measures.</p> <p>For Blanding's Turtle specifically, candidate habitat associated with the Holland River and Holland River East Branch open water and wetland communities has been identified within the Study Area. Blanding's Turtle may be impacted while moving in between habitats if these species enter the construction work area.</p> <p>As part of this phase of the project, preliminary mitigation and avoidance measures for the potential impacts to turtles are included in the Draft EIAR and include:</p> <ul style="list-style-type: none"> If stockpiles of gravel and sandy substrates or the removal of these substrates in the vicinity of turtle habitat are required during the active turtle season (April 1 to October 15), turtle exclusion fencing should be installed in accordance with the Reptile and Amphibian Exclusion Fencing Best Management Practices (Ministry of the Environment, Conservation and Parks, 2020) around stockpiles or area of disturbance prior to April 1. Fencing should be installed immediately after stockpiles are created if after April 1.

					<p>Figure 6-1: Isosonoconcentration Contours for NO₂ in the Future Build Scenario</p>  <p>Figure 6-2: Isosonoconcentration Contours for NO₂ in the Future No-Build Scenario</p>  <p>Note: Concentration contours are shown in units of µg/m³, and a maximum of 10 has been applied.</p> <p>Source: Air Quality Impact Assessment Report - AECOM.</p> <p>The Air Quality Impact Assessment concluded that: Impacts from the Future Build Conditions with the new Bradford Bypass on a cumulative basis within the Air Quality Study Area increases in comparison to a No-Build scenario for several contaminants and their respective averaging periods. This is predominately due to increased traffic along the Bradford Bypass, where in a No-Build scenario this traffic is dispersed along Holland Street and Bridget Street and within communities to the south of the Air Quality Study Area (for example, demonstrated in the traffic reporting related to this project). This included significant increases in NO₂, SO₂, PM_{2.5}, Acetaldehyde, Benzo(a)pyrene, and formaldehyde and some increases in CO. Maximum concentrations which are relevant for acute events also show significant increases, for example a 49% increase in SO₂ and more than 50% increases in fine and large particulates, acetaldehyde, formaldehyde etc. for</p>	<ul style="list-style-type: none"> It is recommended that culverts be designed to provide openness ratios that would allow for the passage of small mammal and/or herpetofauna where possible. An openness ratio of 0.4 would permit usage by medium-sized mammals, while the minimum openness ratio to be considered should be 0.25, which would permit usage by reptiles such as turtles (Credit Valley Conservation, 2017). Avoid work within areas of candidate turtle overwintering habitat during the turtle overwintering period (October 31 to April 1), whenever possible. <p>These preliminary mitigation measures will be further refined as the project proceeds to Detail Design and impacts are assessed in more detail.</p> <p>For further detail on potential impacts to Species at Risk and proposed mitigation and avoidance measures, please refer to Section 5.1.1 of the Draft Environmental Impact Assessment Report.</p> <ol style="list-style-type: none"> The Draft IA report identifies that the Williams Treaties FN reported American Eel and Northern Sunfish in the Holland River. This must be further investigated with new fieldwork. The American Eel is in decline and gets Federal protection. Ontario's Species at Risk legislation doesn't work anymore so it's all up to the federal enforcement. What is Ontario going to do to stand by Canada's obligations to First Nation treaty and consultation rights? Will the American Eel's presence be investigated with new field work. <p>It was noted in discussion with William Treaties First Nations on December 1, 2022, that they had observed both American Eel (<i>Anguilla rostrata</i>; Endangered Species Act – Endangered, Species at Risk Act – Not at Risk) and Northern Sunfish (<i>Lepomis peltastes</i>; Endangered Species Act – Special Concern, Species at Risk Act – Special Concern) in the Holland River.</p>

					<p>critical receptor number 19 (other receptors' models were not displayed in a comparable manner). The results indicated that for NO₂, 1 hour averages 80% of the hours in the future build scenario would have a cumulative concentration above the CAAQS limit of 79 ppm and a 100% of hours would exceed the AAQC for benzo(a)pyrene.</p> <p>In relation to GHGs, the MTO failed to incorporate induced demand in the future build scenario to calculate additional vehicle kilometers traveled that would be induced by the highway, and failed to give a transparent total vehicle assumption or a vehicle emissions factor. In any event the air quality impact assessment predicts that the proposed highway would be a significant contributor to regional GHG emissions even without incorporating the effect of induced demand. No mitigation measures are proposed to address the increase in greenhouse gas emissions from the project which will contribute to catastrophic climate disaster for all of humanity and the planet.</p> <p>12. Many less expensive alternatives to this highway have not been considered. The Minister approved Terms of Reference for the Bradford Bypass Environmental Assessment Study overrode the requirements of the Environmental Assessment act to consider road alternatives that would not be a controlled access highway. As a result, the Hwy 9 / Green Lane corridor was the only existing roadway that was considered as a reasonable alternative. That roadway was rejected as it was not considered feasible to convert it to a controlled access facility. Consideration of these types of</p>	<p>Subsequently, the Project Team consulted with the Ministry of the Environment, Conservation and Parks, in March 2023 and was advised that the Ministry of Environment, Conservation and Parks records have no documented observations of the American Eel or Northern Sunfish in the Study Area. They also noted that the Northern Sunfish is a species of special concern and does not have a permitting status with the Ministry of the Environment, Conservation and Parks, and therefore would not be reported. These discussions with Williams Treaties First Nations and MECP have been documented in the Fish and Fish Habitat Report and Section 2.1.2 of the Updated Draft EIAR.</p> <p>No records of aquatic Species at Risk that are afforded protection under the Species at Risk Act or Endangered Species Act are known to occur in the watercourses where culverts are anticipated to be installed. AECOM ecologists conducted a detailed fish and fish habitat assessment of the water features in the vicinity of the Study Area between September 14-18, 2020, with spring field investigations occurring over multiple days in June 2021. Field investigations were also completed in the spring of 2022 due to changes to the Study Area boundary that required further review for potential fish habitat. Based on these investigations, no Species at Risk were discovered in the Study Area. Regardless, the presence or absence of all aquatic Species at Risk will be re-confirmed in subsequent design phases through additional field investigations.</p> <p>6. Please confirm our understanding that has been no discussion of, and that there are no studies looking at impacts to Lake Simcoe.</p> <p>As the project falls within the jurisdiction of the Lake Simcoe Region Conservation Authority (LSRCA), pertaining to Ontario Regulation 179/06, the ministry has assessed impacts with respect to the <i>Lake Simcoe Protection Act</i> and the Lake Simcoe Protection Plan through consideration of water quality and quantity, stormwater management, groundwater management, landscaping and ecological restoration measures; as well as fluvial geomorphological designs for watercourses, erosion and sediment control and spills prevention and protection measures.</p>

					<p>alternatives are, however, a requirement for all Class EA Studies.</p> <p>A major condition of the 2002 Bradford Bypass EA Approval, was a requirement to conduct a Class EA Study at the time MTO wished to proceed with this project. This study would ensure the currency of the proposed project in light of current travel demand, previously unforeseen environmental factors, new legislation and a full review of all reasonable alternatives including combinations of regional and local roadways.</p> <p>The following are reasonable alternatives that would need to be considered both individually and in combination with one or more other reasonable alternatives if the Class EA Study that was underway at the time Regulation 697 /21 was issued. Each of these proposed alternative solutions would then be evaluated against the then approved Bradford Bypass 4 lane controlled access freeway. Because the Class EA Study was canceled by this regulation, the only comparison AECOM have used throughout the Draft Impact Assessment Report is "Do Nothing". Given that the actual travel problem we are now faced with is local, rather than long distance traffic, we are confident one or more of the following reasonable alternatives would be dramatically preferable to the now 8 lane, Bradford Bypass.</p> <p>Alternatives to the Bradford Bypass:</p> <ol style="list-style-type: none"> Construct a 4 lane arterial road bridge over the West Branch of the Holland River at the currently planned location for the Bradford Bypass bridge – together with paved 4 lane 	<p>a. The Groundwater Protection and Well Monitoring plan, which this Draft IA refers to, discusses the need to dewater the site for the building of piles for elevated bridge sections of the highway. The Draft IA report says, "Construction dewatering activities have been identified as the primary risk to groundwater fed water wells in the Study Area." There is no credible groundwater protection water. There are many suggestions for how to keep it clean but there are few to no commitments.</p> <p>Commitments, preliminary mitigation measures and monitoring activities related to groundwater are documented in Section 5.1.4 of the Draft EIAR, and will be carried forward to subsequent phases of the project.</p> <p>The risk of spills during construction of the project will be primarily limited to petroleum products from machinery (fuels and lubricants). The use of best management practices for handling of hydrocarbons according to the Ministry of Environment, Conservation and Parks and the Technical Standards and Safety Authority of the Ministry of Government Services will reduce the potential of environmental adverse effects associated with petroleum product handling and uses. Spillage of petroleum products must be immediately remediated according to these standards such that groundwater quality is not impacted.</p> <p>Mitigation plans will be generated during future phases of work for the project and for any excavation and structure construction within areas of medium to high significant groundwater recharge areas as shown near the Holland River and Holland River East Branch. Mitigation plans would be specific to each excavation and structure construction and include erosion and sediment control, dewatering treatment and discharge piping away or towards from Significant Groundwater Recharge Areas, or municipal sewer discharge requirements. Dewatering discharge shall be directed away from Well Head Protection areas if excavation and dewatering activities are occurring within them.</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIAR Edits Required? (Yes/No? If yes specify edits)
					<p>roadways to both Bathurst St. and a connection to Bradford's 8th Line.</p> <p>2. Build a 4 lane arterial road bridge over the Holland River from Ravenshoe Road to connect with Simcoe Line 13 or another appropriate east – west arterial road on the west bank of the Holland River.</p> <p>3. Extend and widen Green Lane to 6 lanes and create a diagonal transition from Green Lane to Hwy 9 and highway bridge intersection with Highway 9 around Dufferin St. The Green Lane / Highway 9 option will better serve and reduce both local and long distance traffic from Newmarket south to at least Aurora Sideroad.</p> <p>Any one or a combination of these alternatives will address a substantial amount of local travel problems while being significantly less costly and environmentally invasive.</p> <p>As you can see, there are a lot of questions and concerns surrounding the approach the province is taking. It's too much money to spend on an unjustified project that will have significant environmental impacts!</p> <p>We look forward to hearing back from the project team with answers to our questions.</p> <p>Enjoy the day,</p> <p>Sincerely,</p> <p>██████████</p> <p>██████████</p>	<p>For more information about the Groundwater Protection and Well Monitoring Plan please refer to Section 5.1.4 of the Updated Draft EIAR.</p> <p>b. How exactly is the province going to monitor groundwater discharges to ensure they meet Ontario's water quality standards?</p> <p>c. What penalties are contractors going to face for violating the discharge requirements?</p> <p>d. If penalties are not enough to compel adherence, what next?</p> <p>e. How is the public to have confidence that contaminated water will not be discharged to the Holland Rivers and Lake Simcoe?</p> <p>f. Please confirm is monitoring will continue or not, as this statement is totally vague: "It is expected that each unassessed monitoring well will continue to be monitored and assessed during the subsequent detail design phase of the project."</p> <p>The Groundwater Monitoring Program includes groundwater level monitoring and groundwater quality monitoring to establish the pre-construction baseline conditions for comparison of data collected during and post-construction.</p> <p>During the Preliminary Design study, Golder Associates Ltd. (Golder) installed monitoring wells during the ongoing geotechnical investigations. Monitoring is expected to be completed within these same monitoring wells during all future phases of work for the Project, including construction. Residential monitoring wells will also be part of this program if they fall within the Radius of Influence of the excavation dewatering and permission to enter is granted to gain access to monitor the well. Detail Design will inform the need for further groundwater investigations. Penalties for discharging any deleterious substance or material to the lands will vary based on the federal, provincial or municipal legislation that might be violated. Beyond legislated penalties, contractor behavior is monitored by the Ministry and poor behavior may result</p>

						<p>in additional financial or reputational impacts. The Ministry's process for selecting contractors to support future phases of the work for the project also includes consideration of past performance and assessment of the contractors understanding of the project and sensitivities within the Study Area. Commitments, preliminary mitigation measures and monitoring activities related to groundwater are documented in Section 5.1.4 of the Draft EIAR, and will be carried forward to subsequent phases of the project.</p> <p>g. Explain what kind of environmental impact would make the project stop; or is any impact acceptable?</p> <p>This government takes environmental protection seriously and is implementing a path forward that will ensure environmental protections are not compromised while building this much needed project quickly and safely. Current work on the Bradford Bypass project will continue to be subject to all conditions under Ontario Regulation 697/21.</p> <p>In accordance with Ontario Regulation 697/21, the Project Team has undertaken several environmental impact assessments to identify and document the potential impacts, proposed mitigation measures, and environmental commitments, which are summarized in the Environmental Impact Assessment Report (EIAR).</p> <p>The Ministry of Transportation must also comply with all current federal and provincial environmental requirements. This includes consultation as set out in the regulation and obtaining permits and approvals for the project prior to the start of construction. Obtaining these permits and approvals, which are mechanisms to help protect the environment, confirms that the ministry has met or surpassed the environmental requirements.</p> <p>h. Please confirm that the only financial support for affected well owners whose water quality is affected by the construction is the province providing them with a temporary water supply until the well owner fixes their well.</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIAR Edits Required? (Yes/No? If yes specify edits)
						<p>i. Does this meager bit of help extend to those who did not provide baseline information about their well water?</p> <p>j. If there any effort being made to reach more than 12% of respondents to MTO's well water survey?</p> <p>MTO will work with owners of water wells who experience issues to determine if the issue is the result of Bradford Bypass project activities.</p> <p>If the well issue is confirmed to be a result of the project's activities, the Ministry will provide a letter to the property owner explaining the outcome of the well investigation and detail the recommended mitigation measures (including lowering / replacement of pump inlet, well rehab, new well installed or local watermain connection if available) the Ministry will undertake to remediate the issue. A temporary drinking water supply will be provided and connected to the resident if the project activities are found to be responsible, at the expense of the Ministry, until remediation measures have resolved the issue.</p> <p>A water well survey was completed for the project to determine the pre-construction assessment of private well supplies in the vicinity of the Study Area noted above. Where no response was provided from Property Owners as part of the water well survey, an additional attempt shall be undertaken during Detail Design to contact these owners via mail, email, phone calls, site visit, etc. This information will be used to provide a baseline for water wells prior to the proposed construction to determine existing water quality and quantity of each property.</p> <p>7. How much is this project going to cost?</p> <p>As we bring this project to market, we want to ensure we can retain the best value for the project. As such, the ministry will not be releasing cost estimates prior to the award of contracts to protect the procurement processes.</p> <p>8. When will the Bradford Bypass be completed?</p> <p>The Preliminary Design phase is anticipated to be completed in 2023. Detail Design and Construction Phases will follow.</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIA Edits Required? (Yes/No? If yes specify edits)
						<p>9. It is unclear how many lanes are being constructed at which times. Please clarify.</p> <p>The Ontario government is committed to fully funding the construction of the Bradford Bypass and is following through on its promise to improve and invest in the province's transportation corridors to get people moving within the region, connect people to jobs, make life easier and support a strong economy.</p> <p>A four-lane configuration is planned to be constructed first with two general purpose lanes in each direction. To plan for the future, the Ministry is also considering the design of an ultimate eight-lane design for the Bradford Bypass. The ultimate, eight-lane configuration for the project will feature three general purpose lanes and one HOV lanes in each direction.</p> <p>10. There is no cumulative health impact assessment to understand how traffic related air pollution, known to increase risks of cancers, leukemia, heart and lung disease, will impact the communities surrounding the route. There is also no mention of the cumulative impacts on our climate from construction and higher rates of car travel on this highway.</p> <ol style="list-style-type: none"> How will you be informing people living along the route about the increased risk of traffic related air pollution and its effects on human health? Will you put air quality monitors in Bradford? How do you explain the fact that you are NOT monitoring air quality in Bradford, and using the closest site, Newmarket? The Final Environmental Conditions Report identified numerous planned residential developments right beside the highway, including a planned new school. Have the land owners / developers / school boards received any information that tells them how bad the air quality is going to be there?

						<p>The human health scoping implications of the project such as air quality, noise, land use, traffic congestion and safety, economic, social cohesion, and neighborhood resources have been summarized in Section 2.2.7 and Section 5.2.7 of the Draft EIA. To better understand the human health implications due to the Project as a next step, it is recommended for MTO to continue to consider the human health factors identified in this report and provide recommendations to enhance potential positive impacts and mitigate potential negative health impacts. Specifically, conducting a Screening-Level Human Health Risk Assessment of potential air quality impacts is recommended in order to evaluate and characterize Project-related air quality impacts to health.</p> <p>The project has undertaken an Air Quality Impact Assessment to explore pollutant emissions and dispersion modelling in an effort to predict the contribution of the project to future ambient pollutant concentrations. This contribution, added to background concentration levels, allows prediction of the cumulative impact of the proposed project and all other contributors to air pollution. Concentration levels are compared to provincial and federal ambient air quality criteria and standards to assist in the evaluation of project-specific mitigation needs and options.</p> <p>Areas of concentrated emission impact are influenced by traffic volumes along a given segment of roadway. The implementation of the Bradford Bypass is expected to redistribute traffic from local roads and freeway corridors surrounding the proposed Bradford Bypass. Reductions in traffic volumes are observed on corridors including Highway 11/1 (Bridge Street), Bathurst Street, Holland Landing Road, Yonge Street, Queensville Sideroad, Doane Road, Mount Albert Road, Green Lane, and Simcoe County Road 88/Holland Street, among other roads, which benefits the community of Bradford, Town of Bradford West Gwillimbury, by alleviating congestion during peak hours.</p> <p>The Project Team is currently utilizing the National Air Pollution Surveillance air quality monitoring stations to assess air quality levels. Five years of existing data sets were analyzed from stations within the region, and the complete data set from the closest station or most representative station for each contaminant of concern</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIAR Edits Required? (Yes/No? If yes specify edits)
						<p>was selected to represent the background air quality for the Study Area. Due to the proximity of the Study Area to the Toronto Area, monitoring stations within the City of Toronto were given preference as the one of the most representative locations for the air quality contaminants of concern. As such, Roadside Wallberg – University of Toronto monitoring station, North Downsview monitoring station, Gage Institute monitoring station (all located approximately 38 – 53 km from the Study Area) were used. The nearest monitoring station is in Newmarket. Additional information regarding the assessment of potential air quality impacts have been summarized in Section 2.2.4 and Section 5.2.4 of the Draft EIAR.</p> <p>Land has been designated for the Bradford Bypass since the 2002 Approved EA was completed. As noted above, consultation is an integral component of the Preliminary Design stage and project-specific assessment of environmental impacts and is critical to a project's success. The ministry is actively consulting and engaging with private landowners, developers and school boards within the Study Area. Engagement and consultation has included having a project website and telephone line, having a project contact list for regular project updates, providing notices and correspondence via email, mail, and Ontario Government Notices in local newspapers, hosting public information centres and online events, and holding meetings with Indigenous communities, municipalities, environmental agencies, and stakeholders. More information on the project consultation activities are included in Section 7 of the Updated Draft EIAR.</p> <p>11. Traffic modeling to produce the air dispersion model is not robust or transparent. The air modeling report and supporting reports fail to disclose the % of diesel truck traffic, or the component of that traffic that includes trucks dating from 2006 or earlier which comprise a significant component of air pollution load. The comparison of build with no-build is not valid because the values in Appendix E of the traffic modeling report show that there was an erroneous assumption that there would be significantly less truck traffic in the build scenario compared to the no-build scenario. There is no valid scientifically-based</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIAR Edits Required? (Yes/No? If yes specify edits)
						<p>justification for this. Further, if there is an increase in truck traffic along 404 - as the model predicts - then sensitive receptors along highway 404 need to be included in a health impact study. Instead, impacts on traffic along the 400/404 corridors were excluded and the "air quality study area" was restricted to the bypass corridor itself without any explanation or justification. It is egregious that MTO did not conduct locally relevant air quality monitoring for background in Bradford, River Drive Park, Queensville and along the 404/400 corridors for traffic related air pollutants. Such baseline monitoring is generally inexpensive and could have been easily obtained. The study did not include the cumulative effects of future planned industrial uses along the Bypass corridor and along the 400/404 corridor which may significantly impact people's health along the route. The evaluation did not use 2022 World Health Organization criteria for contaminants which are much lower and more up-to date than the CAAQS or the AAQCs. We disagree that the AAQCs and CAAQS represent the "lowest concentrations at which an adverse effect may be experienced" as they are not based on up-to-date understandings of the health impacts of air contaminants including pre-term births and neurodevelopmental and other impacts. The report predicts significant exceedances for NO2 and benzo(a)pyrene even with the apparently non-conservative assumptions for diesel truck traffic used in the full build out scenario compared to the no-build scenario. The adverse health impacts of NO2 exceedances may be extremely severe and will impact on the Charter rights and human rights of residents in the study area and beyond without justification for the need for the project.</p> <p>Study Area, MOVES3 data, vehicles and assumptions: In order to model relevant vehicle types within the Air Quality Impact Assessment Study Area, MOVES3 data was input to the model and refinements were made to exclude fuel types such as ethanol given these fuels are not readily available for use in Ontario. Fuel inputs utilized</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIA Edits Required? (Yes/No? If yes specify edits)
						<p>in MOVES3.0 modelling at the time of the assessment included: Fuel Type IDs 1, 2, 3 and 9. ID 5 (ethanol) was not included as flex fuel cars and fuelling stations are not readily available in Ontario. The specific source type fractions utilized for various vehicle types applied within the project study area and the related fraction of expected vehicle usage for both passenger-class vehicles and heavy-class vehicles, including the distribution of vehicle types in the heavy truck vehicle category, were combined to create representative vehicle emission for vehicle class that can reasonable be expected to be in use in 2041. Highway 400/404 corridors were included in the Air Quality Impact Assessment. The full air quality study area is shown in Figure 2-9 of the Updated Draft EIA and demonstrates that the air quality study area included emission sources within the boundary of assessment, including but not limited to Highway 400 (500 m south of Rural Rd. 88 to 500 m north of Concession Rd. 11), Highway 404 (500 m south of Queensville Sideroad E to 500 m north of Boag Road), the entirety of the proposed Bradford Bypass, Bridge Street, Holland Street W, 10th Sideroad, Young Street/Barrie Street, and Queensville Sideroad.</p> <p>Traffic distributions and truck traffic: The same Average Annual Daily Traffic (AADT) were used for all scenarios. AADT values for each air quality emission source vary between the three scenarios evaluated based on projected existing traffic within the study area, and future no-build and build traffic projections however the same 24-hour traffic distribution percentages were applied. Three representative 24-hour distribution percentages were applied to the air quality emission sources. These were applied to a given source of emission depending on the type of road in question, e.g. a "Leslie St." 24-hour distribution was applied to air quality emission sources which were categorized as community arterial roads; a "HWY 400" 24-hour distribution was applied to air quality emission sources categorized as highways; and, a "2nd Concession Rd" 24-hour distribution was applied to rural roads. These same 24-hr distributions were applied to the assigned source for all three scenarios of evaluation (existing conditions, future no-build, and future build).</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIAI Edits Required? (Yes/No? If yes specify edits)
						<p>Fuel usage distribution [i.e. diesel, gasoline, CNG, etc.] and vehicle age distribution within each vehicle type category were modelled based on MOVES3.0 default fuel use and age distribution database inputs assigned to the year of evaluation. Heavy truck traffic was included in the modelling with a percentage assigned to each air quality emission source anticipated from this vehicle type.</p> <p>Health Impacts, Critical Receptors and Background/Study Area Monitoring Data: The human health scoping implications of the project such as air quality, noise, land use, traffic congestion and safety, economic, social cohesion, and neighborhood resources have been summarized in Section 2.2.7 and Section 5.2.7 of the Updated Draft EIAI.</p> <p>The Project Team is aware some critical receptors have been identified as 'missing' by a number of stakeholders. Having reviewed the data, these 'missing' receptors were included as residences in the Air Quality Impact Assessment. Potential impacts at the 'missing' receptors within the Air Quality Impact Assessment Study Area are reflected in the assessment by other, nearby critical receptors and receptors identified on Figure 2-9 and 2-10 of the Updated Draft EIAI.</p> <p>The approach to identifying representative air quality levels is conservative and often ensures the worst-case conditions are reflected so as to not under-represent conditions within a study area; i.e. background air quality contaminant levels included within the assessment may be representative or higher than expected for the area in question.</p> <p>While it is recognized that localized in-situ monitoring may provide more accurate data, use of existing monitoring stations within the NAPS network for statistically relevant background monitoring data is a generally accepted and conservative methodology for provincial environmental impact air quality assessments. Stations selected for the background air quality assessment were chosen based on total data availability over a most recent five-year period as a minimum of 12 months of daily and hourly data is required to ensure statistical relevance. Stations were also selected based on their proximity to the air quality study area with the meteorological station selected as</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIAR Edits Required? (Yes/No? If yes specify edits)
						<p>representative of the air quality study area within 15 km north-west of the air quality study area. Stations must also be a relative representation of similar types of existing sources of air quality emission in the study area and it is notable that the meteorological station selected as representative of air quality in the study area was provided by the MECP in site-specific MET data requested for the project modelling.</p> <p>12. Many less expensive alternatives to this highway have not been considered. The Minister approved Terms of Reference for the Bradford Bypass Environmental Assessment Study overrode the requirements of the Environmental Assessment act to consider road alternatives that would not be a controlled access highway. As a result, the Hwy 9 / Green Lane corridor was the only existing roadway that was considered as a reasonable alternative. That roadway was rejected as it was not considered feasible to convert it to a controlled access facility. Consideration of these types of alternatives are, however, a requirement for all Class EA Studies. A major condition of the 2002 Bradford Bypass EA Approval, was a requirement to conduct a Class EA Study at the time MTO wished to proceed with this project. This study would ensure the currency of the proposed project in light of current travel demand, previously unforeseen environmental factors, new legislation and a full review of all reasonable alternatives including combinations of regional and local roadways. The following are reasonable alternatives that would need to be considered both individually and in combination with one or more other reasonable alternatives if the Class EA Study that was underway at the time Regulation 697 /21 was issued. Each of these proposed alternative solutions would then be evaluated against the then approved Bradford Bypass 4 lane controlled access freeway. Because the Class EA Study was canceled by this regulation, the only comparison AECOM have used throughout the Draft Impact Assessment</p>

						<p>Report is “Do Nothing”. Given that the actual travel problem we are now faced with is local, rather than long distance traffic, we are confident one or more of the following reasonable alternatives would be dramatically preferable to the now 8 lane, Bradford Bypass.</p> <p>Alternatives to the Bradford Bypass:</p> <ul style="list-style-type: none"> a Construct a 4 lane arterial road bridge over the West Branch of the Holland River at the currently planned location for the Bradford Bypass bridge – together with paved 4 lane roadways to both Bathurst St. and a connection to Bradford’s 8th Line. b Build a 4 lane arterial road bridge over the Holland River from Ravenshoe Road to connect with Simcoe Line 13 or another appropriate east – west arterial road on the west bank of the Holland River. c Extend and widen Green Lane to 6 lanes and create a diagonal transition from Green Lane to Hwy 9 and highway bridge intersection with Highway 9 around Dufferin St. The Green Lane / Highway 9 option will better serve and reduce both local and long distance traffic from Newmarket south to at least Aurora Sideroad. <p>Any one or a combination of these alternatives will address a substantial amount of local travel problems while being significantly less costly and environmentally invasive. Once again, what logic is being used to ignore these options given all of the rationale in favour of these other alternatives?</p> <p>The planning process that resulted in the 2002 approved Environmental Assessment (EA) for the Bradford Bypass evaluated alternatives from a broad range of potential solutions to address several transportation problems and to address significant opportunities identified in York Region and Simcoe County. The need for this freeway was confirmed during the Route Planning and EA Study as</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIAR Edits Required? (Yes/No? If yes specify edits)
						<p>the only reasonable solution that would make a significant contribution towards addressing the problem as the population in York Region and Simcoe County grows. The 2002 EA approved alignment is technically preferred for a freeway in terms of highway network expansion, ease of construction, relationship to provincial and municipal land use planning and the preferred route is already included in Official and Transportation Master Plans, as well as the Places to Grow Act), as well as having fewer negative impacts to residential and natural areas when compared to other route options considered.</p> <p>The Bradford Bypass Project has been modelled based on current local, regional, and provincial projections and data. This addresses the problem of "lack of long-term planning" per the Bradford Bypass 2002 approved EA..</p> <p>The 2002 approved EA reviewed a broad area of analysis which included several corridors, including areas south of the current corridor, and Highway 89/Ravenshoe Road.</p> <p>The Bradford Corridor was selected as the preferred corridor over Highway 89/Ravenshoe Road as it was beyond the maximum north limit of 10th Line / Boag Road which was assessed in a previous EA study and was determined that a Management Area or river crossing north of this would entail unacceptable environmental impact, which lead to the withdrawal of the Highway 89 EA studies in 1986-87.</p> <p>The Bradford Corridor was selected as the preferred corridor over the southern alternatives as there was no south alternative that met the primary purpose of the study to reduce out-of-way travel. The south limit was established as Highway 88 and Queensville Sideroad.</p> <p>The original purpose of the Bradford Bypass per the 2002 Approved EA was to address the "east-west" long-distance travel demand crossover between Highway 400 and Highway 404 which is a provincial responsibility and distinct from the locally generated trips which use a municipal road to access the provincial network. As noted in the report, the overall network benefits from vehicle-hours of travel time savings and vehicle-kilometres of travel distance savings are observed during the 2041 AM peak hour and during the 2041 PM peak hour in the</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIAR Edits Required? (Yes/No? If yes specify edits)
						<p>updated interchange locations. Local roads forecasted to exceed capacity by 2031 and 2041 under the No-Build scenarios see significant relief from traffic as a result of the diversion to the Bradford Bypass in the Build scenarios. While the Town of Bradford West Gwillimbury owns a closed road allowance east of Artesian Industrial Parkway for 8th Line to Holland River, Hochreiter Road itself is a private road. A connection at this location would not address the primary purpose of the Bradford Bypass to connect Highway 400 and Highway 404. The local benefit of this route is likely outweighed by the reduced congestion of Bridge Street created by the Bradford Bypass. A bridge across 8th Line would still require out-of-way travel, which this study is looking to reduce, to connect to provincial transportation facilities. Improvements would likely be required on Bathurst Street and Queensville Sideroad. Significant property impact (similar to the Bradford Bypass) would be required for a new corridor connection from 8th Line straight to Highway 404. For more information on the 2002 Approved EA, please see the enclosed linked: https://www.bradfordbypass.ca/wp-content/uploads/2020/09/BBP-RoutePlanningEA-1997.pdf</p> <p>For more information on the assessment of alternative routes, please refer to the response to question #3.</p> <p>The Project Team will continue to carefully consider all impacts to wetland areas and will continue to work with Indigenous communities, environmental agencies, municipalities, and other concerned stakeholders to identify principles and recommendations for mitigating the impacts of placing new or expanded provincial highways within wetland areas. The Bradford Bypass Project will continue to look at opportunities to minimize impacts to these wetlands through engineering refinements.</p> <p>If you have any other questions, please feel free to reach out to the Project Team at your earliest convenience. You can reach the Project Team via email at projectteam@bradfordbypass.ca, toll free at 1-877-247-6036, or by visiting the Project Website at www.bradfordbypass.ca.</p> <p>Sincerely,</p>

CT-DraftEIAR-72	To: Project Team From: [REDACTED]	Email: [REDACTED]	Draft EIAR	June 28, 2023	<p>RE: COMMENTS ON DRAFT IMPACT ASSESSMENT REPORT - Bradford Bypass</p> <p>June 28, 2023</p> <p>To whom it may concern on the project team, Minister of Transportation Ontario, Caroline Mulroney, Minister of Health Ontario, Sylvia Jones, Minister of the Environment Ontario, David Piccini, and Minister for the Environment and Climate Change Canada, Steven Guilbeault:</p> <p>I have included health and environment ministers to respond and hopefully intervene within their ministry mandates, given the detrimental impact this project will have on our collective climate action efforts as well as the health of humans and wildlife. Moreover, this will only be compounded by the proposed 413.</p> <p>I appreciate the time the project team has invested however, I also wish that the time I and others have taken to compile the data and questions below will be appreciated and can be honoured with more meaningful responses than I have received previously. This report only seems to create more questions and concerns which are shared by numerous environmental and First Nations groups, farming organizations, health professionals, and citizens.</p> <p>I look forward to the opportunity to discuss or receive a response on the following:</p> <ol style="list-style-type: none"> Timing and consultation are inadequate for this report: an un-editable PDF and 30 days turnaround for a 576 page report. This follows the pattern of public consultation that has limited meaningful dialogue. Will you extend the consultation period to allow appropriate reflection and input about the Impact Assessment Report? Explain how a provincial highway was transformed into a very expensive regional 	<p>Dear [REDACTED]</p> <p>Thank you for your email regarding the Draft Environmental Impact Assessment Report (EIAR) for the Bradford Bypass. I appreciate the opportunity to respond on behalf of the Honourable Minister of Transportation, Caroline Mulroney.</p> <p>The purpose of this new 16.3-kilometre controlled access freeway is to improve connectivity as well as to provide capacity to accommodate future demand. Even with all currently planned transportation and transit investments, road congestion will continue to increase across the Greater Golden Horseshoe (GGH). The Bradford Bypass will relieve congestion on existing east-west local roads and provide an improved northern freeway connection between Highway 400 in the County of Simcoe and Highway 404 in York Region.</p> <p>I appreciate the time you took to review the Draft EIAR and share your comments. The Project Team is currently reviewing all comments and feedback from the public and will be providing responses in the near future. I have shared your comments with the Project Team for their consideration.</p> <p>For your awareness an Updated Draft EIAR with the additional archaeological assessments will be available for public review and comment on the Project Website (BRADFORD BYPASS – Project Website) from July 13, 2023, until August 14, 2023.</p> <p>Thank you for your continued interest in the Bradford Bypass.</p> <p>Sincerely, [REDACTED]</p>	No

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIAR Edits Required? (Yes/No? If yes specify edits)
					<p>road variant with five interchanges and two 400 series highway connections, paid for by all Ontario taxpayers. Local congestion should be managed by a local solution should it not? This bypass is inconsistent with the MTO's mandate to provide long distance travel solutions. I maintain that there are better local cheaper alternatives that have been ignored which are also faster to implement and far less damaging to climate change; regional road and transit solutions that should be pursued to alleviate the congestion in the fastest growing municipality in Canada, even if the Bypass does get built. Why have the alternatives been ignored when it is documented that they meet more of the criteria than the Bypass?</p> <p>3. I would like to see the traffic studies in their entirety. An environmental assessment used to be grounded in a demonstration of need and justification. The MTO has provided neither as it pertains to this particular project and at this time, there is no evidence that local traffic solutions MTO purports to be solving (actually a local traffic issue and not MTO's mandate), are best served by this potentially \$4 billion highway.</p> <p>a. Please share the links and the methodology, transparently, so that people can understand what travel time savings MTO is referring to as the write up is incredibly vague about the start and end of the routes used for analysis. For instance, please explain 'origin-destination pairs' from pg. 334:</p> <p><small>On average, between the various origin-destination pairs using the Bradford Bypass, drivers in the peak direction during the peak period, would save up to 72% or 35 minutes of travel time when connecting between highway 403 and highway 404 compared to avoiding routes in the No Build scenario.</small></p> <p>b. What year do your studies indicate that the Bypass will be congested at peak rush hour times and is this with a 4 or 8 lane highway?</p> <p>4. The Draft Environmental Impact Assessment report shows on pg. 212 the Bypass touching the southern portion of the Lower Landing (AKA BaGv-42), a significant historical and archaeological site at a significant</p>		

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIAR Edits Required? (Yes/No? If yes specify edits)
					<p>meander on the East Holland River. MTO has moved the highway 150 m to the south of the technically preferred route, which would have completely run over the Lower Landing (pg 148). The Draft Environmental Conditions Report indicated that a Stage 3 archaeological assessment "was required" (pg 225); the Draft IA report says that the Stage 3 was completed, and that Stage 4 is required. The Project team's website says, <i>"Currently, additional archaeological investigations are being completed to finalize the impact assessments in accordance with Ontario Regulation 697/21 and are not included in this posting. This information will be available for additional public and Indigenous community review once completed."</i> The Draft IA states, "the southern portion of the site ... will be impacted by construction. Stage 4 Archaeological Assessment excavation plans will be submitted to the Ministry of Citizenship and Multiculturalism and Indigenous communities prior to the Stage 4 excavation being conducted," (pg 395).</p> <p>Does this mean that the archeological work is not finished but yet the route has been chosen? Property owners near the history-rich Lower Landing that are receiving expropriation notifications. We are staunchly opposed to this violation of this site particularly absent the completed stage 4 archaeological assessment of the Lower Landing and the endorsement of the First Nations.</p> 		

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIAR Edits Required? (Yes/No? If yes specify edits)
					<p><i>Bradford Bypass is still too close to the Lower Landing. The Lower Landing is in the area of WC-25 in the image above. This clip of a map shows Provincially significant wetlands (orange); unevaluated wetlands (blue); cold water fish habitat (black) and warm (pink); Original / full map available on pg 55 of Draft IA report.</i></p> <p>a. As stewards of these lands and water for time immemorial, additional time should be given to allow First Nation community members to fully digest the lengthy report. Georgina Island First Nation asked that this site be avoided in 1998, 25 years ago, stating, "It is obvious that there are other routes, which can be used to connect these major highways, and we hope that another will be selected." Is Ontario still ignoring this request?</p> <p>b. Have First Nations been consulted about this part of the plan? Please provide written evidence of their approval of this route.</p> <p>c. It is imperative that the Ontario Government uncover all evidence of burials where the highways are to be built. How this is done must follow affected First Nations' protocols and wishes. These are some thoughts from a non-native resident of the area on the topic:</p> <p>i. These burial sites must be preserved and protected or possibly moved to another location. Identifying registered and unregistered burial sites should be relatively simple for the Ontario Government as the information is readily available from their own ministries, authorities as well as from local governments and churches/cemeteries. While 'registered burial sites' are easy to identify, 'unregistered sites' need to be confirmed and registered as required under Ontario's Funeral, Burial and Cremation Services Act, 2002 while 'Still to be found sites' require sleuthing, historical research and boots on the ground investigation. One of the most extreme requirements that could be requested is for the Ontario Government to perform thorough Ground Penetrating Radar (GPR) surveying of every square foot of the Bradford Bypass.</p>		

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIAR Edits Required? (Yes/No? If yes specify edits)
					<p>Anomalies called 'targets' would receive special attention via Archaeological digs. Human remains discovered would either be left in place or moved. All work and costs are to be borne by the Ontario government. This solution for 'Still to be found' burial sites is as necessary as the work done and currently being done for the former Residential Schools in Canada.</p> <p>5. Species at Risk</p> <p>a. Table 2-2 lays out the 12 species at risk present or very likely to be present. For instance, Blandings Turtles are likely affected as they are likely in the area. The only commitment we see is to do detailed study later on. This is a good example of study following decision or destruction, and is in violation of standard EA practices. There are no commitments to the protection of species at risk in this document.</p> <p>b. There is a requirement for the Minister of the Department of Fisheries and Oceans to consider, when making certain decisions related to the fish and fish habitat protection (and pollution prevention) provisions of the Act, the Indigenous knowledge of the Indigenous peoples of Canada that has been provided to the Minister (34.1(1) (g) of the Fisheries Act); and,</p> <p>c. Requirement to protect the confidentiality of Indigenous knowledge that is provided to the Minister in confidence, except under limited circumstances (subsection 61.2 (1) of the Fisheries Act)."</p> <p>d. The Draft IA report identifies that the Williams Treaties FN reported American Eel https://www.dfo-mpo.gc.ca/species-especes/publications/sara-lep/eel-anquille/index-eng.html and Northern Sunfish in the Holland River. This must be further investigated with new fieldwork. The American Eel is in decline and gets Federal protection. Ontario's Species at Risk legislation doesn't work anymore so it's all up to the Federal enforcement.</p>		

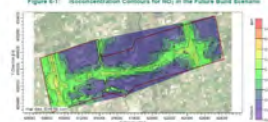

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIAR Edits Required? (Yes/No? If yes specify edits)
					<p>i.What is Ontario going to do to stand by Canada's obligations to First Nations treaty and consultation rights?</p> <p>j.Will the American eel's presence be investigated with new fieldwork?</p> <p>6. There are many concerns related to surface water and groundwater.</p> <p>a. Please confirm the understanding that there has been no discussion of, and that there are no studies looking at impacts to Lake Simcoe.</p> <p>b. The Groundwater Protection and Well Monitoring plan, which this Draft IA refers to, discusses the need to dewater the site for the building of piles for the elevated bridge sections of the highway. The Draft IA report says, "Construction dewatering activities have been identified as the primary risk to groundwater fed water wells in the Study Area," p 295. A credible groundwater protection plan is not apparent. There are many suggestions for how to keep it clean but there are few to no commitments.</p> <p>c. How exactly is the province (MoECP) going to monitor groundwater discharges to ensure they meet Ontario's water quality standards?</p> <p>d. What penalties are contractors going to face for violating the discharge requirements?</p> <p>e. If penalties are not enough to compel adherence, what next?</p> <p>f. How is the public to have confidence that contaminated water will not be discharged to the Holland Rivers and Lake Simcoe, especially given the damage already done to waterways by the 404 extension?</p> <p>g. Please confirm if monitoring will continue, or not, as this statement is totally vague: "It is expected that each unassessed monitoring well will continue to be monitored and assessed during the subsequent detail design phase of the project" P. 79. Will the residents for these unassessed wells be advised that the well is being monitored and, what recourse will be taken to mitigate damage?</p>		

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIAR Edits Required? (Yes/No? If yes specify edits)
					<p>h. Explain what kind of environmental impact would make this project stop; or is any impact acceptable, including harming drinking water sources?</p> <p>i. Please confirm that the only financial support for affected well owners whose water quality is affected by the construction is the province providing them with a temporary water supply until the well owner fixes their well.</p> <p>i.Does this limited help get extended to those who did not provide baseline information about their well water?</p> <p>i.Is there any effort being made to reach more than 12% of respondents to MTO's well water survey?</p> <p>7. How much is this project going to cost?</p> <p>8. When will the Bradford Bypass be completed and what studies have been done to address carbon emissions? Will this project be net zero, how and when? Information shared implies that this bypass would reduce carbon emissions by reducing bottleneck traffic but in fact much research shows otherwise and that the bypass will increase emissions over time and return to bottlenecking after completion simply by the induced travel created and development planned around it.</p> <p>9. It is unclear how many lanes are being constructed at which times. Please clarify and the impact the additional lanes will have on emissions by 2030, 2040 and 2050.</p> <p>10. There is no cumulative health impact assessment to understand how traffic related air pollution, known to increase risks of cancers, leukemia, heart and lung disease, especially in children, will impact the communities</p>		

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIAR Edits Required? (Yes/No? If yes specify edits)
					<p>surrounding the route. There is also no mention of the cumulative impacts on our climate from construction and higher rates of car travel on this highway.</p> <p>a. How will you be informing people living along the route about the increased risk of traffic related air pollution and its effects on human health?</p> <p>b. Will you put air quality monitors in Bradford and share this information with the public?</p> <p>c. How do you explain the fact that you are not monitoring air quality in Bradford, and using the site of Newmarket?</p> <p>d. The Final Environmental Conditions Report identified numerous planned residential developments right beside the highway, including a planned new school. Have the land owners / developers / school boards received any information that tells them how bad the air, soil and ground water quality are going to be there?</p> <p>11. Traffic modeling to produce the air dispersion model needs to be robust and transparent. In order to understand traffic related air pollution, relevant vehicle types and assumptions need to be used. The air dispersion modeling report simply indicates that MOVES3 default data was used - but the EPA has emphasized the need to include relevant vehicle type inputs into the model.</p> <p>Please address the following: The air modeling report and supporting reports fail to disclose the % of diesel truck traffic, or the component of that traffic that includes trucks dating from 2006 or earlier which comprise a significant component of air pollution load. The air dispersion modeling report states that the vehicle type distributions were based on MOVES3.0 default database inputs even though there are no such inputs. It also says that the 24 hour traffic</p>		

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIAR Edits Required? (Yes/No? If yes specify edits)
					<p>distribution was assumed to be equal to the AADT distribution. However the consultant appeared to use different AADT distributions for different scenarios without explanation and the distributions differed significantly as between build and no build scenarios. Mitigation in the form of frequent diesel heavy truck vehicle emission inspections should be included as a mitigation measure to ensure that newer vehicle emissions systems are not being tampered with. The air dispersion modeling report indicates that ethanol based fuels were excluded even though this goes against EPA recommendations for using the model. The report lacks transparency about assumptions made about future vehicle fleet characteristics for both passenger vehicles and heavy trucks.</p> <p>The comparison of build with no-build is not valid because the values in Appendix E of the traffic modeling report show that there was an erroneous assumption that there would be significantly less truck traffic in the build scenario compared to the no-build scenario. There is no valid scientifically-based justification for this. Further, if there is an increase in truck traffic along 404 - as the model predicts - then sensitive receptors along highway 404 need to be included in a health impact study. Instead, impacts on traffic along the 400/404 corridors were excluded and the "air quality study area" was restricted to the bypass corridor itself without any explanation or justification.</p> <p>It is egregious that MTO did not conduct locally relevant air quality monitoring for background in Bradford, River Drive Park, Queensville and along the 404/400 corridors for traffic related air pollutants. Such baseline monitoring is</p>		

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIAR Edits Required? (Yes/No? If yes specify edits)
					<p>generally inexpensive and could have been easily obtained. Using existing monitors in Innisfil, Newmarket and other distant and irrelevant locations is not justifiable. For the air dispersion modeling, MTO appears to be relying on these distant locations (eg. Egbert) for preparation of the wind rose as well, even though meteorological conditions in the study area may be markedly different. MTO also did not identify numerous recreational and daycare facilities adjacent to the Bradford Bypass corridor which were identified by Simcoe County Greenbelt Coalition. How is that?</p> <p>Also, the study did not include the cumulative effects of future planned industrial uses along the Bypass corridor and along the 400/404 corridor which may significantly impact people's health along the route. Why is that? The evaluation did not use 2022 World Health Organization criteria for contaminants which are much lower and more up-to date than the CAAQS or the AAQCs. Ions can disagree that the AAQCs and CAAQS represent the "lowest concentrations at which an adverse effect may be experienced" as they are not based on up-to-date understandings of the health impacts of air contaminants including pre-term births and neurodevelopmental and other impacts. Why is this? These are described in the report by the Canadian Association of Physicians for the Environment (April 2022) Mobilizing Evidence report. The report predicts significant exceedances for NO2 and benzo(a)pyrene even with the apparently non-conservative assumptions for diesel truck traffic used in the full build out scenario compared to the no-build scenario. The adverse health impacts of NO2 exceedances may be extremely</p>		

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIAI Edits Required? (Yes/No? If yes specify edits)
					<p>severe and will impact on the <i>Charter</i> rights and human rights of residents in the study area and beyond without justification for the need for the project. How will this be addressed?</p> <p>Figure 6-1: Isocentration Contours for NO₂ in the Future Build Scenario</p>  <p>Figure 6-2: Isocentration Contours for NO₂ in the Future No-Build Scenario</p>  <p>Source: Air Quality Impact Assessment Report - AECOM.</p> <p>The Air Quality Impact Assessment concluded that: Impacts from the Future Build Conditions with the new Bradford Bypass on a cumulative basis within the Air Quality Study Area <u>increases in comparison to a No-Build scenario for several contaminants and their respective averaging periods. This is predominately due to increased traffic along the Bradford Bypass.</u> where in a No-Build scenario this traffic is dispersed along Holland Street and Bridget Street and within communities to the south of the Air Quality Study Area (for example, demonstrated in the traffic reporting related to this project). This included significant increases in NO₂, SO₂, PM_{2.5}, Acetaldehyde, Benzo(a)pyrene, and formaldehyde and some increases in CO. Maximum concentrations which</p>		

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIAR Edits Required? (Yes/No? If yes specify edits)
					<p>are relevant for acute events also show significant increases, for example a 49% increase in SO₂ and more than 50% increases in fine and large particulates, acetaldehyde, formaldehyde etc. for critical receptor number 19 (other receptors' models were not displayed in a comparable manner). The results indicated that for NO₂, 1 hour averages 80% of the hours in the future build scenario would have a cumulative concentration above the CAAQS limit of 79 ppm and a 100% of hours would exceed the AAQC for benzo(a)pyrene.</p> <p>In relation to GHGs, the MTO failed to incorporate induced demand in the future build scenario to calculate additional vehicle kilometers traveled that would be induced by the highway, and failed to give a transparent total vehicle assumption or a vehicle emissions factor. In any event the air quality impact assessment predicts that the proposed highway would be a significant contributor to regional GHG emissions even without incorporating the effect of induced demand. No mitigation measures are proposed to address the increase in greenhouse gas emissions from the project which will contribute to catastrophic climate disaster for all of humanity and the planet. How can this be justified?</p> <p>12. Many less expensive alternatives to this highway have not been considered. The Minister approved Terms of Reference for the Bradford Bypass Environmental Assessment Study overrode the requirements of the Environmental Assessment act to consider road alternatives that would not be a controlled access highway. As a result, the Hwy 9 / Green Lane corridor was the only existing roadway that was</p>		

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIAI Edits Required? (Yes/No? If yes specify edits)
					<p>considered as a reasonable alternative. That roadway was rejected as it was not considered feasible to convert it to a controlled access facility. Consideration of these types of alternatives are, however, a requirement for all Class EA Studies.</p> <p>A major condition of the 2002 Bradford Bypass EA Approval, was a requirement to conduct a Class EA Study at the time MTO wished to proceed with this project. This study would ensure the currency of the proposed project in light of current travel demand, previously unforeseen environmental factors, new legislation and a full review of all reasonable alternatives including combinations of regional and local roadways.</p> <p>The following are reasonable alternatives that would need to be considered both individually and in combination with one or more other reasonable alternatives if the Class EA Study that was underway at the time Regulation 697 /21 was issued. Each of these proposed alternative solutions would then be evaluated against the then approved Bradford Bypass 4 lane controlled access freeway. Because the Class EA Study was canceled by this regulation, the only comparison AECOM have used throughout the Draft Impact Assessment Report is "Do Nothing". Given that the actual travel problem we are now faced with is local, rather than long distance traffic, we are confident one or more of the following reasonable alternatives would be dramatically preferable to the now 8 lane, Bradford Bypass.</p> <p>Alternatives to the Bradford Bypass:</p> <ol style="list-style-type: none"> 1. Construct a 4 lane arterial road bridge over the West Branch of the Holland River at the currently planned location for the Bradford Bypass bridge – together with paved 4 lane 		

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIAR Edits Required? (Yes/No? If yes specify edits)
					<p>roadways to both Bathurst St. and a connection to Bradford's 8th Line.</p> <p>2. Build a 4 lane arterial road bridge over the Holland River from Ravenshoe Road to connect with Simcoe Line 13 or another appropriate east – west arterial road on the west bank of the Holland River.</p> <p>3. Extend and widen Green Lane to 6 lanes and create a diagonal transition from Green Lane to Hwy 9 and highway bridge intersection with Highway 9 around Dufferin St. The Green Lane / Highway 9 option will better serve and reduce both local and long distance traffic from Newmarket south to at least Aurora Sideroad.</p> <p>Any one or a combination of these alternatives will address a substantial amount of local travel problems while being significantly less costly and environmentally invasive. Once again, what logic is being used to ignore these options given all of the rationale in favour of these other alternatives?</p> <p>As you can see, there are a lot of questions and concerns surrounding the approach the province is taking with highway projects like this that will have significant environmental and health impacts, let alone financial waste to the taxpayer and considerable impact on the rights of the Chippewa and other First Nations. I have consulted, dialogued and listened to a number of groups and organizations; the information and questions above are a compilation of that collective work and whereby I have only listed some of the research data in order to make the point and respect your time.</p> <p>I thank you for that time and your efforts to address these concerns.</p> <p>Sincerely,</p>

CT-DraftEIAR-73	To: Project Team From: [REDACTED]	Email: [REDACTED]	Draft EIAR Comments	June 29, 2023	<p>We have many concerns with this project, the process it is following, and this report is no different. Please answer our questions below.</p> <ol style="list-style-type: none"> 1. Timing and consultation are inadequate. You have provided an un-editable PDF and 30 days for a 576 page report. This follows the pattern of terrible public information and consultation. Will you extend the consultation period? 2. Explain how a provincial highway was transformed into a very expensive regional road variant with five interchanges and two 400 series highway connections, paid for by all Ontario taxpayers. This is inconsistent with the MTO's mandate to provide long distance travel solutions. We maintain that there are better and cheaper, faster to implement, regional road and transit solutions that should be pursued, even if the Bypass does get built. We would like to see the traffic studies in their entirety. An environmental assessment used to be grounded in a demonstration of need and justification. The MTO has provided neither as it pertains to this particular project and at this time. There is no evidence that local traffic solutions MTO purports to be solving (actually a local traffic issue and not MTO's mandate) are best served by this potentially \$4 billion highway. <ol style="list-style-type: none"> Please share the links and the methodology, transparently, so that people can understand what travel time savings MTO is referring to. We have absolutely no idea because your write up is incredibly vague about the start and end of the routes used for analysis. For instance this meaningless babble from pg. 334: <small>On average, between the various origin-destination pairs using the Bradford Bypass, drivers in the peak direction during the peak period, would save up to 73% or 35 minutes of travel time when connecting between Highway 407 and Highway 404 compared to existing routes in the No-Build scenario.</small> What year do your studies indicate that the Bypass will be congested at peak rush hour times? 	<p>Hi [REDACTED]</p> <p>Thank you for your interest in the Bradford Bypass Preliminary Design Study and project-specific assessment of environmental impacts, undertaken in accordance with Ontario Regulation 697/21.</p> <p>1. Time and consultation are inadequate. You have provided an un-editable PDF and 30 days for a 576 page report. This follows the pattern of terrible public information and consultation. Will you extend the consultation period?</p> <p>The process of planning the Bradford Bypass has included -- and will continue to include -- consultation with the public and Indigenous communities to ensure the project moves forward in an environmentally responsible way that is responsive to the needs and concerns of communities. In accordance with Ontario Regulation 697/21, an initial Draft Environmental Impact Assessment Report (EIAR) -- which documents the results of the studies undertaken for various environmental disciplines, proposed mitigation measures and environmental commitments to protect the environment -- was published for public review starting on June 1 and continuing until June 30, 2023. In addition, the Ministry has been providing Indigenous communities and stakeholders various opportunities for meaningful consultation since the project was re-initiated in September 2020 including two Public Information Centres.</p> <p>Additional archaeological investigations, which are necessary to complete the impact assessment in accordance with regulations, have recently been finalized and incorporated into an Updated Draft Environmental Impact Assessment Report. This updated report has been posted for an additional 30-day consultation period. The Updated Draft EIAR posting includes the information from the initial draft to ensure stakeholders can review additional information in full context of the project. As the initial Draft EIAR and the Updated Draft were available for public review for a total of 60 days, an extension of the public review period is not being considered at this time.</p> <p>The Updated Draft Environmental Impact Assessment Report was available for review on the Project Website</p>	No

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIAR Edits Required? (Yes/No? If yes specify edits)
					<p>4. The Draft Environmental Impact Assessment report shows on pg. 212 the Bypass touching the southern portion of the Lower Landing (AKA BaGv-42), a significant historical and archaeological site at a significant meander on the East Holland River. MTO has moved the highway 150 m to the south of the technically preferred route, which would have completely run over the Lower Landing (pg 148). The Draft Environmental Conditions Report indicated that a Stage 3 archaeological assessment "was required" (pg 225); the Draft IA report says that the Stage 3 was completed, and that Stage 4 is required. The Project team's website says, <i>"Currently, additional archaeological investigations are being completed to finalize the impact assessments in accordance with Ontario Regulation 697/21 and are not included in this posting. This information will be available for additional public and Indigenous community review once completed."</i> The Draft IA states, "the southern portion of the site ... will be impacted by construction. Stage 4 Archaeological Assessment excavation plans will be submitted to the Ministry of Citizenship and Multiculturalism and Indigenous communities prior to the Stage 4 excavation being conducted," (pg 395).</p> <p>So the archeological work is not finished. And yet the route has been chosen. Property owners near the history-rich Lower Landing that are receiving expropriation notifications. We are staunchly opposed to this violation of this site particularly absent the completed stage 4 archaeological assessment of the Lower Landing and the endorsement of the First Nations.</p>	<p>(https://www.bradfordbypass.ca/study-process/) until August 14, 2023.</p> <p>2. Explain how a provincial highway was transformed into a very expensive regional road variant with five interchanges and two 400 series highway connections, paid for by all Ontario taxpayers. This is inconsistent with the MTO's mandate to provide long distance travel solutions. We maintain that there are better and cheaper, faster to implement, regional road and transit solutions that should be pursued, even if the Bypass does get built.</p> <p>The project is being assessed with consideration of the Ministry's mandate to provide for the safe, efficient movement of people and goods between regions and urban areas. In addition, the Project Team has consulted with local and regional municipalities, and the traffic analysis for the proposed Bradford Bypass has considered the planned local transportation and transit improvements to be implemented by others.</p> <p>The original route planning study (2002 Approved Environmental Assessment – EA) concluded that additional relief from congestion in this Study Area could only be accommodated through the protection and implementation of a provincial right of way.</p> <p>As part of the 2002 Approved EA, the Bradford Bypass evaluated alternatives from a broad range of potential solutions to address several transportation problems and to address significant opportunities identified in York Region and Simcoe County. The need for this freeway was confirmed as the only reasonable solution that would make a significant contribution towards addressing the problem as the population in York Region and Simcoe County grows. The 2002 Approved EA approved alignment is technically preferred for a freeway in terms of highway network expansion, ease of construction, relationship to provincial and municipal land use planning and the preferred route is already included in Official and Transportation Master Plans, as well as the Places to Grow Act), as well as having fewer negative impacts to</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIAR Edits Required? (Yes/No? If yes specify edits)
					 <p><i>Bradford Bypass is still too close to the Lower Landing. The Lower Landing is in the area of WC-25 in the image above. This clip of a map shows Provincially significant wetlands (orange); unevaluated wetlands (blue); cold water fish habitat (black) and warm (pink); Original / full map available on pg 55 of Draft IA report.</i></p> <p>a. As stewards of these lands and water for time immemorial, additional time should be given to allow First Nation community members to fully digest the lengthy report. Georgina Island First Nation asked that this site be avoided in 1998, 25 years ago, stating, "It is obvious that there are other routes, which can be used to connect these major highways, and we hope that another will be selected." Is Ontario still ignoring this request?</p> <p>b. Have First Nations been consulted about this part of the plan? Please provide written evidence of their approval of this route.</p> <p>c. It is imperative that the Ontario Government uncover all evidence of burials where the highways are to be built. How this is done must follow affected First Nations' protocols and wishes. These are some thoughts from a non-native resident of the area on the topic:</p> <p>i. These burial sites must be preserved and protected or possibly moved to another location. Identifying registered and unregistered burial sites should be relatively simple for the Ontario Government as the information is readily available from their own ministries, authorities as well as from local governments and churches/cemeteries. While 'registered burial sites' are easy to identify, 'unregistered sites' need to be confirmed and registered as required</p>	<p>residential and natural areas when compared to other route options considered.</p> <p>For more information on the Analysis and Evaluation of alternatives, refer to Section 2.1.6 of the 2002 Approved EA, which can be found in the enclosed link: https://www.bradfordbypass.ca/wp-content/uploads/2020/09/BBP-RoutePlanningEA-1997.pdf</p> <p>Further to the conclusion of the 2002 Approved EA, as part of this Preliminary Design study, a traffic analysis was completed and the result of the review has confirmed the need of the highway. This analysis included the review of existing traffic conditions and modelling of future forecast traffic conditions and it has been confirmed that updates to regional and municipal roads alone will not address the transportation needs within the Study Area.</p> <p>Additionally, a feasibility assessment was conducted evaluating nine interchange location scenarios to determine the best interchange configuration through the Bradford Bypass corridor. The evaluation was conducted in accordance with satisfying the study objective to improve connectivity of the study area between Highway 400 and Highway 404, facilitating the improvement of traffic operations and movement of goods. Consideration included interchange utilization, overall network delay, out of way travel, environmental considerations and constraints, and preliminary costs. It was determined that interchanges at 10th Sideroad, County Road 4, Bathurst Street, 2nd Concession Road, and Leslie Street would be included as part of the Study.</p> <p>3. We would like to see the traffic studies in their entirety. An environmental assessment used to be grounded in a demonstration of need and justification. The MTO has provided neither as it pertains to this particular project and at this time. There is no evidence that local traffic solutions MTO purports to be solving (actually a local traffic issue and not MTO's mandate) are best served by this potentially \$4 billion highway.</p> <p>The Bradford Bypass project has been assessed in accordance with Ontario Regulation 697/21. Consistent</p>

					<p>under Ontario's Funeral, Burial and Cremation Services Act, 2002 while 'Still to be found sites' require sleuthing, historical research and boots on the ground investigation. One of the most extreme requirements that could be requested is for the Ontario Government to perform thorough Ground Penetrating Radar (GPR) surveying of every square foot of the Bradford Bypass. Anomalies called 'targets' would receive special attention via Archaeological digs. Human remains discovered would either be left in place or moved. All work and costs are to be borne by the Ontario government. This solution for 'Still to be found' burial sites is as necessary as the work done and currently being done for the former Residential Schools in Canada.</p> <p>5. Species at Risk</p> <p>a. Table 2-2 lays out the 12 species at risk present or very likely to be present. For instance, Blandings Turtles are likely affected as they are likely in the area. The only commitment we see is to do detailed study later on. This is a good example of study following decision or destruction, and is in violation of standard EA practices. There are no commitments to the protection of species at risk in this document.</p> <p>b. There is a requirement for the Minister of the Department of Fisheries and Oceans to consider, when making certain decisions related to the fish and fish habitat protection (and pollution prevention) provisions of the Act, the Indigenous knowledge of the Indigenous peoples of Canada that has been provided to the Minister (34.1(1) (g) of the Fisheries Act); and,</p> <p>c. Requirement to protect the confidentiality of Indigenous knowledge that is provided to the Minister in confidence, except under limited circumstances (subsection 61.2 (1) of the Fisheries Act)."</p> <p>d. The Draft IA report identifies that the Williams Treaties FN reported American Eel https://www.dfo-mpo.gc.ca/species-especies/publications/sara-lep/eel-</p>	<p>with the Regulation, the Project Team completed an update to the description of environmental conditions previously documented in the 2002 Approved Environmental Assessment (EA) for the project. This update included a review and assessment of the existing traffic conditions which was documented in the Environmental Conditions Report (ECR). The ECR was finalized in October 2022 following a public review period, and is available on the Project website.</p> <p>Significant population growth is projected for both Simcoe County and the Regional Municipality of York. Even with all currently planned transportation and transit investments, road congestion will continue to increase across the Greater Golden Horseshoe (GGH) including within the Bradford Bypass Study Area.</p> <p>The purpose of the Bradford Bypass is to relieve congestion on existing local roads between Highway 400 and Highway 404 and provide a northern freeway connection between Highways 400 and 404.</p> <p>Modeling results demonstrated that under the No Build (no Bradford Bypass) scenario, local roads were forecasted to exceed capacity by 2031 but saw significant relief under the Build (with Bradford Bypass) scenario. Alternative alignments for the Bradford Bypass were then compared within the model, including the 2002 Approved EA alignment and interchange locations and an updated preferred interchange location alternative developed by the Project Team.</p> <p>On average, between the various origin-destination pairs using the Bradford Bypass, drivers in the peak direction during the peak period, would save up to 73% or 33 minutes of travel time when connecting between Highway 400 and Highway 404 compared to existing routes in the No Build scenario.</p> <p>The development of the analysis and key results from the Traffic Study have been summarized in the Draft Environmental Impact Assessment Report and the Updated Draft Environmental Impact Assessment Report (EIAR), which were available for public review and comment from June 1, 2023 to June 30, 2023 and July 14, 2023 to August 14, 2023, respectively. The information in the draft EIAR includes the origin and destination locations that were reviewed to determine the average travel time savings during the AM and PM peak hours. Similar to the</p>

					<p>anquille/index-eng.html and Northern Sunfish in the Holland River. This must be further investigated with new fieldwork. The American Eel is in decline and gets Federal protection. Ontario's Species at Risk legislation doesn't work anymore so it's all up to the Federal enforcement.</p> <p>i. What is Ontario going to do to stand by Canada's obligations to First Nations treaty and consultation rights?</p> <p>j. Will the American Eel's presence be investigated with new fieldwork?</p> <p>6. There are many concerns related to surface water and groundwater.</p> <p>a. Please confirm our understanding that there has been no discussion of, and that there are no studies looking at impacts to Lake Simcoe.</p> <p>b. The Groundwater Protection and Well Monitoring plan, which this Draft IA refers to, discusses the need to dewater the site for the building of piles for the elevated bridge sections of the highway. The Draft IA report says, "Construction dewatering activities have been identified as the primary risk to groundwater fed water wells in the Study Area," p 295. There is no credible groundwater protection plan. There are many suggestions for how to keep it clean but there are few to no commitments.</p> <p>c. HOW exactly is the province (MoECP) going to monitor groundwater discharges to ensure they meet Ontario's water quality standards?</p> <p>d. What penalties are contractors going to face for violating the discharge requirements?</p> <p>e. If penalties are not enough to compel adherence, what next?</p> <p>f. How is the public to have confidence that contaminated water will not be discharged to the Holland Rivers and Lake Simcoe?</p> <p>g. Please confirm if monitoring will continue, or not, as this statement is totally vague: "It is expected that each unassessed monitoring well will continue to be monitored</p>	<p>process undertaken for MTO preliminary design studies, the Traffic Study will be finalized upon study completion and will be available if requested.</p> <p>a. Please share the links and the methodology, transparently, so that people can understand what travel time savings MTO is referring to. We have absolutely no idea because your write up is incredibly vague about the start and end of the routes used for analysis.</p> <p>b. What year do your studies indicate that the Bypass will be congested at peak rush hour times?</p> <p>As detailed in the Draft EIAR (Section 2.4.1), an Aimsun model was created to assess the existing traffic conditions for the road network in the Study Area. The model study area encompasses the Highway 400 corridor from south of Simcoe County Road 88 to north of Highway 89, as well as the Highway 404 corridor from south of Green Lane East to its terminal at Woodbine Avenue (Table 4-3 and 4-4 of the Draft EIAR).</p> <p>The model for this area was developed using pre-pandemic traffic volumes to identify peak hour volumes within the Study Area. This model has been calibrated and validated as it closely resembled actual operating conditions.</p> <p>As detailed in Section 4.4 of the Draft EIAR, traffic is assessed through modelling to identify Level Of Service (LOS). Having confirmed the model was consistent with current (base) conditions, and therefore appropriate to assess future conditions and design alternatives, the model was used to assess LOS under future 2031 and 2041 conditions. To assess future conditions, the model was updated to include all road network and transit improvements planned within the Study Area, and, forecast traffic volumes based on the projected growth within the Study Area.</p> <p>The alternative Build scenarios showed the mainline operations on the Bradford Bypass in 2031 would operate at acceptable LOS D in the interim four lane configuration. The model indicates that by expanding to the ultimate 8</p>

					<p>and assessed during the subsequent detail design phase of the project" P. 79.</p> <p>h. Explain what kind of environmental impact would make this project stop; or is any impact acceptable?</p> <p>i. Please confirm that the only financial support for affected well owners whose water quality is affected by the construction is the province providing them with a temporary water supply until the well owner fixes their well.</p> <p>i. Does this meager bit of help get extended to those who did not provide baseline information about their well water?</p> <p>i. Is there any effort being made to reach more than 12% of respondents to MTO's well water survey?</p> <p>7. How much is this project going to cost?</p> <p>8. When will the Bradford Bypass be completed?</p> <p>9. It is unclear how many lanes are being constructed at which times. Please clarify.</p> <p>10. There is no cumulative health impact assessment to understand how traffic related air pollution, known to increase risks of cancers, leukemia, heart and lung disease, will impact the communities surrounding the route. There is also no mention of the cumulative impacts on our climate from construction and higher rates of car travel on this highway.</p> <p>a. How will you be informing people living along the route about the increased risk of traffic related air pollution and its effects on human health?</p> <p>b. Will you put air quality monitors in Bradford?</p> <p>c. How do you explain the fact that you are NOT monitoring air quality in Bradford, and using the closest site, Newmarket?</p>	<p>lane configuration (implementing another general purpose lane and an HOV lane in each direction by 2041), LOS on the mainline improves to LOS B or C and accommodates the additional traffic forecast by 2041.</p> <p>For further information about the Traffic Study please refer to the response to Question #3 and Section 4.4 of the Updated Draft EIAR.</p> <p>4. The Draft Environmental Impact Assessment report shows on pg. 212 the Bypass touching the southern portion of the Lower Landing (AKA BaGv-42), a significant historical and archaeological site at a significant meander on the East Holland River. MTO has moved the highway 150 m to the south of the technically preferred route, which would have completely run over the Lower Landing (pg 148). But the Draft IA states, "the southern portion of the site ... will be impacted by construction" (pg 395). The Draft Environmental Conditions Report indicated that a Stage 3 archaeological assessment "was required" (pg 225); the Draft IA report says that the Stage 3 was completed, and that Stage 4 is required. The Project team's website says, "Currently, additional archaeological investigations are being completed to finalize the impact assessments in accordance with Ontario Regulation 697/21 and are not included in this posting. This information will be available for additional public and Indigenous community review once completed." So the archeological work is not finished. And yet the route has been chosen. Property owners near the history-rich Lower Landing that are receiving expropriation notifications. We are staunchly opposed to this violation of this site particularly absent the stage 4 evaluation of the Lower Landing and the endorsement of the First Nations.</p> <p>a. As stewards of these lands and water for time immemorial, additional time should be given to allow First Nation community members to fully digest the lengthy report. Georgina Island First Nation asked that this site be avoided in</p>

					<p>d. The Final Environmental Conditions Report identified numerous planned residential developments right beside the highway, including a planned new school. Have the land owners / developers / school boards received any information that tells them how bad the air quality is going to be there?</p> <p>11. Traffic modeling to produce the air dispersion model is not robust or transparent. In order to understand traffic related air pollution, relevant vehicle types and assumptions need to be used. The air dispersion modeling report simply indicates that MOVES3 default data was used - but the EPA has emphasized the need to include relevant vehicle type inputs into the model.</p> <p>The air modeling report and supporting reports fail to disclose the % of diesel truck traffic, or the component of that traffic that includes trucks dating from 2006 or earlier which comprise a significant component of air pollution load. The air dispersion modeling report states that the vehicle type distributions were based on MOVES3.0 default database inputs even though there are no such inputs. It also says that the 24 hour traffic distribution was assumed to be equal to the AADT distribution. However the consultant appeared to use different AADT distributions for different scenarios without explanation and the distributions differed significantly as between build and no build scenarios. Mitigation in the form of frequent diesel heavy truck vehicle emission inspections should be included as a mitigation measure to ensure that newer vehicle emissions systems are not being tampered with. The air dispersion modeling report indicates that ethanol based fuels were excluded even though this goes against</p>	<p>1998, 25 years ago, stating, "It is obvious that there are other routes, which can be used to connect these major highways, and we hope that another will be selected." Is Ontario still ignoring this request.</p> <p>b. Have First Nations be consulted about this part of the plan? Please provide written evidence of their approval of this route.</p> <p>Field investigations for Stage 2 and Stage 3 works have been completed and additional details are included in the Updated Draft Environmental Impact Assessment Report available on the Project Website (https://www.bradfordbypass.ca/study-process/) for public review until August 14, 2023.</p> <p>The required Stage 4 Archaeological Assessment of BaGv-42 will be completed during future phases of work for the project and will be carried out in accordance with the Ministry of Citizenship and Multiculturalism Standards and Guidelines for Consultant Archaeologists (Ontario Government 2011). No ground disturbing activities will occur at this site until the Stage 4 assessment has been conducted.</p> <p>In accordance with Ontario Regulation 697/21, the Project Team completed site specific Stage 3 archaeological assessments for areas within the Study Area that were identified as having archaeological potential in accordance with the Stage 2 archaeological assessments.</p> <p>It is common practice for Stage 4 archaeology work to be completed during Detail Design. Limiting the impact to Stage 4 archaeological sites where feasible is one of the Project Team's main priorities. As a result, the Project Team will determine the exact impact limits to archaeological sites during subsequent design phases of the project. To avoid unnecessary excavation, the Project Team will then undertake the Stage 4 archaeological assessments. Any Stage 4 field work that will be undertaken must engage interested Indigenous communities.</p>

					<p>EPA recommendations for using the model. The report lacks transparency about assumptions made about future vehicle fleet characteristics for both passenger vehicles and heavy trucks.</p> <p>The comparison of build with no-build is not valid because the values in Appendix E of the traffic modeling report show that there was an erroneous assumption that there would be significantly less truck traffic in the build scenario compared to the no-build scenario. There is no valid scientifically-based justification for this. Further, if there is an increase in truck traffic along 404 - as the model predicts - then sensitive receptors along highway 404 need to be included in a health impact study. Instead, impacts on traffic along the 400/404 corridors were excluded and the "air quality study area" was restricted to the bypass corridor itself without any explanation or justification.</p> <p>It is egregious that MTO did not conduct locally relevant air quality monitoring for background in Bradford, River Drive Park, Queensville and along the 404/400 corridors for traffic related air pollutants. Such baseline monitoring is generally inexpensive and could have been easily obtained. Using existing monitors in Innisfil, Newmarket and other distant and irrelevant locations is not justifiable. For the air dispersion modeling, MTO appears to be relying on these distant locations (eg. Egbert) for preparation of the wind rose as well, even though meteorological conditions in the study area may be markedly different. MTO also did not identify numerous recreational and daycare facilities adjacent to the Bradford Bypass corridor which were identified by Simcoe County Greenbelt Coalition. The study</p>	<p>As recommended by the cultural heritage resource assessment undertaken by the Project Team, the Holland River watershed was identified as a Cultural Heritage Landscape requiring further research and evaluation to determine if it possesses cultural heritage value or interest. This further assessment will be completed in a Cultural Heritage Evaluation Report (CHER), and if the CHER determines that the Holland River Watershed meets the criteria in Ontario Regulation 9/06 or Ontario Regulation 10/06 of the Ontario Heritage Act, and may be adversely impacted by the Updated Technically Preferred Route, a Heritage Impact Assessment will be prepared to fully assess impacts on the resource's identified heritage attributes and propose alternatives and mitigation to conserve the property's Cultural Heritage Value or Interest. These commitments are included in Section 5.3.2 of the Updated Draft EIAR.</p> <p>Consultation is an integral component of the Preliminary Design stage, the project-specific assessment of environmental impacts process, and for future project phases, and is critical to a project's success. The ministry is actively consulting and engaging with Indigenous communities throughout the Bradford Bypass Project.</p> <p>The Project Team is engaging with and considers input provided by the following Indigenous communities:</p> <ul style="list-style-type: none"> - Alderville First Nation - Beausoleil First Nation - Chippewas of Georgina Island First Nation - Chippewas of Rama First Nation - Curve Lake First Nation - Hiawatha First Nation - Mississaugas of Scugog Island First Nation - Kawartha Nishnawbe First Nation - Georgian Bay Métis Council, and - Huron-Wendat Nation <p>Comments from Indigenous communities are accepted at any time in the study process.</p> <p>5. Table 2-2 lays out the 12 species present or very likely to be present. For instance, Blandings Turtles are likely affected as they are likely in the area. The only commitment we see is to do a detailed study later on. This is a good</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIAR Edits Required? (Yes/No? If yes specify edits)
					<p>did not include the cumulative effects of future planned industrial uses along the Bypass corridor and along the 400/404 corridor which may significantly impact people's health along the route. The evaluation did not use 2022 World Health Organization criteria for contaminants which are much lower and more up-to date than the CAAQS or the AAQCs. We disagree that the AAQCs and CAAQS represent the "lowest concentrations at which an adverse effect may be experienced" as they are not based on up-to-date understandings of the health impacts of air contaminants including pre-term births and neurodevelopmental and other impacts. These are described in the report by the Canadian Association of Physicians for the Environment (April 2022) Mobilizing Evidence report. The report predicts significant exceedances for NO2 and benzo(a)pyrene even with the apparently non-conservative assumptions for diesel truck traffic used in the full build out scenario compared to the no-build scenario. The adverse health impacts of NO2 exceedances may be extremely severe and will impact on the <i>Charter</i> rights and human rights of residents in the study area and beyond without justification for the need for the project.</p>	<p>example of study following decision or destruction, and is in violation of the standard EA practices. There are no commitments to the protection of species at risk in this document.</p> <p>Targeted surveys for all species at risk with potential to occur in the Study Area will be required during future phases of work. These future studies will inform the need for any permits, authorizations, mitigation or compensation under the Endangered Species Act.</p> <p>The Updated Draft EIAR requires consideration and review of all recommendations throughout the corridor during future phases of work. This approach is necessary and standard practice for planning projects in that design is an iterative approach and this project is only completing design to a preliminary level. During future phases of work, additional design will be completed and may include refinements to the design as details are developed with greater accuracy. Limiting the future design phases by making certain elements of the project non-discretionary at the preliminary design stage limits the potential for future work to explore opportunities for further reducing impacts and / or increasing mitigation and offsetting measures.</p> <p>For Blanding's Turtle specifically, candidate habitat associated with the Holland River and Holland River East Branch open water and wetland communities has been identified within the Study Area. Blanding's Turtle may be impacted while moving in between habitats if these species enter the construction work area.</p> <p>As part of this phase of the project, preliminary mitigation and avoidance measures for the potential impacts to turtles are included in the Draft EIAR and include:</p> <ul style="list-style-type: none"> If stockpiles of gravel and sandy substrates or the removal of these substrates in the vicinity of turtle habitat are required during the active turtle season (April 1 to October 15), turtle exclusion fencing should be installed in accordance with the Reptile and Amphibian Exclusion Fencing Best Management Practices (Ministry of the Environment, Conservation and Parks, 2020) around stockpiles or area of disturbance prior to April 1. Fencing should be installed immediately after stockpiles are created if after April 1.

					<p>Figure 6-1: Inconcentration Contours for NO₂ in the Future No-Build Scenario</p>  <p>Figure 6-2: Inconcentration Contours for NO₂ in the Future No-Build Scenario</p>  <p>Source: Air Quality Impact Assessment Report - AECOM.</p> <p>The Air Quality Impact Assessment concluded that: Impacts from the Future Build Conditions with the new Bradford Bypass on a cumulative basis within the Air Quality Study Area increases in comparison to a No-Build scenario for several contaminants and their respective averaging periods. This is predominately due to increased traffic along the Bradford Bypass, where in a No-Build scenario this traffic is dispersed along Holland Street and Bridget Street and within communities to the south of the Air Quality Study Area (for example, demonstrated in the traffic reporting related to this project). This included significant increases in NO₂, SO₂, PM_{2.5}, Acetaldehyde, Benzo(a)pyrene, and formaldehyde and some increases in CO. Maximum concentrations which are relevant for acute events also show significant increases, for example a 49% increase in SO₂ and more than 50% increases in fine and large particulates, acetaldehyde, formaldehyde etc. for</p>	<ul style="list-style-type: none"> It is recommended that culverts be designed to provide openness ratios that would allow for the passage of small mammal and/or herpetofauna where possible. An openness ratio of 0.4 would permit usage by medium-sized mammals, while the minimum openness ratio to be considered should be 0.25, which would permit usage by reptiles such as turtles (Credit Valley Conservation, 2017). Avoid work within areas of candidate turtle overwintering habitat during the turtle overwintering period (October 31 to April 1), whenever possible. <p>These preliminary mitigation measures will be further refined as the project proceeds to Detail Design and impacts are assessed in more detail.</p> <p>For further detail on potential impacts to Species at Risk and proposed mitigation and avoidance measures, please refer to Section 5.1.1 of the Draft Environmental Impact Assessment Report.</p> <ol style="list-style-type: none"> The Draft IA report identifies that the Williams Treaties FN reported American Eel and Northern Sunfish in the Holland River. This must be further investigated with new fieldwork. The American Eel is in decline and gets Federal protection. Ontario's Species at Risk legislation doesn't work anymore so it's all up to the federal enforcement. What is Ontario going to do to stand by Canada's obligations to First Nation treaty and consultation rights? Will the American Eel's presence be investigated with new field work. <p>It was noted in discussion with William Treaties First Nations on December 1, 2022, that they had observed both American Eel (<i>Anguilla rostrata</i>; Endangered Species Act – Endangered, Species at Risk Act – Not at Risk) and Northern Sunfish (<i>Lepomis peltastes</i>; Endangered Species Act – Special Concern, Species at Risk Act – Special Concern) in the Holland River.</p>

					<p>critical receptor number 19 (other receptors' models were not displayed in a comparable manner). The results indicated that for NO₂, 1 hour averages 80% of the hours in the future build scenario would have a cumulative concentration above the CAAQS limit of 79 ppm and a 100% of hours would exceed the AAQC for benzo(a)pyrene.</p> <p>In relation to GHGs, the MTO failed to incorporate induced demand in the future build scenario to calculate additional vehicle kilometers traveled that would be induced by the highway, and failed to give a transparent total vehicle assumption or a vehicle emissions factor. In any event the air quality impact assessment predicts that the proposed highway would be a significant contributor to regional GHG emissions even without incorporating the effect of induced demand. No mitigation measures are proposed to address the increase in greenhouse gas emissions from the project which will contribute to catastrophic climate disaster for all of humanity and the planet.</p> <p>12. Many less expensive alternatives to this highway have not been considered. The Minister approved Terms of Reference for the Bradford Bypass Environmental Assessment Study overrode the requirements of the Environmental Assessment act to consider road alternatives that would not be a controlled access highway. As a result, the Hwy 9 / Green Lane corridor was the only existing roadway that was considered as a reasonable alternative. That roadway was rejected as it was not considered feasible to convert it to a controlled access facility. Consideration of these types of</p>	<p>Subsequently, the Project Team consulted with the Ministry of the Environment, Conservation and Parks, in March 2023 and was advised that the Ministry of Environment, Conservation and Parks records have no documented observations of the American Eel or Northern Sunfish in the Study Area. They also noted that the Northern Sunfish is a species of special concern and does not have a permitting status with the Ministry of the Environment, Conservation and Parks, and therefore would not be reported. These discussions with Williams Treaties First Nations and MECP have been documented in the Fish and Fish Habitat Report and Section 2.1.2 of the Updated Draft EIAR.</p> <p>No records of aquatic Species at Risk that are afforded protection under the Species at Risk Act or Endangered Species Act are known to occur in the watercourses where culverts are anticipated to be installed. AECOM ecologists conducted a detailed fish and fish habitat assessment of the water features in the vicinity of the Study Area between September 14-18, 2020, with spring field investigations occurring over multiple days in June 2021. Field investigations were also completed in the spring of 2022 due to changes to the Study Area boundary that required further review for potential fish habitat. Based on these investigations, no Species at Risk were discovered in the Study Area. Regardless, the presence or absence of all aquatic Species at Risk will be re-confirmed in subsequent design phases through additional field investigations.</p> <p>6. Please confirm our understanding that has been no discussion of, and that there are no studies looking at impacts to Lake Simcoe.</p> <p>As the project falls within the jurisdiction of the Lake Simcoe Region Conservation Authority (LSRCA), pertaining to Ontario Regulation 179/06, the ministry has assessed impacts with respect to the <i>Lake Simcoe Protection Act</i> and the Lake Simcoe Protection Plan through consideration of water quality and quantity, stormwater management, groundwater management, landscaping and ecological restoration measures; as well as fluvial geomorphological designs for watercourses, erosion and sediment control and spills prevention and protection measures.</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIAR Edits Required? (Yes/No? If yes specify edits)
					<p>alternatives are, however, a requirement for all Class EA Studies.</p> <p>A major condition of the 2002 Bradford Bypass EA Approval, was a requirement to conduct a Class EA Study at the time MTO wished to proceed with this project. This study would ensure the currency of the proposed project in light of current travel demand, previously unforeseen environmental factors, new legislation and a full review of all reasonable alternatives including combinations of regional and local roadways.</p> <p>The following are reasonable alternatives that would need to be considered both individually and in combination with one or more other reasonable alternatives if the Class EA Study that was underway at the time Regulation 697 /21 was issued had not been terminated. Each of these proposed alternative solutions would then be evaluated against the then approved Bradford Bypass 4 lane controlled access freeway. Because the Class EA Study was canceled by this regulation, the only comparison AECOM have used throughout the Draft Impact Assessment Report is "Do Nothing". Given that the actual travel problem we are now faced with is local, rather than long distance traffic, we are confident one or more of the following reasonable alternatives would be dramatically preferable to the now 8 lane, Bradford Bypass.</p> <p>Alternatives to the Bradford Bypass:</p> <ol style="list-style-type: none"> Construct a 4 lane arterial road bridge over the West Branch of the Holland River at the currently planned location for the Bradford Bypass bridge – together with paved 4 lane roadways to both Bathurst St. and a connection to Bradford's 8th Line. 	<p>a. The Groundwater Protection and Well Monitoring plan, which this Draft IA refers to, discusses the need to dewater the site for the building of piles for elevated bridge sections of the highway. The Draft IA report says, "Construction dewatering activities have been identified as the primary risk to groundwater fed water wells in the Study Area." There is no credible groundwater protection water. There are many suggestions for how to keep it clean but there are few to no commitments.</p> <p>Commitments, preliminary mitigation measures and monitoring activities related to groundwater are documented in Section 5.1.4 of the Draft EIAR, and will be carried forward to subsequent phases of the project.</p> <p>The risk of spills during construction of the project will be primarily limited to petroleum products from machinery (fuels and lubricants). The use of best management practices for handling of hydrocarbons according to the Ministry of Environment, Conservation and Parks and the Technical Standards and Safety Authority of the Ministry of Government Services will reduce the potential of environmental adverse effects associated with petroleum product handling and uses. Spillage of petroleum products must be immediately remediated according to these standards such that groundwater quality is not impacted.</p> <p>Mitigation plans will be generated during future phases of work for the project and for any excavation and structure construction within areas of medium to high significant groundwater recharge areas as shown near the Holland River and Holland River East Branch. Mitigation plans would be specific to each excavation and structure construction and include erosion and sediment control, dewatering treatment and discharge piping away or towards from Significant Groundwater Recharge Areas, or municipal sewer discharge requirements. Dewatering discharge shall be directed away from Well Head Protection areas if excavation and dewatering activities are occurring within them.</p>

					<p>2. Build a 4 lane arterial road bridge over the Holland River from Ravenshoe Road to connect with Simcoe Line 13 or another appropriate east – west arterial road on the west bank of the Holland River.</p> <p>3. Extend and widen Green Lane to 6 lanes and create a diagonal transition from Green Lane to Hwy 9 and highway bridge intersection with Highway 9 around Dufferin St. The Green Lane / Highway 9 option will better serve and reduce both local and long distance traffic from Newmarket south to at least Aurora Sideroad.</p> <p>Any one or a combination of these alternatives will address a substantial amount of local travel problems while being significantly less costly and environmentally invasive.</p> <p>As you can see, there are a lot of questions and concerns surrounding the approach the province is taking. It's too much money to spend on an unjustified project that will have significant environmental impacts!</p> <p>We look forward to hearing back from the project team with answers to our questions. We are concerned residents and stakeholders, [REDACTED]</p>	<p>For more information about the Groundwater Protection and Well Monitoring Plan please refer to Section 5.1.4 of the Updated Draft EIAR.</p> <p>b. How exactly is the province going to monitor groundwater discharges to ensure they meet Ontario's water quality standards?</p> <p>c. What penalties are contractors going to face for violating the discharge requirements?</p> <p>d. If penalties are not enough to compel adherence, what next?</p> <p>e. How is the public to have confidence that contaminated water will not be discharged to the Holland Rivers and Lake Simcoe?</p> <p>f. Please confirm is monitoring will continue or not, as this statement is totally vague: "It is expected that each unassessed monitoring well will continue to be monitored and assessed during the subsequent detail design phase of the project."</p> <p>The Groundwater Monitoring Program includes groundwater level monitoring and groundwater quality monitoring to establish the pre-construction baseline conditions for comparison of data collected during and post-construction.</p> <p>During the Preliminary Design study, Golder Associates Ltd. (Golder) installed monitoring wells during the ongoing geotechnical investigations. Monitoring is expected to be completed within these same monitoring wells during all future phases of work for the Project, including construction. Residential monitoring wells will also be part of this program if they fall within the Radius of Influence of the excavation dewatering and permission to enter is granted to gain access to monitor the well. Detail Design will inform the need for further groundwater investigations.</p> <p>Penalties for discharging any deleterious substance or material to the lands will vary based on the federal, provincial or municipal legislation that might be violated. Beyond legislated penalties, contractor behavior</p>

						<p>is monitored by the Ministry and poor behavior may result in additional financial or reputational impacts. The Ministry's process for selecting contractors to support future phases of the work for the project also includes consideration of past performance and assessment of the contractors understanding of the project and sensitivities within the Study Area. Commitments, preliminary mitigation measures and monitoring activities related to groundwater are documented in Section 5.1.4 of the Draft EIAR, and will be carried forward to subsequent phases of the project.</p> <p>g. Explain what kind of environmental impact would make the project stop; or is any impact acceptable?</p> <p>This government takes environmental protection seriously and is implementing a path forward that will ensure environmental protections are not compromised while building this much needed project quickly and safely. Current work on the Bradford Bypass project will continue to be subject to all conditions under Ontario Regulation 697/21.</p> <p>In accordance with Ontario Regulation 697/21, the Project Team has undertaken several environmental impact assessments to identify and document the potential impacts, proposed mitigation measures, and environmental commitments, which are summarized in the Environmental Impact Assessment Report (EIAR).</p> <p>The Ministry of Transportation must also comply with all current federal and provincial environmental requirements. This includes consultation as set out in the regulation and obtaining permits and approvals for the project prior to the start of construction. Obtaining these permits and approvals, which are mechanisms to help protect the environment, confirms that the ministry has met or surpassed the environmental requirements.</p> <p>h. Please confirm that the only financial support for affected well owners whose water quality is affected by the construction is the province providing them with a temporary water supply until the well owner fixes their well.</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIAR Edits Required? (Yes/No? If yes specify edits)
						<p>i. Does this meager bit of help extend to those who did not provide baseline information about their well water?</p> <p>j. If there any effort being made to reach more than 12% of respondents to MTO's well water survey?</p> <p>MTO will work with owners of water wells who experience issues to determine if the issue is the result of Bradford Bypass project activities.</p> <p>If the well issue is confirmed to be a result of the project's activities, the Ministry will provide a letter to the property owner explaining the outcome of the well investigation and detail the recommended mitigation measures (including lowering / replacement of pump inlet, well rehab, new well installed or local watermain connection if available) the Ministry will undertake to remediate the issue. A temporary drinking water supply will be provided and connected to the resident if the project activities are found to be responsible, at the expense of the Ministry, until remediation measures have resolved the issue.</p> <p>A water well survey was completed for the project to determine the pre-construction assessment of private well supplies in the vicinity of the Study Area noted above. Where no response was provided from Property Owners as part of the water well survey, an additional attempt shall be undertaken during Detail Design to contact these owners via mail, email, phone calls, site visit, etc. This information will be used to provide a baseline for water wells prior to the proposed construction to determine existing water quality and quantity of each property.</p> <p>7. How much is this project going to cost?</p> <p>As we bring this project to market, we want to ensure we can retain the best value for the project. As such, the ministry will not be releasing cost estimates prior to the award of contracts to protect the procurement processes.</p> <p>8. When will the Bradford Bypass be completed?</p> <p>The Preliminary Design phase is anticipated to be completed in 2023. Detail Design and Construction Phases will follow.</p>

						<p>9. It is unclear how many lanes are being constructed at which times. Please clarify.</p> <p>The Ontario government is committed to fully funding the construction of the Bradford Bypass and is following through on its promise to improve and invest in the province's transportation corridors to get people moving within the region, connect people to jobs, make life easier and support a strong economy.</p> <p>A four-lane configuration is planned to be constructed first with two general purpose lanes in each direction. To plan for the future, the Ministry is also considering the design of an ultimate eight-lane design for the Bradford Bypass. The ultimate, eight-lane configuration for the project will feature three general purpose lanes and one HOV lanes in each direction.</p> <p>10. There is no cumulative health impact assessment to understand how traffic related air pollution, known to increase risks of cancers, leukemia, heart and lung disease, will impact the communities surrounding the route. There is also no mention of the cumulative impacts on our climate from construction and higher rates of car travel on this highway.</p> <ol style="list-style-type: none"> How will you be informing people living along the route about the increased risk of traffic related air pollution and its effects on human health? Will you put air quality monitors in Bradford? How do you explain the fact that you are NOT monitoring air quality in Bradford, and using the closest site, Newmarket? The Final Environmental Conditions Report identified numerous planned residential developments right beside the highway, including a planned new school. Have the land owners / developers / school boards received any information that tells them how bad the air quality is going to be there? 	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIAI Edits Required? (Yes/No? If yes specify edits)
						<p>The human health scoping implications of the project such as air quality, noise, land use, traffic congestion and safety, economic, social cohesion, and neighborhood resources have been summarized in Section 2.2.7 and Section 5.2.7 of the Draft EIAI. To better understand the human health implications due to the Project as a next step, it is recommended for MTO to continue to consider the human health factors identified in this report and provide recommendations to enhance potential positive impacts and mitigate potential negative health impacts. Specifically, conducting a Screening-Level Human Health Risk Assessment of potential air quality impacts is recommended in order to evaluate and characterize Project-related air quality impacts to health.</p> <p>The project has undertaken an Air Quality Impact Assessment to explore pollutant emissions and dispersion modelling in an effort to predict the contribution of the project to future ambient pollutant concentrations. This contribution, added to background concentration levels, allows prediction of the cumulative impact of the proposed project and all other contributors to air pollution. Concentration levels are compared to provincial and federal ambient air quality criteria and standards to assist in the evaluation of project-specific mitigation needs and options.</p> <p>Areas of concentrated emission impact are influenced by traffic volumes along a given segment of roadway. The implementation of the Bradford Bypass is expected to redistribute traffic from local roads and freeway corridors surrounding the proposed Bradford Bypass. Reductions in traffic volumes are observed on corridors including Highway 11/1 (Bridge Street), Bathurst Street, Holland Landing Road, Yonge Street, Queensville Sideroad, Doane Road, Mount Albert Road, Green Lane, and Simcoe County Road 88/Holland Street, among other roads, which benefits the community of Bradford, Town of Bradford West Gwillimbury, by alleviating congestion during peak hours.</p> <p>The Project Team is currently utilizing the National Air Pollution Surveillance air quality monitoring stations to assess air quality levels. Five years of existing data sets were analyzed from stations within the region, and the complete data set from the closest station or most</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIAR Edits Required? (Yes/No? If yes specify edits)
						<p>representative station for each contaminant of concern was selected to represent the background air quality for the Study Area. Due to the proximity of the Study Area to the Toronto Area, monitoring stations within the City of Toronto were given preference as the one of the most representative locations for the air quality contaminants of concern. As such, Roadside Wallberg – University of Toronto monitoring station, North Downsview monitoring station, Gage Institute monitoring station (all located approximately 38 – 53 km from the Study Area) were used. The nearest monitoring station is in Newmarket. Additional information regarding the assessment of potential air quality impacts have been summarized in Section 2.2.4 and Section 5.2.4 of the Draft EIAR.</p> <p>Land has been designated for the Bradford Bypass since the 2002 Approved EA was completed. As noted above, consultation is an integral component of the Preliminary Design stage and project-specific assessment of environmental impacts and is critical to a project's success. The ministry is actively consulting and engaging with private landowners, developers and school boards within the Study Area. Engagement and consultation has included having a project website and telephone line, having a project contact list for regular project updates, providing notices and correspondence via email, mail, and Ontario Government Notices in local newspapers, hosting public information centres and online events, and holding meetings with Indigenous communities, municipalities, environmental agencies, and stakeholders. More information on the project consultation activities are included in Section 7 of the Updated Draft EIAR.</p> <p>11. Traffic modeling to produce the air dispersion model is not robust or transparent. The air modeling report and supporting reports fail to disclose the % of diesel truck traffic, or the component of that traffic that includes trucks dating from 2006 or earlier which comprise a significant component of air pollution load. The comparison of build with no-build is not valid because the values in Appendix E of the traffic modeling report show that there was an erroneous assumption that there would be significantly less truck traffic in the build scenario compared to the no-build scenario.</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIA Edits Required? (Yes/No? If yes specify edits)
						<p>There is no valid scientifically-based justification for this. Further, if there is an increase in truck traffic along 404 - as the model predicts - then sensitive receptors along highway 404 need to be included in a health impact study. Instead, impacts on traffic along the 400/404 corridors were excluded and the "air quality study area" was restricted to the bypass corridor itself without any explanation or justification. It is egregious that MTO did not conduct locally relevant air quality monitoring for background in Bradford, River Drive Park, Queensville and along the 404/400 corridors for traffic related air pollutants. Such baseline monitoring is generally inexpensive and could have been easily obtained. The study did not include the cumulative effects of future planned industrial uses along the Bypass corridor and along the 400/404 corridor which may significantly impact people's health along the route. The evaluation did not use 2022 World Health Organization criteria for contaminants which are much lower and more up-to-date than the CAAQS or the AAQCs. We disagree that the AAQCs and CAAQS represent the "lowest concentrations at which an adverse effect may be experienced" as they are not based on up-to-date understandings of the health impacts of air contaminants including pre-term births and neurodevelopmental and other impacts. The report predicts significant exceedances for NO₂ and benzo(a)pyrene even with the apparently non-conservative assumptions for diesel truck traffic used in the full build out scenario compared to the no-build scenario. The adverse health impacts of NO₂ exceedances may be extremely severe and will impact on the Charter rights and human rights of residents in the study area and beyond without justification for the need for the project.</p> <p>Study Area, MOVES3 data, vehicles and assumptions: In order to model relevant vehicle types within the Air Quality Impact Assessment Study Area, MOVES3 data was input to the model and refinements were made to exclude fuel types such as ethanol given these fuels are</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIAR Edits Required? (Yes/No? If yes specify edits)
						<p>not readily available for use in Ontario. Fuel inputs utilized in MOVES3.0 modelling at the time of the assessment included: Fuel Type IDs 1, 2, 3 and 9. ID 5 (ethanol) was not included as flex fuel cars and fuelling stations are not readily available in Ontario. The specific source type fractions utilized for various vehicle types applied within the project study area and the related fraction of expected vehicle usage for both passenger-class vehicles and heavy-class vehicles, including the distribution of vehicle types in the heavy truck vehicle category, were combined to create representative vehicle emission for vehicle class that can reasonable be expected to be in use in 2041.</p> <p>Highway 400/404 corridors were included in the Air Quality Impact Assessment. The full air quality study area is shown in Figure 2-9 of the Updated Draft EIAR and demonstrates that the air quality study area included emission sources within the boundary of assessment, including but not limited to Highway 400 (500 m south of Rural Rd. 88 to 500 m north of Concession Rd. 11), Highway 404 (500 m south of Queensville Sideroad E to 500 m north of Boag Road), the entirety of the proposed Bradford Bypass, Bridge Street, Holland Street W, 10th Sideroad, Young Street/Barrie Street, and Queensville Sideroad.</p> <p>Traffic distributions and truck traffic: The same Average Annual Daily Traffic (AADT) were used for all scenarios. AADT values for each air quality emission source vary between the three scenarios evaluated based on projected existing traffic within the study area, and future no-build and build traffic projections however the same 24-hour traffic distribution percentages were applied. Three representative 24-hour distribution percentages were applied to the air quality emission sources. These were applied to a given source of emission depending on the type of road in question, e.g. a "Leslie St." 24-hour distribution was applied to air quality emission sources which were categorized as community arterial roads; a "HWY 400" 24-hour distribution was applied to air quality emission sources categorized as highways; and, a "2nd Concession Rd" 24-hour distribution was applied to rural roads. These same 24-hr distributions were applied to the assigned source for all three scenarios of evaluation (existing conditions, future no-build, and future build).</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIAR Edits Required? (Yes/No? If yes specify edits)
						<p>Fuel usage distribution [i.e. diesel, gasoline, CNG, etc.] and vehicle age distribution within each vehicle type category were modelled based on MOVES3.0 default fuel use and age distribution database inputs assigned to the year of evaluation. Heavy truck traffic was included in the modelling with a percentage assigned to each air quality emission source anticipated from this vehicle type.</p> <p>Health Impacts, Critical Receptors and Background/Study Area Monitoring Data: The human health scoping implications of the project such as air quality, noise, land use, traffic congestion and safety, economic, social cohesion, and neighborhood resources have been summarized in Section 2.2.7 and Section 5.2.7 of the Updated Draft EIAR.</p> <p>The Project Team is aware some critical receptors have been identified as 'missing' by a number of stakeholders. Having reviewed the data, these 'missing' receptors were included as residences in the Air Quality Impact Assessment. Potential impacts at the 'missing' receptors within the Air Quality Impact Assessment Study Area are reflected in the assessment by other, nearby critical receptors and receptors identified on Figure 2-9 and 2-10 of the Updated Draft EIAR.</p> <p>The approach to identifying representative air quality levels is conservative and often ensures the worst-case conditions are reflected so as to not under-represent conditions within a study area; i.e. background air quality contaminant levels included within the assessment may be representative or higher than expected for the area in question.</p> <p>While it is recognized that localized in-situ monitoring may provide more accurate data, use of existing monitoring stations within the NAPS network for statistically relevant background monitoring data is a generally accepted and conservative methodology for provincial environmental impact air quality assessments. Stations selected for the background air quality assessment were chosen based on total data availability over a most recent five-year period as a minimum of 12 months of daily and hourly data is required to ensure statistical relevance. Stations were also selected based on their proximity to the air quality</p>

CT-DraftEIAR-74	To: Project Team From: [REDACTED]	Email: [REDACTED]	Draft EIAR	June 29, 2023	<p>To whom ever it may concern, I am writing today because I want to express my concern about the Bradford Bypass. Recently, the Project Team released a Draft Environmental Impact Assessment Report for the Bradford Bypass. I think you should know that there are glaring omissions and severe concerns in this report including:</p> <ul style="list-style-type: none"> Removing Greenbelt lands including Provincially Significant Wetlands from the Holland Marsh as well as some of its specialty crop areas. In fact, almost 70% of the land within the study area for this highway is prime agricultural land (class 1-3). Potential habitat destruction for twelve species at risk including the Blanding's turtle without any commitment to protect these species, their habitat or even to reduce damage. A commitment to do a future study is not good enough. Destruction and damage to a significant Indigenous site, the Lower Landing. The report outlines how a portion of this site will be impacted by construction. Georgina Island has been on record since 1998 that they want this site completely protected. This site is more significant than 95% of existing Canadian heritage sites; therefore, this site must be protected in its entirety and First Nations must be properly engaged as per the United Nations Declaration on the Rights of Indigenous People. Impacts to Lake Simcoe which have not been studied at all despite its headwaters in the Holland Marsh Wetland complex will be the receiver of pollutants and salt thanks to the Bypass. Impacts to people's health particularly around air pollution and the contamination of wells and groundwater. Considering that traffic related air pollution is well known to be a contributor to many diseases including cancers, heart disease and respiratory 	<p>Hi [REDACTED]</p> <p>Thank you for your interest in the Bradford Bypass Preliminary Design Study and project-specific assessment of environmental impacts, undertaken in accordance with Ontario Regulation 697/21.</p> <p>Please see below the responses to your questions from June 28, 2023.</p> <p>1. Removing Greenbelt lands including Provincially Significant Wetlands from the Holland Marsh as well as some of its specialty crop areas. In fact, almost 70% of the land within the study area for this highway is prime agricultural land (class 1-3).</p> <p>As part of the Preliminary Design, the Project Team considered all impacts and will continue to work with environmental agencies, municipalities, and other concerned stakeholders to identify measures to avoid or mitigate the potential impacts of placing new or expanded provincial highways within areas of the existing and enhanced Greenbelt lands.</p> <p>The Greenbelt Plan acknowledges the necessity of building infrastructure. The Plan allows for existing, expanded or new infrastructure in the Greenbelt if the infrastructure serves the significant population growth expected in southern Ontario.</p> <p>Potential impacts to agricultural lands as a result of the Project have been assessed with regards to the loss of agricultural land, loss of prime agricultural land, creation of severed parcels, and increased fragmentation of the land base on the designated agricultural lands. These potential impacts cannot be avoided. There are also potential impacts to adjacent agricultural lands and communities based on the proposed locations of the interchanges and by the proposed highway lighting.</p> <p>The first method of addressing potential impacts is to avoid the potential impact. In this study, the proposed future development of the Bradford Bypass lands will be a permanent use with portions of the Bradford Bypass being</p>	No

					<p>disease, a cumulative health impact study is required.</p> <ul style="list-style-type: none"> Increase in greenhouse gas emissions without a cumulative impact assessment on regional climate. <p>As a public official whose main concern should be public benefit I would like you to support my asks from the Ministry of Transportation:</p> <ul style="list-style-type: none"> Extend the consultation time past 30 days and give at least 120 days for the public, affected municipalities, Indigenous communities and Indigenous governments time to understand and respond to this lengthy report; Mandate a cumulative health impact assessment that will outline specifically the public health costs of this highway due to air pollution, groundwater contamination and increased greenhouse gas emissions due to induced demand; Detailed commitments on protection of species at risk and their habitat within the study area; Commitment to do further field studies about the presence of American Eel and Northern Sunfish - two species that have Indigenous significance and have not been included in your reports; Commitment to protect the Lower Landing in its entirety from any site alteration; Detailed study about the impacts this highway will have on Lake Simcoe in particular how it could impact the fisheries as well as the harvesting rights of Indigenous people and their water quality. <p>I appreciate your consideration in this matter and look forward to your response, Sincerely,</p> <p>██████████</p>	<p>located within designated agricultural areas. As a result, there will be designated agricultural lands lost due to the project, which cannot be avoided.</p> <p>When avoidance is not possible, the next priority is to minimize impacts to the extent feasible. The minimization of impacts may be achieved during the design process and through proactive planning measures that provide for the separation of land uses. The Updated Technically Preferred Route has taken into consideration the 2002 Approved Environmental Assessment by maintaining parts of the original alignment and employing similar techniques to minimize the corridor footprint and impact the fewest agricultural buildings, investment and agricultural operations, thereby minimizing the potential impacts to the agricultural land base, agricultural operations, and the agricultural system.</p> <p>When avoidance techniques and minimizing potential impact to agriculture have not achieved the desired effect the next priority is to mitigate any further impact. Potential mitigation measures may include:</p> <ul style="list-style-type: none"> The use of salt management plans to reduce the amount of salt require for de-icing The use of adequate fencing or berms and vegetated features between different land uses to reduce the potential for trespassing and potential vandalism The use of plantings/vegetation as screens and buffers to reduce visual impacts and sounds Implementation of surface and/ or groundwater monitoring in areas where agricultural operations make use of surface or groundwater as part of their normal farm practices Construct or replace agricultural buildings to mitigate the loss of agricultural buildings Provide new wells or other water access for any potential groundwater disruption <p>It should also be noted that there are opportunities for local agricultural operations with the future development of the Bradford Bypass lands. The future development of the Bradford Bypass lands will bring people closer to the agricultural areas and specialty crop areas, market garden, field vegetable areas which will result in increased</p>

						<p>potential for expanding sales of local vegetable crops from the farm markets.</p> <p>Additional details on impacts to agricultural lands and proposed mitigation measures and monitoring activities are included in Section 5.2.2 of the Updated Draft EIAR, available on the Project Website:</p> <p>https://www.bradfordbypass.ca/study-process/</p> <p>2. Potential habitat destruction for twelve species at risk including the Blanding's turtle without any commitment to protect these species, their habitat or even to reduce damage. A commitment to do a future study is not good enough.</p> <p>Targeted surveys for all species at risk with potential to occur in the Study Area will be required during future phases of work. These future studies will inform the need for any permits, authorizations, mitigation or compensation under the Endangered Species Act.</p> <p>The Updated Draft EIAR requires consideration and review of all recommendations throughout the corridor during future phases of work. This approach is necessary and standard practice for planning projects in that design is an iterative approach and this project is only completing design to a preliminary level. During future phases of work, additional design will be completed and may include refinements to the design as details are developed with greater accuracy. Limiting the future design phases by making certain elements of the project non-discretionary at the Preliminary Design stage limits the potential for future work to explore opportunities for further reducing impacts and / or increasing mitigation and offsetting measures.</p> <p>For Blanding's Turtle specifically, candidate habitat associated with the Holland River and Holland River East Branch open water and wetland communities has been identified within the Study Area. Blanding's Turtle may be impacted while moving in between habitats if these species enter the construction work area.</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIAR Edits Required? (Yes/No? If yes specify edits)
						<p>As part of this phase of the project, preliminary mitigation and avoidance measures for the potential impacts to turtles are included in the Draft EIAR and include:</p> <ul style="list-style-type: none"> • If stockpiles of gravel and sandy substrates or the removal of these substrates in the vicinity of turtle habitat are required during the active turtle season (April 1 to October 15), turtle exclusion fencing should be installed in accordance with the Reptile and Amphibian Exclusion Fencing Best Management Practices (Ministry of the Environment, Conservation and Parks, 2020) around stockpiles or area of disturbance prior to April 1. Fencing should be installed immediately after stockpiles are created if after April 1. • It is recommended that culverts be designed to provide openness ratios that would allow for the passage of small mammal and/or herpetofauna where possible. An openness ratio of 0.4 would permit usage by medium-sized mammals, while the minimum openness ratio to be considered should be 0.25, which would permit usage by reptiles such as turtles (Credit Valley Conservation, 2017). • Avoid work within areas of candidate turtle overwintering habitat during the turtle overwintering period (October 31 to April 1), whenever possible. <p>These proposed mitigation measures will be further refined as the project proceeds to Detail Design and impacts are assessed in more detail.</p> <p>For further information on potential impacts to Species at Risk and proposed mitigation and avoidance measures, please refer to Section 5.1.1 of the Draft Environmental Impact Assessment Report.</p> <p>3. Destruction and damage to a significant Indigenous site, the Lower Landing. The report outlines how a portion of this site will be impacted by construction. Georgina Island has been on record since 1998 that they want this site completely protected. This site is more significant than 95% of existing Canadian heritage sites; therefore, this site must be protected in its entirety and First Nations must</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIAR Edits Required? (Yes/No? If yes specify edits)
						<p>be properly engaged as per the United Nations Declaration on the Rights of Indigenous People.</p> <p>Field investigations for Stage 2 and Stage 3 works have been completed and additional details have been provided in the Updated Draft Environmental Impact Assessment Report.</p> <p>The required Stage 4 Archaeological Assessment of BaGv-42 will be completed during future phases of work for the project and will be carried out in accordance with the Ministry of Citizenship and Multiculturalism Standards and Guidelines for Consultant Archaeologists (Ontario Government 2011). No ground disturbing activities will occur at this site until the Stage 4 assessment has been conducted.</p> <p>As recommended by the cultural heritage resource assessment undertaken by the Project Team, the Holland River watershed was identified as a Cultural Heritage Landscape requiring further research and evaluation to determine if it possesses cultural heritage value or interest. This further assessment will be completed in a Cultural Heritage Evaluation Report (CHER), and if the CHER determines that the Holland River Watershed meets the criteria in Ontario Regulation 9/06 or Ontario Regulation 10/06 of the Ontario Heritage Act, and may be adversely impacted by the Updated Technically Preferred Route, a Heritage Impact Assessment will be prepared to fully assess impacts on the resource's identified heritage attributes and propose alternatives and mitigation to conserve the property's Cultural Heritage Value or Interest. These commitments are included in Section 5.3.2 of the Updated Draft EIAR.</p> <p>Consultation is an integral component of the Preliminary Design stage, the project-specific assessment of environmental impacts process, and for future project phases, and is critical to a project's success. The ministry is actively consulting and engaging with Indigenous communities throughout the Bradford Bypass Project.</p> <p>Comments from Indigenous communities are accepted at any time in the study process.</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIAR Edits Required? (Yes/No? If yes specify edits)
						<p>4. Impacts to Lake Simcoe which have not been studied at all despite its headwaters in the Holland Marsh Wetland complex will be the receiver of pollutants and salt thanks to the Bypass.</p> <p>As the project falls within the jurisdiction of the Lake Simcoe Region Conservation Authority (LSRCA), pertaining to Ontario Regulation 179/06, the ministry has assessed impacts with respect to the <i>Lake Simcoe Protection Act</i> and the Lake Simcoe Protection Plan through consideration of water quality and quantity, stormwater management, groundwater management, landscaping and ecological restoration measures; as well as fluvial geomorphological designs for watercourses, erosion and sediment control and spills prevention and protection measures.</p> <p>Appropriate mitigation measures to prevent salt and treated sand from entering watercourses and salt-sensitive areas will be proposed based on various factors including the use of MTO's Salt Management Plan and the Ministry of Environment, Conservation and Parks (MECP) Guidelines on Snow Disposal and De-icing Operations in Ontario. The MTO Salt Management Plan outlines salt management operational practices and strategies and Best Management Practices (BMP) in terms of equipment, best practices, materials, storage, testing, storm response, application rules, snow and ice control trainings, snow removal and disposal, and technology review. This includes implementing a balanced approach to the highway salt application based on the amount of snow precipitation and highway conditions.</p> <p>In areas that are particularly sensitive, salt management measures may be necessary to mitigate environmental effects of road salt in accordance with the study objectives utilizing the Code of Practice for Environmental Management of Road Salts released by Environment Canada. The Code of Practice for Environmental Management of Road Salts can be viewed here: https://www.canada.ca/en/environment-climate-change/services/pollutants/road-salts/code-practice-environmental-management.html.</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIAR Edits Required? (Yes/No? If yes specify edits)
						<p>In addition, snow removal and disposal will be utilized in accordance with the MECP Guidelines on Snow Disposal and De-icing Operations in Ontario. Further details on MECP's Guidelines on Snow Disposal and De-icing Operations in Ontario can be found here: https://www.ontario.ca/page/guidelines-snow-disposal-and-de-icing-operations-ontario#:~:text=Ministry%20Approval-,If%20special%20circumstances&text=As%20a%20general%20rule%2C%20the,be%20approved%20for%20direct%20disposal.</p> <p>5. Impacts to people's health particularly around air pollution and the contamination of wells and groundwater. Considering that traffic related air pollution is well known to be a contributor to many diseases including cancers, heart disease and respiratory disease, a cumulative health impact study is required.</p> <p>The human health scoping implications of the project such as air quality, noise, land use, traffic congestion and safety, economic, social cohesion, and neighborhood resources have been summarized in Section 2.2.7 and Section 5.2.7 of the Updated Draft EIAR. To better understand the human health implications due to the Project as a next step, it is recommended for MTO to continue to consider the human health factors identified in this report and provide recommendations to enhance potential positive impacts and mitigate potential negative health impacts. Specifically, conducting a Screening-Level Human Health Risk Assessment of potential air quality impacts is recommended in order to evaluate and characterize Project-related air quality impacts to health.</p> <p>The project has undertaken an Air Quality Impact Assessment to explore pollutant emissions and dispersion modelling in an effort to predict the contribution of the project to future ambient pollutant concentrations. This contribution, added to background concentration levels, allows prediction of the cumulative impact of the proposed project and all other contributors to air pollution. Concentration levels are compared to provincial and federal ambient air quality criteria and standards to assist in the evaluation of project-specific mitigation needs and options.</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIAR Edits Required? (Yes/No? If yes specify edits)
						<p>Areas of concentrated emission impact are influenced by traffic volumes along a given segment of roadway. The implementation of the Bradford Bypass is expected to redistribute traffic from local roads surrounding the proposed Bradford Bypass to the new corridor and greater freeway network. Reductions in traffic volumes are observed on corridors including Highway 11/1 (Bridge Street), Bathurst Street, Holland Landing Road, Yonge Street, Queensville Sideroad, Doane Road, Mount Albert Road, Green Lane, and Simcoe County Road 88/Holland Street, among other roads. The alleviation of traffic on local roads benefits the area including but not limited to Town of Bradford West Gwillimbury, community of Holland Landing, Town of East Gwillimbury, and northern King Township by alleviating congestion during peak hours.</p> <p>Recognizing the potential impacts to groundwater and private wells in the Study Area, the Project Team has completed and initial assessment of the groundwater and surficial soils within the Study Area and documented the findings in a Hydrogeological Data Report. In addition, a Water Well Survey was completed and included a review of available secondary should information as well as data from stakeholders in the Study Area regarding their existing water wells.</p> <p>Additional well surveys and a detailed assessment of potential groundwater interference will be completed during future phases of the project. A Construction Dewatering Plan will also be prepared to identify potential impacts to groundwater and measures to be implemented to avoid or mitigate the impacts. In addition, all groundwater taking must adhere to the municipal, regional, provincial and federal policies and any permits or approvals required for the Project will be obtained prior to construction.</p> <p>Impacts to groundwater and proposed mitigation measures and monitoring activities are also summarized in the Updated Draft EIAR (Section 5.1.4).</p> <p>6. Increase in greenhouse gas emissions without a cumulative impact assessment on regional climate.</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIAR Edits Required? (Yes/No? If yes specify edits)
						<p>The Project Team has undertaken a Qualitative Climate Change Assessment to assess potential impacts and suggest mitigation options for consideration. The assessment was completed accordance with MECP's Climate Change Guide (Considering Climate Change in the Environmental Assessment Process, 2017), and considers the project's resilience or vulnerability of the undertaking to changing climatic conditions. Findings are summarized in Section 5.2.6 of the Draft EIAR.</p> <p>7. Extend the consultation time past 30 days and give at least 120 days for the public, affected municipalities, Indigenous communities and Indigenous governments time to understand and respond to this lengthy report</p> <p>The process of planning the Bradford Bypass has included -- and will continue to include -- consultation with the public and Indigenous communities to ensure the project move forward in an environmentally responsible way that is responsive to the needs and concerns of communities.</p> <p>In accordance with Ontario Regulation 697/21, an initial Draft EIAR -- which documents the results of the studies undertaken for various environmental disciplines, proposed mitigation measures and environmental commitments to protect the environment -- was published for public review from starting on June 1 and continuing until June 30, 2023. In addition, the Ministry has been providing Indigenous communities and stakeholders various opportunities for meaningful consultation since the project was re-initiated in September 2020 including two Public Information Centres.</p> <p>Additional archaeological investigations, which are necessary to complete the impact assessment in accordance with the regulation, have recently been finalized and incorporated into an updated Draft EIAR. This updated report was posted for an additional 30-day consultation period. The Updated Draft EIAR posting includes the information from the initial draft to ensure stakeholders can review additional information in full context of the project.</p> <p>The Updated EIAR was made available on the Project website for an additional 30-day consultation period, from</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIA Edits Required? (Yes/No? If yes specify edits)
						<p>July 13, 2023 until August 14, 2023. The updated draft EIA posting includes the information from the initial draft to ensure stakeholders can review additional information in full context of the project. As the initial Draft EIA and the Updated Draft were available for public review for a total of 60 days, an extension of the public review period is not being considered at this time.</p> <p>8. Mandate a cumulative health impact assessment that will outline specifically the public health costs of this highway due to air pollution, groundwater contamination and increased greenhouse gas emissions due to induced demand</p> <p>As noted in the response to Question #5, the human health implications of the project such as air quality, noise, land use, traffic congestion and safety, economic, social cohesion, and neighborhood resources have been summarized in Section 2.2.7 and Section 5.2.7 of the Draft EIA and the Project Team will continue to evaluate and characterize project-related air quality impacts to health and provide recommendations to enhance potential positive impacts and mitigate potential negative health impacts.</p> <p>9. Detailed commitments on protection of species at risk and their habitat within the study area</p> <p>As noted above in the response to Question #2, details on Species at Risk and proposed mitigation measures and monitoring commitments are documented in Section 5.1.1 of the Updated Draft EIA.</p> <p>10. Commitment to do further field studies about the presence of American Eel and Northern Sunfish - two species that have Indigenous significance and have not been included in your reports</p> <p>It was noted in discussion with William Treaties First Nations on December 1, 2022, that they had observed both American Eel (<i>Anguilla rostrata</i>; Endangered Species Act – Endangered, Species at Risk Act – Not at Risk) and Northern Sunfish (<i>Lepomis peltastes</i>; Endangered Species</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIAR Edits Required? (Yes/No? If yes specify edits)
						<p>Act – Special Concern, Species at Risk Act – Special Concern) in the Holland River.</p> <p>Subsequently, the Project Team consulted with the Ministry of the Environment, Conservation and Parks, in March 2023 and was advised that the Ministry of Environment, Conservation and Parks records have no documented observances of the American Eel or Northern Sunfish in the Study Area. They also noted that the Northern Sunfish is a species of special concern and does not have a permitting status with the Ministry of the Environment, Conservation and Parks, and therefore would not be reported. These discussions with Williams Treaties First Nations and MECP have been documented in the Fish and Fish Habitat Report and Section 2.1.2 of the Updated Draft EIAR.</p> <p>No records of aquatic Species at Risk that are afforded protection under the Species at Risk Act or Endangered Species Act are known to occur in the watercourses where culverts are anticipated to be installed. AECOM ecologists conducted a detailed fish and fish habitat assessment of the water features in the vicinity of the Study Area between September 14-18, 2020, with spring field investigations occurring over multiple days in June 2021. Field investigations were also completed in the spring of 2022 due to changes to the Study Area boundary that required further review for potential fish habitat. Based on these investigations, no Species at Risk were discovered in the Study Area. Regardless, the presence or absence of all aquatic Species at Risk will be re-confirmed in subsequent design phases through additional field investigations.</p> <p>11. Commitment to protect the Lower Landing in its entirety from any site alteration</p> <p>In accordance with the Ministry's cultural heritage conservation process and the Ministry's obligations under the Standards and Guidelines for Conservation of Provincial Heritage Properties, 2010 (S&Gs) issued under section 25.2 of the Ontario Heritage Act (OHA) the Ministry has completed a Cultural Heritage Resource Assessment Report (CHRAR) to identify known and potential built heritage resources and cultural heritage landscapes within the Study Area, assess potential impacts and project</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIAR Edits Required? (Yes/No? If yes specify edits)
						<p>alternatives and recommend mitigations and next steps. The cultural heritage resource assessment has informed the analysis of environmental conditions undertaken for this project and recorded in the Environmental Conditions Report and the Environmental Impact Assessment Report.</p> <p>The assessment has identified the Holland River watershed as having potential cultural heritage value or Interest (CHVI). As recommended in the Environmental Impact Assessment Report (EIAR) and the CHRAR, a cultural heritage evaluation is being undertaken to determine CHVI for the property. This includes research and evaluation to determine if the property meets criteria in Ontario Regulation 9/06 and/or Ontario Regulation 10/06 of the Ontario Heritage Act to be considered a Provincial Heritage Property or a Provincial Heritage Property of Provincial Significance. Research includes, but is not limited to, review of heritage property databases, field review, archives, museums, planning offices and other facilities, archaeological reports, other relevant reports or studies, information from community engagement including input from Indigenous communities, oral histories etc. to provide the historic context of the property including the history of Indigenous communities and post-contact communities.</p> <p>For properties, including the Holland River Watershed, that are determined by the Ministry to meet the criteria in O. Reg. 9/06 or O. Reg. 10/06 of the Ontario Heritage Act and that may be adversely impacted by the Updated Technically Preferred Route, a Heritage Impact Assessment (HIA) will be prepared to fully assess impacts and propose alternatives and mitigation to conserve the property's CHVI. In accordance with F.5 of the S&Gs, and as committed in Section 5.3.2.2 of the EIAR, if the Ministry determines that a property, including the Holland River Watershed, is a provincial heritage property of provincial significance, the Ministry must obtain the consent of the Minister of Citizenship and Multiculturalism before removing or demolishing buildings or structures on the property, or before transferring the property from provincial control. The Minister of Citizenship and Multiculturalism may not grant consent or may grant consent, with or without conditions, where the Minister is of the opinion that all alternatives to the removal, demolition or the transfer of the property have been considered by the Ministry,</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIAR Edits Required? (Yes/No? If yes specify edits)
						<p>including alternatives that would not adversely affect the property, and the best alternative in all the circumstances has been adopted. The Minister, as a condition of consent, may require that such reasonable steps as the Minister may specify be taken to minimize or mitigate adverse effects on the property resulting from the removal, demolition or the transfer of the property.</p> <p>12. Detailed study about the impacts this highway will have on Lake Simcoe in particular how it could impact the fisheries as well as the harvesting rights of Indigenous people and their water quality.</p> <p>The Ministry has been and will continue to consult with Indigenous communities regarding potential impacts to their Aboriginal and Treaty Rights.</p> <p>The project has been assessed in accordance with the Interim Environmental Guide for Fisheries and the Protocol for Protecting Fish and Fish Habitat on Provincial Transportation Undertakings. Following the completion of the impact assessment, it was determined that many of the potential negative effects of the proposed works could be avoided or mitigated at many locations. However, due to the number and size of some of the required new crossings it is anticipated that not all negative effects could be avoided or mitigated entirely. At this time, it is assumed that a Request for Review will need to be submitted to Fisheries and Oceans Canada during Detail Design/ prior to construction.</p> <p>For more information on impacts to Lake Simcoe, please refer to the response to Question 4.</p> <p>Please see below the responses to your questions from June 29, 2023.</p> <p>1. Time and consultation are inadequate. You have provided an un-editable PDF and 30 days for a 576 page report. This follows the pattern of terrible public information and consultation. Will you extend the consultation period?</p> <p>The process of planning the Bradford Bypass has included -- and will continue to include -- consultation with the</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIAR Edits Required? (Yes/No? If yes specify edits)
						<p>public and Indigenous communities to ensure the project moves forward in an environmentally responsible way that is responsive to the needs and concerns of communities. In accordance with Ontario Regulation 697/21, an initial Draft Environmental Impact Assessment Report (EIAR) -- which documents the results of the studies undertaken for various environmental disciplines, proposed mitigation measures and environmental commitments to protect the environment -- was published for public review starting on June 1 and continuing until June 30, 2023. In addition, the Ministry has been providing Indigenous communities and stakeholders various opportunities for meaningful consultation since the project was re-initiated in September 2020 including two Public Information Centres. Additional archaeological investigations, which are necessary to complete the impact assessment in accordance with regulations, have recently been finalized and incorporated into an Updated Draft Environmental Impact Assessment Report. This updated report has been posted for an additional 30-day consultation period. The Updated Draft EIAR posting includes the information from the initial draft to ensure stakeholders can review additional information in full context of the project. As the initial Draft EIAR and the Updated Draft were available for public review for a total of 60 days, an extension of the public review period is not being considered at this time.</p> <p>The Updated Draft Environmental Impact Assessment Report was available for review on the Project Website (https://www.bradfordbypass.ca/study-process/) until August 14, 2023.</p> <p>2. Explain how a provincial highway was transformed into a very expensive regional road variant with five interchanges and two 400 series highway connections, paid for by all Ontario taxpayers. This is inconsistent with the MTO's mandate to provide long distance travel solutions. We maintain that there are better and cheaper, faster to implement, regional road and transit solutions that should be pursued, even if the Bypass does get built.</p> <p>The project is being assessed with consideration of the Ministry's mandate to provide for the safe, efficient movement of people and goods between regions and</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIAR Edits Required? (Yes/No? If yes specify edits)
						<p>urban areas. In addition, the Project Team has consulted with local and regional municipalities, and the traffic analysis for the proposed Bradford Bypass has considered the planned local transportation and transit improvements to be implemented by others.</p> <p>The original route planning study (2002 Approved Environmental Assessment – EA) concluded that additional relief from congestion in this Study Area could only be accommodated through the protection and implementation of a provincial right of way.</p> <p>As part of the 2002 Approved EA, the Bradford Bypass evaluated alternatives from a broad range of potential solutions to address several transportation problems and to address significant opportunities identified in York Region and Simcoe County. The need for this freeway was confirmed as the only reasonable solution that would make a significant contribution towards addressing the problem as the population in York Region and Simcoe County grows. The 2002 Approved EA approved alignment is technically preferred for a freeway in terms of highway network expansion, ease of construction, relationship to provincial and municipal land use planning and the preferred route is already included in Official and Transportation Master Plans, as well as the Places to Grow Act), as well as having fewer negative impacts to residential and natural areas when compared to other route options considered.</p> <p>For more information on the Analysis and Evaluation of alternatives, refer to Section 2.1.6 of the 2002 Approved EA, which can be found in the enclosed link: https://www.bradfordbypass.ca/wp-content/uploads/2020/09/BBP-RoutePlanningEA-1997.pdf</p> <p>Further to the conclusion of the 2002 Approved EA, as part of this Preliminary Design study, a traffic analysis was completed and the result of the review has confirmed the need of the highway. This analysis included the review of existing traffic conditions and modelling of future forecast traffic conditions and it has been confirmed that updates to regional and municipal roads alone will not address the transportation needs within the Study Area.</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIA Edits Required? (Yes/No? If yes specify edits)
						<p>Additionally, a feasibility assessment was conducted evaluating nine interchange location scenarios to determine the best interchange configuration through the Bradford Bypass corridor. The evaluation was conducted in accordance with satisfying the study objective to improve connectivity of the study area between Highway 400 and Highway 404, facilitating the improvement of traffic operations and movement of goods. Consideration included interchange utilization, overall network delay, out of way travel, environmental considerations and constraints, and preliminary costs. It was determined that interchanges at 10th Sideroad, County Road 4, Bathurst Street, 2nd Concession Road, and Leslie Street would be included as part of the Study.</p> <p>3. We would like to see the traffic studies in their entirety. An environmental assessment used to be grounded in a demonstration of need and justification. The MTO has provided neither as it pertains to this particular project and at this time. There is no evidence that local traffic solutions MTO purports to be solving (actually a local traffic issue and not MTO's mandate) are best served by this potentially \$4 billion highway.</p> <p>The Bradford Bypass project has been assessed in accordance with Ontario Regulation 697/21. Consistent with the Regulation, the Project Team completed an update to the description of environmental conditions previously documented in the 2002 Approved Environmental Assessment (EA) for the project. This update included a review and assessment of the existing traffic conditions which was documented in the Environmental Conditions Report (ECR). The ECR was finalized in October 2022 following a public review period, and is available on the Project website.</p> <p>Significant population growth is projected for both Simcoe County and the Regional Municipality of York. Even with all currently planned transportation and transit investments, road congestion will continue to increase across the Greater Golden Horseshoe (GGH) including within the Bradford Bypass Study Area.</p> <p>The purpose of the Bradford Bypass is to relieve congestion on existing local roads between Highway 400</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIAR Edits Required? (Yes/No? If yes specify edits)
						<p>and Highway 404 and provide a northern freeway connection between Highways 400 and 404. Modeling results demonstrated that under the No Build (no Bradford Bypass) scenario, local roads were forecasted to exceed capacity by 2031 but saw significant relief under the Build (with Bradford Bypass) scenario. Alternative alignments for the Bradford Bypass were then compared within the model, including the 2002 Approved EA alignment and interchange locations and an updated preferred interchange location alternative developed by the Project Team.</p> <p>On average, between the various origin-destination pairs using the Bradford Bypass, drivers in the peak direction during the peak period, would save up to 73% or 33 minutes of travel time when connecting between Highway 400 and Highway 404 compared to existing routes in the No Build scenario.</p> <p>The development of the analysis and key results from the Traffic Study have been summarized in the Draft Environmental Impact Assessment Report and the Updated Draft Environmental Impact Assessment Report (EIAR), which were available for public review and comment from June 1, 2023 to June 30, 2023 and July 14, 2023 to August 14, 2023, respectively. The information in the draft EIAR includes the origin and destination locations that were reviewed to determine the average travel time savings during the AM and PM peak hours. Similar to the process undertaken for MTO preliminary design studies, the Traffic Study will be finalized upon study completion and will be available if requested.</p> <p>a. Please share the links and the methodology, transparently, so that people can understand what travel time savings MTO is referring to. We have absolutely no idea because your write up is incredibly vague about the start and end of the routes used for analysis.</p> <p>b. What year do your studies indicate that the Bypass will be congested at peak rush hour times?</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIAR Edits Required? (Yes/No? If yes specify edits)
						<p>As detailed in the Draft EIAR (Section 2.4.1), an Aimsun model was created to assess the existing traffic conditions for the road network in the Study Area. The model study area encompasses the Highway 400 corridor from south of Simcoe County Road 88 to north of Highway 89, as well as the Highway 404 corridor from south of Green Lane East to its terminal at Woodbine Avenue (Table 4-3 and 4-4 of the Draft EIAR).</p> <p>The model for this area was developed using pre-pandemic traffic volumes to identify peak hour volumes within the Study Area. This model has been calibrated and validated as it closely resembled actual operating conditions.</p> <p>As detailed in Section 4.4 of the Draft EIAR, traffic is assessed through modelling to identify Level Of Service (LOS). Having confirmed the model was consistent with current (base) conditions, and therefore appropriate to assess future conditions and design alternatives, the model was used to assess LOS under future 2031 and 2041 conditions. To assess future conditions, the model was updated to include all road network and transit improvements planned within the Study Area, and, forecast traffic volumes based on the projected growth within the Study Area.</p> <p>The alternative Build scenarios showed the mainline operations on the Bradford Bypass in 2031 would operate at acceptable LOS D in the interim four lane configuration. The model indicates that by expanding to the ultimate 8 lane configuration (implementing another general purpose lane and an HOV lane in each direction by 2041), LOS on the mainline improves to LOS B or C and accommodates the additional traffic forecast by 2041.</p> <p>For further information about the Traffic Study please refer to the response to Question #3 and Section 4.4 of the Updated Draft EIAR.</p> <p>4. The Draft Environmental Impact Assessment report shows on pg. 212 the Bypass touching the southern portion of the Lower Landing (AKA BaGv-42), a significant historical and archaeological site at a significant meander on the East Holland River. MTO has moved the highway 150 m to the south of the technically</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIAR Edits Required? (Yes/No? If yes specify edits)
						<p>preferred route, which would have completely run over the Lower Landing (pg 148). But the Draft IA states," the southern portion of the site ... will be impacted by construction" (pg 395). The Draft Environmental Conditions Report indicated that a Stage 3 archaeological assessment "was required" (pg 225); the Draft IA report says that the Stage 3 was completed, and that Stage 4 is required. The Project team's website says, "<i>Currently, additional archaeological investigations are being completed to finalize the impact assessments in accordance with Ontario Regulation 697/21 and are not included in this posting. This information will be available for additional public and Indigenous community review once completed.</i>" So the archeological work is not finished. And yet the route has been chosen. Property owners near the history-rich Lower Landing that are receiving expropriation notifications. We are staunchly opposed to this violation of this site particularly absent the stage 4 evaluation of the Lower Landing and the endorsement of the First Nations.</p> <p>c. As stewards of these lands and water for time immemorial, additional time should be given to allow First Nation community members to fully digest the lengthy report. Georgina Island First Nation asked that this site be avoided in 1998, 25 years ago, stating, "It is obvious that there are other routes, which can be used to connect these major highways, and we hope that another will be selected." Is Ontario still ignoring this request.</p> <p>d. Have First Nations be consulted about this part of the plan? Please provide written evidence of their approval of this route.</p> <p>Field investigations for Stage 2 and Stage 3 works have been completed and additional details are included in the Updated Draft Environmental Impact Assessment Report available on the Project Website</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIAR Edits Required? (Yes/No? If yes specify edits)
						<p>(https://www.bradfordbypass.ca/study-process/) for public review until August 14, 2023.</p> <p>The required Stage 4 Archaeological Assessment of BaGv-42 will be completed during future phases of work for the project and will be carried out in accordance with the Ministry of Citizenship and Multiculturalism Standards and Guidelines for Consultant Archaeologists (Ontario Government 2011). No ground disturbing activities will occur at this site until the Stage 4 assessment has been conducted.</p> <p>In accordance with Ontario Regulation 697/21, the Project Team completed site specific Stage 3 archaeological assessments for areas within the Study Area that were identified as having archaeological potential in accordance with the Stage 2 archaeological assessments.</p> <p>It is common practice for Stage 4 archaeology work to be completed during Detail Design. Limiting the impact to Stage 4 archaeological sites where feasible is one of the Project Team's main priorities. As a result, the Project Team will determine the exact impact limits to archaeological sites during subsequent design phases of the project. To avoid unnecessary excavation, the Project Team will then undertake the Stage 4 archaeological assessments. Any Stage 4 field work that will be undertaken must engage interested Indigenous communities.</p> <p>As recommended by the cultural heritage resource assessment undertaken by the Project Team, the Holland River watershed was identified as a Cultural Heritage Landscape requiring further research and evaluation to determine if it possesses cultural heritage value or interest. This further assessment will be completed in a Cultural Heritage Evaluation Report (CHER), and if the CHER determines that the Holland River Watershed meets the criteria in Ontario Regulation 9/06 or Ontario Regulation 10/06 of the Ontario Heritage Act, and may be adversely impacted by the Updated Technically Preferred Route, a Heritage Impact Assessment will be prepared to fully assess impacts on the resource's identified heritage attributes and propose alternatives and mitigation to conserve the property's Cultural Heritage Value or</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIAR Edits Required? (Yes/No? If yes specify edits)
						<p>Interest. These commitments are included in Section 5.3.2 of the Updated Draft EIAR.</p> <p>Consultation is an integral component of the Preliminary Design stage, the project-specific assessment of environmental impacts process, and for future project phases, and is critical to a project's success. The ministry is actively consulting and engaging with Indigenous communities throughout the Bradford Bypass Project.</p> <p>The Project Team is engaging with and considers input provided by the following Indigenous communities:</p> <ul style="list-style-type: none"> - Alderville First Nation - Beausoleil First Nation - Chippewas of Georgina Island First Nation - Chippewas of Rama First Nation - Curve Lake First Nation - Hiawatha First Nation - Mississaugas of Scugog Island First Nation - Kewartha Nishnawbe First Nation - Georgian Bay Métis Council, and - Huron-Wendat Nation <p>Comments from Indigenous communities are accepted at any time in the study process.</p> <p>5. Table 2-2 lays out the 12 species present or very likely to be present. For instance, Blandings Turtles are likely affected as they are likely in the area. The only commitment we see is to do a detailed study later on. This is a good example of study following decision or destruction, and is in violation of the standard EA practices. There are no commitments to the protection of species at risk in this document.</p> <p>Targeted surveys for all species at risk with potential to occur in the Study Area will be required during future phases of work. These future studies will inform the need for any permits, authorizations, mitigation or compensation under the Endangered Species Act.</p> <p>The Updated Draft EIAR requires consideration and review of all recommendations throughout the corridor during future phases of work. This approach is necessary and standard practice for planning projects in that design</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIAR Edits Required? (Yes/No? If yes specify edits)
						<p>is an iterative approach and this project is only completing design to a preliminary level. During future phases of work, additional design will be completed and may include refinements to the design as details are developed with greater accuracy. Limiting the future design phases by making certain elements of the project non-discretionary at the preliminary design stage limits the potential for future work to explore opportunities for further reducing impacts and / or increasing mitigation and offsetting measures.</p> <p>For Blanding's Turtle specifically, candidate habitat associated with the Holland River and Holland River East Branch open water and wetland communities has been identified within the Study Area. Blanding's Turtle may be impacted while moving in between habitats if these species enter the construction work area.</p> <p>As part of this phase of the project, preliminary mitigation and avoidance measures for the potential impacts to turtles are included in the Draft EIAR and include:</p> <ul style="list-style-type: none"> • If stockpiles of gravel and sandy substrates or the removal of these substrates in the vicinity of turtle habitat are required during the active turtle season (April 1 to October 15), turtle exclusion fencing should be installed in accordance with the Reptile and Amphibian Exclusion Fencing Best Management Practices (Ministry of the Environment, Conservation and Parks, 2020) around stockpiles or area of disturbance prior to April 1. Fencing should be installed immediately after stockpiles are created if after April 1. • It is recommended that culverts be designed to provide openness ratios that would allow for the passage of small mammal and/or herpetofauna where possible. An openness ratio of 0.4 would permit usage by medium-sized mammals, while the minimum openness ratio to be considered should be 0.25, which would permit usage by reptiles such as turtles (Credit Valley Conservation, 2017). • Avoid work within areas of candidate turtle overwintering habitat during the turtle overwintering period (October 31 to April 1), whenever possible. <p>These preliminary mitigation measures will be further refined as the project proceeds to Detail Design and impacts are assessed in more detail.</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIA Edits Required? (Yes/No? If yes specify edits)
						<p>For further detail on potential impacts to Species at Risk and proposed mitigation and avoidance measures, please refer to Section 5.1.1 of the Draft Environmental Impact Assessment Report.</p> <p>a. The Draft IA report identifies that the Williams Treaties FN reported American Eel and Northern Sunfish in the Holland River. This must be further investigated with new fieldwork. The American Eel is in decline and gets Federal protection. Ontario's Species at Risk legislation doesn't work anymore so it's all up to the federal enforcement.</p> <p>b. What is Ontario going to do to stand by Canada's obligations to First Nation treaty and consultation rights?</p> <p>c. Will the American Eel's presence be investigated with new field work.</p> <p>It was noted in discussion with William Treaties First Nations on December 1, 2022, that they had observed both American Eel (<i>Anguilla rostrata</i>; Endangered Species Act – Endangered, Species at Risk Act – Not at Risk) and Northern Sunfish (<i>Lepomis peltastes</i>; Endangered Species Act – Special Concern, Species at Risk Act – Special Concern) in the Holland River.</p> <p>Subsequently, the Project Team consulted with the Ministry of the Environment, Conservation and Parks, in March 2023 and was advised that the Ministry of Environment, Conservation and Parks records have no documented observances of the American Eel or Northern Sunfish in the Study Area. They also noted that the Northern Sunfish is a species of special concern and does not have a permitting status with the Ministry of the Environment, Conservation and Parks, and therefore would not be reported. These discussions with Williams Treaties First Nations and MECP have been documented in the Fish and Fish Habitat Report and Section 2.1.2 of the Updated Draft EIA.</p> <p>No records of aquatic Species at Risk that are afforded protection under the Species at Risk Act or Endangered Species Act are known to occur in the watercourses where</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIAR Edits Required? (Yes/No? If yes specify edits)
						<p>culverts are anticipated to be installed. AECOM ecologists conducted a detailed fish and fish habitat assessment of the water features in the vicinity of the Study Area between September 14-18, 2020, with spring field investigations occurring over multiple days in June 2021. Field investigations were also completed in the spring of 2022 due to changes to the Study Area boundary that required further review for potential fish habitat. Based on these investigations, no Species at Risk were discovered in the Study Area. Regardless, the presence or absence of all aquatic Species at Risk will be re-confirmed in subsequent design phases through additional field investigations.</p> <p>6. Please confirm our understanding that has been no discussion of, and that there are no studies looking at impacts to Lake Simcoe.</p> <p>As the project falls within the jurisdiction of the Lake Simcoe Region Conservation Authority (LSRCA), pertaining to Ontario Regulation 179/06, the ministry has assessed impacts with respect to the <i>Lake Simcoe Protection Act</i> and the Lake Simcoe Protection Plan through consideration of water quality and quantity, stormwater management, groundwater management, landscaping and ecological restoration measures; as well as fluvial geomorphological designs for watercourses, erosion and sediment control and spills prevention and protection measures.</p> <p>a. The Groundwater Protection and Well Monitoring plan, which this Draft IA refers to, discusses the need to dewater the site for the building of piles for elevated bridge sections of the highway. The Draft IA report says, "Construction dewatering activities have been identified as the primary risk to groundwater fed water wells in the Study Area." There is no credible groundwater protection water. There are many suggestions for how to keep it clean but there are few to no commitments.</p> <p>Commitments, preliminary mitigation measures and monitoring activities related to groundwater are</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIAI Edits Required? (Yes/No? If yes specify edits)
						<p>documented in Section 5.1.4 of the Draft EIAI, and will be carried forward to subsequent phases of the project.</p> <p>The risk of spills during construction of the project will be primarily limited to petroleum products from machinery (fuels and lubricants). The use of best management practices for handling of hydrocarbons according to the Ministry of Environment, Conservation and Parks and the Technical Standards and Safety Authority of the Ministry of Government Services will reduce the potential of environmental adverse effects associated with petroleum product handling and uses. Spillage of petroleum products must be immediately remediated according to these standards such that groundwater quality is not impacted.</p> <p>Mitigation plans will be generated during future phases of work for the project and for any excavation and structure construction within areas of medium to high significant groundwater recharge areas as shown near the Holland River and Holland River East Branch. Mitigation plans would be specific to each excavation and structure construction and include erosion and sediment control, dewatering treatment and discharge piping away or towards from Significant Groundwater Recharge Areas, or municipal sewer discharge requirements. Dewatering discharge shall be directed away from Well Head Protection areas if excavation and dewatering activities are occurring within them.</p> <p>For more information about the Groundwater Protection and Well Monitoring Plan please refer to Section 5.1.4 of the Updated Draft EIAI.</p> <p>b. How exactly is the province going to monitor groundwater discharges to ensure they meet Ontario's water quality standards?</p> <p>c. What penalties are contractors going to face for violating the discharge requirements?</p> <p>d. If penalties are not enough to compel adherence, what next?</p> <p>e. How is the public to have confidence that contaminated water will not be discharged to the Holland Rivers and Lake Simcoe?</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIAR Edits Required? (Yes/No? If yes specify edits)
						<p>f. Please confirm is monitoring will continue or not, as this statement is totally vague: "It is expected that each unassessed monitoring well will continue to be monitored and assessed during the subsequent detail design phase of the project."</p> <p>The Groundwater Monitoring Program includes groundwater level monitoring and groundwater quality monitoring to establish the pre-construction baseline conditions for comparison of data collected during and post-construction.</p> <p>During the Preliminary Design study, Golder Associates Ltd. (Golder) installed monitoring wells during the ongoing geotechnical investigations. Monitoring is expected to be completed within these same monitoring wells during all future phases of work for the Project, including construction. Residential monitoring wells will also be part of this program if they fall within the Radius of Influence of the excavation dewatering and permission to enter is granted to gain access to monitor the well. Detail Design will inform the need for further groundwater investigations.</p> <p>Penalties for discharging any deleterious substance or material to the lands will vary based on the federal, provincial or municipal legislation that might be violated. Beyond legislated penalties, contractor behavior is monitored by the Ministry and poor behavior may result in additional financial or reputational impacts. The Ministry's process for selecting contractors to support future phases of the work for the project also includes consideration of past performance and assessment of the contractors understanding of the project and sensitivities within the Study Area. Commitments, preliminary mitigation measures and monitoring activities related to groundwater are documented in Section 5.1.4 of the Draft EIAR, and will be carried forward to subsequent phases of the project.</p> <p>g. Explain what kind of environmental impact would make the project stop; or is any impact acceptable?</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIAR Edits Required? (Yes/No? If yes specify edits)
						<p>This government takes environmental protection seriously and is implementing a path forward that will ensure environmental protections are not compromised while building this much needed project quickly and safely. Current work on the Bradford Bypass project will continue to be subject to all conditions under Ontario Regulation 697/21.</p> <p>In accordance with Ontario Regulation 697/21, the Project Team has undertaken several environmental impact assessments to identify and document the potential impacts, proposed mitigation measures, and environmental commitments, which are summarized in the Environmental Impact Assessment Report (EIAR).</p> <p>The Ministry of Transportation must also comply with all current federal and provincial environmental requirements. This includes consultation as set out in the regulation and obtaining permits and approvals for the project prior to the start of construction. Obtaining these permits and approvals, which are mechanisms to help protect the environment, confirms that the ministry has met or surpassed the environmental requirements.</p> <p>h. Please confirm that the only financial support for affected well owners whose water quality is affected by the construction is the province providing them with a temporary water supply until the well owner fixes their well.</p> <p>i. Does this meager bit of help extend to those who did not provide baseline information about their well water?</p> <p>j. If there any effort being made to reach more than 12% of respondents to MTO's well water survey?</p> <p>MTO will work with owners of water wells who experience issues to determine if the issue is the result of Bradford Bypass project activities.</p> <p>If the well issue is confirmed to be a result of the project's activities, the Ministry will provide a letter to the property owner explaining the outcome of the well investigation and detail the recommended mitigation measures (including lowering / replacement of pump inlet, well rehab, new well</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIAR Edits Required? (Yes/No? If yes specify edits)
						<p>installed or local watermain connection if available) the Ministry will undertake to remediate the issue. A temporary drinking water supply will be provided and connected to the resident if the project activities are found to be responsible, at the expense of the Ministry, until remediation measures have resolved the issue.</p> <p>A water well survey was completed for the project to determine the pre-construction assessment of private well supplies in the vicinity of the Study Area noted above. Where no response was provided from Property Owners as part of the water well survey, an additional attempt shall be undertaken during Detail Design to contact these owners via mail, email, phone calls, site visit, etc. This information will be used to provide a baseline for water wells prior to the proposed construction to determine existing water quality and quantity of each property.</p> <p>7. How much is this project going to cost?</p> <p>As we bring this project to market, we want to ensure we can retain the best value for the project. As such, the ministry will not be releasing cost estimates prior to the award of contracts to protect the procurement processes.</p> <p>8. When will the Bradford Bypass be completed?</p> <p>The Preliminary Design phase is anticipated to be completed in 2023. Detail Design and Construction Phases will follow.</p> <p>9. It is unclear how many lanes are being constructed at which times. Please clarify.</p> <p>The Ontario government is committed to fully funding the construction of the Bradford Bypass and is following through on its promise to improve and invest in the province's transportation corridors to get people moving within the region, connect people to jobs, make life easier and support a strong economy.</p> <p>A four-lane configuration is planned to be constructed first with two general purpose lanes in each direction. To plan for the future, the Ministry is also considering the design of an ultimate eight-lane design for the Bradford Bypass. The ultimate, eight-lane configuration for the project will feature</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIAR Edits Required? (Yes/No? If yes specify edits)
						<p>three general purpose lanes and one HOV lanes in each direction.</p> <p>10. There is no cumulative health impact assessment to understand how traffic related air pollution, known to increase risks of cancers, leukemia, heart and lung disease, will impact the communities surrounding the route. There is also no mention of the cumulative impacts on our climate from construction and higher rates of car travel on this highway.</p> <ul style="list-style-type: none"> a. How will you be informing people living along the route about the increased risk of traffic related air pollution and its effects on human health? b. Will you put air quality monitors in Bradford? c. How do you explain the fact that you are NOT monitoring air quality in Bradford, and using the closest site, Newmarket? d. The Final Environmental Conditions Report identified numerous planned residential developments right beside the highway, including a planned new school. Have the land owners / developers / school boards received any information that tells them how bad the air quality is going to be there? <p>The human health scoping implications of the project such as air quality, noise, land use, traffic congestion and safety, economic, social cohesion, and neighborhood resources have been summarized in Section 2.2.7 and Section 5.2.7 of the Draft EIA. To better understand the human health implications due to the Project as a next step, it is recommended for MTO to continue to consider the human health factors identified in this report and provide recommendations to enhance potential positive impacts and mitigate potential negative health impacts. Specifically, conducting a Screening-Level Human Health Risk Assessment of potential air quality impacts is recommended in order to evaluate and characterize Project-related air quality impacts to health.</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIAR Edits Required? (Yes/No? If yes specify edits)
						<p>The project has undertaken an Air Quality Impact Assessment to explore pollutant emissions and dispersion modelling in an effort to predict the contribution of the project to future ambient pollutant concentrations. This contribution, added to background concentration levels, allows prediction of the cumulative impact of the proposed project and all other contributors to air pollution. Concentration levels are compared to provincial and federal ambient air quality criteria and standards to assist in the evaluation of project-specific mitigation needs and options.</p> <p>Areas of concentrated emission impact are influenced by traffic volumes along a given segment of roadway. The implementation of the Bradford Bypass is expected to redistribute traffic from local roads and freeway corridors surrounding the proposed Bradford Bypass. Reductions in traffic volumes are observed on corridors including Highway 11/1 (Bridge Street), Bathurst Street, Holland Landing Road, Yonge Street, Queensville Sideroad, Doane Road, Mount Albert Road, Green Lane, and Simcoe County Road 88/Holland Street, among other roads, which benefits the community of Bradford, Town of Bradford West Gwillimbury, by alleviating congestion during peak hours.</p> <p>The Project Team is currently utilizing the National Air Pollution Surveillance air quality monitoring stations to assess air quality levels. Five years of existing data sets were analyzed from stations within the region, and the complete data set from the closest station or most representative station for each contaminant of concern was selected to represent the background air quality for the Study Area. Due to the proximity of the Study Area to the Toronto Area, monitoring stations within the City of Toronto were given preference as the one of the most representative locations for the air quality contaminants of concern. As such, Roadside Wallberg – University of Toronto monitoring station, North Downsview monitoring station, Gage Institute monitoring station (all located approximately 38 – 53 km from the Study Area) were used. The nearest monitoring station is in Newmarket. Additional information regarding the assessment of potential air quality impacts have been summarized in Section 2.2.4 and Section 5.2.4 of the Draft EIAR.</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIAR Edits Required? (Yes/No? If yes specify edits)
						<p>Land has been designated for the Bradford Bypass since the 2002 Approved EA was completed. As noted above, consultation is an integral component of the Preliminary Design stage and project-specific assessment of environmental impacts and is critical to a project's success. The ministry is actively consulting and engaging with private landowners, developers and school boards within the Study Area. Engagement and consultation has included having a project website and telephone line, having a project contact list for regular project updates, providing notices and correspondence via email, mail, and Ontario Government Notices in local newspapers, hosting public information centres and online events, and holding meetings with Indigenous communities, municipalities, environmental agencies, and stakeholders. More information on the project consultation activities are included in Section 7 of the Updated Draft EIAR.</p> <p>11. Traffic modeling to produce the air dispersion model is not robust or transparent. The air modeling report and supporting reports fail to disclose the % of diesel truck traffic, or the component of that traffic that includes trucks dating from 2006 or earlier which comprise a significant component of air pollution load. The comparison of build with no-build is not valid because the values in Appendix E of the traffic modeling report show that there was an erroneous assumption that there would be significantly less truck traffic in the build scenario compared to the no-build scenario. There is no valid scientifically-based justification for this. Further, if there is an increase in truck traffic along 404 - as the model predicts - then sensitive receptors along highway 404 need to be included in a health impact study. Instead, impacts on traffic along the 400/404 corridors were excluded and the "air quality study area" was restricted to the bypass corridor itself without any explanation or justification. It is egregious that MTO did not conduct locally relevant air quality monitoring for background in Bradford, River Drive Park, Queensville and along the 404/400 corridors for traffic related air pollutants. Such baseline monitoring is generally inexpensive and could have been easily obtained. The study did not</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIAR Edits Required? (Yes/No? If yes specify edits)
						<p>include the cumulative effects of future planned industrial uses along the Bypass corridor and along the 400/404 corridor which may significantly impact people's health along the route. The evaluation did not use 2022 World Health Organization criteria for contaminants which are much lower and more up-to date than the CAAQs or the AAQCs. We disagree that the AAQCs and CAAQs represent the "lowest concentrations at which an adverse effect may be experienced" as they are not based on up-to-date understandings of the health impacts of air contaminants including pre-term births and neurodevelopmental and other impacts. The report predicts significant exceedances for NO₂ and benzo(a)pyrene even with the apparently non-conservative assumptions for diesel truck traffic used in the full build out scenario compared to the no-build scenario. The adverse health impacts of NO₂ exceedances may be extremely severe and will impact on the Charter rights and human rights of residents in the study area and beyond without justification for the need for the project.</p> <p>Study Area, MOVES3 data, vehicles and assumptions: In order to model relevant vehicle types within the Air Quality Impact Assessment Study Area, MOVES3 data was input to the model and refinements were made to exclude fuel types such as ethanol given these fuels are not readily available for use in Ontario. Fuel inputs utilized in MOVES3.0 modelling at the time of the assessment included: Fuel Type IDs 1, 2, 3 and 9. ID 5 (ethanol) was not included as flex fuel cars and fuelling stations are not readily available in Ontario. The specific source type fractions utilized for various vehicle types applied within the project study area and the related fraction of expected vehicle usage for both passenger-class vehicles and heavy-class vehicles, including the distribution of vehicle types in the heavy truck vehicle category, were combined to create representative vehicle emission for vehicle class that can reasonable be expected to be in use in 2041.</p> <p>Highway 400/404 corridors were included in the Air Quality Impact Assessment. The full air quality study area is shown in Figure 2-9 of the Updated Draft EIAR and</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIAI Edits Required? (Yes/No? If yes specify edits)
						<p>demonstrates that the air quality study area included emission sources within the boundary of assessment, including but not limited to Highway 400 (500 m south of Rural Rd. 88 to 500 m north of Concession Rd. 11), Highway 404 (500 m south of Queensville Sideroad E to 500 m north of Boag Road), the entirety of the proposed Bradford Bypass, Bridge Street, Holland Street W, 10th Sideroad, Young Street/Barrie Street, and Queensville Sideroad.</p> <p>Traffic distributions and truck traffic: The same Average Annual Daily Traffic (AADT) were used for all scenarios. AADT values for each air quality emission source vary between the three scenarios evaluated based on projected existing traffic within the study area, and future no-build and build traffic projections however the same 24-hour traffic distribution percentages were applied. Three representative 24-hour distribution percentages were applied to the air quality emission sources. These were applied to a given source of emission depending on the type of road in question, e.g. a "Leslie St." 24-hour distribution was applied to air quality emission sources which were categorized as community arterial roads; a "HWY 400" 24-hour distribution was applied to air quality emission sources categorized as highways; and, a "2nd Concession Rd" 24-hour distribution was applied to rural roads. These same 24-hr distributions were applied to the assigned source for all three scenarios of evaluation (existing conditions, future no-build, and future build).</p> <p>Fuel usage distribution [i.e. diesel, gasoline, CNG, etc.] and vehicle age distribution within each vehicle type category were modelled based on MOVES3.0 default fuel use and age distribution database inputs assigned to the year of evaluation. Heavy truck traffic was included in the modelling with a percentage assigned to each air quality emission source anticipated from this vehicle type.</p> <p>Health Impacts, Critical Receptors and Background/Study Area Monitoring Data: The human health scoping implications of the project such as air quality, noise, land use, traffic congestion and safety, economic, social cohesion, and neighborhood resources have been summarized in Section 2.2.7 and Section 5.2.7 of the Updated Draft EIAI.</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIA Edits Required? (Yes/No? If yes specify edits)
						<p>The Project Team is aware some critical receptors have been identified as 'missing' by a number of stakeholders. Having reviewed the data, these 'missing' receptors were included as residences in the Air Quality Impact Assessment. Potential impacts at the 'missing' receptors within the Air Quality Impact Assessment Study Area are reflected in the assessment by other, nearby critical receptors and receptors identified on Figure 2-9 and 2-10 of the Updated Draft EIA.</p> <p>The approach to identifying representative air quality levels is conservative and often ensures the worst-case conditions are reflected so as to not under-represent conditions within a study area; i.e. background air quality contaminant levels included within the assessment may be representative or higher than expected for the area in question.</p> <p>While it is recognized that localized in-situ monitoring may provide more accurate data, use of existing monitoring stations within the NAPS network for statistically relevant background monitoring data is a generally accepted and conservative methodology for provincial environmental impact air quality assessments. Stations selected for the background air quality assessment were chosen based on total data availability over a most recent five-year period as a minimum of 12 months of daily and hourly data is required to ensure statistical relevance. Stations were also selected based on their proximity to the air quality study area with the meteorological station selected as representative of the air quality study area within 15 km north-west of the air quality study area. Stations must also be a relative representation of similar types of existing sources of air quality emission in the study area and it is notable that the meteorological station selected as representative of air quality in the study area was provided by the MECF in site-specific MET data requested for the project modelling.</p> <p>12. Many less expensive alternatives to this highway have not been considered. The Minister approved Terms of Reference for the Bradford Bypass Environmental Assessment Study overrode the requirements of the Environmental Assessment act to consider</p>

						<p>road alternatives that would not be a controlled access highway. As a result, the Hwy 9 / Green Lane corridor was the only existing roadway that was considered as a reasonable alternative. That roadway was rejected as it was not considered feasible to convert it to a controlled access facility. Consideration of these types of alternatives are, however, a requirement for all Class EA Studies. A major condition of the 2002 Bradford Bypass EA Approval, was a requirement to conduct a Class EA Study at the time MTO wished to proceed with this project. This study would ensure the currency of the proposed project in light of current travel demand, previously unforeseen environmental factors, new legislation and a full review of all reasonable alternatives including combinations of regional and local roadways. The following are reasonable alternatives that would need to be considered both individually and in combination with one or more other reasonable alternatives if the Class EA Study that was underway at the time Regulation 697 /21 was issued. Each of these proposed alternative solutions would then be evaluated against the then approved Bradford Bypass 4 lane controlled access freeway. Because the Class EA Study was canceled by this regulation, the only comparison AECOM have used throughout the Draft Impact Assessment Report is "Do Nothing". Given that the actual travel problem we are now faced with is local, rather than long distance traffic, we are confident one or more of the following reasonable alternatives would be dramatically preferable to the now 8 lane, Bradford Bypass. Alternatives to the Bradford Bypass:</p> <ul style="list-style-type: none"> a Construct a 4 lane arterial road bridge over the West Branch of the Holland River at the currently planned location for the Bradford Bypass bridge – together with paved 4 lane roadways to both Bathurst St. and a connection to Bradford's 8th Line.

						<p>b Build a 4 lane arterial road bridge over the Holland River from Ravenshoe Road to connect with Simcoe Line 13 or another appropriate east – west arterial road on the west bank of the Holland River.</p> <p>c Extend and widen Green Lane to 6 lanes and create a diagonal transition from Green Lane to Hwy 9 and highway bridge intersection with Highway 9 around Dufferin St. The Green Lane / Highway 9 option will better serve and reduce both local and long distance traffic from Newmarket south to at least Aurora Sideroad.</p> <p>Any one or a combination of these alternatives will address a substantial amount of local travel problems while being significantly less costly and environmentally invasive. Once again, what logic is being used to ignore these options given all of the rationale in favour of these other alternatives?</p> <p>The planning process that resulted in the 2002 approved Environmental Assessment (EA) for the Bradford Bypass evaluated alternatives from a broad range of potential solutions to address several transportation problems and to address significant opportunities identified in York Region and Simcoe County. The need for this freeway was confirmed during the Route Planning and EA Study as the only reasonable solution that would make a significant contribution towards addressing the problem as the population in York Region and Simcoe County grows. The 2002 EA approved alignment is technically preferred for a freeway in terms of highway network expansion, ease of construction, relationship to provincial and municipal land use planning and the preferred route is already included in Official and Transportation Master Plans, as well as the Places to Grow Act), as well as having fewer negative impacts to residential and natural areas when compared to other route options considered.</p> <p>The Bradford Bypass Project has been modelled based on current local, regional, and provincial projections and data.</p>

						<p>This addresses the problem of “lack of long-term planning” per the Bradford Bypass 2002 approved EA.</p> <p>The 2002 approved EA reviewed a broad area of analysis which included several corridors, including areas south of the current corridor, and Highway 89/Ravenshoe Road.</p> <p>The Bradford Corridor was selected as the preferred corridor over Highway 89/Ravenshoe Road as it was beyond the maximum north limit of 10th Line / Boag Road which was assessed in a previous EA study and was determined that a Management Area or river crossing north of this would entail unacceptable environmental impact, which lead to the withdrawal of the Highway 89 EA studies in 1986-87.</p> <p>The Bradford Corridor was selected as the preferred corridor over the southern alternatives as there was no south alternative that met the primary purpose of the study to reduce out-of-way travel. The south limit was established as Highway 88 and Queensville Sideroad.</p> <p>The original purpose of the Bradford Bypass per the 2002 Approved EA was to address the “east-west” long-distance travel demand crossover between Highway 400 and Highway 404 which is a provincial responsibility and distinct from the locally generated trips which use a municipal road to access the provincial network. As noted in the report, the overall network benefits from vehicle-hours of travel time savings and vehicle-kilometres of travel distance savings are observed during the 2041 AM peak hour and during the 2041 PM peak hour in the updated interchange locations. Local roads forecasted to exceed capacity by 2031 and 2041 under the No-Build scenarios see significant relief from traffic as a result of the diversion to the Bradford Bypass in the Build scenarios. While the Town of Bradford West Gwillimbury owns a closed road allowance east of Artesian Industrial Parkway for 8th Line to Holland River, Hochreiter Road itself is a private road. A connection at this location would not address the primary purpose of the Bradford Bypass to connect Highway 400 and Highway 404. The local benefit of this route is likely outweighed by the reduced congestion of Bridge Street created by the Bradford Bypass. A bridge across 8th Line would still require out-of-way travel, which this study is looking to reduce, to</p>

CT-DraftEIAR-74 Cont.	To: Project Team From: [REDACTED]	Email: [REDACTED]	Draft EIAR	June 29, 2023	<p>Dear Sirs,</p> <p>We have many concerns with this project, the process it is following, and this report is no different. Please answer our questions below.</p> <p>3. Timing and consultation are inadequate. You have provided an un-editable PDF and 30 days for a 576 page report. This follows the pattern of terrible public information and consultation. Will you extend the consultation period?</p> <p>3. Explain how a provincial highway was transformed into a very expensive regional road variant with five interchanges and two 400 series highway connections, paid for by all Ontario taxpayers. This is inconsistent with the MTO's mandate to provide long distance travel solutions. We maintain that there are better and cheaper, faster to implement, regional road and transit solutions that should be pursued, even if the Bypass does get built.</p> <p>4. We would like to see the traffic studies in their entirety. An environmental assessment used to be grounded in a demonstration of need and justification. The MTO has provided neither as it pertains to this particular project and at this time. There is no evidence that local traffic solutions MTO purports to be solving (actually a local traffic issue and not MTO's mandate) are best served by this potentially \$4 billion highway.</p> <p>c. Please share the links and the methodology, transparently, so that people can understand what travel time savings MTO is referring to. We have absolutely no idea because your write up is incredibly vague about the start and end of the routes used for analysis. For instance this meaningless babble from pg. 334:</p> <p><small>On average, between the various origin-destination pairs using the Bradford Bypass, drivers in the peak direction during the peak period, would save up to 72% or 35 minutes of travel time when connecting between Highway 403 and Highway 404 compared to existing routes in the No Build scenario.</small></p>	Response provided in CT-DraftEIAR-74	No

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIAR Edits Required? (Yes/No? If yes specify edits)
					<p>d. What year do your studies indicate that the Bypass will be congested at peak rush hour times?</p> <p>5. The Draft Environmental Impact Assessment report shows on pg. 212 the Bypass touching the southern portion of the Lower Landing (AKA BaGv-42), a significant historical and archaeological site at a significant meander on the East Holland River. MTO has moved the highway 150 m to the south of the technically preferred route, which would have completely run over the Lower Landing (pg 148). But the Draft IA states, "the southern portion of the site ... will be impacted by construction" (pg 395). The Draft Environmental Conditions Report indicated that a Stage 3 archaeological assessment "was required" (pg 225); the Draft IA report says that the Stage 3 was completed, and that Stage 4 is required. The Project team's website says, "Currently, additional archaeological investigations are being completed to finalize the impact assessments in accordance with Ontario Regulation 697/21 and are not included in this posting. This information will be available for additional public and Indigenous community review once completed." So the archeological work is not finished. And yet the route has been chosen. Property owners near the history-rich Lower Landing that are receiving expropriation notifications. We are staunchly opposed to this violation of this site particularly absent the stage 4 evaluation of the Lower Landing and the endorsement of the First Nations.</p>  <p>Highway is still too close to the Lower Landing. The Lower Landing is in the area of WC-25 in</p>

					<p><i>the image above. This clip of a map shows Provincially significant wetlands (orange); unevaluated wetlands (blue); cold water fish habitat (black) and warm (pink); Original / full map available on pg 55 of Draft IA report.</i></p> <p>c. As stewards of these lands and water for time immemorial, additional time should be given to allow First Nation community members to fully digest the lengthy report. Georgina Island First Nation asked that this site be avoided in 1998, 25 years ago, stating, "It is obvious that there are other routes, which can be used to connect these major highways, and we hope that another will be selected." Is Ontario still ignoring this request?</p> <p>d. Have First Nations been consulted about this part of the plan? Please provide written evidence of their approval of this route.</p> <p>6. Species at Risk</p> <p>a. Table 2-2 lays out the 12 species at risk present or very likely to be present. For instance, Blandings Turtles are likely affected as they are likely in the area. The only commitment we see is to do detailed study later on. This is a good example of study following decision or destruction, and is in violation of standard EA practices. There are no commitments to the protection of species at risk in this document.</p> <p>b. There is a requirement for the Minister of the Department of Fisheries and Oceans to consider, when making certain decisions related to the fish and fish habitat protection (and pollution prevention) provisions of the Act, the Indigenous knowledge of the Indigenous peoples of Canada that has been provided to the Minister (34.1(1) (g) of the Fisheries Act); and,</p> <p>c. Requirement to protect the confidentiality of Indigenous knowledge that is provided to the Minister in confidence, except under limited circumstances (subsection 61.2 (1) of the Fisheries Act)."</p> <p>d. The Draft IA report identifies that the Williams Treaties FN reported American Eel</p>

					<p>https://www.dfo-mpo.gc.ca/species-especes/publications/sara-lep/eel-anquille/index-eng.html and Northern Sunfish in the Holland River. This must be further investigated with new fieldwork. The American Eel is in decline and gets Federal protection. Ontario's Species at Risk legislation doesn't work anymore so it's all up to the Federal enforcement.</p> <p>i. What is Ontario going to do to stand by Canada's obligations to First Nations treaty and consultation rights?</p> <p>ii. Will the American Eel's presence be investigated with new fieldwork?</p> <p>7. There are many concerns related to surface water and groundwater.</p> <p>a. Please confirm our understanding that there has been no discussion of, and that there are no studies looking at impacts to Lake Simcoe.</p> <p>b. The Groundwater Protection and Well Monitoring plan, which this Draft IA refers to, discusses the need to dewater the site for the building of piles for the elevated bridge sections of the highway. The Draft IA report says, "Construction dewatering activities have been identified as the primary risk to groundwater fed water wells in the Study Area," p 295. There is no credible groundwater protection plan. There are many suggestions for how to keep it clean but there are few to no commitments.</p> <p>c. HOW exactly is the province (MoECP) going to monitor groundwater discharges to ensure they meet Ontario's water quality standards?</p> <p>d. What penalties are contractors going to face for violating the discharge requirements?</p> <p>e. If penalties are not enough to compel adherence, what next?</p> <p>f. How is the public to have confidence that contaminated water will not be discharged to the Holland Rivers and Lake Simcoe?</p> <p>g. Please confirm if monitoring will continue, or not, as this statement is totally vague: "It is expected that each unassessed</p>

					<p>monitoring well will continue to be monitored and assessed during the subsequent detail design phase of the project" P. 79.</p> <p>h. Explain what kind of environmental impact would make this project stop; or is any impact acceptable?</p> <p>i. Please confirm that the only financial support for affected well owners whose water quality is affected by the construction is the province providing them with a temporary water supply until the well owner fixes their well.</p> <p>i. Does this meager bit of help get extended to those who did not provide baseline information about their well water?</p> <p>ii. Is there any effort being made to reach more than 12% of respondents to MTO's well water survey?</p> <p>8. How much is this project going to cost?</p> <p>9. When will the Bradford Bypass be completed?</p> <p>10. It is unclear how many lanes are being constructed at which times. Please clarify.</p> <p>11. There is no cumulative health impact assessment to understand how traffic related air pollution, known to increase risks of cancers, leukemia, heart and lung disease, will impact the communities surrounding the route. There is also no mention of the cumulative impacts on our climate from construction and higher rates of car travel on this highway.</p> <p>a. How will you be informing people living along the route about the increased risk of traffic related air pollution and its effects on human health?</p> <p>b. Will you put air quality monitors in Bradford?</p> <p>c. How do you explain the fact that you are NOT monitoring air quality in Bradford, and using the closest site, Newmarket?</p> <p>d. The Final Environmental Conditions Report identified numerous planned residential developments right beside the highway.</p>		

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIAR Edits Required? (Yes/No? If yes specify edits)
					<p>including a planned new school. Have the land owners / developers / school boards received any information that tells them how bad the air quality is going to be there?</p> <p>13. Traffic modeling to produce the air dispersion model is not robust or transparent. In order to understand traffic related air pollution, relevant vehicle types and assumptions need to be used. The air dispersion modeling report simply indicates that MOVES3 default data was used - but the EPA has emphasized the need to include relevant vehicle type inputs into the model.</p> <p>The air modeling report and supporting reports fail to disclose the % of diesel truck traffic, or the component of that traffic that includes trucks dating from 2006 or earlier which comprise a significant component of air pollution load. The air dispersion modeling report states that the vehicle type distributions were based on MOVES3.0 default database inputs even though there are no such inputs. It also says that the 24 hour traffic distribution was assumed to be equal to the AADT distribution. However the consultant appeared to use different AADT distributions for different scenarios without explanation and the distributions differed significantly as between build and no build scenarios. Mitigation in the form of frequent diesel heavy truck vehicle emission inspections should be included as a mitigation measure to ensure that newer vehicle emissions systems are not being tampered with. The air dispersion modeling report indicates that ethanol based fuels were excluded even though this goes against EPA recommendations for using the model. The report lacks transparency about assumptions made about future vehicle fleet</p>		

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIAR Edits Required? (Yes/No? If yes specify edits)
					<p>characteristics for both passenger vehicles and heavy trucks.</p> <p>The comparison of build with no-build is not valid because the values in Appendix E of the traffic modeling report show that there was an erroneous assumption that there would be significantly less truck traffic in the build scenario compared to the no-build scenario. There is no valid scientifically-based justification for this. Further, if there is an increase in truck traffic along 404 - as the model predicts - then sensitive receptors along highway 404 need to be included in a health impact study. Instead, impacts on traffic along the 400/404 corridors were excluded and the "air quality study area" was restricted to the bypass corridor itself without any explanation or justification.</p> <p>It is egregious that MTO did not conduct locally relevant air quality monitoring for background in Bradford, River Drive Park, Queensville and along the 404/400 corridors for traffic related air pollutants. Such baseline monitoring is generally inexpensive and could have been easily obtained. Using existing monitors in Innisfil, Newmarket and other distant and irrelevant locations is not justifiable. For the air dispersion modeling, MTO appears to be relying on these distant locations (eg. Egbert) for preparation of the wind rose as well, even though meteorological conditions in the study area may be markedly different. MTO also did not identify numerous recreational and daycare facilities adjacent to the Bradford Bypass corridor which were identified by Simcoe County Greenbelt Coalition. The study did not include the cumulative effects of future planned industrial uses along the Bypass corridor and along the 400/404 corridor which may significantly impact people's health along the route. The</p>

					<p>evaluation did not use 2022 World Health Organization criteria for contaminants which are much lower and more up-to date than the CAAQS or the AAQCs. We disagree that the AAQCs and CAAQS represent the "lowest concentrations at which an adverse effect may be experienced" as they are not based on up-to-date understandings of the health impacts of air contaminants including pre-term births and neurodevelopmental and other impacts. These are described in the report by the Canadian Association of Physicians for the Environment (April 2022) Mobilizing Evidence report. The report predicts significant exceedances for NO2 and benzo(a)pyrene even with the apparently non-conservative assumptions for diesel truck traffic used in the full build out scenario compared to the no-build scenario. The adverse health impacts of NO2 exceedances may be extremely severe and will impact on the <i>Charter</i> rights and human rights of residents in the study area and beyond without justification for the need for the project.</p>

					<div><p>Figure 6-1: Isoconcentration Contours for NO₂ in the Future Build Scenario</p><p>Note: Concentration contours are shown in units of ppb, and a multiplier of 10 has been applied.</p><p>Figure 6-2: Isoconcentration Contours for NO₂ in the Future No-Build Scenario</p><p>Note: Concentration contours are shown in units of ppb, and a multiplier of 10 has been applied.</p></div> <p>Source: Air Quality Impact Assessment Report - AECOM.</p> <p>The Air Quality Impact Assessment concluded that: Impacts from the Future Build Conditions with the new Bradford Bypass on a cumulative basis within the Air Quality Study Area increases in comparison to a No-Build scenario for several contaminants and their respective averaging periods. This is predominately due to increased traffic along the Bradford Bypass, where in a No-Build scenario this traffic is dispersed along Holland Street and Bridget Street and within communities to the south of the Air Quality Study Area (for example, demonstrated in the traffic reporting related to this project). This included significant increases in NO₂, SO₂, PM_{2.5}, Acetaldehyde, Benzo(a)pyrene, and formaldehyde and some increases in CO. Maximum concentrations which are relevant for acute events also show significant increases, for example a 49% increase in SO₂ and more than 50% increases in fine and large particulates, acetaldehyde, formaldehyde etc. for</p>		

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIAR Edits Required? (Yes/No? If yes specify edits)
					<p>critical receptor number 19 (other receptors' models were not displayed in a comparable manner). The results indicated that for NO₂, 1 hour averages 80% of the hours in the future build scenario would have a cumulative concentration above the CAAQS limit of 79 ppm and a 100% of hours would exceed the AAQC for benzo(a)pyrene. In relation to GHGs, the MTO failed to incorporate induced demand in the future build scenario to calculate additional vehicle kilometers traveled that would be induced by the highway, and failed to give a transparent total vehicle assumption or a vehicle emissions factor. In any event the air quality impact assessment predicts that the proposed highway would be a significant contributor to regional GHG emissions even without incorporating the effect of induced demand. No mitigation measures are proposed to address the increase in greenhouse gas emissions from the project which will lead to catastrophic climate disaster for all of humanity and the planet.</p> <p>12. Many less expensive alternatives to this highway have not been considered. The Minister approved Terms of Reference for the Bradford Bypass Environmental Assessment Study overrode the requirements of the Environmental Assessment act to consider road alternatives that would not be a controlled access highway. As a result, the Hwy 9 / Green Lane corridor was the only existing roadway that was considered as a reasonable alternative. That roadway was rejected as it was not considered feasible to convert it to a controlled access facility. Consideration of these types of alternatives are, however, a requirement for all Class EA Studies.</p>

Ct-DraftEIAR-76	To: Project Team From: [REDACTED]	Email: [REDACTED]	Draft EIAR	June 29, 2023	Hi, I am writing because I am against the Bradford Bypass and have many questions about the EIA. Please find attached a letter outlining all the questions I would like answered. Thank you [REDACTED]	Hi [REDACTED] Thank you for your interest in the Bradford Bypass Preliminary Design Study and project-specific assessment of environmental impacts, undertaken in accordance with Ontario Regulation 697/21. 1. Time and consultation are inadequate. You have provided an un-editable PDF and 30 days for a 576 page report. This follows the pattern of terrible public information and consultation. Will you extend the consultation period? The process of planning the Bradford Bypass has included -- and will continue to include -- consultation with the public and Indigenous communities to ensure the project moves forward in an environmentally responsible way that is responsive to the needs and concerns of communities. In accordance with Ontario Regulation 697/21, an initial Draft Environmental Impact Assessment Report (EIAR) -- which documents the results of the studies undertaken for various environmental disciplines, proposed mitigation measures and environmental commitments to protect the environment -- was published for public review starting on June 1 and continuing until June 30, 2023. In addition, the Ministry has been providing Indigenous communities and stakeholders various opportunities for meaningful consultation since the project was re-initiated in September 2020 including two Public Information Centres. Additional archaeological investigations, which are necessary to complete the impact assessment in accordance with regulations, have recently been finalized and incorporated into an Updated Draft Environmental Impact Assessment Report. This updated report has been posted for an additional 30-day consultation period. The Updated Draft EIAR posting includes the information from the initial draft to ensure stakeholders can review additional information in full context of the project. As the initial Draft EIAR and the Updated Draft were available for public review for a total of 60 days, an extension of the public review period is not being considered at this time. The Updated Draft Environmental Impact Assessment Report was available for review on the Project Website (https://www.bradfordbypass.ca/study-process/) until August 14, 2023.	No

						<p>2. Explain how a provincial highway was transformed into a very expensive regional road variant with five interchanges and two 400 series highway connections, paid for by all Ontario taxpayers. This is inconsistent with the MTO's mandate to provide long distance travel solutions. We maintain that there are better and cheaper, faster to implement, regional road and transit solutions that should be pursued, even if the Bypass does get built.</p> <p>The project is being assessed with consideration of the Ministry's mandate to provide for the safe, efficient movement of people and goods between regions and urban areas. In addition, the Project Team has consulted with local and regional municipalities, and the traffic analysis for the proposed Bradford Bypass has considered the planned local transportation and transit improvements to be implemented by others.</p> <p>The original route planning study (2002 Approved Environmental Assessment – EA) concluded that additional relief from congestion in this Study Area could only be accommodated through the protection and implementation of a provincial right of way.</p> <p>As part of the 2002 Approved EA, the Bradford Bypass evaluated alternatives from a broad range of potential solutions to address several transportation problems and to address significant opportunities identified in York Region and Simcoe County. The need for this freeway was confirmed as the only reasonable solution that would make a significant contribution towards addressing the problem as the population in York Region and Simcoe County grows. The 2002 Approved EA approved alignment is technically preferred for a freeway in terms of highway network expansion, ease of construction, relationship to provincial and municipal land use planning and the preferred route is already included in Official and Transportation Master Plans, as well as the Places to Grow Act), as well as having fewer negative impacts to residential and natural areas when compared to other route options considered.</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIAR Edits Required? (Yes/No? If yes specify edits)
						<p>For more information on the Analysis and Evaluation of alternatives, refer to Section 2.1.6 of the 2002 Approved EA, which can be found in the enclosed link: https://www.bradfordbypass.ca/wp-content/uploads/2020/09/BBP-RoutePlanningEA-1997.pdf</p> <p>Further to the conclusion of the 2002 Approved EA, as part of this Preliminary Design study, a traffic analysis was completed and the result of the review has confirmed the need of the highway. This analysis included the review of existing traffic conditions and modelling of future forecast traffic conditions and it has been confirmed that updates to regional and municipal roads alone will not address the transportation needs within the Study Area.</p> <p>Additionally, a feasibility assessment was conducted evaluating nine interchange location scenarios to determine the best interchange configuration through the Bradford Bypass corridor. The evaluation was conducted in accordance with satisfying the study objective to improve connectivity of the study area between Highway 400 and Highway 404, facilitating the improvement of traffic operations and movement of goods. Consideration included interchange utilization, overall network delay, out of way travel, environmental considerations and constraints, and preliminary costs. It was determined that interchanges at 10th Sideroad, County Road 4, Bathurst Street, 2nd Concession Road, and Leslie Street would be included as part of the Study.</p> <p>3. We would like to see the traffic studies in their entirety. An environmental assessment used to be grounded in a demonstration of need and justification. The MTO has provided neither as it pertains to this particular project and at this time. There is no evidence that local traffic solutions MTO purports to be solving (actually a local traffic issue and not MTO's mandate) are best served by this potentially \$4 billion highway.</p> <p>The Bradford Bypass project has been assessed in accordance with Ontario Regulation 697/21. Consistent with the Regulation, the Project Team completed an update to the description of environmental conditions previously documented in the 2002 Approved</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIAR Edits Required? (Yes/No? If yes specify edits)
						<p>Environmental Assessment (EA) for the project. This update included a review and assessment of the existing traffic conditions which was documented in the Environmental Conditions Report (ECR). The ECR was finalized in October 2022 following a public review period, and is available on the Project website.</p> <p>Significant population growth is projected for both Simcoe County and the Regional Municipality of York. Even with all currently planned transportation and transit investments, road congestion will continue to increase across the Greater Golden Horseshoe (GGH) including within the Bradford Bypass Study Area.</p> <p>The purpose of the Bradford Bypass is to relieve congestion on existing local roads between Highway 400 and Highway 404 and provide a northern freeway connection between Highways 400 and 404.</p> <p>Modeling results demonstrated that under the No Build (no Bradford Bypass) scenario, local roads were forecasted to exceed capacity by 2031 but saw significant relief under the Build (with Bradford Bypass) scenario. Alternative alignments for the Bradford Bypass were then compared within the model, including the 2002 Approved EA alignment and interchange locations and an updated preferred interchange location alternative developed by the Project Team.</p> <p>On average, between the various origin-destination pairs using the Bradford Bypass, drivers in the peak direction during the peak period, would save up to 73% or 33 minutes of travel time when connecting between Highway 400 and Highway 404 compared to existing routes in the No Build scenario.</p> <p>The development of the analysis and key results from the Traffic Study have been summarized in the Draft Environmental Impact Assessment Report and the Updated Draft Environmental Impact Assessment Report (EIAR), which were available for public review and comment from June 1, 2023 to June 30, 2023 and July 14, 2023 to August 14, 2023, respectively. The information in the draft EIAR includes the origin and destination locations that were reviewed to determine the average travel time savings during the AM and PM peak hours. Similar to the process undertaken for MTO preliminary design studies, the Traffic Study will be finalized upon study completion and will be available if requested.</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIAI Edits Required? (Yes/No? If yes specify edits)
						<p>a. Please share the links and the methodology, transparently, so that people can understand what travel time savings MTO is referring to. We have absolutely no idea because your write up is incredibly vague about the start and end of the routes used for analysis.</p> <p>b. What year do your studies indicate that the Bypass will be congested at peak rush hour times?</p> <p>As detailed in the Draft EIAI (Section 2.4.1), an Aimsun model was created to assess the existing traffic conditions for the road network in the Study Area. The model study area encompasses the Highway 400 corridor from south of Simcoe County Road 88 to north of Highway 89, as well as the Highway 404 corridor from south of Green Lane East to its terminal at Woodbine Avenue (Table 4-3 and 4-4 of the Draft EIAI).</p> <p>The model for this area was developed using pre-pandemic traffic volumes to identify peak hour volumes within the Study Area. This model has been calibrated and validated as it closely resembled actual operating conditions.</p> <p>As detailed in Section 4.4 of the Draft EIAI, traffic is assessed through modelling to identify Level Of Service (LOS). Having confirmed the model was consistent with current (base) conditions, and therefore appropriate to assess future conditions and design alternatives, the model was used to assess LOS under future 2031 and 2041 conditions. To assess future conditions, the model was updated to include all road network and transit improvements planned within the Study Area, and, forecast traffic volumes based on the projected growth within the Study Area.</p> <p>The alternative Build scenarios showed the mainline operations on the Bradford Bypass in 2031 would operate at acceptable LOS D in the interim four lane configuration. The model indicates that by expanding to the ultimate 8 lane configuration (implementing another general purpose lane and an HOV lane in each direction by 2041), LOS on</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIAR Edits Required? (Yes/No? If yes specify edits)
						<p>the mainline improves to LOS B or C and accommodates the additional traffic forecast by 2041.</p> <p>For further information about the Traffic Study please refer to the response to Question #3 and Section 4.4 of the Updated Draft EIAR.</p> <p>4. The Draft Environmental Impact Assessment report shows on pg. 212 the Bypass touching the southern portion of the Lower Landing (AKA BaGv-42), a significant historical and archaeological site at a significant meander on the East Holland River. MTO has moved the highway 150 m to the south of the technically preferred route, which would have completely run over the Lower Landing (pg 148). But the Draft IA states, "the southern portion of the site ... will be impacted by construction" (pg 395). The Draft Environmental Conditions Report indicated that a Stage 3 archaeological assessment "was required" (pg 225); the Draft IA report says that the Stage 3 was completed, and that Stage 4 is required. The Project team's website says, "Currently, additional archaeological investigations are being completed to finalize the impact assessments in accordance with Ontario Regulation 697/21 and are not included in this posting. This information will be available for additional public and Indigenous community review once completed." So the archeological work is not finished. And yet the route has been chosen. Property owners near the history-rich Lower Landing that are receiving expropriation notifications. We are staunchly opposed to this violation of this site particularly absent the stage 4 evaluation of the Lower Landing and the endorsement of the First Nations.</p> <p>a. As stewards of these lands and water for time immemorial, additional time should be given to allow First Nation community members to fully digest the lengthy report. Georgina Island First Nation asked that this site be avoided in 1998, 25 years ago, stating, "It is obvious that there are other routes,</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIAR Edits Required? (Yes/No? If yes specify edits)
						<p>which can be used to connect these major highways, and we hope that another will be selected." Is Ontario still ignoring this request.</p> <p>b. Have First Nations be consulted about this part of the plan? Please provide written evidence of their approval of this route.</p> <p>Field investigations for Stage 2 and Stage 3 works have been completed and additional details are included in the Updated Draft Environmental Impact Assessment Report available on the Project Website (https://www.bradfordbypass.ca/study-process/) for public review until August 14, 2023.</p> <p>The required Stage 4 Archaeological Assessment of BaGv-42 will be completed during future phases of work for the project and will be carried out in accordance with the Ministry of Citizenship and Multiculturalism Standards and Guidelines for Consultant Archaeologists (Ontario Government 2011). No ground disturbing activities will occur at this site until the Stage 4 assessment has been conducted.</p> <p>In accordance with Ontario Regulation 697/21, the Project Team completed site specific Stage 3 archaeological assessments for areas within the Study Area that were identified as having archaeological potential in accordance with the Stage 2 archaeological assessments.</p> <p>It is common practice for Stage 4 archaeology work to be completed during Detail Design. Limiting the impact to Stage 4 archaeological sites where feasible is one of the Project Team's main priorities. As a result, the Project Team will determine the exact impact limits to archaeological sites during subsequent design phases of the project. To avoid unnecessary excavation, the Project Team will then undertake the Stage 4 archaeological assessments. Any Stage 4 field work that will be undertaken must engage interested Indigenous communities.</p> <p>As recommended by the cultural heritage resource assessment undertaken by the Project Team, the Holland River watershed was identified as a Cultural Heritage</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIAR Edits Required? (Yes/No? If yes specify edits)
						<p>Landscape requiring further research and evaluation to determine if it possesses cultural heritage value or interest. This further assessment will be completed in a Cultural Heritage Evaluation Report (CHER), and if the CHER determines that the Holland River Watershed meets the criteria in Ontario Regulation 9/06 or Ontario Regulation 10/06 of the Ontario Heritage Act, and may be adversely impacted by the Updated Technically Preferred Route, a Heritage Impact Assessment will be prepared to fully assess impacts on the resource's identified heritage attributes and propose alternatives and mitigation to conserve the property's Cultural Heritage Value or Interest. These commitments are included in Section 5.3.2 of the Updated Draft EIAR.</p> <p>Consultation is an integral component of the Preliminary Design stage, the project-specific assessment of environmental impacts process, and for future project phases, and is critical to a project's success. The ministry is actively consulting and engaging with Indigenous communities throughout the Bradford Bypass Project.</p> <p>The Project Team is engaging with and considers input provided by the following Indigenous communities:</p> <ul style="list-style-type: none"> - Alderville First Nation - Beausoleil First Nation - Chippewas of Georgina Island First Nation - Chippewas of Rama First Nation - Curve Lake First Nation - Hiawatha First Nation - Mississaugas of Scugog Island First Nation - Kawartha Nishnawbe First Nation - Georgian Bay Métis Council, and - Huron-Wendat Nation <p>Comments from Indigenous communities are accepted at any time in the study process.</p> <p>5. Table 2-2 lays out the 12 species present or very likely to be present. For instance, Blandings Turtles are likely affected as they are likely in the area. The only commitment we see is to do a detailed study later on. This is a good example of study following decision or destruction, and is in violation of the standard</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIAR Edits Required? (Yes/No? If yes specify edits)
						<p>EA practices. There are no commitments to the protection of species at risk in this document.</p> <p>Targeted surveys for all species at risk with potential to occur in the Study Area will be required during future phases of work. These future studies will inform the need for any permits, authorizations, mitigation or compensation under the Endangered Species Act.</p> <p>The Updated Draft EIAR requires consideration and review of all recommendations throughout the corridor during future phases of work. This approach is necessary and standard practice for planning projects in that design is an iterative approach and this project is only completing design to a preliminary level. During future phases of work, additional design will be completed and may include refinements to the design as details are developed with greater accuracy. Limiting the future design phases by making certain elements of the project non-discretionary at the preliminary design stage limits the potential for future work to explore opportunities for further reducing impacts and / or increasing mitigation and offsetting measures.</p> <p>For Blanding's Turtle specifically, candidate habitat associated with the Holland River and Holland River East Branch open water and wetland communities has been identified within the Study Area. Blanding's Turtle may be impacted while moving in between habitats if these species enter the construction work area.</p> <p>As part of this phase of the project, preliminary mitigation and avoidance measures for the potential impacts to turtles are included in the Draft EIAR and include:</p> <ul style="list-style-type: none"> • If stockpiles of gravel and sandy substrates or the removal of these substrates in the vicinity of turtle habitat are required during the active turtle season (April 1 to October 15), turtle exclusion fencing should be installed in accordance with the Reptile and Amphibian Exclusion Fencing Best Management Practices (Ministry of the Environment, Conservation and Parks, 2020) around stockpiles or area of disturbance prior to April 1. Fencing should be installed immediately after stockpiles are created if after April 1. • It is recommended that culverts be designed to provide openness ratios that would allow for the 	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIAR Edits Required? (Yes/No? If yes specify edits)
						<p>passage of small mammal and/or herpetofauna where possible. An openness ratio of 0.4 would permit usage by medium-sized mammals, while the minimum openness ratio to be considered should be 0.25, which would permit usage by reptiles such as turtles (Credit Valley Conservation, 2017).</p> <ul style="list-style-type: none"> Avoid work within areas of candidate turtle overwintering habitat during the turtle overwintering period (October 31 to April 1), whenever possible. <p>These preliminary mitigation measures will be further refined as the project proceeds to Detail Design and impacts are assessed in more detail.</p> <p>For further detail on potential impacts to Species at Risk and proposed mitigation and avoidance measures, please refer to Section 5.1.1 of the Draft Environmental Impact Assessment Report.</p> <p>a. The Draft IA report identifies that the Williams Treaties FN reported American Eel and Northern Sunfish in the Holland River. This must be further investigated with new fieldwork. The American Eel is in decline and gets Federal protection. Ontario's Species at Risk legislation doesn't work anymore so it's all up to the federal enforcement.</p> <p>b. What is Ontario going to do to stand by Canada's obligations to First Nation treaty and consultation rights?</p> <p>c. Will the American Eel's presence be investigated with new field work.</p> <p>It was noted in discussion with William Treaties First Nations on December 1, 2022, that they had observed both American Eel (<i>Anguilla rostrata</i>; Endangered Species Act – Endangered, Species at Risk Act – Not at Risk) and Northern Sunfish (<i>Lepomis peltastes</i>; Endangered Species Act – Special Concern, Species at Risk Act – Special Concern) in the Holland River.</p> <p>Subsequently, the Project Team consulted with the Ministry of the Environment, Conservation and Parks, in March 2023 and was advised that the Ministry of</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIAR Edits Required? (Yes/No? If yes specify edits)
						<p>Environment, Conservation and Parks records have no documented observances of the American Eel or Northern Sunfish in the Study Area. They also noted that the Northern Sunfish is a species of special concern and does not have a permitting status with the Ministry of the Environment, Conservation and Parks, and therefore would not be reported. These discussions with Williams Treaties First Nations and MECP have been documented in the Fish and Fish Habitat Report and Section 2.1.2 of the Updated Draft EIAR.</p> <p>No records of aquatic Species at Risk that are afforded protection under the Species at Risk Act or Endangered Species Act are known to occur in the watercourses where culverts are anticipated to be installed. AECOM ecologists conducted a detailed fish and fish habitat assessment of the water features in the vicinity of the Study Area between September 14-18, 2020, with spring field investigations occurring over multiple days in June 2021. Field investigations were also completed in the spring of 2022 due to changes to the Study Area boundary that required further review for potential fish habitat. Based on these investigations, no Species at Risk were discovered in the Study Area. Regardless, the presence or absence of all aquatic Species at Risk will be re-confirmed in subsequent design phases through additional field investigations.</p> <p>6. Please confirm our understanding that has been no discussion of, and that there are no studies looking at impacts to Lake Simcoe.</p> <p>As the project falls within the jurisdiction of the Lake Simcoe Region Conservation Authority (LSRCA), pertaining to Ontario Regulation 179/06, the ministry has assessed impacts with respect to the <i>Lake Simcoe Protection Act</i> and the Lake Simcoe Protection Plan through consideration of water quality and quantity, stormwater management, groundwater management, landscaping and ecological restoration measures; as well as fluvial geomorphological designs for watercourses, erosion and sediment control and spills prevention and protection measures.</p> <p>a. The Groundwater Protection and Well Monitoring plan, which this Draft IA refers to, discusses the need to dewater</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIAR Edits Required? (Yes/No? If yes specify edits)
						<p>the site for the building of piles for elevated bridge sections of the highway. The Draft IA report says, "Construction dewatering activities have been identified as the primary risk to groundwater fed water wells in the Study Area." There is no credible groundwater protection water. There are many suggestions for how to keep it clean but there are few to no commitments.</p> <p>Commitments, preliminary mitigation measures and monitoring activities related to groundwater are documented in Section 5.1.4 of the Draft EIAR, and will be carried forward to subsequent phases of the project.</p> <p>The risk of spills during construction of the project will be primarily limited to petroleum products from machinery (fuels and lubricants). The use of best management practices for handling of hydrocarbons according to the Ministry of Environment, Conservation and Parks and the Technical Standards and Safety Authority of the Ministry of Government Services will reduce the potential of environmental adverse effects associated with petroleum product handling and uses. Spillage of petroleum products must be immediately remediated according to these standards such that groundwater quality is not impacted.</p> <p>Mitigation plans will be generated during future phases of work for the project and for any excavation and structure construction within areas of medium to high significant groundwater recharge areas as shown near the Holland River and Holland River East Branch. Mitigation plans would be specific to each excavation and structure construction and include erosion and sediment control, dewatering treatment and discharge piping away or towards from Significant Groundwater Recharge Areas, or municipal sewer discharge requirements. Dewatering discharge shall be directed away from Well Head Protection areas if excavation and dewatering activities are occurring within them.</p> <p>For more information about the Groundwater Protection and Well Monitoring Plan please refer to Section 5.1.4 of the Updated Draft EIAR.</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIAR Edits Required? (Yes/No? If yes specify edits)
						<p>b. How exactly is the province going to monitor groundwater discharges to ensure they meet Ontario's water quality standards?</p> <p>c. What penalties are contractors going to face for violating the discharge requirements?</p> <p>d. If penalties are not enough to compel adherence, what next?</p> <p>e. How is the public to have confidence that contaminated water will not be discharged to the Holland Rivers and Lake Simcoe?</p> <p>f. Please confirm is monitoring will continue or not, as this statement is totally vague: "It is expected that each unassessed monitoring well will continue to be monitored and assessed during the subsequent detail design phase of the project."</p> <p>The Groundwater Monitoring Program includes groundwater level monitoring and groundwater quality monitoring to establish the pre-construction baseline conditions for comparison of data collected during and post-construction.</p> <p>During the Preliminary Design study, Golder Associates Ltd. (Golder) installed monitoring wells during the ongoing geotechnical investigations. Monitoring is expected to be completed within these same monitoring wells during all future phases of work for the Project, including construction. Residential monitoring wells will also be part of this program if they fall within the Radius of Influence of the excavation dewatering and permission to enter is granted to gain access to monitor the well. Detail Design will inform the need for further groundwater investigations. Penalties for discharging any deleterious substance or material to the lands will vary based on the federal, provincial or municipal legislation that might be violated. Beyond legislated penalties, contractor behavior is monitored by the Ministry and poor behavior may result in additional financial or reputational impacts. The Ministry's process for selecting contractors to support future phases of the work for the project also includes consideration of past performance and assessment of the</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIA Edits Required? (Yes/No? If yes specify edits)
						<p>contractors understanding of the project and sensitivities within the Study Area. Commitments, preliminary mitigation measures and monitoring activities related to groundwater are documented in Section 5.1.4 of the Draft EIA, and will be carried forward to subsequent phases of the project.</p> <p>g. Explain what kind of environmental impact would make the project stop; or is any impact acceptable?</p> <p>This government takes environmental protection seriously and is implementing a path forward that will ensure environmental protections are not compromised while building this much needed project quickly and safely. Current work on the Bradford Bypass project will continue to be subject to all conditions under Ontario Regulation 697/21.</p> <p>In accordance with Ontario Regulation 697/21, the Project Team has undertaken several environmental impact assessments to identify and document the potential impacts, proposed mitigation measures, and environmental commitments, which are summarized in the Environmental Impact Assessment Report (EIA).</p> <p>The Ministry of Transportation must also comply with all current federal and provincial environmental requirements. This includes consultation as set out in the regulation and obtaining permits and approvals for the project prior to the start of construction. Obtaining these permits and approvals, which are mechanisms to help protect the environment, confirms that the ministry has met or surpassed the environmental requirements.</p> <p>h. Please confirm that the only financial support for affected well owners whose water quality is affected by the construction is the province providing them with a temporary water supply until the well owner fixes their well.</p> <p>i. Does this meager bit of help extend to those who did not provide baseline information about their well water?</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIAR Edits Required? (Yes/No? If yes specify edits)
						<p>j. If there any effort being made to reach more than 12% of respondents to MTO's well water survey?</p> <p>MTO will work with owners of water wells who experience issues to determine if the issue is the result of Bradford Bypass project activities.</p> <p>If the well issue is confirmed to be a result of the project's activities, the Ministry will provide a letter to the property owner explaining the outcome of the well investigation and detail the recommended mitigation measures (including lowering / replacement of pump inlet, well rehab, new well installed or local watermain connection if available) the Ministry will undertake to remediate the issue. A temporary drinking water supply will be provided and connected to the resident if the project activities are found to be responsible, at the expense of the Ministry, until remediation measures have resolved the issue.</p> <p>A water well survey was completed for the project to determine the pre-construction assessment of private well supplies in the vicinity of the Study Area noted above. Where no response was provided from Property Owners as part of the water well survey, an additional attempt shall be undertaken during Detail Design to contact these owners via mail, email, phone calls, site visit, etc. This information will be used to provide a baseline for water wells prior to the proposed construction to determine existing water quality and quantity of each property.</p> <p>7. How much is this project going to cost?</p> <p>As we bring this project to market, we want to ensure we can retain the best value for the project. As such, the ministry will not be releasing cost estimates prior to the award of contracts to protect the procurement processes.</p> <p>8. When will the Bradford Bypass be completed?</p> <p>The Preliminary Design phase is anticipated to be completed in 2023. Detail Design and Construction Phases will follow.</p> <p>9. It is unclear how many lanes are being constructed at which times. Please clarify.</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIAR Edits Required? (Yes/No? If yes specify edits)
						<p>The Ontario government is committed to fully funding the construction of the Bradford Bypass and is following through on its promise to improve and invest in the province's transportation corridors to get people moving within the region, connect people to jobs, make life easier and support a strong economy.</p> <p>A four-lane configuration is planned to be constructed first with two general purpose lanes in each direction. To plan for the future, the Ministry is also considering the design of an ultimate eight-lane design for the Bradford Bypass. The ultimate, eight-lane configuration for the project will feature three general purpose lanes and one HOV lanes in each direction.</p> <p>10. There is no cumulative health impact assessment to understand how traffic related air pollution, known to increase risks of cancers, leukemia, heart and lung disease, will impact the communities surrounding the route. There is also no mention of the cumulative impacts on our climate from construction and higher rates of car travel on this highway.</p> <ul style="list-style-type: none"> a. How will you be informing people living along the route about the increased risk of traffic related air pollution and its effects on human health? b. Will you put air quality monitors in Bradford? c. How do you explain the fact that you are NOT monitoring air quality in Bradford, and using the closest site, Newmarket? d. The Final Environmental Conditions Report identified numerous planned residential developments right beside the highway, including a planned new school. Have the land owners / developers / school boards received any information that tells them how bad the air quality is going to be there? <p>The human health scoping implications of the project such as air quality, noise, land use, traffic congestion and safety, economic, social cohesion, and neighborhood</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIAR Edits Required? (Yes/No? If yes specify edits)
						<p>resources have been summarized in Section 2.2.7 and Section 5.2.7 of the Draft EIAR. To better understand the human health implications due to the Project as a next step, it is recommended for MTO to continue to consider the human health factors identified in this report and provide recommendations to enhance potential positive impacts and mitigate potential negative health impacts. Specifically, conducting a Screening-Level Human Health Risk Assessment of potential air quality impacts is recommended in order to evaluate and characterize Project-related air quality impacts to health.</p> <p>The project has undertaken an Air Quality Impact Assessment to explore pollutant emissions and dispersion modelling in an effort to predict the contribution of the project to future ambient pollutant concentrations. This contribution, added to background concentration levels, allows prediction of the cumulative impact of the proposed project and all other contributors to air pollution. Concentration levels are compared to provincial and federal ambient air quality criteria and standards to assist in the evaluation of project-specific mitigation needs and options.</p> <p>Areas of concentrated emission impact are influenced by traffic volumes along a given segment of roadway. The implementation of the Bradford Bypass is expected to redistribute traffic from local roads and freeway corridors surrounding the proposed Bradford Bypass. Reductions in traffic volumes are observed on corridors including Highway 11/1 (Bridge Street), Bathurst Street, Holland Landing Road, Yonge Street, Queensville Sideroad, Doane Road, Mount Albert Road, Green Lane, and Simcoe County Road 88/Holland Street, among other roads, which benefits the community of Bradford, Town of Bradford West Gwillimbury, by alleviating congestion during peak hours.</p> <p>The Project Team is currently utilizing the National Air Pollution Surveillance air quality monitoring stations to assess air quality levels. Five years of existing data sets were analyzed from stations within the region, and the complete data set from the closest station or most representative station for each contaminant of concern was selected to represent the background air quality for the Study Area. Due to the proximity of the Study Area to the Toronto Area, monitoring stations within the City of</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIA Edits Required? (Yes/No? If yes specify edits)
						<p>Toronto were given preference as the one of the most representative locations for the air quality contaminants of concern. As such, Roadside Wallberg – University of Toronto monitoring station, North Downsview monitoring station, Gage Institute monitoring station (all located approximately 38 – 53 km from the Study Area) were used. The nearest monitoring station is in Newmarket. Additional information regarding the assessment of potential air quality impacts have been summarized in Section 2.2.4 and Section 5.2.4 of the Draft EIA.</p> <p>Land has been designated for the Bradford Bypass since the 2002 Approved EA was completed. As noted above, consultation is an integral component of the Preliminary Design stage and project-specific assessment of environmental impacts and is critical to a project's success. The ministry is actively consulting and engaging with private landowners, developers and school boards within the Study Area. Engagement and consultation has included having a project website and telephone line, having a project contact list for regular project updates, providing notices and correspondence via email, mail, and Ontario Government Notices in local newspapers, hosting public information centres and online events, and holding meetings with Indigenous communities, municipalities, environmental agencies, and stakeholders. More information on the project consultation activities are included in Section 7 of the Updated Draft EIA.</p> <p>11. Traffic modeling to produce the air dispersion model is not robust or transparent. The air modeling report and supporting reports fail to disclose the % of diesel truck traffic, or the component of that traffic that includes trucks dating from 2006 or earlier which comprise a significant component of air pollution load. The comparison of build with no-build is not valid because the values in Appendix E of the traffic modeling report show that there was an erroneous assumption that there would be significantly less truck traffic in the build scenario compared to the no-build scenario. There is no valid scientifically-based justification for this. Further, if there is an increase in truck traffic along 404 - as the model predicts - then sensitive receptors along</p>

						<p>highway 404 need to be included in a health impact study. Instead, impacts on traffic along the 400/404 corridors were excluded and the "air quality study area" was restricted to the bypass corridor itself without any explanation or justification. It is egregious that MTO did not conduct locally relevant air quality monitoring for background in Bradford, River Drive Park, Queensville and along the 404/400 corridors for traffic related air pollutants. Such baseline monitoring is generally inexpensive and could have been easily obtained. The study did not include the cumulative effects of future planned industrial uses along the Bypass corridor and along the 400/404 corridor which may significantly impact people's health along the route. The evaluation did not use 2022 World Health Organization criteria for contaminants which are much lower and more up-to date than the CAAQS or the AAQCs. We disagree that the AAQCs and CAAQS represent the "lowest concentrations at which an adverse effect may be experienced" as they are not based on up-to-date understandings of the health impacts of air contaminants including pre-term births and neurodevelopmental and other impacts. The report predicts significant exceedances for NO2 and benzo(a)pyrene even with the apparently non-conservative assumptions for diesel truck traffic used in the full build out scenario compared to the no-build scenario. The adverse health impacts of NO2 exceedances may be extremely severe and will impact on the Charter rights and human rights of residents in the study area and beyond without justification for the need for the project.</p> <p>Study Area, MOVES3 data, vehicles and assumptions: In order to model relevant vehicle types within the Air Quality Impact Assessment Study Area, MOVES3 data was input to the model and refinements were made to exclude fuel types such as ethanol given these fuels are not readily available for use in Ontario. Fuel inputs utilized in MOVES3.0 modelling at the time of the assessment included: Fuel Type IDs 1, 2, 3 and 9. ID 5 (ethanol) was not included as flex fuel cars and fuelling stations are not</p>

						<p>readily available in Ontario. The specific source type fractions utilized for various vehicle types applied within the project study area and the related fraction of expected vehicle usage for both passenger-class vehicles and heavy-class vehicles, including the distribution of vehicle types in the heavy truck vehicle category, were combined to create representative vehicle emission for vehicle class that can reasonable be expected to be in use in 2041. Highway 400/404 corridors were included in the Air Quality Impact Assessment. The full air quality study area is shown in Figure 2-9 of the Updated Draft EIAI and demonstrates that the air quality study area included emission sources within the boundary of assessment, including but not limited to Highway 400 (500 m south of Rural Rd. 88 to 500 m north of Concession Rd. 11), Highway 404 (500 m south of Queensville Sideroad E to 500 m north of Boag Road), the entirety of the proposed Bradford Bypass, Bridge Street, Holland Street W, 10th Sideroad, Young Street/Barrie Street, and Queensville Sideroad.</p> <p>Traffic distributions and truck traffic: The same Average Annual Daily Traffic (AADT) were used for all scenarios. AADT values for each air quality emission source vary between the three scenarios evaluated based on projected existing traffic within the study area, and future no-build and build traffic projections however the same 24-hour traffic distribution percentages were applied. Three representative 24-hour distribution percentages were applied to the air quality emission sources. These were applied to a given source of emission depending on the type of road in question, e.g. a "Leslie St." 24-hour distribution was applied to air quality emission sources which were categorized as community arterial roads; a "HWY 400" 24-hour distribution was applied to air quality emission sources categorized as highways; and, a "2nd Concession Rd" 24-hour distribution was applied to rural roads. These same 24-hr distributions were applied to the assigned source for all three scenarios of evaluation (existing conditions, future no-build, and future build).</p> <p>Fuel usage distribution [i.e. diesel, gasoline, CNG, etc.] and vehicle age distribution within each vehicle type category were modelled based on MOVES3.0 default fuel use and age distribution database inputs assigned to the</p>

						<p>year of evaluation. Heavy truck traffic was included in the modelling with a percentage assigned to each air quality emission source anticipated from this vehicle type.</p> <p>Health Impacts, Critical Receptors and Background/Study Area Monitoring Data: The human health scoping implications of the project such as air quality, noise, land use, traffic congestion and safety, economic, social cohesion, and neighborhood resources have been summarized in Section 2.2.7 and Section 5.2.7 of the Updated Draft EIAI.</p> <p>The Project Team is aware some critical receptors have been identified as 'missing' by a number of stakeholders. Having reviewed the data, these 'missing' receptors were included as residences in the Air Quality Impact Assessment. Potential impacts at the 'missing' receptors within the Air Quality Impact Assessment Study Area are reflected in the assessment by other, nearby critical receptors and receptors identified on Figure 2-9 and 2-10 of the Updated Draft EIAI.</p> <p>The approach to identifying representative air quality levels is conservative and often ensures the worst-case conditions are reflected so as to not under-represent conditions within a study area; i.e. background air quality contaminant levels included within the assessment may be representative or higher than expected for the area in question.</p> <p>While it is recognized that localized in-situ monitoring may provide more accurate data, use of existing monitoring stations within the NAPS network for statistically relevant background monitoring data is a generally accepted and conservative methodology for provincial environmental impact air quality assessments. Stations selected for the background air quality assessment were chosen based on total data availability over a most recent five-year period as a minimum of 12 months of daily and hourly data is required to ensure statistical relevance. Stations were also selected based on their proximity to the air quality study area with the meteorological station selected as representative of the air quality study area within 15 km north-west of the air quality study area. Stations must also be a relative representation of similar types of existing sources of air quality emission in the study area and it is</p>

						<p>notable that the meteorological station selected as representative of air quality in the study area was provided by the MECF in site-specific MET data requested for the project modelling.</p> <p>12. Many less expensive alternatives to this highway have not been considered. The Minister approved Terms of Reference for the Bradford Bypass Environmental Assessment Study overrode the requirements of the Environmental Assessment act to consider road alternatives that would not be a controlled access highway. As a result, the Hwy 9 / Green Lane corridor was the only existing roadway that was considered as a reasonable alternative. That roadway was rejected as it was not considered feasible to convert it to a controlled access facility. Consideration of these types of alternatives are, however, a requirement for all Class EA Studies. A major condition of the 2002 Bradford Bypass EA Approval, was a requirement to conduct a Class EA Study at the time MTO wished to proceed with this project. This study would ensure the currency of the proposed project in light of current travel demand, previously unforeseen environmental factors, new legislation and a full review of all reasonable alternatives including combinations of regional and local roadways. The following are reasonable alternatives that would need to be considered both individually and in combination with one or more other reasonable alternatives if the Class EA Study that was underway at the time Regulation 697 /21 was issued. Each of these proposed alternative solutions would then be evaluated against the then approved Bradford Bypass 4 lane controlled access freeway. Because the Class EA Study was canceled by this regulation, the only comparison AECOM have used throughout the Draft Impact Assessment Report is "Do Nothing". Given that the actual travel problem we are now faced with is local, rather than long distance traffic, we are confident one or more of the following</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIAR Edits Required? (Yes/No? If yes specify edits)
						<p>reasonable alternatives would be dramatically preferable to the now 8 lane, Bradford Bypass. Alternatives to the Bradford Bypass:</p> <ul style="list-style-type: none"> a Construct a 4 lane arterial road bridge over the West Branch of the Holland River at the currently planned location for the Bradford Bypass bridge – together with paved 4 lane roadways to both Bathurst St. and a connection to Bradford's 8th Line. b Build a 4 lane arterial road bridge over the Holland River from Ravenshoe Road to connect with Simcoe Line 13 or another appropriate east – west arterial road on the west bank of the Holland River. c Extend and widen Green Lane to 6 lanes and create a diagonal transition from Green Lane to Hwy 9 and highway bridge intersection with Highway 9 around Dufferin St. The Green Lane / Highway 9 option will better serve and reduce both local and long distance traffic from Newmarket south to at least Aurora Sideroad. <p>Any one or a combination of these alternatives will address a substantial amount of local travel problems while being significantly less costly and environmentally invasive. Once again, what logic is being used to ignore these options given all of the rationale in favour of these other alternatives?</p> <p>The planning process that resulted in the 2002 approved Environmental Assessment (EA) for the Bradford Bypass evaluated alternatives from a broad range of potential solutions to address several transportation problems and to address significant opportunities identified in York Region and Simcoe County. The need for this freeway was confirmed during the Route Planning and EA Study as the only reasonable solution that would make a significant contribution towards addressing the problem as the population in York Region and Simcoe County grows. The 2002 EA approved alignment is technically preferred for a freeway in terms of highway network expansion, ease of</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIAR Edits Required? (Yes/No? If yes specify edits)
						<p>construction, relationship to provincial and municipal land use planning and the preferred route is already included in Official and Transportation Master Plans, as well as the Places to Grow Act), as well as having fewer negative impacts to residential and natural areas when compared to other route options considered.</p> <p>The Bradford Bypass Project has been modelled based on current local, regional, and provincial projections and data. This addresses the problem of "lack of long-term planning" per the Bradford Bypass 2002 approved EA..</p> <p>The 2002 approved EA reviewed a broad area of analysis which included several corridors, including areas south of the current corridor, and Highway 89/Ravenshoe Road.</p> <p>The Bradford Corridor was selected as the preferred corridor over Highway 89/Ravenshoe Road as it was beyond the maximum north limit of 10th Line / Boag Road which was assessed in a previous EA study and was determined that a Management Area or river crossing north of this would entail unacceptable environmental impact, which lead to the withdrawal of the Highway 89 EA studies in 1986-87.</p> <p>The Bradford Corridor was selected as the preferred corridor over the southern alternatives as there was no south alternative that met the primary purpose of the study to reduce out-of-way travel. The south limit was established as Highway 88 and Queensville Sideroad.</p> <p>The original purpose of the Bradford Bypass per the 2002 Approved EA was to address the "east-west" long-distance travel demand crossover between Highway 400 and Highway 404 which is a provincial responsibility and distinct from the locally generated trips which use a municipal road to access the provincial network. As noted in the report, the overall network benefits from vehicle-hours of travel time savings and vehicle-kilometres of travel distance savings are observed during the 2041 AM peak hour and during the 2041 PM peak hour in the updated interchange locations. Local roads forecasted to exceed capacity by 2031 and 2041 under the No-Build scenarios see significant relief from traffic as a result of the diversion to the Bradford Bypass in the Build scenarios.</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIAR Edits Required? (Yes/No? If yes specify edits)
						<p>While the Town of Bradford West Gwillimbury owns a closed road allowance east of Artesian Industrial Parkway for 8th Line to Holland River, Hochreiter Road itself is a private road. A connection at this location would not address the primary purpose of the Bradford Bypass to connect Highway 400 and Highway 404. The local benefit of this route is likely outweighed by the reduced congestion of Bridge Street created by the Bradford Bypass. A bridge across 8th Line would still require out-of-way travel, which this study is looking to reduce, to connect to provincial transportation facilities. Improvements would likely be required on Bathurst Street and Queensville Sideroad. Significant property impact (similar to the Bradford Bypass) would be required for a new corridor connection from 8th Line straight to Highway 404. For more information on the 2002 Approved EA, please see the enclosed linked: https://www.bradfordbypass.ca/wp-content/uploads/2020/09/BBP-RoutePlanningEA-1997.pdf</p> <p>For more information on the assessment of alternative routes, please refer to the response to question #3.</p> <p>The Project Team will continue to carefully consider all impacts to wetland areas and will continue to work with Indigenous communities, environmental agencies, municipalities, and other concerned stakeholders to identify principles and recommendations for mitigating the impacts of placing new or expanded provincial highways within wetland areas. The Bradford Bypass Project will continue to look at opportunities to minimize impacts to these wetlands through engineering refinements.</p> <p>If you have any other questions, please feel free to reach out to the Project Team at your earliest convenience. You can reach the Project Team via email at projectteam@bradfordbypass.ca, toll free at 1-877-247-6036, or by visiting the Project Website at www.bradfordbypass.ca.</p> <p>Sincerely,</p> <p>The Bradford Bypass Project Team Email: projectteam@bradfordbypass.ca Toll-Free: 1 (877) 247-6036</p>

CT-DraftEIAR-77	To: Project Team From: [REDACTED]	Email: [REDACTED]	Draft EIAR	June 29, 2023	<p>Submitted by email to ProjectTeam@BradfordBypass.ca By June 30, 2023</p> <p>Dear Sirs,</p> <p>We have many concerns with this project, the process it is following, and this report is no different. Please answer our questions below.</p> <ol style="list-style-type: none"> 1. Timing and consultation are inadequate. You have provided an un-editable PDF and 30 days for a 576 page report. This follows the pattern of terrible public information and consultation. Will you extend the consultation period? 2. Explain how a provincial highway was transformed into a very expensive regional road variant with five interchanges and two 400 series highway connections, paid for by all Ontario taxpayers. This is inconsistent with the MTO's mandate to provide long distance travel solutions. We maintain that there are better and cheaper, faster to implement, regional road and transit solutions that should be pursued, even if the Bypass does get built. We would like to see the traffic studies in their entirety. An environmental assessment used to be grounded in a demonstration of need and justification. The MTO has provided neither as it pertains to this particular project and at this time. There is no evidence that local traffic solutions MTO purports to be solving (actually a local traffic issue and not MTO's mandate) are best served by this potentially \$4 billion highway. <ol style="list-style-type: none"> Please share the links and the methodology, transparently, so that people can understand what travel time savings MTO is referring to. We have absolutely no idea because your write up is incredibly vague about the start and end of the routes used for analysis. For instance this meaningless babble from pg. 	<p>Hi [REDACTED]</p> <p>Thank you for your interest in the Bradford Bypass Preliminary Design Study and project-specific assessment of environmental impacts, undertaken in accordance with Ontario Regulation 697/21.</p> <p>1. Time and consultation are inadequate. You have provided an un-editable PDF and 30 days for a 576 page report. This follows the pattern of terrible public information and consultation. Will you extend the consultation period?</p> <p>The process of planning the Bradford Bypass has included -- and will continue to include -- consultation with the public and Indigenous communities to ensure the project moves forward in an environmentally responsible way that is responsive to the needs and concerns of communities. In accordance with Ontario Regulation 697/21, an initial Draft Environmental Impact Assessment Report (EIAR) -- which documents the results of the studies undertaken for various environmental disciplines, proposed mitigation measures and environmental commitments to protect the environment -- was published for public review starting on June 1 and continuing until June 30, 2023. In addition, the Ministry has been providing Indigenous communities and stakeholders various opportunities for meaningful consultation since the project was re-initiated in September 2020 including two Public Information Centres.</p> <p>Additional archaeological investigations, which are necessary to complete the impact assessment in accordance with regulations, have recently been finalized and incorporated into an Updated Draft Environmental Impact Assessment Report. This updated report has been posted for an additional 30-day consultation period. The Updated Draft EIAR posting includes the information from the initial draft to ensure stakeholders can review additional information in full context of the project. As the initial Draft EIAR and the Updated Draft were available for public review for a total of 60 days, an extension of the public review period is not being considered at this time.</p> <p>The Updated Draft Environmental Impact Assessment Report was available for review on the Project Website (https://www.bradfordbypass.ca/study-process/) until August 14, 2023.</p>	No

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIAR Edits Required? (Yes/No? If yes specify edits)
					<p>334:</p> <p><i>On average between the various origin-destination pairs using the Bradford Bypass, drivers in the peak direction during the peak period, would save up to 73% or 33 minutes of travel time when connecting between Highway 403 and Highway 404 compared to existing routes in the No Build scenario.</i></p> <p>b. What year do your studies indicate that the Bypass will be congested at peak rush hour times?</p> <p>4. The Draft Environmental Impact Assessment report shows on pg. 212 the Bypass touching the southern portion of the Lower Landing (AKA BaGv-42), a significant historical and archaeological site at a significant meander on the East Holland River. MTO has moved the highway 150 m to the south of the technically preferred route, which would have completely run over the Lower Landing (pg 148). The Draft Environmental Conditions Report indicated that a Stage 3 archaeological assessment "was required" (pg 225); the Draft IA report says that the Stage 3 was completed, and that Stage 4 is required. The Project team's website says, <i>"Currently, additional archaeological investigations are being completed to finalize the impact assessments in accordance with Ontario Regulation 697/21 and are not included in this posting. This information will be available for additional public and Indigenous community review once completed."</i> The Draft IA states, "the southern portion of the site ... will be impacted by construction. Stage 4 Archaeological Assessment excavation plans will be submitted to the Ministry of Citizenship and Multiculturalism and Indigenous communities prior to the Stage 4 excavation being conducted," (pg 395).</p> <p>So the archeological work is not finished. And yet the route has been chosen. Property owners near the history-rich Lower Landing that are receiving expropriation notifications. We</p>	<p>2. Explain how a provincial highway was transformed into a very expensive regional road variant with five interchanges and two 400 series highway connections, paid for by all Ontario taxpayers. This is inconsistent with the MTO's mandate to provide long distance travel solutions. We maintain that there are better and cheaper, faster to implement, regional road and transit solutions that should be pursued, even if the Bypass does get built.</p> <p>The project is being assessed with consideration of the Ministry's mandate to provide for the safe, efficient movement of people and goods between regions and urban areas. In addition, the Project Team has consulted with local and regional municipalities, and the traffic analysis for the proposed Bradford Bypass has considered the planned local transportation and transit improvements to be implemented by others.</p> <p>The original route planning study (2002 Approved Environmental Assessment – EA) concluded that additional relief from congestion in this Study Area could only be accommodated through the protection and implementation of a provincial right of way.</p> <p>As part of the 2002 Approved EA, the Bradford Bypass evaluated alternatives from a broad range of potential solutions to address several transportation problems and to address significant opportunities identified in York Region and Simcoe County. The need for this freeway was confirmed as the only reasonable solution that would make a significant contribution towards addressing the problem as the population in York Region and Simcoe County grows. The 2002 Approved EA approved alignment is technically preferred for a freeway in terms of highway network expansion, ease of construction, relationship to provincial and municipal land use planning and the preferred route is already included in Official and Transportation Master Plans, as well as the Places to Grow Act), as well as having fewer negative impacts to residential and natural areas when compared to other route options considered.</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIAR Edits Required? (Yes/No? If yes specify edits)
					<p>are staunchly opposed to this violation of this site particularly absent the completed stage 4 archaeological assessment of the Lower Landing and the endorsement of the First Nations.</p>  <p><i>Bradford Bypass is still too close to the Lower Landing. The Lower Landing is in the area of WC-25 in the image above. This clip of a map shows Provincially significant wetlands (orange); unevaluated wetlands (blue); cold water fish habitat (black) and warm (pink); Original / full map available on pg 55 of Draft IA report.</i></p> <p>a. As stewards of these lands and water for time immemorial, additional time should be given to allow First Nation community members to fully digest the lengthy report. Georgina Island First Nation asked that this site be avoided in 1998, 25 years ago, stating, "It is obvious that there are other routes, which can be used to connect these major highways, and we hope that another will be selected." Is Ontario still ignoring this request?</p> <p>b. Have First Nations been consulted about this part of the plan? Please provide written evidence of their approval of this route.</p> <p>c. It is imperative that the Ontario Government uncover all evidence of burials where the highways are to be built. How this is done must follow affected First Nations' protocols and wishes. These are some thoughts from a non-native resident of the area on the topic:</p> <p>i. These burial sites must be preserved and protected or possibly moved to another location. Identifying registered and unregistered burial sites should be relatively simple for the Ontario Government as the information is readily</p>	<p>For more information on the Analysis and Evaluation of alternatives, refer to Section 2.1.6 of the 2002 Approved EA, which can be found in the enclosed link: https://www.bradfordbypass.ca/wp-content/uploads/2020/09/BBP-RoutePlanningEA-1997.pdf</p> <p>Further to the conclusion of the 2002 Approved EA, as part of this Preliminary Design study, a traffic analysis was completed and the result of the review has confirmed the need of the highway. This analysis included the review of existing traffic conditions and modelling of future forecast traffic conditions and it has been confirmed that updates to regional and municipal roads alone will not address the transportation needs within the Study Area.</p> <p>Additionally, a feasibility assessment was conducted evaluating nine interchange location scenarios to determine the best interchange configuration through the Bradford Bypass corridor. The evaluation was conducted in accordance with satisfying the study objective to improve connectivity of the study area between Highway 400 and Highway 404, facilitating the improvement of traffic operations and movement of goods. Consideration included interchange utilization, overall network delay, out of way travel, environmental considerations and constraints, and preliminary costs. It was determined that interchanges at 10th Sideroad, County Road 4, Bathurst Street, 2nd Concession Road, and Leslie Street would be included as part of the Study.</p> <p>3. We would like to see the traffic studies in their entirety. An environmental assessment used to be grounded in a demonstration of need and justification. The MTO has provided neither as it pertains to this particular project and at this time. There is no evidence that local traffic solutions MTO purports to be solving (actually a local traffic issue and not MTO's mandate) are best served by this potentially \$4 billion highway.</p> <p>The Bradford Bypass project has been assessed in accordance with Ontario Regulation 697/21. Consistent with the Regulation, the Project Team completed an update to the description of environmental conditions previously documented in the 2002 Approved</p>

					<p>available from their own ministries, authorities as well as from local governments and churches/cemeteries. While 'registered burial sites' are easy to identify, 'unregistered sites' need to be confirmed and registered as required under Ontario's Funeral, Burial and Cremation Services Act, 2002 while 'Still to be found sites' require sleuthing, historical research and boots on the ground investigation. One of the most extreme requirements that could be requested is for the Ontario Government to perform thorough Ground Penetrating Radar (GPR) surveying of every square foot of the Bradford Bypass. Anomalies called 'targets' would receive special attention via Archaeological digs. Human remains discovered would either be left in place or moved. All work and costs are to be borne by the Ontario government. This solution for 'Still to be found' burial sites is as necessary as the work done and currently being done for the former Residential Schools in Canada.</p> <p>5. Species at Risk</p> <p>a. Table 2-2 lays out the 12 species at risk present or very likely to be present. For instance, Blandings Turtles are likely affected as they are likely in the area. The only commitment we see is to do detailed study later on. This is a good example of study following decision or destruction, and is in violation of standard EA practices. There are no commitments to the protection of species at risk in this document.</p> <p>b. There is a requirement for the Minister of the Department of Fisheries and Oceans to consider, when making certain decisions related to the fish and fish habitat protection (and pollution prevention) provisions of the Act, the Indigenous knowledge of the Indigenous peoples of Canada that has been provided to the Minister (34.1(1) (g) of the Fisheries Act); and,</p> <p>c. Requirement to protect the confidentiality of Indigenous knowledge that is provided to the Minister in confidence, except under limited</p>	<p>Environmental Assessment (EA) for the project. This update included a review and assessment of the existing traffic conditions which was documented in the Environmental Conditions Report (ECR). The ECR was finalized in October 2022 following a public review period, and is available on the Project website.</p> <p>Significant population growth is projected for both Simcoe County and the Regional Municipality of York. Even with all currently planned transportation and transit investments, road congestion will continue to increase across the Greater Golden Horseshoe (GGH) including within the Bradford Bypass Study Area.</p> <p>The purpose of the Bradford Bypass is to relieve congestion on existing local roads between Highway 400 and Highway 404 and provide a northern freeway connection between Highways 400 and 404.</p> <p>Modeling results demonstrated that under the No Build (no Bradford Bypass) scenario, local roads were forecasted to exceed capacity by 2031 but saw significant relief under the Build (with Bradford Bypass) scenario. Alternative alignments for the Bradford Bypass were then compared within the model, including the 2002 Approved EA alignment and interchange locations and an updated preferred interchange location alternative developed by the Project Team.</p> <p>On average, between the various origin-destination pairs using the Bradford Bypass, drivers in the peak direction during the peak period, would save up to 73% or 33 minutes of travel time when connecting between Highway 400 and Highway 404 compared to existing routes in the No Build scenario.</p> <p>The development of the analysis and key results from the Traffic Study have been summarized in the Draft Environmental Impact Assessment Report and the Updated Draft Environmental Impact Assessment Report (EIAR), which were available for public review and comment from June 1, 2023 to June 30, 2023 and July 14, 2023 to August 14, 2023, respectively. The information in the draft EIAR includes the origin and destination locations that were reviewed to determine the average travel time savings during the AM and PM peak hours. Similar to the process undertaken for MTO preliminary design studies, the Traffic Study will be finalized upon study completion and will be available if requested.</p>

					<p>circumstances (subsection 61.2 (1) of the Fisheries Act)."</p> <p>d. The Draft IA report identifies that the Williams Treaties FN reported American Eel https://www.dfo-mpo.gc.ca/species-especes/publications/sara-lep/eel-anquille/index-eng.html and (delay in listing - actually gets no protection now) Northern Sunfish in the Holland River. This must be further investigated with new fieldwork. The American Eel is in decline and gets Federal protection. Ontario's Species at Risk legislation doesn't work anymore so it's all up to the Federal enforcement.</p> <p>i. What is Ontario going to do to stand by Canada's obligations to First Nations treaty and consultation rights?</p> <p>j. Will the American Eel's presence be investigated with new fieldwork?</p> <p>6. There are many concerns related to surface water and groundwater.</p> <p>a. Please confirm our understanding that there has been no discussion of, and that there are no studies looking at impacts to Lake Simcoe.</p> <p>b. The Groundwater Protection and Well Monitoring plan, which this Draft IA refers to, discusses the need to dewater the site for the building of piles for the elevated bridge sections of the highway. The Draft IA report says, "Construction dewatering activities have been identified as the primary risk to groundwater fed water wells in the Study Area," p 295. There is no credible groundwater protection plan. There are many suggestions for how to keep it clean but there are few to no commitments.</p> <p>c. HOW exactly is the province (MoECP) going to monitor groundwater discharges to ensure they meet Ontario's water quality standards?</p> <p>d. What penalties are contractors going to face for violating the discharge requirements?</p> <p>e. If penalties are not enough to compel adherence, what next?</p>	<p>a. Please share the links and the methodology, transparently, so that people can understand what travel time savings MTO is referring to. We have absolutely no idea because your write up is incredibly vague about the start and end of the routes used for analysis.</p> <p>b. What year do your studies indicate that the Bypass will be congested at peak rush hour times?</p> <p>As detailed in the Draft EIAR (Section 2.4.1), an Aimsun model was created to assess the existing traffic conditions for the road network in the Study Area. The model study area encompasses the Highway 400 corridor from south of Simcoe County Road 88 to north of Highway 89, as well as the Highway 404 corridor from south of Green Lane East to its terminal at Woodbine Avenue (Table 4-3 and 4-4 of the Draft EIAR).</p> <p>The model for this area was developed using pre-pandemic traffic volumes to identify peak hour volumes within the Study Area. This model has been calibrated and validated as it closely resembled actual operating conditions.</p> <p>As detailed in Section 4.4 of the Draft EIAR, traffic is assessed through modelling to identify Level Of Service (LOS). Having confirmed the model was consistent with current (base) conditions, and therefore appropriate to assess future conditions and design alternatives, the model was used to assess LOS under future 2031 and 2041 conditions. To assess future conditions, the model was updated to include all road network and transit improvements planned within the Study Area, and, forecast traffic volumes based on the projected growth within the Study Area.</p> <p>The alternative Build scenarios showed the mainline operations on the Bradford Bypass in 2031 would operate at acceptable LOS D in the interim four lane configuration. The model indicates that by expanding to the ultimate 8 lane configuration (implementing another general purpose lane and an HOV lane in each direction by 2041), LOS on</p>

					<p>f. How is the public to have confidence that contaminated water will not be discharged to the Holland Rivers and Lake Simcoe?</p> <p>g. Please confirm if monitoring will continue, or not, as this statement is totally vague: "It is expected that each unassessed monitoring well will continue to be monitored and assessed during the subsequent detail design phase of the project" P. 79.</p> <p>h. Explain what kind of environmental impact would make this project stop; or is any impact acceptable?</p> <p>i. Please confirm that the only financial support for affected well owners whose water quality is affected by the construction is the province providing them with a temporary water supply until the well owner fixes their well.</p> <p>j. Does this meager bit of help get extended to those who did not provide baseline information about their well water?</p> <p>k. Is there any effort being made to reach more than 12% of respondents to MTO's well water survey?</p> <p>7. How much is this project going to cost?</p> <p>8. When will the Bradford Bypass be completed?</p> <p>9. It is unclear how many lanes are being constructed at which times. Please clarify.</p> <p>10. There is no cumulative health impact assessment to understand how traffic related air pollution, known to increase risks of cancers, leukemia, heart and lung disease, will impact the communities surrounding the route. There is also no mention of the cumulative impacts on our climate from construction and higher rates of car travel on this highway.</p> <p>a. How will you be informing people living along the route about the increased risk of traffic</p>	<p>the mainline improves to LOS B or C and accommodates the additional traffic forecast by 2041.</p> <p>For further information about the Traffic Study please refer to the response to Question #3 and Section 4.4 of the Updated Draft EIAR.</p> <p>4. The Draft Environmental Impact Assessment report shows on pg. 212 the Bypass touching the southern portion of the Lower Landing (AKA BaGv-42), a significant historical and archaeological site at a significant meander on the East Holland River. MTO has moved the highway 150 m to the south of the technically preferred route, which would have completely run over the Lower Landing (pg 148). But the Draft IA states," the southern portion of the site ... will be impacted by construction" (pg 395). The Draft Environmental Conditions Report indicated that a Stage 3 archaeological assessment "was required" (pg 225); the Draft IA report says that the Stage 3 was completed, and that Stage 4 is required. The Project team's website says, "Currently, additional archaeological investigations are being completed to finalize the impact assessments in accordance with Ontario Regulation 697/21 and are not included in this posting. This information will be available for additional public and Indigenous community review once completed." So the archeological work is not finished. And yet the route has been chosen. Property owners near the history-rich Lower Landing that are receiving expropriation notifications. We are staunchly opposed to this violation of this site particularly absent the stage 4 evaluation of the Lower Landing and the endorsement of the First Nations.</p> <p>a. As stewards of these lands and water for time immemorial, additional time should be given to allow First Nation community members to fully digest the lengthy report. Georgina Island First Nation asked that this site be avoided in 1998, 25 years ago, stating, "It is obvious that there are other routes,</p>

					<p>related air pollution and its effects on human health?</p> <p>b. Will you put air quality monitors in Bradford?</p> <p>c. How do you explain the fact that you are NOT monitoring air quality in Bradford, and using the closest site, Newmarket?</p> <p>d. The Final Environmental Conditions Report identified numerous planned residential developments right beside the highway, including a planned new school. Have the land owners / developers / school boards received any information that tells them how bad the air quality is going to be there?</p> <p>11. Traffic modeling to produce the air dispersion model is not robust or transparent. In order to understand traffic related air pollution, relevant vehicle types and assumptions need to be used. The air dispersion modeling report simply indicates that MOVES3 default data was used - but the EPA has emphasized the need to include relevant vehicle type inputs into the model.</p> <p>The air modeling report and supporting reports fail to disclose the % of diesel truck traffic, or the component of that traffic that includes trucks dating from 2006 or earlier which comprise a significant component of air pollution load. The air dispersion modeling report states that the vehicle type distributions were based on MOVES3.0 default database inputs even though there are no such inputs. It also says that the 24 hour traffic distribution was assumed to be equal to the AADT distribution. However the consultant appeared to use different AADT distributions for different scenarios without explanation and the distributions differed significantly as between build and no build scenarios. Mitigation in the form of frequent diesel heavy truck</p>	<p>which can be used to connect these major highways, and we hope that another will be selected." Is Ontario still ignoring this request.</p> <p>b. Have First Nations be consulted about this part of the plan? Please provide written evidence of their approval of this route.</p> <p>Field investigations for Stage 2 and Stage 3 works have been completed and additional details are included in the Updated Draft Environmental Impact Assessment Report available on the Project Website (https://www.bradfordbypass.ca/study-process/) for public review until August 14, 2023.</p> <p>The required Stage 4 Archaeological Assessment of BaGv-42 will be completed during future phases of work for the project and will be carried out in accordance with the Ministry of Citizenship and Multiculturalism Standards and Guidelines for Consultant Archaeologists (Ontario Government 2011). No ground disturbing activities will occur at this site until the Stage 4 assessment has been conducted.</p> <p>In accordance with Ontario Regulation 697/21, the Project Team completed site specific Stage 3 archaeological assessments for areas within the Study Area that were identified as having archaeological potential in accordance with the Stage 2 archaeological assessments.</p> <p>It is common practice for Stage 4 archaeology work to be completed during Detail Design. Limiting the impact to Stage 4 archaeological sites where feasible is one of the Project Team's main priorities. As a result, the Project Team will determine the exact impact limits to archaeological sites during subsequent design phases of the project. To avoid unnecessary excavation, the Project Team will then undertake the Stage 4 archaeological assessments. Any Stage 4 field work that will be undertaken must engage interested Indigenous communities.</p> <p>As recommended by the cultural heritage resource assessment undertaken by the Project Team, the Holland River watershed was identified as a Cultural Heritage</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIAR Edits Required? (Yes/No? If yes specify edits)
					<p>vehicle emission inspections should be included as a mitigation measure to ensure that newer vehicle emissions systems are not being tampered with. The air dispersion modeling report indicates that ethanol based fuels were excluded even though this goes against EPA recommendations for using the model. The report lacks transparency about assumptions made about future vehicle fleet characteristics for both passenger vehicles and heavy trucks.</p> <p>The comparison of build with no-build is not valid because the values in Appendix E of the traffic modeling report show that there was an erroneous assumption that there would be significantly less truck traffic in the build scenario compared to the no-build scenario. There is no valid scientifically-based justification for this. Further, if there is an increase in truck traffic along 404 - as the model predicts - then sensitive receptors along highway 404 need to be included in a health impact study. Instead, impacts on traffic along the 400/404 corridors were excluded and the "air quality study area" was restricted to the bypass corridor itself without any explanation or justification.</p> <p>It is egregious that MTO did not conduct locally relevant air quality monitoring for background in Bradford, River Drive Park, Queensville and along the 404/400 corridors for traffic related air pollutants. Such baseline monitoring is generally inexpensive and could have been easily obtained. Using existing monitors in Innisfil, Newmarket and other distant and irrelevant locations is not justifiable. For the air dispersion modeling, MTO appears to be relying on these distant locations (eg. Egbert) for preparation of the wind rose as well,</p>	<p>Landscape requiring further research and evaluation to determine if it possesses cultural heritage value or interest. This further assessment will be completed in a Cultural Heritage Evaluation Report (CHER), and if the CHER determines that the Holland River Watershed meets the criteria in Ontario Regulation 9/06 or Ontario Regulation 10/06 of the Ontario Heritage Act, and may be adversely impacted by the Updated Technically Preferred Route, a Heritage Impact Assessment will be prepared to fully assess impacts on the resource's identified heritage attributes and propose alternatives and mitigation to conserve the property's Cultural Heritage Value or Interest. These commitments are included in Section 5.3.2 of the Updated Draft EIAR.</p> <p>Consultation is an integral component of the Preliminary Design stage, the project-specific assessment of environmental impacts process, and for future project phases, and is critical to a project's success. The ministry is actively consulting and engaging with Indigenous communities throughout the Bradford Bypass Project.</p> <p>The Project Team is engaging with and considers input provided by the following Indigenous communities:</p> <ul style="list-style-type: none"> - Alderville First Nation - Beausoleil First Nation - Chippewas of Georgina Island First Nation - Chippewas of Rama First Nation - Curve Lake First Nation - Hiawatha First Nation - Mississaugas of Scugog Island First Nation - Kawartha Nishnawbe First Nation - Georgian Bay Métis Council, and - Huron-Wendat Nation <p>Comments from Indigenous communities are accepted at any time in the study process.</p> <p>5. Table 2-2 lays out the 12 species present or very likely to be present. For instance, Blandings Turtles are likely affected as they are likely in the area. The only commitment we see is to do a detailed study later on. This is a good example of study following decision or destruction, and is in violation of the standard</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIAR Edits Required? (Yes/No? If yes specify edits)
					<p>even though meteorological conditions in the study area may be markedly different. MTO also did not identify numerous recreational and daycare facilities adjacent to the Bypass corridor which were identified by Simcoe County Greenbelt Coalition.</p> <p>[add adam's map]</p> <p>The study did not include the cumulative effects of future planned industrial uses along the Bypass corridor and along the 400/404 corridor which may significantly impact people's health along the route. The evaluation did not use 2022 World Health Organization criteria for contaminants which are much lower and more up-to-date than the CAAQS or the AAQCs. We disagree that the AAQCs and CAAQS represent the "lowest concentrations at which an adverse effect may be experienced" as they are not based on up-to-date understandings of the health impacts of air contaminants including pre-term births and neurodevelopmental and other impacts. These are described in the report by the Canadian Association of Physicians for the Environment (April 2022) Mobilizing Evidence report. The Air Quality report predicts significant exceedances for NO2 and benzo(a)pyrene even with the apparently non-conservative assumptions for diesel truck traffic used in the full build out scenario compared to the no-build scenario. The adverse health impacts of NO2 exceedances may be extremely severe and will impact on the <i>Charter</i> rights and human rights of residents in the study area and beyond without justification for the need for the project.</p>	<p>EA practices. There are no commitments to the protection of species at risk in this document.</p> <p>Targeted surveys for all species at risk with potential to occur in the Study Area will be required during future phases of work. These future studies will inform the need for any permits, authorizations, mitigation or compensation under the Endangered Species Act.</p> <p>The Updated Draft EIA requires consideration and review of all recommendations throughout the corridor during future phases of work. This approach is necessary and standard practice for planning projects in that design is an iterative approach and this project is only completing design to a preliminary level. During future phases of work, additional design will be completed and may include refinements to the design as details are developed with greater accuracy. Limiting the future design phases by making certain elements of the project non-discretionary at the preliminary design stage limits the potential for future work to explore opportunities for further reducing impacts and / or increasing mitigation and offsetting measures.</p> <p>For Blanding's Turtle specifically, candidate habitat associated with the Holland River and Holland River East Branch open water and wetland communities has been identified within the Study Area. Blanding's Turtle may be impacted while moving in between habitats if these species enter the construction work area.</p> <p>As part of this phase of the project, preliminary mitigation and avoidance measures for the potential impacts to turtles are included in the Draft EIA and include:</p> <ul style="list-style-type: none"> • If stockpiles of gravel and sandy substrates or the removal of these substrates in the vicinity of turtle habitat are required during the active turtle season (April 1 to October 15), turtle exclusion fencing should be installed in accordance with the Reptile and Amphibian Exclusion Fencing Best Management Practices (Ministry of the Environment, Conservation and Parks, 2020) around stockpiles or area of disturbance prior to April 1. Fencing should be installed immediately after stockpiles are created if after April 1. • It is recommended that culverts be designed to provide openness ratios that would allow for the

					<p>Figure 6-1: Inconcentration Contours for NO₂ in the Future Build Scenario</p>  <p>Figure 6-2: Inconcentration Contours for NO₂ in the Future No-Build Scenario</p>  <p>Source: Air Quality Impact Assessment Report - AECOM.</p> <p>The Air Quality Impact Assessment concluded that: Impacts from the Future Build Conditions with the new Bradford Bypass on a cumulative basis within the Air Quality Study Area increases in comparison to a No-Build scenario for several contaminants and their respective averaging periods. This is predominately due to increased traffic along the Bradford Bypass, where in a No-Build scenario this traffic is dispersed along Holland Street and Bridget Street and within communities to the south of the Air Quality Study Area (for example, demonstrated in the traffic reporting related to this project). This included significant increases in NO₂, SO₂, PM_{2.5}, Acetaldehyde, Benzo(a)pyrene, and formaldehyde and some increases in CO. Maximum concentrations which are relevant for acute events also show significant increases, for example a 49% increase in SO₂ and more than 50% increases in fine and large particulates, acetaldehyde, formaldehyde etc. for</p>	<p>passage of small mammal and/or herpetofauna where possible. An openness ratio of 0.4 would permit usage by medium-sized mammals, while the minimum openness ratio to be considered should be 0.25, which would permit usage by reptiles such as turtles (Credit Valley Conservation, 2017).</p> <ul style="list-style-type: none"> Avoid work within areas of candidate turtle overwintering habitat during the turtle overwintering period (October 31 to April 1), whenever possible. <p>These preliminary mitigation measures will be further refined as the project proceeds to Detail Design and impacts are assessed in more detail.</p> <p>For further detail on potential impacts to Species at Risk and proposed mitigation and avoidance measures, please refer to Section 5.1.1 of the Draft Environmental Impact Assessment Report.</p> <ol style="list-style-type: none"> The Draft IA report identifies that the Williams Treaties FN reported American Eel and Northern Sunfish in the Holland River. This must be further investigated with new fieldwork. The American Eel is in decline and gets Federal protection. Ontario's Species at Risk legislation doesn't work anymore so it's all up to the federal enforcement. What is Ontario going to do to stand by Canada's obligations to First Nation treaty and consultation rights? Will the American Eel's presence be investigated with new field work. <p>It was noted in discussion with William Treaties First Nations on December 1, 2022, that they had observed both American Eel (<i>Anguilla rostrata</i>; Endangered Species Act – Endangered, Species at Risk Act – Not at Risk) and Northern Sunfish (<i>Lepomis peltastes</i>; Endangered Species Act – Special Concern, Species at Risk Act – Special Concern) in the Holland River.</p> <p>Subsequently, the Project Team consulted with the Ministry of the Environment, Conservation and Parks, in</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIAR Edits Required? (Yes/No? If yes specify edits)
					<p>critical receptor number 19 (other receptors' models were not displayed in a comparable manner). The results indicated that for NO₂, 1 hour averages 80% of the hours in the future build scenario would have a cumulative concentration above the CAAQS limit of 79 ppm and a 100% of hours would exceed the AAQC for benzo(a)pyrene.</p> <p>In relation to GHGs, the MTO failed to incorporate induced demand in the future build scenario to calculate additional vehicle kilometers traveled that would be induced by the highway, and failed to give a transparent total vehicle assumption, vehicle type assumption including the age of the emissions controls on heavy diesel trucks, or a vehicle emissions factor. In any event the air quality impact assessment predicts that the proposed highway would be a significant contributor to regional GHG emissions even without incorporating the effect of induced demand. No mitigation measures are proposed to address the increase in greenhouse gas emissions from the project which will contribute to catastrophic climate disaster for all of humanity and the planet.</p> <p>12. Many less expensive alternatives to this highway have not been considered. The Minister approved Terms of Reference for the Bradford Bypass Environmental Assessment Study overrode the requirements of the Environmental Assessment act to consider road alternatives that would not be a controlled access highway. As a result, the Hwy 9 / Green Lane corridor was the only existing roadway that was considered as a reasonable alternative. That roadway was rejected as it was not considered feasible to</p>	<p>March 2023 and was advised that the Ministry of Environment, Conservation and Parks records have no documented observances of the American Eel or Northern Sunfish in the Study Area. They also noted that the Northern Sunfish is a species of special concern and does not have a permitting status with the Ministry of the Environment, Conservation and Parks, and therefore would not be reported. These discussions with Williams Treaties First Nations and MECP have been documented in the Fish and Fish Habitat Report and Section 2.1.2 of the Updated Draft EIAR.</p> <p>No records of aquatic Species at Risk that are afforded protection under the Species at Risk Act or Endangered Species Act are known to occur in the watercourses where culverts are anticipated to be installed. AECOM ecologists conducted a detailed fish and fish habitat assessment of the water features in the vicinity of the Study Area between September 14-18, 2020, with spring field investigations occurring over multiple days in June 2021. Field investigations were also completed in the spring of 2022 due to changes to the Study Area boundary that required further review for potential fish habitat. Based on these investigations, no Species at Risk were discovered in the Study Area. Regardless, the presence or absence of all aquatic Species at Risk will be re-confirmed in subsequent design phases through additional field investigations.</p> <p>6. Please confirm our understanding that has been no discussion of, and that there are no studies looking at impacts to Lake Simcoe.</p> <p>As the project falls within the jurisdiction of the Lake Simcoe Region Conservation Authority (LSRCA), pertaining to Ontario Regulation 179/06, the ministry has assessed impacts with respect to the <i>Lake Simcoe Protection Act</i> and the Lake Simcoe Protection Plan through consideration of water quality and quantity, stormwater management, groundwater management, landscaping and ecological restoration measures; as well as fluvial geomorphological designs for watercourses, erosion and sediment control and spills prevention and protection measures.</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIAR Edits Required? (Yes/No? If yes specify edits)
					<p>convert it to a controlled access facility. Consideration of these types of alternatives are, however, a requirement for all Class EA Studies.</p> <p>A major condition of the 2002 Bradford Bypass EA Approval, was a requirement to conduct a Class EA Study at the time MTO wished to proceed with this project. This study would ensure the currency of the proposed project in light of current travel demand, previously unforeseen environmental factors, new legislation and a full review of all reasonable alternatives including combinations of regional and local roadways.</p> <p>The following are reasonable alternatives that would need to be considered both individually and in combination with one or more other reasonable alternatives if the Class EA Study that was underway at the time Regulation 697 /21 was issued had not been terminated. Each of these proposed alternative solutions would then be evaluated against the then approved Bradford Bypass 4 lane controlled access freeway. Because the Class EA Study was canceled by this regulation, the only comparison AECOM have used throughout the Draft Impact Assessment Report is "Do Nothing". Given that the actual travel problem we are now faced with is local, rather than long distance traffic, we are confident one or more of the following reasonable alternatives would be dramatically preferable to the now 8 lane, Bradford Bypass.</p> <p>Alternatives to the Bradford Bypass:</p> <ol style="list-style-type: none"> Construct a 4 lane arterial road bridge over the West Branch of the Holland River at the currently planned location for the Bradford Bypass bridge – together with paved 4 lane 	<p>a. The Groundwater Protection and Well Monitoring plan, which this Draft IA refers to, discusses the need to dewater the site for the building of piles for elevated bridge sections of the highway. The Draft IA report says, "Construction dewatering activities have been identified as the primary risk to groundwater fed water wells in the Study Area." There is no credible groundwater protection water. There are many suggestions for how to keep it clean but there are few to no commitments.</p> <p>Commitments, preliminary mitigation measures and monitoring activities related to groundwater are documented in Section 5.1.4 of the Draft EIAR, and will be carried forward to subsequent phases of the project.</p> <p>The risk of spills during construction of the project will be primarily limited to petroleum products from machinery (fuels and lubricants). The use of best management practices for handling of hydrocarbons according to the Ministry of Environment, Conservation and Parks and the Technical Standards and Safety Authority of the Ministry of Government Services will reduce the potential of environmental adverse effects associated with petroleum product handling and uses. Spillage of petroleum products must be immediately remediated according to these standards such that groundwater quality is not impacted.</p> <p>Mitigation plans will be generated during future phases of work for the project and for any excavation and structure construction within areas of medium to high significant groundwater recharge areas as shown near the Holland River and Holland River East Branch. Mitigation plans would be specific to each excavation and structure construction and include erosion and sediment control, dewatering treatment and discharge piping away or towards from Significant Groundwater Recharge Areas, or municipal sewer discharge requirements. Dewatering discharge shall be directed away from Well Head Protection areas if excavation and dewatering activities are occurring within them.</p>

					<p>roadways to both Bathurst St. and a connection to Bradford's 8th Line.</p> <p>2. Build a 4 lane arterial road bridge over the Holland River from Ravenshoe Road to connect with Simcoe Line 13 or another appropriate east – west arterial road on the west bank of the Holland River.</p> <p>3. Extend and widen Green Lane to 6 lanes and create a diagonal transition from Green Lane to Hwy 9 and highway bridge intersection with Highway 9 around Dufferin St. The Green Lane / Highway 9 option will better serve and reduce both local and long distance traffic from Newmarket south to at least Aurora Sideroad.</p> <p>Any one or a combination of these alternatives will address a substantial amount of local travel problems while being significantly less costly and environmentally invasive.</p> <p>As you can see, there are a lot of questions and concerns surrounding the approach the province is taking. It's too much money to spend on an unjustified project that will have significant environmental impacts!</p> <p>We look forward to hearing back from the project team with answers to our questions.</p> <p>Enjoy the day,</p> <p>Sincerely, </p>	<p>For more information about the Groundwater Protection and Well Monitoring Plan please refer to Section 5.1.4 of the Updated Draft EIAR.</p> <p>b. How exactly is the province going to monitor groundwater discharges to ensure they meet Ontario's water quality standards?</p> <p>c. What penalties are contractors going to face for violating the discharge requirements?</p> <p>d. If penalties are not enough to compel adherence, what next?</p> <p>e. How is the public to have confidence that contaminated water will not be discharged to the Holland Rivers and Lake Simcoe?</p> <p>f. Please confirm is monitoring will continue or not, as this statement is totally vague: "It is expected that each unassessed monitoring well will continue to be monitored and assessed during the subsequent detail design phase of the project."</p> <p>The Groundwater Monitoring Program includes groundwater level monitoring and groundwater quality monitoring to establish the pre-construction baseline conditions for comparison of data collected during and post-construction.</p> <p>During the Preliminary Design study, Golder Associates Ltd. (Golder) installed monitoring wells during the ongoing geotechnical investigations. Monitoring is expected to be completed within these same monitoring wells during all future phases of work for the Project, including construction. Residential monitoring wells will also be part of this program if they fall within the Radius of Influence of the excavation dewatering and permission to enter is granted to gain access to monitor the well. Detail Design will inform the need for further groundwater investigations. Penalties for discharging any deleterious substance or material to the lands will vary based on the federal, provincial or municipal legislation that might be violated. Beyond legislated penalties, contractor behavior is monitored by the Ministry and poor behavior may result</p>

						<p>in additional financial or reputational impacts. The Ministry's process for selecting contractors to support future phases of the work for the project also includes consideration of past performance and assessment of the contractors understanding of the project and sensitivities within the Study Area. Commitments, preliminary mitigation measures and monitoring activities related to groundwater are documented in Section 5.1.4 of the Draft EIAR, and will be carried forward to subsequent phases of the project.</p> <p>g. Explain what kind of environmental impact would make the project stop; or is any impact acceptable?</p> <p>This government takes environmental protection seriously and is implementing a path forward that will ensure environmental protections are not compromised while building this much needed project quickly and safely. Current work on the Bradford Bypass project will continue to be subject to all conditions under Ontario Regulation 697/21.</p> <p>In accordance with Ontario Regulation 697/21, the Project Team has undertaken several environmental impact assessments to identify and document the potential impacts, proposed mitigation measures, and environmental commitments, which are summarized in the Environmental Impact Assessment Report (EIAR).</p> <p>The Ministry of Transportation must also comply with all current federal and provincial environmental requirements. This includes consultation as set out in the regulation and obtaining permits and approvals for the project prior to the start of construction. Obtaining these permits and approvals, which are mechanisms to help protect the environment, confirms that the ministry has met or surpassed the environmental requirements.</p> <p>h. Please confirm that the only financial support for affected well owners whose water quality is affected by the construction is the province providing them with a temporary water supply until the well owner fixes their well.</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIAR Edits Required? (Yes/No? If yes specify edits)
						<p>i. Does this meager bit of help extend to those who did not provide baseline information about their well water?</p> <p>j. If there any effort being made to reach more than 12% of respondents to MTO's well water survey?</p> <p>MTO will work with owners of water wells who experience issues to determine if the issue is the result of Bradford Bypass project activities.</p> <p>If the well issue is confirmed to be a result of the project's activities, the Ministry will provide a letter to the property owner explaining the outcome of the well investigation and detail the recommended mitigation measures (including lowering / replacement of pump inlet, well rehab, new well installed or local watermain connection if available) the Ministry will undertake to remediate the issue. A temporary drinking water supply will be provided and connected to the resident if the project activities are found to be responsible, at the expense of the Ministry, until remediation measures have resolved the issue.</p> <p>A water well survey was completed for the project to determine the pre-construction assessment of private well supplies in the vicinity of the Study Area noted above. Where no response was provided from Property Owners as part of the water well survey, an additional attempt shall be undertaken during Detail Design to contact these owners via mail, email, phone calls, site visit, etc. This information will be used to provide a baseline for water wells prior to the proposed construction to determine existing water quality and quantity of each property.</p> <p>7. How much is this project going to cost?</p> <p>As we bring this project to market, we want to ensure we can retain the best value for the project. As such, the ministry will not be releasing cost estimates prior to the award of contracts to protect the procurement processes.</p> <p>8. When will the Bradford Bypass be completed?</p> <p>The Preliminary Design phase is anticipated to be completed in 2023. Detail Design and Construction Phases will follow.</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIAR Edits Required? (Yes/No? If yes specify edits)
						<p>9. It is unclear how many lanes are being constructed at which times. Please clarify.</p> <p>The Ontario government is committed to fully funding the construction of the Bradford Bypass and is following through on its promise to improve and invest in the province's transportation corridors to get people moving within the region, connect people to jobs, make life easier and support a strong economy.</p> <p>A four-lane configuration is planned to be constructed first with two general purpose lanes in each direction. To plan for the future, the Ministry is also considering the design of an ultimate eight-lane design for the Bradford Bypass. The ultimate, eight-lane configuration for the project will feature three general purpose lanes and one HOV lanes in each direction.</p> <p>10. There is no cumulative health impact assessment to understand how traffic related air pollution, known to increase risks of cancers, leukemia, heart and lung disease, will impact the communities surrounding the route. There is also no mention of the cumulative impacts on our climate from construction and higher rates of car travel on this highway.</p> <ul style="list-style-type: none"> a. How will you be informing people living along the route about the increased risk of traffic related air pollution and its effects on human health? b. Will you put air quality monitors in Bradford? c. How do you explain the fact that you are NOT monitoring air quality in Bradford, and using the closest site, Newmarket? d. The Final Environmental Conditions Report identified numerous planned residential developments right beside the highway, including a planned new school. Have the land owners / developers / school boards received any information that tells them how bad the air quality is going to be there? 	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIAI Edits Required? (Yes/No? If yes specify edits)
						<p>The human health scoping implications of the project such as air quality, noise, land use, traffic congestion and safety, economic, social cohesion, and neighborhood resources have been summarized in Section 2.2.7 and Section 5.2.7 of the Draft EIAI. To better understand the human health implications due to the Project as a next step, it is recommended for MTO to continue to consider the human health factors identified in this report and provide recommendations to enhance potential positive impacts and mitigate potential negative health impacts. Specifically, conducting a Screening-Level Human Health Risk Assessment of potential air quality impacts is recommended in order to evaluate and characterize Project-related air quality impacts to health.</p> <p>The project has undertaken an Air Quality Impact Assessment to explore pollutant emissions and dispersion modelling in an effort to predict the contribution of the project to future ambient pollutant concentrations. This contribution, added to background concentration levels, allows prediction of the cumulative impact of the proposed project and all other contributors to air pollution. Concentration levels are compared to provincial and federal ambient air quality criteria and standards to assist in the evaluation of project-specific mitigation needs and options.</p> <p>Areas of concentrated emission impact are influenced by traffic volumes along a given segment of roadway. The implementation of the Bradford Bypass is expected to redistribute traffic from local roads and freeway corridors surrounding the proposed Bradford Bypass. Reductions in traffic volumes are observed on corridors including Highway 11/1 (Bridge Street), Bathurst Street, Holland Landing Road, Yonge Street, Queensville Sideroad, Doane Road, Mount Albert Road, Green Lane, and Simcoe County Road 88/Holland Street, among other roads, which benefits the community of Bradford, Town of Bradford West Gwillimbury, by alleviating congestion during peak hours.</p> <p>The Project Team is currently utilizing the National Air Pollution Surveillance air quality monitoring stations to assess air quality levels. Five years of existing data sets were analyzed from stations within the region, and the complete data set from the closest station or most</p>

						<p>representative station for each contaminant of concern was selected to represent the background air quality for the Study Area. Due to the proximity of the Study Area to the Toronto Area, monitoring stations within the City of Toronto were given preference as the one of the most representative locations for the air quality contaminants of concern. As such, Roadside Wallberg – University of Toronto monitoring station, North Downsview monitoring station, Gage Institute monitoring station (all located approximately 38 – 53 km from the Study Area) were used. The nearest monitoring station is in Newmarket. Additional information regarding the assessment of potential air quality impacts have been summarized in Section 2.2.4 and Section 5.2.4 of the Draft EIAR.</p> <p>Land has been designated for the Bradford Bypass since the 2002 Approved EA was completed. As noted above, consultation is an integral component of the Preliminary Design stage and project-specific assessment of environmental impacts and is critical to a project's success. The ministry is actively consulting and engaging with private landowners, developers and school boards within the Study Area. Engagement and consultation has included having a project website and telephone line, having a project contact list for regular project updates, providing notices and correspondence via email, mail, and Ontario Government Notices in local newspapers, hosting public information centres and online events, and holding meetings with Indigenous communities, municipalities, environmental agencies, and stakeholders. More information on the project consultation activities are included in Section 7 of the Updated Draft EIAR.</p> <p>11. Traffic modeling to produce the air dispersion model is not robust or transparent. The air modeling report and supporting reports fail to disclose the % of diesel truck traffic, or the component of that traffic that includes trucks dating from 2006 or earlier which comprise a significant component of air pollution load. The comparison of build with no-build is not valid because the values in Appendix E of the traffic modeling report show that there was an erroneous assumption that there would be significantly less truck traffic in the build scenario compared to the no-build scenario.</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIA Edits Required? (Yes/No? If yes specify edits)
						<p>There is no valid scientifically-based justification for this. Further, if there is an increase in truck traffic along 404 - as the model predicts - then sensitive receptors along highway 404 need to be included in a health impact study. Instead, impacts on traffic along the 400/404 corridors were excluded and the "air quality study area" was restricted to the bypass corridor itself without any explanation or justification. It is egregious that MTO did not conduct locally relevant air quality monitoring for background in Bradford, River Drive Park, Queensville and along the 404/400 corridors for traffic related air pollutants. Such baseline monitoring is generally inexpensive and could have been easily obtained. The study did not include the cumulative effects of future planned industrial uses along the Bypass corridor and along the 400/404 corridor which may significantly impact people's health along the route. The evaluation did not use 2022 World Health Organization criteria for contaminants which are much lower and more up-to-date than the CAAQS or the AAQCs. We disagree that the AAQCs and CAAQS represent the "lowest concentrations at which an adverse effect may be experienced" as they are not based on up-to-date understandings of the health impacts of air contaminants including pre-term births and neurodevelopmental and other impacts. The report predicts significant exceedances for NO2 and benzo(a)pyrene even with the apparently non-conservative assumptions for diesel truck traffic used in the full build out scenario compared to the no-build scenario. The adverse health impacts of NO2 exceedances may be extremely severe and will impact on the Charter rights and human rights of residents in the study area and beyond without justification for the need for the project.</p> <p>Study Area, MOVES3 data, vehicles and assumptions: In order to model relevant vehicle types within the Air Quality Impact Assessment Study Area, MOVES3 data was input to the model and refinements were made to exclude fuel types such as ethanol given these fuels are</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIAR Edits Required? (Yes/No? If yes specify edits)
						<p>not readily available for use in Ontario. Fuel inputs utilized in MOVES3.0 modelling at the time of the assessment included: Fuel Type IDs 1, 2, 3 and 9. ID 5 (ethanol) was not included as flex fuel cars and fuelling stations are not readily available in Ontario. The specific source type fractions utilized for various vehicle types applied within the project study area and the related fraction of expected vehicle usage for both passenger-class vehicles and heavy-class vehicles, including the distribution of vehicle types in the heavy truck vehicle category, were combined to create representative vehicle emission for vehicle class that can reasonable be expected to be in use in 2041.</p> <p>Highway 400/404 corridors were included in the Air Quality Impact Assessment. The full air quality study area is shown in Figure 2-9 of the Updated Draft EIAR and demonstrates that the air quality study area included emission sources within the boundary of assessment, including but not limited to Highway 400 (500 m south of Rural Rd. 88 to 500 m north of Concession Rd. 11), Highway 404 (500 m south of Queensville Sideroad E to 500 m north of Boag Road), the entirety of the proposed Bradford Bypass, Bridge Street, Holland Street W, 10th Sideroad, Young Street/Barrie Street, and Queensville Sideroad.</p> <p>Traffic distributions and truck traffic: The same Average Annual Daily Traffic (AADT) were used for all scenarios. AADT values for each air quality emission source vary between the three scenarios evaluated based on projected existing traffic within the study area, and future no-build and build traffic projections however the same 24-hour traffic distribution percentages were applied. Three representative 24-hour distribution percentages were applied to the air quality emission sources. These were applied to a given source of emission depending on the type of road in question, e.g. a "Leslie St." 24-hour distribution was applied to air quality emission sources which were categorized as community arterial roads; a "HWY 400" 24-hour distribution was applied to air quality emission sources categorized as highways; and, a "2nd Concession Rd" 24-hour distribution was applied to rural roads. These same 24-hr distributions were applied to the assigned source for all three scenarios of evaluation (existing conditions, future no-build, and future build).</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIAR Edits Required? (Yes/No? If yes specify edits)
						<p>Fuel usage distribution [i.e. diesel, gasoline, CNG, etc.] and vehicle age distribution within each vehicle type category were modelled based on MOVES3.0 default fuel use and age distribution database inputs assigned to the year of evaluation. Heavy truck traffic was included in the modelling with a percentage assigned to each air quality emission source anticipated from this vehicle type.</p> <p>Health Impacts, Critical Receptors and Background/Study Area Monitoring Data: The human health scoping implications of the project such as air quality, noise, land use, traffic congestion and safety, economic, social cohesion, and neighborhood resources have been summarized in Section 2.2.7 and Section 5.2.7 of the Updated Draft EIAR.</p> <p>The Project Team is aware some critical receptors have been identified as 'missing' by a number of stakeholders. Having reviewed the data, these 'missing' receptors were included as residences in the Air Quality Impact Assessment. Potential impacts at the 'missing' receptors within the Air Quality Impact Assessment Study Area are reflected in the assessment by other, nearby critical receptors and receptors identified on Figure 2-9 and 2-10 of the Updated Draft EIAR.</p> <p>The approach to identifying representative air quality levels is conservative and often ensures the worst-case conditions are reflected so as to not under-represent conditions within a study area; i.e. background air quality contaminant levels included within the assessment may be representative or higher than expected for the area in question.</p> <p>While it is recognized that localized in-situ monitoring may provide more accurate data, use of existing monitoring stations within the NAPS network for statistically relevant background monitoring data is a generally accepted and conservative methodology for provincial environmental impact air quality assessments. Stations selected for the background air quality assessment were chosen based on total data availability over a most recent five-year period as a minimum of 12 months of daily and hourly data is required to ensure statistical relevance. Stations were also selected based on their proximity to the air quality</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIAR Edits Required? (Yes/No? If yes specify edits)
						<p>study area with the meteorological station selected as representative of the air quality study area within 15 km north-west of the air quality study area. Stations must also be a relative representation of similar types of existing sources of air quality emission in the study area and it is notable that the meteorological station selected as representative of air quality in the study area was provided by the MECP in site-specific MET data requested for the project modelling.</p> <p>12. Many less expensive alternatives to this highway have not been considered. The Minister approved Terms of Reference for the Bradford Bypass Environmental Assessment Study overrode the requirements of the Environmental Assessment act to consider road alternatives that would not be a controlled access highway. As a result, the Hwy 9 / Green Lane corridor was the only existing roadway that was considered as a reasonable alternative. That roadway was rejected as it was not considered feasible to convert it to a controlled access facility. Consideration of these types of alternatives are, however, a requirement for all Class EA Studies. A major condition of the 2002 Bradford Bypass EA Approval, was a requirement to conduct a Class EA Study at the time MTO wished to proceed with this project. This study would ensure the currency of the proposed project in light of current travel demand, previously unforeseen environmental factors, new legislation and a full review of all reasonable alternatives including combinations of regional and local roadways. The following are reasonable alternatives that would need to be considered both individually and in combination with one or more other reasonable alternatives if the Class EA Study that was underway at the time Regulation 697 /21 was issued. Each of these proposed alternative solutions would then be evaluated against the then approved Bradford Bypass 4 lane controlled access freeway. Because the Class EA Study was canceled by this regulation, the</p>

						<p>only comparison AECOM have used throughout the Draft Impact Assessment Report is "Do Nothing". Given that the actual travel problem we are now faced with is local, rather than long distance traffic, we are confident one or more of the following reasonable alternatives would be dramatically preferable to the now 8 lane, Bradford Bypass.</p> <p>Alternatives to the Bradford Bypass:</p> <ul style="list-style-type: none"> a Construct a 4 lane arterial road bridge over the West Branch of the Holland River at the currently planned location for the Bradford Bypass bridge – together with paved 4 lane roadways to both Bathurst St. and a connection to Bradford's 8th Line. b Build a 4 lane arterial road bridge over the Holland River from Ravenshoe Road to connect with Simcoe Line 13 or another appropriate east – west arterial road on the west bank of the Holland River. c Extend and widen Green Lane to 6 lanes and create a diagonal transition from Green Lane to Hwy 9 and highway bridge intersection with Highway 9 around Dufferin St. The Green Lane / Highway 9 option will better serve and reduce both local and long distance traffic from Newmarket south to at least Aurora Sideroad. <p>Any one or a combination of these alternatives will address a substantial amount of local travel problems while being significantly less costly and environmentally invasive. Once again, what logic is being used to ignore these options given all of the rationale in favour of these other alternatives?</p> <p>The planning process that resulted in the 2002 approved Environmental Assessment (EA) for the Bradford Bypass evaluated alternatives from a broad range of potential solutions to address several transportation problems and to address significant opportunities identified in York Region and Simcoe County. The need for this freeway was confirmed during the Route Planning and EA Study as</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIAR Edits Required? (Yes/No? If yes specify edits)
						<p>the only reasonable solution that would make a significant contribution towards addressing the problem as the population in York Region and Simcoe County grows. The 2002 EA approved alignment is technically preferred for a freeway in terms of highway network expansion, ease of construction, relationship to provincial and municipal land use planning and the preferred route is already included in Official and Transportation Master Plans, as well as the Places to Grow Act), as well as having fewer negative impacts to residential and natural areas when compared to other route options considered.</p> <p>The Bradford Bypass Project has been modelled based on current local, regional, and provincial projections and data. This addresses the problem of "lack of long-term planning" per the Bradford Bypass 2002 approved EA..</p> <p>The 2002 approved EA reviewed a broad area of analysis which included several corridors, including areas south of the current corridor, and Highway 89/Ravenshoe Road.</p> <p>The Bradford Corridor was selected as the preferred corridor over Highway 89/Ravenshoe Road as it was beyond the maximum north limit of 10th Line / Boag Road which was assessed in a previous EA study and was determined that a Management Area or river crossing north of this would entail unacceptable environmental impact, which lead to the withdrawal of the Highway 89 EA studies in 1986-87.</p> <p>The Bradford Corridor was selected as the preferred corridor over the southern alternatives as there was no south alternative that met the primary purpose of the study to reduce out-of-way travel. The south limit was established as Highway 88 and Queensville Sideroad.</p> <p>The original purpose of the Bradford Bypass per the 2002 Approved EA was to address the "east-west" long-distance travel demand crossover between Highway 400 and Highway 404 which is a provincial responsibility and distinct from the locally generated trips which use a municipal road to access the provincial network. As noted in the report, the overall network benefits from vehicle-hours of travel time savings and vehicle-kilometres of travel distance savings are observed during the 2041 AM peak hour and during the 2041 PM peak hour in the</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIAR Edits Required? (Yes/No? If yes specify edits)
						<p>updated interchange locations. Local roads forecasted to exceed capacity by 2031 and 2041 under the No-Build scenarios see significant relief from traffic as a result of the diversion to the Bradford Bypass in the Build scenarios.</p> <p>While the Town of Bradford West Gwillimbury owns a closed road allowance east of Artesian Industrial Parkway for 8th Line to Holland River, Hochreiter Road itself is a private road. A connection at this location would not address the primary purpose of the Bradford Bypass to connect Highway 400 and Highway 404. The local benefit of this route is likely outweighed by the reduced congestion of Bridge Street created by the Bradford Bypass. A bridge across 8th Line would still require out-of-way travel, which this study is looking to reduce, to connect to provincial transportation facilities. Improvements would likely be required on Bathurst Street and Queensville Sideroad. Significant property impact (similar to the Bradford Bypass) would be required for a new corridor connection from 8th Line straight to Highway 404. For more information on the 2002 Approved EA, please see the enclosed linked: https://www.bradfordbypass.ca/wp-content/uploads/2020/09/BBP-RoutePlanningEA-1997.pdf</p> <p>For more information on the assessment of alternative routes, please refer to the response to question #3.</p> <p>The Project Team will continue to carefully consider all impacts to wetland areas and will continue to work with Indigenous communities, environmental agencies, municipalities, and other concerned stakeholders to identify principles and recommendations for mitigating the impacts of placing new or expanded provincial highways within wetland areas. The Bradford Bypass Project will continue to look at opportunities to minimize impacts to these wetlands through engineering refinements.</p> <p>If you have any other questions, please feel free to reach out to the Project Team at your earliest convenience. You can reach the Project Team via email at projectteam@bradfordbypass.ca, toll free at 1-877-247-6036, or by visiting the Project Website at www.bradfordbypass.ca.</p>

CT-DraftEIAR-79	To: Project Team From: [REDACTED]	Email: [REDACTED]	Draft EIAR	June 29, 2023	<p>Dear Sirs,</p> <p>We have many concerns with this project, the process it is following, and this report is no different. Please answer our questions below.</p> <ol style="list-style-type: none"> Timing and consultation are inadequate. You have provided an un-editable PDF and 30 days for a 576 page report. This follows the pattern of terrible public information and consultation. Will you extend the consultation period? Explain how a provincial highway was transformed into a very expensive regional road variant with five interchanges and two 400 series highway connections, paid for by all Ontario taxpayers. This is inconsistent with the MTO's mandate to provide long distance travel solutions. We maintain that there are better and cheaper, faster to implement, regional road and transit solutions that should be pursued, even if the Bypass does get built. We would like to see the traffic studies in their entirety. An environmental assessment used to be grounded in a demonstration of need and justification. The MTO has provided neither as it pertains to this particular project and at this time. There is no evidence that local traffic solutions MTO purports to be solving (actually a local traffic issue and not MTO's mandate) are best served by this potentially \$4 billion highway. <ol style="list-style-type: none"> Please share the links and the methodology, transparently, so that people can understand what travel time savings MTO is referring to. We have absolutely no idea because your write up is incredibly vague about the start and end of the routes used for analysis. For instance this meaningless babble from pg. 334: <small>On average, between the various origin-destination pairs using the Bradford Bypass in the peak direction during the peak period, would save up to 75% of minutes of travel time when connecting between Highway 400 and Highway 401 compared to existing routes in the No Build scenario</small> 	<p>Hi [REDACTED]</p> <p>Thank you for your interest in the Bradford Bypass Preliminary Design Study and project-specific assessment of environmental impacts, undertaken in accordance with Ontario Regulation 697/21.</p> <ol style="list-style-type: none"> Time and consultation are inadequate. You have provided an un-editable PDF and 30 days for a 576 page report. This follows the pattern of terrible public information and consultation. Will you extend the consultation period? <p>The process of planning the Bradford Bypass has included -- and will continue to include -- consultation with the public and Indigenous communities to ensure the project moves forward in an environmentally responsible way that is responsive to the needs and concerns of communities. In accordance with Ontario Regulation 697/21, an initial Draft Environmental Impact Assessment Report (EIAR) -- which documents the results of the studies undertaken for various environmental disciplines, proposed mitigation measures and environmental commitments to protect the environment -- was published for public review starting on June 1 and continuing until June 30, 2023. In addition, the Ministry has been providing Indigenous communities and stakeholders various opportunities for meaningful consultation since the project was re-initiated in September 2020 including two Public Information Centres.</p> <p>Additional archaeological investigations, which are necessary to complete the impact assessment in accordance with regulations, have recently been finalized and incorporated into an Updated Draft Environmental Impact Assessment Report. This updated report has been posted for an additional 30-day consultation period. The Updated Draft EIAR posting includes the information from the initial draft to ensure stakeholders can review additional information in full context of the project. As the initial Draft EIAR and the Updated Draft were available for public review for a total of 60 days, an extension of the public review period is not being considered at this time.</p> <p>The Updated Draft Environmental Impact Assessment Report was available for review on the Project Website (https://www.bradfordbypass.ca/study-process/) until August 14, 2023.</p>	No

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIAR Edits Required? (Yes/No? If yes specify edits)
					<p>2. What year do your studies indicate that the Bypass will be congested at peak rush hour times?</p> <p>4. The Draft Environmental Impact Assessment report shows on pg. 212 the Bypass touching the southern portion of the Lower Landing (AKA BaGv-42), a significant historical and archaeological site at a significant meander on the East Holland River. MTO has moved the highway 150 m to the south of the technically preferred route, which would have completely run over the Lower Landing (pg 148). The Draft Environmental Conditions Report indicated that a Stage 3 archaeological assessment "was required" (pg 225); the Draft IA report says that the Stage 3 was completed, and that Stage 4 is required. The Project team's website says, "<i>Currently, additional archaeological investigations are being completed to finalize the impact assessments in accordance with Ontario Regulation 697/21 and are not included in this posting. This information will be available for additional public and Indigenous community review once completed.</i>" The Draft IA states, "the southern portion of the site ... will be impacted by construction. Stage 4 Archaeological Assessment excavation plans will be submitted to the Ministry of Citizenship and Multiculturalism and Indigenous communities prior to the Stage 4 excavation being conducted," (pg 395). So the archeological work is not finished. And yet the route has been chosen. Property owners near the history-rich Lower Landing that are receiving expropriation notifications. We are staunchly opposed to this violation of this site particularly absent the completed stage 4 archaeological assessment of the Lower Landing and the endorsement of the First Nations.</p>	<p>2. Explain how a provincial highway was transformed into a very expensive regional road variant with five interchanges and two 400 series highway connections, paid for by all Ontario taxpayers. This is inconsistent with the MTO's mandate to provide long distance travel solutions. We maintain that there are better and cheaper, faster to implement, regional road and transit solutions that should be pursued, even if the Bypass does get built.</p> <p>The project is being assessed with consideration of the Ministry's mandate to provide for the safe, efficient movement of people and goods between regions and urban areas. In addition, the Project Team has consulted with local and regional municipalities, and the traffic analysis for the proposed Bradford Bypass has considered the planned local transportation and transit improvements to be implemented by others.</p> <p>The original route planning study (2002 Approved Environmental Assessment – EA) concluded that additional relief from congestion in this Study Area could only be accommodated through the protection and implementation of a provincial right of way.</p> <p>As part of the 2002 Approved EA, the Bradford Bypass evaluated alternatives from a broad range of potential solutions to address several transportation problems and to address significant opportunities identified in York Region and Simcoe County. The need for this freeway was confirmed as the only reasonable solution that would make a significant contribution towards addressing the problem as the population in York Region and Simcoe County grows. The 2002 Approved EA approved alignment is technically preferred for a freeway in terms of highway network expansion, ease of construction, relationship to provincial and municipal land use planning and the preferred route is already included in Official and Transportation Master Plans, as well as the Places to Grow Act), as well as having fewer negative impacts to residential and natural areas when compared to other route options considered.</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIAR Edits Required? (Yes/No? If yes specify edits)
					 <p><i>Bradford Bypass is still too close to the Lower Landing. The Lower Landing is in the area of WC-25 in the image above. This clip of a map shows Provincially significant wetlands (orange); unevaluated wetlands (blue); cold water fish habitat (black) and warm (pink); Original / full map available on pg 55 of Draft IA report.</i></p> <ol style="list-style-type: none"> As stewards of these lands and water for time immemorial, additional time should be given to allow First Nation community members to fully digest the lengthy report. Georgina Island First Nation asked that this site be avoided in 1998, 25 years ago, stating, "It is obvious that there are other routes, which can be used to connect these major highways, and we hope that another will be selected." Is Ontario still ignoring this request? Have First Nations been consulted about this part of the plan? Please provide written evidence of their approval of this route. It is imperative that the Ontario Government uncover all evidence of burials where the highways are to be built. How this is done must follow affected First Nations' protocols and wishes. These are some thoughts from a non-native resident of the area on the topic: <ol style="list-style-type: none"> These burial sites must be preserved and protected or possibly moved to another location. Identifying registered and unregistered burial sites should be relatively simple for the Ontario Government as the information is 	<p>For more information on the Analysis and Evaluation of alternatives, refer to Section 2.1.6 of the 2002 Approved EA, which can be found in the enclosed link: https://www.bradfordbypass.ca/wp-content/uploads/2020/09/BBP-RoutePlanningEA-1997.pdf</p> <p>Further to the conclusion of the 2002 Approved EA, as part of this Preliminary Design study, a traffic analysis was completed and the result of the review has confirmed the need of the highway. This analysis included the review of existing traffic conditions and modelling of future forecast traffic conditions and it has been confirmed that updates to regional and municipal roads alone will not address the transportation needs within the Study Area.</p> <p>Additionally, a feasibility assessment was conducted evaluating nine interchange location scenarios to determine the best interchange configuration through the Bradford Bypass corridor. The evaluation was conducted in accordance with satisfying the study objective to improve connectivity of the study area between Highway 400 and Highway 404, facilitating the improvement of traffic operations and movement of goods. Consideration included interchange utilization, overall network delay, out of way travel, environmental considerations and constraints, and preliminary costs. It was determined that interchanges at 10th Sideroad, County Road 4, Bathurst Street, 2nd Concession Road, and Leslie Street would be included as part of the Study.</p> <p>3. We would like to see the traffic studies in their entirety. An environmental assessment used to be grounded in a demonstration of need and justification. The MTO has provided neither as it pertains to this particular project and at this time. There is no evidence that local traffic solutions MTO purports to be solving (actually a local traffic issue and not MTO's mandate) are best served by this potentially \$4 billion highway.</p> <p>The Bradford Bypass project has been assessed in accordance with Ontario Regulation 697/21. Consistent with the Regulation, the Project Team completed an update to the description of environmental conditions previously documented in the 2002 Approved</p>

					<p>readily available from their own ministries, authorities as well as from local governments and churches/cemeteries. While 'registered burial sites' are easy to identify, 'unregistered sites' need to be confirmed and registered as required under Ontario's Funeral, Burial and Cremation Services Act, 2002 while 'Still to be found sites' require sleuthing, historical research and boots on the ground investigation. One of the most extreme requirements that could be requested is for the Ontario Government to perform thorough Ground Penetrating Radar (GPR) surveying of every square foot of the Bradford Bypass. Anomalies called 'targets' would receive special attention via Archaeological digs. Human remains discovered would either be left in place or moved. All work and costs are to be borne by the Ontario government. This solution for 'Still to be found' burial sites is as necessary as the work done and currently being done for the former Residential Schools in Canada.</p> <p>5. Species at Risk</p> <p>1. Table 2-2 lays out the 12 species at risk present or very likely to be present. For instance, Blandings Turtles are likely affected as they are likely in the area. The only commitment we see is to do detailed study later on. This is a good example of study following decision or destruction, and is in violation of standard EA practices. There are no commitments to the protection of species at risk in this document.</p> <p>2. There is a requirement for the Minister of the Department of Fisheries and Oceans to consider, when making certain decisions related to the fish and</p>	<p>Environmental Assessment (EA) for the project. This update included a review and assessment of the existing traffic conditions which was documented in the Environmental Conditions Report (ECR). The ECR was finalized in October 2022 following a public review period, and is available on the Project website.</p> <p>Significant population growth is projected for both Simcoe County and the Regional Municipality of York. Even with all currently planned transportation and transit investments, road congestion will continue to increase across the Greater Golden Horseshoe (GGH) including within the Bradford Bypass Study Area.</p> <p>The purpose of the Bradford Bypass is to relieve congestion on existing local roads between Highway 400 and Highway 404 and provide a northern freeway connection between Highways 400 and 404.</p> <p>Modeling results demonstrated that under the No Build (no Bradford Bypass) scenario, local roads were forecasted to exceed capacity by 2031 but saw significant relief under the Build (with Bradford Bypass) scenario. Alternative alignments for the Bradford Bypass were then compared within the model, including the 2002 Approved EA alignment and interchange locations and an updated preferred interchange location alternative developed by the Project Team.</p> <p>On average, between the various origin-destination pairs using the Bradford Bypass, drivers in the peak direction during the peak period, would save up to 73% or 33 minutes of travel time when connecting between Highway 400 and Highway 404 compared to existing routes in the No Build scenario.</p> <p>The development of the analysis and key results from the Traffic Study have been summarized in the Draft Environmental Impact Assessment Report and the Updated Draft Environmental Impact Assessment Report (EIAR), which were available for public review and comment from June 1, 2023 to June 30, 2023 and July 14, 2023 to August 14, 2023, respectively. The information in the draft EIAR includes the origin and destination locations that were reviewed to determine the average travel time savings during the AM and PM peak hours. Similar to the process undertaken for MTO preliminary design studies, the Traffic Study will be finalized upon study completion and will be available if requested.</p>

					<p>fish habitat protection (and pollution prevention) provisions of the Act, the Indigenous knowledge of the Indigenous peoples of Canada that has been provided to the Minister (34.1(1) (g) of the Fisheries Act); and,</p> <p>3. Requirement to protect the confidentiality of Indigenous knowledge that is provided to the Minister in confidence, except under limited circumstances (subsection 61.2 (1) of the Fisheries Act)."</p> <p>4. The Draft IA report identifies that the Williams Treaties FN reported American Eel https://www.dfo-mpo.gc.ca/species-especies/publications/sara-lep/eel-anquille/index-eng.html and Northern Sunfish in the Holland River. This must be further investigated with new fieldwork. The American Eel is in decline and gets Federal protection. Ontario's Species at Risk legislation doesn't work anymore so it's all up to the Federal enforcement.</p> <p>1. What is Ontario going to do to stand by Canada's obligations to First Nations treaty and consultation rights?</p> <p>2. Will the American Eel's presence be investigated with new fieldwork?</p> <p>6. There are many concerns related to surface water and groundwater.</p> <p>1. Please confirm our understanding that there has been no discussion of, and that there are no studies looking at impacts to Lake Simcoe.</p> <p>2. The Groundwater Protection and Well Monitoring plan, which this Draft IA refers to, discusses the need to dewater the site for the building of piles for the elevated bridge sections of the highway. The Draft IA report says, "Construction dewatering activities have been identified as the primary risk to groundwater fed water wells in the Study Area," p 295. There is no</p>	<p>a. Please share the links and the methodology, transparently, so that people can understand what travel time savings MTO is referring to. We have absolutely no idea because your write up is incredibly vague about the start and end of the routes used for analysis.</p> <p>b. What year do your studies indicate that the Bypass will be congested at peak rush hour times?</p> <p>As detailed in the Draft EIAR (Section 2.4.1), an Aimsun model was created to assess the existing traffic conditions for the road network in the Study Area. The model study area encompasses the Highway 400 corridor from south of Simcoe County Road 88 to north of Highway 89, as well as the Highway 404 corridor from south of Green Lane East to its terminal at Woodbine Avenue (Table 4-3 and 4-4 of the Draft EIAR).</p> <p>The model for this area was developed using pre-pandemic traffic volumes to identify peak hour volumes within the Study Area. This model has been calibrated and validated as it closely resembled actual operating conditions.</p> <p>As detailed in Section 4.4 of the Draft EIAR, traffic is assessed through modelling to identify Level Of Service (LOS). Having confirmed the model was consistent with current (base) conditions, and therefore appropriate to assess future conditions and design alternatives, the model was used to assess LOS under future 2031 and 2041 conditions. To assess future conditions, the model was updated to include all road network and transit improvements planned within the Study Area, and, forecast traffic volumes based on the projected growth within the Study Area.</p> <p>The alternative Build scenarios showed the mainline operations on the Bradford Bypass in 2031 would operate at acceptable LOS D in the interim four lane configuration. The model indicates that by expanding to the ultimate 8 lane configuration (implementing another general purpose lane and an HOV lane in each direction by 2041), LOS on</p>

					<p>credible groundwater protection plan. There are many suggestions for how to keep it clean but there are few to no commitments.</p> <p>3. HOW exactly is the province (MoECP) going to monitor groundwater discharges to ensure they meet Ontario's water quality standards?</p> <p>4. What penalties are contractors going to face for violating the discharge requirements?</p> <p>5. If penalties are not enough to compel adherence, what next?</p> <p>6. How is the public to have confidence that contaminated water will not be discharged to the Holland Rivers and Lake Simcoe?</p> <p>7. Please confirm if monitoring will continue, or not, as this statement is totally vague: "It is expected that each unassessed monitoring well will continue to be monitored and assessed during the subsequent detail design phase of the project" P. 79.</p> <p>8. Explain what kind of environmental impact would make this project stop; or is any impact acceptable?</p> <p>9. Please confirm that the only financial support for affected well owners whose water quality is affected by the construction is the province providing them with a temporary water supply until the well owner fixes their well.</p> <p>1. Does this meager bit of help get extended to those who did not provide baseline information about their well water?</p> <p>2. Is there any effort being made to reach more than 12% of respondents to MTO's well water survey?</p> <p>7. How much is this project going to cost?</p> <p>8. When will the Bradford Bypass be completed?</p> <p>9. It is unclear how many lanes are being constructed at which times. Please clarify.</p>	<p>the mainline improves to LOS B or C and accommodates the additional traffic forecast by 2041.</p> <p>For further information about the Traffic Study please refer to the response to Question #3 and Section 4.4 of the Updated Draft EIAR.</p> <p>4. The Draft Environmental Impact Assessment report shows on pg. 212 the Bypass touching the southern portion of the Lower Landing (AKA BaGv-42), a significant historical and archaeological site at a significant meander on the East Holland River. MTO has moved the highway 150 m to the south of the technically preferred route, which would have completely run over the Lower Landing (pg 148). But the Draft IA states," the southern portion of the site ... will be impacted by construction" (pg 395). The Draft Environmental Conditions Report indicated that a Stage 3 archaeological assessment "was required" (pg 225); the Draft IA report says that the Stage 3 was completed, and that Stage 4 is required. The Project team's website says, "Currently, additional archaeological investigations are being completed to finalize the impact assessments in accordance with Ontario Regulation 697/21 and are not included in this posting. This information will be available for additional public and Indigenous community review once completed." So the archeological work is not finished. And yet the route has been chosen. Property owners near the history-rich Lower Landing that are receiving expropriation notifications. We are staunchly opposed to this violation of this site particularly absent the stage 4 evaluation of the Lower Landing and the endorsement of the First Nations.</p> <p>a. As stewards of these lands and water for time immemorial, additional time should be given to allow First Nation community members to fully digest the lengthy report. Georgina Island First Nation asked that this site be avoided in 1998, 25 years ago, stating, "It is obvious that there are other routes,</p>

					<p>10. There is no cumulative health impact assessment to understand how traffic related air pollution, known to increase risks of cancers, leukemia, heart and lung disease, will impact the communities surrounding the route. There is also no mention of the cumulative impacts on our climate from construction and higher rates of car travel on this highway.</p> <ol style="list-style-type: none"> How will you be informing people living along the route about the increased risk of traffic related air pollution and its effects on human health? Will you put air quality monitors in Bradford? How do you explain the fact that you are NOT monitoring air quality in Bradford, and using the closest site, Newmarket? The Final Environmental Conditions Report identified numerous planned residential developments right beside the highway, including a planned new school. Have the land owners / developers / school boards received any information that tells them how bad the air quality is going to be there? <p>11. Traffic modeling to produce the air dispersion model is not robust or transparent. In order to understand traffic related air pollution, relevant vehicle types and assumptions need to be used. The air dispersion modeling report simply indicates that MOVES3 default data was used - but the EPA has emphasized the need to include relevant vehicle type inputs into the model.</p> <p>The air modeling report and supporting reports fail to disclose the % of diesel truck traffic, or the component of that traffic that includes trucks dating from 2006 or earlier which comprise a significant component of air pollution load. The air dispersion modeling report states that the vehicle type distributions were based on MOVES3.0 default database inputs even though there are no such inputs. It also says that the 24 hour traffic distribution was assumed to be equal to the AADT distribution. However the</p>	<p>which can be used to connect these major highways, and we hope that another will be selected." Is Ontario still ignoring this request.</p> <p>b. Have First Nations be consulted about this part of the plan? Please provide written evidence of their approval of this route.</p> <p>Field investigations for Stage 2 and Stage 3 works have been completed and additional details are included in the Updated Draft Environmental Impact Assessment Report available on the Project Website (https://www.bradfordbypass.ca/study-process/) for public review until August 14, 2023.</p> <p>The required Stage 4 Archaeological Assessment of BaGv-42 will be completed during future phases of work for the project and will be carried out in accordance with the Ministry of Citizenship and Multiculturalism Standards and Guidelines for Consultant Archaeologists (Ontario Government 2011). No ground disturbing activities will occur at this site until the Stage 4 assessment has been conducted.</p> <p>In accordance with Ontario Regulation 697/21, the Project Team completed site specific Stage 3 archaeological assessments for areas within the Study Area that were identified as having archaeological potential in accordance with the Stage 2 archaeological assessments.</p> <p>It is common practice for Stage 4 archaeology work to be completed during Detail Design. Limiting the impact to Stage 4 archaeological sites where feasible is one of the Project Team's main priorities. As a result, the Project Team will determine the exact impact limits to archaeological sites during subsequent design phases of the project. To avoid unnecessary excavation, the Project Team will then undertake the Stage 4 archaeological assessments. Any Stage 4 field work that will be undertaken must engage interested Indigenous communities.</p> <p>As recommended by the cultural heritage resource assessment undertaken by the Project Team, the Holland River watershed was identified as a Cultural Heritage</p>

					<p>consultant appeared to use different AADT distributions for different scenarios without explanation and the distributions differed significantly as between build and no build scenarios. Mitigation in the form of frequent diesel heavy truck vehicle emission inspections should be included as a mitigation measure to ensure that newer vehicle emissions systems are not being tampered with. The air dispersion modeling report indicates that ethanol based fuels were excluded even though this goes against EPA recommendations for using the model. The report lacks transparency about assumptions made about future vehicle fleet characteristics for both passenger vehicles and heavy trucks.</p> <p>The comparison of build with no-build is not valid because the values in Appendix E of the traffic modeling report show that there was an erroneous assumption that there would be significantly less truck traffic in the build scenario compared to the no-build scenario.</p> <p>There is no valid scientifically-based justification for this. Further, if there is an increase in truck traffic along 404 - as the model predicts - then sensitive receptors along highway 404 need to be included in a health impact study. Instead, impacts on traffic along the 400/404 corridors were excluded and the "air quality study area" was restricted to the bypass corridor itself without any explanation or justification.</p> <p>It is egregious that MTO did not conduct locally relevant air quality monitoring for background in Bradford, River Drive Park, Queensville and along the 404/400 corridors for traffic related air pollutants. Such baseline monitoring is generally inexpensive and could have been easily obtained. Using existing monitors in Innisfil, Newmarket and other distant and irrelevant locations is not justifiable. For the air dispersion modeling, MTO appears to be relying on these distant locations (eg. Egbert) for preparation of the wind rose as well, even though meteorological conditions in the study area may be markedly different. MTO also did not identify numerous recreational and daycare</p>	<p>Landscape requiring further research and evaluation to determine if it possesses cultural heritage value or interest. This further assessment will be completed in a Cultural Heritage Evaluation Report (CHER), and if the CHER determines that the Holland River Watershed meets the criteria in Ontario Regulation 9/06 or Ontario Regulation 10/06 of the Ontario Heritage Act, and may be adversely impacted by the Updated Technically Preferred Route, a Heritage Impact Assessment will be prepared to fully assess impacts on the resource's identified heritage attributes and propose alternatives and mitigation to conserve the property's Cultural Heritage Value or Interest. These commitments are included in Section 5.3.2 of the Updated Draft EIAR.</p> <p>Consultation is an integral component of the Preliminary Design stage, the project-specific assessment of environmental impacts process, and for future project phases, and is critical to a project's success. The ministry is actively consulting and engaging with Indigenous communities throughout the Bradford Bypass Project.</p> <p>The Project Team is engaging with and considers input provided by the following Indigenous communities:</p> <ul style="list-style-type: none"> - Alderville First Nation - Beausoleil First Nation - Chippewas of Georgina Island First Nation - Chippewas of Rama First Nation - Curve Lake First Nation - Hiawatha First Nation - Mississaugas of Scugog Island First Nation - Kawartha Nishnawbe First Nation - Georgian Bay Métis Council, and - Huron-Wendat Nation <p>Comments from Indigenous communities are accepted at any time in the study process.</p> <p>5. Table 2-2 lays out the 12 species present or very likely to be present. For instance, Blandings Turtles are likely affected as they are likely in the area. The only commitment we see is to do a detailed study later on. This is a good example of study following decision or destruction, and is in violation of the standard</p>

					<p>facilities adjacent to the Bradford Bypass corridor which were identified by Simcoe County Greenbelt Coalition.</p> <p>[add adam's map]</p> <p>The study did not include the cumulative effects of future planned industrial uses along the Bypass corridor and along the 400/404 corridor which may significantly impact people's health along the route. The evaluation did not use 2022 World Health Organization criteria for contaminants which are much lower and more up-to-date than the CAAQS or the AAQCs. We disagree that the AAQCs and CAAQS represent the "lowest concentrations at which an adverse effect may be experienced" as they are not based on up-to-date understandings of the health impacts of air contaminants including pre-term births and neurodevelopmental and other impacts. These are described in the report by the Canadian Association of Physicians for the Environment (April 2022) Mobilizing Evidence report. The Air Quality report predicts significant exceedances for NO2 and benzo(a)pyrene even with the apparently non-conservative assumptions for diesel truck traffic used in the full build out scenario compared to the no-build scenario. The adverse health impacts of NO2 exceedances may be extremely severe and will impact on the <i>Charter</i> rights and human rights of residents in the study area and beyond without justification for the need for the project.</p>	<p>EA practices. There are no commitments to the protection of species at risk in this document.</p> <p>Targeted surveys for all species at risk with potential to occur in the Study Area will be required during future phases of work. These future studies will inform the need for any permits, authorizations, mitigation or compensation under the Endangered Species Act.</p> <p>The Updated Draft EIAR requires consideration and review of all recommendations throughout the corridor during future phases of work. This approach is necessary and standard practice for planning projects in that design is an iterative approach and this project is only completing design to a preliminary level. During future phases of work, additional design will be completed and may include refinements to the design as details are developed with greater accuracy. Limiting the future design phases by making certain elements of the project non-discretionary at the preliminary design stage limits the potential for future work to explore opportunities for further reducing impacts and / or increasing mitigation and offsetting measures.</p> <p>For Blanding's Turtle specifically, candidate habitat associated with the Holland River and Holland River East Branch open water and wetland communities has been identified within the Study Area. Blanding's Turtle may be impacted while moving in between habitats if these species enter the construction work area.</p> <p>As part of this phase of the project, preliminary mitigation and avoidance measures for the potential impacts to turtles are included in the Draft EIAR and include:</p> <ul style="list-style-type: none"> • If stockpiles of gravel and sandy substrates or the removal of these substrates in the vicinity of turtle habitat are required during the active turtle season (April 1 to October 15), turtle exclusion fencing should be installed in accordance with the Reptile and Amphibian Exclusion Fencing Best Management Practices (Ministry of the Environment, Conservation and Parks, 2020) around stockpiles or area of disturbance prior to April 1. Fencing should be installed immediately after stockpiles are created if after April 1. • It is recommended that culverts be designed to provide openness ratios that would allow for the

					<p>Figure 6-11: Isoconcentration Contours for NO₂ in the Future Build Scenario</p>  <p>Note: Concentration contours are shown in units of ppb, and a multiplier of 10 has been applied.</p> <p>Figure 6-12: Isoconcentration Contours for NO₂ in the Future No-Build Scenario</p>  <p>Note: Concentration contours are shown in units of ppb, and a multiplier of 10 has been applied.</p> <p>Source: Air Quality Impact Assessment Report - AECOM.</p> <p>The Air Quality Impact Assessment concluded that: Impacts from the Future Build Conditions with the new Bradford Bypass on a cumulative basis within the Air Quality Study Area increases in comparison to a No-Build scenario for several contaminants and their respective averaging periods. This is predominately due to increased traffic along the Bradford Bypass, where in a No-Build scenario this traffic is dispersed along Holland Street and Bridget Street and within communities to the south of the Air Quality Study Area (for example, demonstrated in the traffic reporting related to this project). This included significant increases in NO₂, SO₂, PM_{2.5}, Acetaldehyde, Benzo(a)pyrene, and formaldehyde and some increases in CO. Maximum concentrations which are relevant for acute events also show significant increases, for example a 49% increase in SO₂ and more than 50% increases in fine and large particulates, acetaldehyde, formaldehyde etc. for critical receptor number 19 (other receptors' models were not displayed in a comparable manner). The results indicated that for NO₂, 1</p>	<p>passage of small mammal and/or herpetofauna where possible. An openness ratio of 0.4 would permit usage by medium-sized mammals, while the minimum openness ratio to be considered should be 0.25, which would permit usage by reptiles such as turtles (Credit Valley Conservation, 2017).</p> <ul style="list-style-type: none"> Avoid work within areas of candidate turtle overwintering habitat during the turtle overwintering period (October 31 to April 1), whenever possible. <p>These preliminary mitigation measures will be further refined as the project proceeds to Detail Design and impacts are assessed in more detail.</p> <p>For further detail on potential impacts to Species at Risk and proposed mitigation and avoidance measures, please refer to Section 5.1.1 of the Draft Environmental Impact Assessment Report.</p> <p>a. The Draft IA report identifies that the Williams Treaties FN reported American Eel and Northern Sunfish in the Holland River. This must be further investigated with new fieldwork. The American Eel is in decline and gets Federal protection. Ontario's Species at Risk legislation doesn't work anymore so it's all up to the federal enforcement.</p> <p>b. What is Ontario going to do to stand by Canada's obligations to First Nation treaty and consultation rights?</p> <p>c. Will the American Eel's presence be investigated with new field work.</p> <p>It was noted in discussion with William Treaties First Nations on December 1, 2022, that they had observed both American Eel (<i>Anguilla rostrata</i>; Endangered Species Act – Endangered, Species at Risk Act – Not at Risk) and Northern Sunfish (<i>Lepomis peilastates</i>; Endangered Species Act – Special Concern, Species at Risk Act – Special Concern) in the Holland River.</p> <p>Subsequently, the Project Team consulted with the Ministry of the Environment, Conservation and Parks, in</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIAR Edits Required? (Yes/No? If yes specify edits)
					<p>hour averages 80% of the hours in the future build scenario would have a cumulative concentration above the CAAQS limit of 79 ppm and a 100% of hours would exceed the AAQC for benzo(a)pyrene.</p> <p>In relation to GHGs, the MTO failed to incorporate induced demand in the future build scenario to calculate additional vehicle kilometers traveled that would be induced by the highway, and failed to give a transparent total vehicle assumption, vehicle type assumption including the age of the emissions controls on heavy diesel trucks, or a vehicle emissions factor. In any event the air quality impact assessment predicts that the proposed highway would be a significant contributor to regional GHG emissions even without incorporating the effect of induced demand. No mitigation measures are proposed to address the increase in greenhouse gas emissions from the project which will contribute to catastrophic climate disaster for all of humanity and the planet.</p> <p>12. Many less expensive alternatives to this highway have not been considered. The Minister approved Terms of Reference for the Bradford Bypass Environmental Assessment Study overrode the requirements of the Environmental Assessment act to consider road alternatives that would not be a controlled access highway. As a result, the Hwy 9 / Green Lane corridor was the only existing roadway that was considered as a reasonable alternative. That roadway was rejected as it was not considered feasible to convert it to a controlled access facility. Consideration of these types of alternatives are, however, a requirement for all Class EA Studies.</p> <p>A major condition of the 2002 Bradford Bypass EA Approval, was a requirement to conduct a Class EA Study at the time MTO wished to proceed with this project. This study would ensure the currency of the proposed project in light of current travel demand, previously unforeseen environmental factors, new legislation and a full review of all reasonable</p>	<p>March 2023 and was advised that the Ministry of Environment, Conservation and Parks records have no documented observances of the American Eel or Northern Sunfish in the Study Area. They also noted that the Northern Sunfish is a species of special concern and does not have a permitting status with the Ministry of the Environment, Conservation and Parks, and therefore would not be reported. These discussions with Williams Treaties First Nations and MECP have been documented in the Fish and Fish Habitat Report and Section 2.1.2 of the Updated Draft EIAR.</p> <p>No records of aquatic Species at Risk that are afforded protection under the Species at Risk Act or Endangered Species Act are known to occur in the watercourses where culverts are anticipated to be installed. AECOM ecologists conducted a detailed fish and fish habitat assessment of the water features in the vicinity of the Study Area between September 14-18, 2020, with spring field investigations occurring over multiple days in June 2021. Field investigations were also completed in the spring of 2022 due to changes to the Study Area boundary that required further review for potential fish habitat. Based on these investigations, no Species at Risk were discovered in the Study Area. Regardless, the presence or absence of all aquatic Species at Risk will be re-confirmed in subsequent design phases through additional field investigations.</p> <p>6. Please confirm our understanding that has been no discussion of, and that there are no studies looking at impacts to Lake Simcoe.</p> <p>As the project falls within the jurisdiction of the Lake Simcoe Region Conservation Authority (LSRCA), pertaining to Ontario Regulation 179/06, the ministry has assessed impacts with respect to the <i>Lake Simcoe Protection Act</i> and the Lake Simcoe Protection Plan through consideration of water quality and quantity, stormwater management, groundwater management, landscaping and ecological restoration measures; as well as fluvial geomorphological designs for watercourses, erosion and sediment control and spills prevention and protection measures.</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIAR Edits Required? (Yes/No? If yes specify edits)
					<p>alternatives including combinations of regional and local roadways.</p> <p>The following are reasonable alternatives that would need to be considered both individually and in combination with one or more other reasonable alternatives if the Class EA Study that was underway at the time Regulation 697 /21 was issued had not been terminated. Each of these proposed alternative solutions would then be evaluated against the then approved Bradford Bypass 4 lane controlled access freeway. Because the Class EA Study was canceled by this regulation, the only comparison AECOM have used throughout the Draft Impact Assessment Report is "Do Nothing". Given that the actual travel problem we are now faced with is local, rather than long distance traffic, we are confident one or more of the following reasonable alternatives would be dramatically preferable to the now 8 lane, Bradford Bypass. Alternatives to the Bradford Bypass:</p> <ol style="list-style-type: none"> 1. Construct a 4 lane arterial road bridge over the West Branch of the Holland River at the currently planned location for the Bradford Bypass bridge – together with paved 4 lane roadways to both Bathurst St. and a connection to Bradford's 8th Line. 2. Build a 4 lane arterial road bridge over the Holland River from Ravenshoe Road to connect with Simcoe Line 13 or another appropriate east – west arterial road on the west bank of the Holland River. 3. Extend and widen Green Lane to 6 lanes and create a diagonal transition from Green Lane to Hwy 9 and highway bridge intersection with Highway 9 around Dufferin St. The Green Lane / Highway 9 option will better serve and reduce both local and long distance traffic from Newmarket south to at least Aurora Sideroad. 	<p>a. The Groundwater Protection and Well Monitoring plan, which this Draft IA refers to, discusses the need to dewater the site for the building of piles for elevated bridge sections of the highway. The Draft IA report says, "Construction dewatering activities have been identified as the primary risk to groundwater fed water wells in the Study Area." There is no credible groundwater protection water. There are many suggestions for how to keep it clean but there are few to no commitments.</p> <p>Commitments, preliminary mitigation measures and monitoring activities related to groundwater are documented in Section 5.1.4 of the Draft EIAR, and will be carried forward to subsequent phases of the project.</p> <p>The risk of spills during construction of the project will be primarily limited to petroleum products from machinery (fuels and lubricants). The use of best management practices for handling of hydrocarbons according to the Ministry of Environment, Conservation and Parks and the Technical Standards and Safety Authority of the Ministry of Government Services will reduce the potential of environmental adverse effects associated with petroleum product handling and uses. Spillage of petroleum products must be immediately remediated according to these standards such that groundwater quality is not impacted.</p> <p>Mitigation plans will be generated during future phases of work for the project and for any excavation and structure construction within areas of medium to high significant groundwater recharge areas as shown near the Holland River and Holland River East Branch. Mitigation plans would be specific to each excavation and structure construction and include erosion and sediment control, dewatering treatment and discharge piping away or towards from Significant Groundwater Recharge Areas, or municipal sewer discharge requirements. Dewatering discharge shall be directed away from Well Head Protection areas if excavation and dewatering activities are occurring within them.</p>

						<p>in additional financial or reputational impacts. The Ministry's process for selecting contractors to support future phases of the work for the project also includes consideration of past performance and assessment of the contractors understanding of the project and sensitivities within the Study Area. Commitments, preliminary mitigation measures and monitoring activities related to groundwater are documented in Section 5.1.4 of the Draft EIAR, and will be carried forward to subsequent phases of the project.</p> <p>g. Explain what kind of environmental impact would make the project stop; or is any impact acceptable?</p> <p>This government takes environmental protection seriously and is implementing a path forward that will ensure environmental protections are not compromised while building this much needed project quickly and safely. Current work on the Bradford Bypass project will continue to be subject to all conditions under Ontario Regulation 697/21.</p> <p>In accordance with Ontario Regulation 697/21, the Project Team has undertaken several environmental impact assessments to identify and document the potential impacts, proposed mitigation measures, and environmental commitments, which are summarized in the Environmental Impact Assessment Report (EIAR).</p> <p>The Ministry of Transportation must also comply with all current federal and provincial environmental requirements. This includes consultation as set out in the regulation and obtaining permits and approvals for the project prior to the start of construction. Obtaining these permits and approvals, which are mechanisms to help protect the environment, confirms that the ministry has met or surpassed the environmental requirements.</p> <p>h. Please confirm that the only financial support for affected well owners whose water quality is affected by the construction is the province providing them with a temporary water supply until the well owner fixes their well.</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIAR Edits Required? (Yes/No? If yes specify edits)
						<p>i. Does this meager bit of help extend to those who did not provide baseline information about their well water?</p> <p>j. If there any effort being made to reach more than 12% of respondents to MTO's well water survey?</p> <p>MTO will work with owners of water wells who experience issues to determine if the issue is the result of Bradford Bypass project activities.</p> <p>If the well issue is confirmed to be a result of the project's activities, the Ministry will provide a letter to the property owner explaining the outcome of the well investigation and detail the recommended mitigation measures (including lowering / replacement of pump inlet, well rehab, new well installed or local watermain connection if available) the Ministry will undertake to remediate the issue. A temporary drinking water supply will be provided and connected to the resident if the project activities are found to be responsible, at the expense of the Ministry, until remediation measures have resolved the issue.</p> <p>A water well survey was completed for the project to determine the pre-construction assessment of private well supplies in the vicinity of the Study Area noted above. Where no response was provided from Property Owners as part of the water well survey, an additional attempt shall be undertaken during Detail Design to contact these owners via mail, email, phone calls, site visit, etc. This information will be used to provide a baseline for water wells prior to the proposed construction to determine existing water quality and quantity of each property.</p> <p>7. How much is this project going to cost?</p> <p>As we bring this project to market, we want to ensure we can retain the best value for the project. As such, the ministry will not be releasing cost estimates prior to the award of contracts to protect the procurement processes.</p> <p>8. When will the Bradford Bypass be completed?</p> <p>The Preliminary Design phase is anticipated to be completed in 2023. Detail Design and Construction Phases will follow.</p>

						<p>9. It is unclear how many lanes are being constructed at which times. Please clarify.</p> <p>The Ontario government is committed to fully funding the construction of the Bradford Bypass and is following through on its promise to improve and invest in the province's transportation corridors to get people moving within the region, connect people to jobs, make life easier and support a strong economy.</p> <p>A four-lane configuration is planned to be constructed first with two general purpose lanes in each direction. To plan for the future, the Ministry is also considering the design of an ultimate eight-lane design for the Bradford Bypass. The ultimate, eight-lane configuration for the project will feature three general purpose lanes and one HOV lanes in each direction.</p> <p>10. There is no cumulative health impact assessment to understand how traffic related air pollution, known to increase risks of cancers, leukemia, heart and lung disease, will impact the communities surrounding the route. There is also no mention of the cumulative impacts on our climate from construction and higher rates of car travel on this highway.</p> <ol style="list-style-type: none"> How will you be informing people living along the route about the increased risk of traffic related air pollution and its effects on human health? Will you put air quality monitors in Bradford? How do you explain the fact that you are NOT monitoring air quality in Bradford, and using the closest site, Newmarket? The Final Environmental Conditions Report identified numerous planned residential developments right beside the highway, including a planned new school. Have the land owners / developers / school boards received any information that tells them how bad the air quality is going to be there? 	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIAR Edits Required? (Yes/No? If yes specify edits)
						<p>The human health scoping implications of the project such as air quality, noise, land use, traffic congestion and safety, economic, social cohesion, and neighborhood resources have been summarized in Section 2.2.7 and Section 5.2.7 of the Draft EIA. To better understand the human health implications due to the Project as a next step, it is recommended for MTO to continue to consider the human health factors identified in this report and provide recommendations to enhance potential positive impacts and mitigate potential negative health impacts. Specifically, conducting a Screening-Level Human Health Risk Assessment of potential air quality impacts is recommended in order to evaluate and characterize Project-related air quality impacts to health.</p> <p>The project has undertaken an Air Quality Impact Assessment to explore pollutant emissions and dispersion modelling in an effort to predict the contribution of the project to future ambient pollutant concentrations. This contribution, added to background concentration levels, allows prediction of the cumulative impact of the proposed project and all other contributors to air pollution. Concentration levels are compared to provincial and federal ambient air quality criteria and standards to assist in the evaluation of project-specific mitigation needs and options.</p> <p>Areas of concentrated emission impact are influenced by traffic volumes along a given segment of roadway. The implementation of the Bradford Bypass is expected to redistribute traffic from local roads and freeway corridors surrounding the proposed Bradford Bypass. Reductions in traffic volumes are observed on corridors including Highway 11/1 (Bridge Street), Bathurst Street, Holland Landing Road, Yonge Street, Queensville Sideroad, Doane Road, Mount Albert Road, Green Lane, and Simcoe County Road 88/Holland Street, among other roads, which benefits the community of Bradford, Town of Bradford West Gwillimbury, by alleviating congestion during peak hours.</p> <p>The Project Team is currently utilizing the National Air Pollution Surveillance air quality monitoring stations to assess air quality levels. Five years of existing data sets were analyzed from stations within the region, and the complete data set from the closest station or most</p>

						<p>representative station for each contaminant of concern was selected to represent the background air quality for the Study Area. Due to the proximity of the Study Area to the Toronto Area, monitoring stations within the City of Toronto were given preference as the one of the most representative locations for the air quality contaminants of concern. As such, Roadside Wallberg – University of Toronto monitoring station, North Downsview monitoring station, Gage Institute monitoring station (all located approximately 38 – 53 km from the Study Area) were used. The nearest monitoring station is in Newmarket. Additional information regarding the assessment of potential air quality impacts have been summarized in Section 2.2.4 and Section 5.2.4 of the Draft EIAR.</p> <p>Land has been designated for the Bradford Bypass since the 2002 Approved EA was completed. As noted above, consultation is an integral component of the Preliminary Design stage and project-specific assessment of environmental impacts and is critical to a project's success. The ministry is actively consulting and engaging with private landowners, developers and school boards within the Study Area. Engagement and consultation has included having a project website and telephone line, having a project contact list for regular project updates, providing notices and correspondence via email, mail, and Ontario Government Notices in local newspapers, hosting public information centres and online events, and holding meetings with Indigenous communities, municipalities, environmental agencies, and stakeholders. More information on the project consultation activities are included in Section 7 of the Updated Draft EIAR.</p> <p>11. Traffic modeling to produce the air dispersion model is not robust or transparent. The air modeling report and supporting reports fail to disclose the % of diesel truck traffic, or the component of that traffic that includes trucks dating from 2006 or earlier which comprise a significant component of air pollution load. The comparison of build with no-build is not valid because the values in Appendix E of the traffic modeling report show that there was an erroneous assumption that there would be significantly less truck traffic in the build scenario compared to the no-build scenario.</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIA Edits Required? (Yes/No? If yes specify edits)
						<p>There is no valid scientifically-based justification for this. Further, if there is an increase in truck traffic along 404 - as the model predicts - then sensitive receptors along highway 404 need to be included in a health impact study. Instead, impacts on traffic along the 400/404 corridors were excluded and the "air quality study area" was restricted to the bypass corridor itself without any explanation or justification. It is egregious that MTO did not conduct locally relevant air quality monitoring for background in Bradford, River Drive Park, Queensville and along the 404/400 corridors for traffic related air pollutants. Such baseline monitoring is generally inexpensive and could have been easily obtained. The study did not include the cumulative effects of future planned industrial uses along the Bypass corridor and along the 400/404 corridor which may significantly impact people's health along the route. The evaluation did not use 2022 World Health Organization criteria for contaminants which are much lower and more up-to-date than the CAAQS or the AAQCs. We disagree that the AAQCs and CAAQS represent the "lowest concentrations at which an adverse effect may be experienced" as they are not based on up-to-date understandings of the health impacts of air contaminants including pre-term births and neurodevelopmental and other impacts. The report predicts significant exceedances for NO₂ and benzo(a)pyrene even with the apparently non-conservative assumptions for diesel truck traffic used in the full build out scenario compared to the no-build scenario. The adverse health impacts of NO₂ exceedances may be extremely severe and will impact on the Charter rights and human rights of residents in the study area and beyond without justification for the need for the project.</p> <p>Study Area, MOVES3 data, vehicles and assumptions: In order to model relevant vehicle types within the Air Quality Impact Assessment Study Area, MOVES3 data was input to the model and refinements were made to exclude fuel types such as ethanol given these fuels are</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIAI Edits Required? (Yes/No? If yes specify edits)
						<p>not readily available for use in Ontario. Fuel inputs utilized in MOVES3.0 modelling at the time of the assessment included: Fuel Type IDs 1, 2, 3 and 9. ID 5 (ethanol) was not included as flex fuel cars and fuelling stations are not readily available in Ontario. The specific source type fractions utilized for various vehicle types applied within the project study area and the related fraction of expected vehicle usage for both passenger-class vehicles and heavy-class vehicles, including the distribution of vehicle types in the heavy truck vehicle category, were combined to create representative vehicle emission for vehicle class that can reasonable be expected to be in use in 2041.</p> <p>Highway 400/404 corridors were included in the Air Quality Impact Assessment. The full air quality study area is shown in Figure 2-9 of the Updated Draft EIAI and demonstrates that the air quality study area included emission sources within the boundary of assessment, including but not limited to Highway 400 (500 m south of Rural Rd. 88 to 500 m north of Concession Rd. 11), Highway 404 (500 m south of Queensville Sideroad E to 500 m north of Boag Road), the entirety of the proposed Bradford Bypass, Bridge Street, Holland Street W, 10th Sideroad, Young Street/Barrie Street, and Queensville Sideroad.</p> <p>Traffic distributions and truck traffic: The same Average Annual Daily Traffic (AADT) were used for all scenarios. AADT values for each air quality emission source vary between the three scenarios evaluated based on projected existing traffic within the study area, and future no-build and build traffic projections however the same 24-hour traffic distribution percentages were applied. Three representative 24-hour distribution percentages were applied to the air quality emission sources. These were applied to a given source of emission depending on the type of road in question, e.g. a "Leslie St." 24-hour distribution was applied to air quality emission sources which were categorized as community arterial roads; a "HWY 400" 24-hour distribution was applied to air quality emission sources categorized as highways; and, a "2nd Concession Rd" 24-hour distribution was applied to rural roads. These same 24-hr distributions were applied to the assigned source for all three scenarios of evaluation (existing conditions, future no-build, and future build).</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIAR Edits Required? (Yes/No? If yes specify edits)
						<p>Fuel usage distribution [i.e. diesel, gasoline, CNG, etc.] and vehicle age distribution within each vehicle type category were modelled based on MOVES3.0 default fuel use and age distribution database inputs assigned to the year of evaluation. Heavy truck traffic was included in the modelling with a percentage assigned to each air quality emission source anticipated from this vehicle type.</p> <p>Health Impacts, Critical Receptors and Background/Study Area Monitoring Data: The human health scoping implications of the project such as air quality, noise, land use, traffic congestion and safety, economic, social cohesion, and neighborhood resources have been summarized in Section 2.2.7 and Section 5.2.7 of the Updated Draft EIAR.</p> <p>The Project Team is aware some critical receptors have been identified as 'missing' by a number of stakeholders. Having reviewed the data, these 'missing' receptors were included as residences in the Air Quality Impact Assessment. Potential impacts at the 'missing' receptors within the Air Quality Impact Assessment Study Area are reflected in the assessment by other, nearby critical receptors and receptors identified on Figure 2-9 and 2-10 of the Updated Draft EIAR.</p> <p>The approach to identifying representative air quality levels is conservative and often ensures the worst-case conditions are reflected so as to not under-represent conditions within a study area; i.e. background air quality contaminant levels included within the assessment may be representative or higher than expected for the area in question.</p> <p>While it is recognized that localized in-situ monitoring may provide more accurate data, use of existing monitoring stations within the NAPS network for statistically relevant background monitoring data is a generally accepted and conservative methodology for provincial environmental impact air quality assessments. Stations selected for the background air quality assessment were chosen based on total data availability over a most recent five-year period as a minimum of 12 months of daily and hourly data is required to ensure statistical relevance. Stations were also selected based on their proximity to the air quality</p>

						<p>study area with the meteorological station selected as representative of the air quality study area within 15 km north-west of the air quality study area. Stations must also be a relative representation of similar types of existing sources of air quality emission in the study area and it is notable that the meteorological station selected as representative of air quality in the study area was provided by the MECP in site-specific MET data requested for the project modelling.</p> <p>12. Many less expensive alternatives to this highway have not been considered. The Minister approved Terms of Reference for the Bradford Bypass Environmental Assessment Study overrode the requirements of the Environmental Assessment act to consider road alternatives that would not be a controlled access highway. As a result, the Hwy 9 / Green Lane corridor was the only existing roadway that was considered as a reasonable alternative. That roadway was rejected as it was not considered feasible to convert it to a controlled access facility. Consideration of these types of alternatives are, however, a requirement for all Class EA Studies. A major condition of the 2002 Bradford Bypass EA Approval, was a requirement to conduct a Class EA Study at the time MTO wished to proceed with this project. This study would ensure the currency of the proposed project in light of current travel demand, previously unforeseen environmental factors, new legislation and a full review of all reasonable alternatives including combinations of regional and local roadways. The following are reasonable alternatives that would need to be considered both individually and in combination with one or more other reasonable alternatives if the Class EA Study that was underway at the time Regulation 697 /21 was issued. Each of these proposed alternative solutions would then be evaluated against the then approved Bradford Bypass 4 lane controlled access freeway. Because the Class EA Study was canceled by this regulation, the</p>

						<p>only comparison AECOM have used throughout the Draft Impact Assessment Report is "Do Nothing". Given that the actual travel problem we are now faced with is local, rather than long distance traffic, we are confident one or more of the following reasonable alternatives would be dramatically preferable to the now 8 lane, Bradford Bypass.</p> <p>Alternatives to the Bradford Bypass:</p> <ul style="list-style-type: none"> a Construct a 4 lane arterial road bridge over the West Branch of the Holland River at the currently planned location for the Bradford Bypass bridge – together with paved 4 lane roadways to both Bathurst St. and a connection to Bradford's 8th Line. b Build a 4 lane arterial road bridge over the Holland River from Ravenshoe Road to connect with Simcoe Line 13 or another appropriate east – west arterial road on the west bank of the Holland River. c Extend and widen Green Lane to 6 lanes and create a diagonal transition from Green Lane to Hwy 9 and highway bridge intersection with Highway 9 around Dufferin St. The Green Lane / Highway 9 option will better serve and reduce both local and long distance traffic from Newmarket south to at least Aurora Sideroad. <p>Any one or a combination of these alternatives will address a substantial amount of local travel problems while being significantly less costly and environmentally invasive. Once again, what logic is being used to ignore these options given all of the rationale in favour of these other alternatives?</p> <p>The planning process that resulted in the 2002 approved Environmental Assessment (EA) for the Bradford Bypass evaluated alternatives from a broad range of potential solutions to address several transportation problems and to address significant opportunities identified in York Region and Simcoe County. The need for this freeway was confirmed during the Route Planning and EA Study as</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIAR Edits Required? (Yes/No? If yes specify edits)
						<p>the only reasonable solution that would make a significant contribution towards addressing the problem as the population in York Region and Simcoe County grows. The 2002 EA approved alignment is technically preferred for a freeway in terms of highway network expansion, ease of construction, relationship to provincial and municipal land use planning and the preferred route is already included in Official and Transportation Master Plans, as well as the Places to Grow Act), as well as having fewer negative impacts to residential and natural areas when compared to other route options considered.</p> <p>The Bradford Bypass Project has been modelled based on current local, regional, and provincial projections and data. This addresses the problem of "lack of long-term planning" per the Bradford Bypass 2002 approved EA..</p> <p>The 2002 approved EA reviewed a broad area of analysis which included several corridors, including areas south of the current corridor, and Highway 89/Ravenshoe Road.</p> <p>The Bradford Corridor was selected as the preferred corridor over Highway 89/Ravenshoe Road as it was beyond the maximum north limit of 10th Line / Boag Road which was assessed in a previous EA study and was determined that a Management Area or river crossing north of this would entail unacceptable environmental impact, which lead to the withdrawal of the Highway 89 EA studies in 1986-87.</p> <p>The Bradford Corridor was selected as the preferred corridor over the southern alternatives as there was no south alternative that met the primary purpose of the study to reduce out-of-way travel. The south limit was established as Highway 88 and Queensville Sideroad.</p> <p>The original purpose of the Bradford Bypass per the 2002 Approved EA was to address the "east-west" long-distance travel demand crossover between Highway 400 and Highway 404 which is a provincial responsibility and distinct from the locally generated trips which use a municipal road to access the provincial network. As noted in the report, the overall network benefits from vehicle-hours of travel time savings and vehicle-kilometres of travel distance savings are observed during the 2041 AM peak hour and during the 2041 PM peak hour in the</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIAR Edits Required? (Yes/No? If yes specify edits)
						<p>updated interchange locations. Local roads forecasted to exceed capacity by 2031 and 2041 under the No-Build scenarios see significant relief from traffic as a result of the diversion to the Bradford Bypass in the Build scenarios.</p> <p>While the Town of Bradford West Gwillimbury owns a closed road allowance east of Artesian Industrial Parkway for 8th Line to Holland River, Hochreiter Road itself is a private road. A connection at this location would not address the primary purpose of the Bradford Bypass to connect Highway 400 and Highway 404. The local benefit of this route is likely outweighed by the reduced congestion of Bridge Street created by the Bradford Bypass. A bridge across 8th Line would still require out-of-way travel, which this study is looking to reduce, to connect to provincial transportation facilities. Improvements would likely be required on Bathurst Street and Queensville Sideroad. Significant property impact (similar to the Bradford Bypass) would be required for a new corridor connection from 8th Line straight to Highway 404. For more information on the 2002 Approved EA, please see the enclosed linked: https://www.bradfordbypass.ca/wp-content/uploads/2020/09/BBP-RoutePlanningEA-1997.pdf</p> <p>For more information on the assessment of alternative routes, please refer to the response to question #3.</p> <p>The Project Team will continue to carefully consider all impacts to wetland areas and will continue to work with Indigenous communities, environmental agencies, municipalities, and other concerned stakeholders to identify principles and recommendations for mitigating the impacts of placing new or expanded provincial highways within wetland areas. The Bradford Bypass Project will continue to look at opportunities to minimize impacts to these wetlands through engineering refinements.</p> <p>If you have any other questions, please feel free to reach out to the Project Team at your earliest convenience. You can reach the Project Team via email at projectteam@bradfordbypass.ca, toll free at 1-877-247-6036, or by visiting the Project Website at www.bradfordbypass.ca.</p>

CT-DraftEIAR-80	To: Project Team From: [REDACTED]	Email: [REDACTED] [REDACTED]	Draft EIAR	June 30, 2023	<p>Good morning,</p> <p>Please find the Ministry of Citizenship and Multiculturalism's comments on the Draft Environmental Impact Assessment Report (Draft EIAR) for the Bradford Bypass attached.</p> <p>We understand that another draft of the EIAR will be prepared to incorporate the findings of the archaeological assessments that are still underway. MCM staff would like to request a meeting between MCM (Heritage Planning Unit and Archaeology Program Unit) and MTO to discuss the timing and next steps for this component of the project, as well as other cultural heritage considerations.</p> <p>We suggest the following dates and times for a meeting:</p> <p>July 13, 11AM-12PM, 1-2PM July 14, 9:30AM-11AM, 1-2PM July 17, 10AM-12PM, 1-3PM July 18, 9:30-12PM, 1-3PM</p> <p>If you would kindly let us know your availability and who should attend, we can set up a Teams meeting (likely 1h).</p> <p>Thank you,</p> <p>[REDACTED]</p> <p>[REDACTED]</p>	<p>Hi [REDACTED]</p> <p>Thank you to you and your team for meeting with us last week.</p> <p>Please see attached the Project Team responses to MCM's comments on the Draft EIAR. Please note that following our meeting, we were contacted by an Indigenous community who requested additional time to review the archaeological reports that had been made available to them. As such, the anticipated timing for the Project Team to submit the remaining archaeological reports to the Ministry is being deferred until reviews are completed by the Indigenous communities.</p> <p>The Project Team will advise you once the archaeological reports have been submitted to MCM. Responses to MCM's comments on the Updated Draft EIAR will also be provided shortly.</p> <p>If you have any questions in relation to the attached or any other comments regarding the project, please let us know.</p> <p>Sincerely,</p> <p>The Bradford Bypass Project Team</p>	Yes – see MCM comment table for specific EIAR revisions .

					<p>distance travel solutions. We maintain that there are better and cheaper, faster to implement, regional road and transit solutions that should be pursued, even if the Bypass does get built.</p> <p>3. We would like to see the traffic studies in their entirety. An environmental assessment used to be grounded in a demonstration of need and justification. The MTO has provided neither as it pertains to this particular project and at this time. There is no evidence that local traffic solutions MTO purports to be solving (actually a local traffic issue and not MTO's mandate) are best served by this potentially \$4 billion highway.</p> <p>a. Please share the links and the methodology, transparently, so that people can understand what travel time savings MTO is referring to. We have absolutely no idea because your write up is incredibly vague about the start and end of the routes used for analysis. For instance this meaningless babble from pg. 334:</p> <p>b. What year do your studies indicate that the Bypass will be congested at peak rush hour times?</p> <p>4. The Draft Environmental Impact Assessment report shows on pg. 212 the Bypass touching the southern portion of the Lower Landing (AKA BaGv-42), a significant historical and archaeological site at a significant meander on the East Holland River. MTO has moved the highway 150 m to the south of the technically preferred route, which would have completely run over the Lower Landing (pg 148). The Draft Environmental Conditions Report indicated that a Stage 3 archaeological assessment "was required" (pg 225); the Draft IA report says that the Stage 3 was completed, and that Stage 4 is required. The Project team's website says, "Currently, additional</p>	<p>2. Explain how a provincial highway was transformed into a very expensive regional road variant with five interchanges and two 400 series highway connections, paid for by all Ontario taxpayers. This is inconsistent with the MTO's mandate to provide long distance travel solutions. We maintain that there are better and cheaper, faster to implement, regional road and transit solutions that should be pursued, even if the Bypass does get built.</p> <p>The project is being assessed with consideration of the Ministry's mandate to provide for the safe, efficient movement of people and goods between regions and urban areas. In addition, the Project Team has consulted with local and regional municipalities, and the traffic analysis for the proposed Bradford Bypass has considered the planned local transportation and transit improvements to be implemented by others.</p> <p>The original route planning study (2002 Approved Environmental Assessment – EA) concluded that additional relief from congestion in this Study Area could only be accommodated through the protection and implementation of a provincial right of way.</p> <p>As part of the 2002 Approved EA, the Bradford Bypass evaluated alternatives from a broad range of potential solutions to address several transportation problems and to address significant opportunities identified in York Region and Simcoe County. The need for this freeway was confirmed as the only reasonable solution that would make a significant contribution towards addressing the problem as the population in York Region and Simcoe County grows. The 2002 Approved EA approved alignment is technically preferred for a freeway in terms of highway network expansion, ease of construction, relationship to provincial and municipal land use planning and the preferred route is already included in Official and Transportation Master Plans, as well as the Places to Grow Act), as well as having fewer negative impacts to residential and natural areas when compared to other route options considered.</p>

					<p>archaeological investigations are being completed to finalize the impact assessments in accordance with Ontario Regulation 697/21 and are not included in this posting. This information will be available for additional public and Indigenous community review once completed." The Draft IA states," the southern portion of the site ... will be impacted by construction. Stage 4 Archaeological Assessment excavation plans will be submitted to the Ministry of Citizenship and Multiculturalism and Indigenous communities prior to the Stage 4 excavation being conducted," (pg 395).</p> <p>So the archeological work is not finished. And yet the route has been chosen. Property owners near the history-rich Lower Landing that are receiving expropriation notifications. We are staunchly opposed to this violation of this site particularly absent the completed stage 4 archaeological assessment of the Lower Landing and the endorsement of the First Nations.</p> <p>As stewards of these lands and water for time immemorial, additional time should be given to allow First Nation community members to fully digest the lengthy report. Georgina Island First Nation asked that this site be avoided in 1998, 25 years ago, stating, "It is obvious that there are other routes, which can be used to connect these major highways, and we hope that another will be selected." Is Ontario still ignoring this request?</p> <p>b. Have First Nations been consulted about this part of the plan? Please provide written evidence of their approval of this route.</p> <p>c. It is imperative that the Ontario Government uncover all evidence of burials where the highways are to be built. How this is done must follow affected First Nations' protocols and wishes. These are some thoughts from a non-native resident of the area on the topic:</p>	<p>For more information on the Analysis and Evaluation of alternatives, refer to Section 2.1.6 of the 2002 Approved EA, which can be found in the enclosed link: https://www.bradfordbypass.ca/wp-content/uploads/2020/09/BBP-RoutePlanningEA-1997.pdf</p> <p>Further to the conclusion of the 2002 Approved EA, as part of this Preliminary Design study, a traffic analysis was completed and the result of the review has confirmed the need of the highway. This analysis included the review of existing traffic conditions and modelling of future forecast traffic conditions and it has been confirmed that updates to regional and municipal roads alone will not address the transportation needs within the Study Area.</p> <p>Additionally, a feasibility assessment was conducted evaluating nine interchange location scenarios to determine the best interchange configuration through the Bradford Bypass corridor. The evaluation was conducted in accordance with satisfying the study objective to improve connectivity of the study area between Highway 400 and Highway 404, facilitating the improvement of traffic operations and movement of goods. Consideration included interchange utilization, overall network delay, out of way travel, environmental considerations and constraints, and preliminary costs. It was determined that interchanges at 10th Sideroad, County Road 4, Bathurst Street, 2nd Concession Road, and Leslie Street would be included as part of the Study.</p> <p>3. We would like to see the traffic studies in their entirety. An environmental assessment used to be grounded in a demonstration of need and justification. The MTO has provided neither as it pertains to this particular project and at this time. There is no evidence that local traffic solutions MTO purports to be solving (actually a local traffic issue and not MTO's mandate) are best served by this potentially \$4 billion highway.</p> <p>The Bradford Bypass project has been assessed in accordance with Ontario Regulation 697/21. Consistent with the Regulation, the Project Team completed an update to the description of environmental conditions previously documented in the 2002 Approved</p>

					<p>i. These burial sites must be preserved and protected or possibly moved to another location. Identifying registered and unregistered burial sites should be relatively simple for the Ontario Government as the information is readily available from their own ministries, authorities as well as from local governments and churches/cemeteries. While 'registered burial sites' are easy to identify, 'unregistered sites' need to be confirmed and registered as required under Ontario's Funeral, Burial and Cremation Services Act, 2002 while 'Still to be found sites' require sleuthing, historical research and boots on the ground investigation. One of the most extreme requirements that could be requested is for the Ontario Government to perform thorough Ground Penetrating Radar (GPR) surveying of every square foot of the Bradford Bypass. Anomalies called 'targets' would receive special attention via Archaeological digs. Human remains discovered would either be left in place or moved. All work and costs are to be borne by the Ontario government. This solution for 'Still to be found' burial sites is as necessary as the work done and currently being done for the former Residential Schools in Canada.</p> <p>5. Species at Risk</p> <p>a. Table 2-2 lays out the 12 species at risk present or very likely to be present. For instance, Blandings Turtles are likely affected as they are likely in the area. The only commitment we see is to do detailed study later on. This is a good example of study following decision or destruction, and is in violation of standard EA practices. There are no commitments to the protection of species at risk in this document.</p> <p>b. There is a requirement for the Minister of the Department of Fisheries and</p>	<p>Environmental Assessment (EA) for the project. This update included a review and assessment of the existing traffic conditions which was documented in the Environmental Conditions Report (ECR). The ECR was finalized in October 2022 following a public review period, and is available on the Project website.</p> <p>Significant population growth is projected for both Simcoe County and the Regional Municipality of York. Even with all currently planned transportation and transit investments, road congestion will continue to increase across the Greater Golden Horseshoe (GGH) including within the Bradford Bypass Study Area.</p> <p>The purpose of the Bradford Bypass is to relieve congestion on existing local roads between Highway 400 and Highway 404 and provide a northern freeway connection between Highways 400 and 404.</p> <p>Modeling results demonstrated that under the No Build (no Bradford Bypass) scenario, local roads were forecasted to exceed capacity by 2031 but saw significant relief under the Build (with Bradford Bypass) scenario. Alternative alignments for the Bradford Bypass were then compared within the model, including the 2002 Approved EA alignment and interchange locations and an updated preferred interchange location alternative developed by the Project Team.</p> <p>On average, between the various origin-destination pairs using the Bradford Bypass, drivers in the peak direction during the peak period, would save up to 73% or 33 minutes of travel time when connecting between Highway 400 and Highway 404 compared to existing routes in the No Build scenario.</p> <p>The development of the analysis and key results from the Traffic Study have been summarized in the Draft Environmental Impact Assessment Report and the Updated Draft Environmental Impact Assessment Report (EIAR), which were available for public review and comment from June 1, 2023 to June 30, 2023 and July 14, 2023 to August 14, 2023, respectively. The information in the draft EIAR includes the origin and destination locations that were reviewed to determine the average travel time savings during the AM and PM peak hours. Similar to the process undertaken for MTO preliminary design studies,</p>

					<p>Oceans to consider, when making certain decisions related to the fish and fish habitat protection (and pollution prevention) provisions of the Act, the Indigenous knowledge of the Indigenous peoples of Canada that has been provided to the Minister (34.1(1) (g) of the Fisheries Act); and,</p> <p>c. Requirement to protect the confidentiality of Indigenous knowledge that is provided to the Minister in confidence, except under limited circumstances (subsection 61.2 (1) of the Fisheries Act)."</p> <p>d. The Draft IA report identifies that the Williams Treaties FN reported American Eel https://www.dfo-mpo.gc.ca/species-especes/publications/sara-lep/eel-anguille/index-eng.html and Northern Sunfish in the Holland River. This must be further investigated with new fieldwork. The American Eel is in decline and is in the process of being listed for protection Federally.</p> <p>i. What is Ontario going to do to stand by Canada's obligations to First Nation's treaty and consultation rights?</p> <p>ii. Will the American Eel's presence be investigated with new fieldwork?</p> <p>6. There are many concerns related to surface water and groundwater.</p> <p>a. Please confirm our understanding that there has been no discussion of, and that there are no studies looking at impacts to Lake Simcoe.</p> <p>b. The Groundwater Protection and Well Monitoring plan, which this Draft IA refers to, discusses the need to dewater the site for the building of piles for the elevated bridge sections of the highway. The Draft IA report says, "Construction</p>	<p>the Traffic Study will be finalized upon study completion and will be available if requested.</p> <p>a. Please share the links and the methodology, transparently, so that people can understand what travel time savings MTO is referring to. We have absolutely no idea because your write up is incredibly vague about the start and end of the routes used for analysis.</p> <p>b. What year do your studies indicate that the Bypass will be congested at peak rush hour times?</p> <p>As detailed in the Draft EIAR (Section 2.4.1), an Aimsun model was created to assess the existing traffic conditions for the road network in the Study Area. The model study area encompasses the Highway 400 corridor from south of Simcoe County Road 88 to north of Highway 89, as well as the Highway 404 corridor from south of Green Lane East to its terminal at Woodbine Avenue (Table 4-3 and 4-4 of the Draft EIAR).</p> <p>The model for this area was developed using pre-pandemic traffic volumes to identify peak hour volumes within the Study Area. This model has been calibrated and validated as it closely resembled actual operating conditions.</p> <p>As detailed in Section 4.4 of the Draft EIAR, traffic is assessed through modelling to identify Level Of Service (LOS). Having confirmed the model was consistent with current (base) conditions, and therefore appropriate to assess future conditions and design alternatives, the model was used to assess LOS under future 2031 and 2041 conditions. To assess future conditions, the model was updated to include all road network and transit improvements planned within the Study Area, and, forecast traffic volumes based on the projected growth within the Study Area.</p> <p>The alternative Build scenarios showed the mainline operations on the Bradford Bypass in 2031 would operate at acceptable LOS D in the interim four lane configuration. The model indicates that by expanding to the ultimate 8 lane configuration (implementing another general purpose</p>

					<p>dewatering activities have been identified as the primary risk to groundwater fed water wells in the Study Area," p 295. There is no credible groundwater protection plan. There are many suggestions for how to keep it clean but there are few to no commitments.</p> <p>c. HOW exactly is the province (MoECP) going to monitor groundwater discharges to ensure they meet Ontario's water quality standards?</p> <p>d. What penalties are contractors going to face for violating the discharge requirements?</p> <p>e. If penalties are not enough to compel adherence, what next?</p> <p>f. How is the public to have confidence that contaminated water will not be discharged to the Holland Rivers and Lake Simcoe?</p> <p>g. Please confirm if monitoring will continue, or not, as this statement is totally vague: "It is expected that each unassessed monitoring well will continue to be monitored and assessed during the subsequent detail design phase of the project" P. 79.</p> <p>h. Explain what kind of environmental impact would make this project stop; or is any impact acceptable?</p> <p>i. Please confirm that the only financial support for affected well owners whose water quality is affected by the construction is the province providing them with a temporary water supply until the well owner fixes their well.</p> <p>i. Does this meager bit of help get extended to those who did not provide baseline information about their well water?</p>	<p>lane and an HOV lane in each direction by 2041), LOS on the mainline improves to LOS B or C and accommodates the additional traffic forecast by 2041.</p> <p>For further information about the Traffic Study please refer to the response to Question #3 and Section 4.4 of the Updated Draft EIAR.</p> <p>4. The Draft Environmental Impact Assessment report shows on pg. 212 the Bypass touching the southern portion of the Lower Landing (AKA BaGv-42), a significant historical and archaeological site at a significant meander on the East Holland River. MTO has moved the highway 150 m to the south of the technically preferred route, which would have completely run over the Lower Landing (pg 148). But the Draft IA states," the southern portion of the site ... will be impacted by construction" (pg 395). The Draft Environmental Conditions Report indicated that a Stage 3 archaeological assessment "was required" (pg 225); the Draft IA report says that the Stage 3 was completed, and that Stage 4 is required. The Project team's website says, "Currently, additional archaeological investigations are being completed to finalize the impact assessments in accordance with Ontario Regulation 697/21 and are not included in this posting. This information will be available for additional public and Indigenous community review once completed." So the archeological work is not finished. And yet the route has been chosen. Property owners near the history-rich Lower Landing that are receiving expropriation notifications. We are staunchly opposed to this violation of this site particularly absent the stage 4 evaluation of the Lower Landing and the endorsement of the First Nations.</p> <p>a. As stewards of these lands and water for time immemorial, additional time should be given to allow First Nation community members to fully digest the lengthy report. Georgina Island First Nation asked that this site be avoided in 1998, 25 years ago, stating, "It is</p>

					<p>k. Is there any effort being made to reach more than 12% of respondents to MTO's well water survey?</p> <p>7. How much is this project going to cost?</p> <p>8. When will the Bradford Bypass be completed?</p> <p>9. It is unclear how many lanes are being constructed at which times. Please clarify.</p> <p>10. There is no cumulative health impact assessment to understand how traffic related air pollution, known to increase risks of cancers, leukemia, heart and lung disease, will impact the communities surrounding the route. There is also no mention of the cumulative impacts on our climate from construction and higher rates of car travel on this highway.</p> <p>a. How will you be informing people living along the route about the increased risk of traffic related air pollution and its effects on human health?</p> <p>b. Will you put air quality monitors in Bradford?</p> <p>c. How do you explain the fact that you are NOT monitoring air quality in Bradford, and using the closest site, Newmarket?</p> <p>d. The Final Environmental Conditions Report identified numerous planned residential developments right beside the highway, including a planned new school. Have the land owners / developers / school boards received any information that tells them how bad the air quality is going to be there?</p>	<p>obvious that there are other routes, which can be used to connect these major highways, and we hope that another will be selected." Is Ontario still ignoring this request.</p> <p>b. Have First Nations be consulted about this part of the plan? Please provide written evidence of their approval of this route.</p> <p>Field investigations for Stage 2 and Stage 3 works have been completed and additional details are included in the Updated Draft Environmental Impact Assessment Report available on the Project Website (https://www.bradfordbypass.ca/study-process/) for public review until August 14, 2023.</p> <p>The required Stage 4 Archaeological Assessment of BaGv-42 will be completed during future phases of work for the project and will be carried out in accordance with the Ministry of Citizenship and Multiculturalism Standards and Guidelines for Consultant Archaeologists (Ontario Government 2011). No ground disturbing activities will occur at this site until the Stage 4 assessment has been conducted.</p> <p>In accordance with Ontario Regulation 697/21, the Project Team completed site specific Stage 3 archaeological assessments for areas within the Study Area that were identified as having archaeological potential in accordance with the Stage 2 archaeological assessments.</p> <p>It is common practice for Stage 4 archaeology work to be completed during Detail Design. Limiting the impact to Stage 4 archaeological sites where feasible is one of the Project Team's main priorities. As a result, the Project Team will determine the exact impact limits to archaeological sites during subsequent design phases of the project. To avoid unnecessary excavation, the Project Team will then undertake the Stage 4 archaeological assessments. Any Stage 4 field work that will be undertaken must engage interested Indigenous communities.</p> <p>As recommended by the cultural heritage resource assessment undertaken by the Project Team, the Holland</p>

					<p>11. Traffic modeling to produce the air dispersion model is not robust or transparent. In order to understand traffic related air pollution, relevant vehicle types and assumptions need to be used. The air dispersion modeling report simply indicates that MOVES3 default data was used - but the EPA has emphasized the need to include relevant vehicle type inputs into the model.</p> <p>The air modeling report and supporting reports fail to disclose the % of diesel truck traffic, or the component of that traffic that includes trucks dating from 2006 or earlier which comprise a significant component of air pollution load. The air dispersion modeling report states that the vehicle type distributions were based on MOVES3.0 default database inputs even though there are no such inputs. It also says that the 24 hour traffic distribution was assumed to be equal to the AADT distribution. However the consultant appeared to use different AADT distributions for different scenarios without explanation and the distributions differed significantly as between build and no build scenarios. Mitigation in the form of frequent diesel heavy truck vehicle emission inspections should be included as a mitigation measure to ensure that newer vehicle emissions systems are not being tampered with. The air dispersion modeling report indicates that ethanol based fuels were excluded even though this goes against EPA recommendations for using the model. The report lacks transparency about assumptions made about future vehicle fleet characteristics for both passenger vehicles and heavy trucks.</p> <p>The comparison of build with no-build is not valid because the values in Appendix E of the traffic modeling report show that there was an</p>	<p>River watershed was identified as a Cultural Heritage Landscape requiring further research and evaluation to determine if it possesses cultural heritage value or interest. This further assessment will be completed in a Cultural Heritage Evaluation Report (CHER), and if the CHER determines that the Holland River Watershed meets the criteria in Ontario Regulation 9/06 or Ontario Regulation 10/06 of the Ontario Heritage Act, and may be adversely impacted by the Updated Technically Preferred Route, a Heritage Impact Assessment will be prepared to fully assess impacts on the resource's identified heritage attributes and propose alternatives and mitigation to conserve the property's Cultural Heritage Value or Interest. These commitments are included in Section 5.3.2 of the Updated Draft EIAR.</p> <p>Consultation is an integral component of the Preliminary Design stage, the project-specific assessment of environmental impacts process, and for future project phases, and is critical to a project's success. The ministry is actively consulting and engaging with Indigenous communities throughout the Bradford Bypass Project.</p> <p>The Project Team is engaging with and considers input provided by the following Indigenous communities:</p> <ul style="list-style-type: none"> - Alderville First Nation - Beausoleil First Nation - Chippewas of Georgina Island First Nation - Chippewas of Rama First Nation - Curve Lake First Nation - Hiawatha First Nation - Mississaugas of Scugog Island First Nation - Kawartha Nishnawbe First Nation - Georgian Bay Métis Council, and - Huron-Wendat Nation <p>Comments from Indigenous communities are accepted at any time in the study process.</p> <p>5. Table 2-2 lays out the 12 species present or very likely to be present. For instance, Blandings Turtles are likely affected as they are likely in the area. The only commitment we see is to do a detailed study later on. This is a good example of study following decision or destruction, and is in violation of the standard</p>

					<p>erroneous assumption that there would be significantly less truck traffic in the build scenario compared to the no-build scenario. There is no valid scientifically-based justification for this. Further, if there is an increase in truck traffic along 404 - as the model predicts - then sensitive receptors along highway 404 need to be included in a health impact study. Instead, impacts on traffic along the 400/404 corridors were excluded and the "air quality study area" was restricted to the bypass corridor itself without any explanation or justification.</p> <p>It is egregious that MTO did not conduct locally relevant air quality monitoring for background in Bradford, River Drive Park, Queensville and along the 404/400 corridors for traffic related air pollutants. Such baseline monitoring is generally inexpensive and could have been easily obtained. Using existing monitors in Innisfil, Newmarket and other distant and irrelevant locations is not justifiable. For the air dispersion modeling, MTO appears to be relying on these distant locations (eg. Egbert) for preparation of the wind rose as well, even though meteorological conditions in the study area may be markedly different. MTO also did not identify numerous recreational and daycare facilities adjacent to the Bradford Bypass corridor which were identified by Simcoe County Greenbelt Coalition.</p>	<p>EA practices. There are no commitments to the protection of species at risk in this document.</p> <p>Targeted surveys for all species at risk with potential to occur in the Study Area will be required during future phases of work. These future studies will inform the need for any permits, authorizations, mitigation or compensation under the Endangered Species Act.</p> <p>The Updated Draft EIA requires consideration and review of all recommendations throughout the corridor during future phases of work. This approach is necessary and standard practice for planning projects in that design is an iterative approach and this project is only completing design to a preliminary level. During future phases of work, additional design will be completed and may include refinements to the design as details are developed with greater accuracy. Limiting the future design phases by making certain elements of the project non-discretionary at the preliminary design stage limits the potential for future work to explore opportunities for further reducing impacts and / or increasing mitigation and offsetting measures.</p> <p>For Blanding's Turtle specifically, candidate habitat associated with the Holland River and Holland River East Branch open water and wetland communities has been identified within the Study Area. Blanding's Turtle may be impacted while moving in between habitats if these species enter the construction work area.</p> <p>As part of this phase of the project, preliminary mitigation and avoidance measures for the potential impacts to turtles are included in the Draft EIA and include:</p> <ul style="list-style-type: none"> • If stockpiles of gravel and sandy substrates or the removal of these substrates in the vicinity of turtle habitat are required during the active turtle season (April 1 to October 15), turtle exclusion fencing should be installed in accordance with the Reptile and Amphibian Exclusion Fencing Best Management Practices (Ministry of the Environment, Conservation and Parks, 2020) around stockpiles or area of disturbance prior to April 1. Fencing should be installed immediately after stockpiles are created if after April 1. • It is recommended that culverts be designed to provide openness ratios that would allow for the

					<p>Figure 6-1: Interpolated Contours for NO₂ in the Future Build Scenario</p>  <p>Figure 6-2: Interpolated Contours for NO₂ in the Future No-Build Scenario</p>  <p>The Air Quality Impact Assessment concluded that: Impacts from the Future Build Conditions with the new Bradford Bypass on a cumulative basis within the Air Quality Study Area increases in comparison to a No-Build scenario for several contaminants and their respective averaging periods. This is predominately due to increased traffic along the Bradford Bypass, where in a No-Build scenario this traffic is dispersed along Holland Street and Bridget Street and within communities to the south of the Air Quality Study Area (for example, demonstrated in the traffic reporting related to this project). This included significant increases in NO₂, SO₂, PM_{2.5}, Acetaldehyde, Benzo(a)pyrene, and formaldehyde and some increases in CO. Maximum concentrations which are relevant for acute events also show significant increases, for example a 49% increase in SO₂ and more than 50% increases in fine and large particulates, acetaldehyde, formaldehyde etc. for critical receptor number 19 (other receptors' models were not displayed in a comparable manner). The results indicated that for NO₂, 1 hour averages 80% of the hours in the future build scenario would have a cumulative concentration above the</p>	<p>March 2023 and was advised that the Ministry of Environment, Conservation and Parks records have no documented observations of the American Eel or Northern Sunfish in the Study Area. They also noted that the Northern Sunfish is a species of special concern and does not have a permitting status with the Ministry of the Environment, Conservation and Parks, and therefore would not be reported. These discussions with Williams Treaties First Nations and MECP have been documented in the Fish and Fish Habitat Report and Section 2.1.2 of the Updated Draft EIAR.</p> <p>No records of aquatic Species at Risk that are afforded protection under the Species at Risk Act or Endangered Species Act are known to occur in the watercourses where culverts are anticipated to be installed. AECOM ecologists conducted a detailed fish and fish habitat assessment of the water features in the vicinity of the Study Area between September 14-18, 2020, with spring field investigations occurring over multiple days in June 2021. Field investigations were also completed in the spring of 2022 due to changes to the Study Area boundary that required further review for potential fish habitat. Based on these investigations, no Species at Risk were discovered in the Study Area. Regardless, the presence or absence of all aquatic Species at Risk will be re-confirmed in subsequent design phases through additional field investigations.</p> <p>6. Please confirm our understanding that has been no discussion of, and that there are no studies looking at impacts to Lake Simcoe.</p> <p>As the project falls within the jurisdiction of the Lake Simcoe Region Conservation Authority (LSRCA), pertaining to Ontario Regulation 179/06, the ministry has assessed impacts with respect to the <i>Lake Simcoe Protection Act</i> and the Lake Simcoe Protection Plan through consideration of water quality and quantity, stormwater management, groundwater management, landscaping and ecological restoration measures; as well as fluvial geomorphological designs for watercourses, erosion and sediment control and spills prevention and protection measures.</p>

					<p>CAAQS limit of 79 ppm and a 100% of hours would exceed the AAQC for benzo(a)pyrene.</p> <p>In relation to GHGs, the MTO failed to incorporate induced demand in the future build scenario to calculate additional vehicle kilometers traveled that would be induced by the highway, and failed to give a transparent total vehicle assumption, vehicle type assumption including the age of the emissions controls on heavy diesel trucks, or a vehicle emissions factor. In any event the air quality impact assessment predicts that the proposed highway would be a significant contributor to regional GHG emissions even without incorporating the effect of induced demand. No mitigation measures are proposed to address the increase in greenhouse gas emissions from the project which will contribute to catastrophic climate disaster for all of humanity and the planet.</p> <p>12. Many less expensive alternatives to this highway have not been considered. The Minister approved Terms of Reference for the Bradford Bypass Environmental Assessment Study overrode the requirements of the Environmental Assessment act to consider road alternatives that would not be a controlled access highway. As a result, the Hwy 9 / Green Lane corridor was the only existing roadway that was considered as a reasonable alternative. That roadway was rejected as it was not considered feasible to convert it to a controlled access facility. Consideration of these types of alternatives are, however, a requirement for all Class EA Studies. A major condition of the 2002 Bradford Bypass EA Approval was a requirement to conduct a Class EA Study at the time MTO wished to proceed with this project. This study would ensure the currency of the proposed project in light of current travel demand, previously</p>	<p>a. The Groundwater Protection and Well Monitoring plan, which this Draft IA refers to, discusses the need to dewater the site for the building of piles for elevated bridge sections of the highway. The Draft IA report says, "Construction dewatering activities have been identified as the primary risk to groundwater fed water wells in the Study Area." There is no credible groundwater protection water. There are many suggestions for how to keep it clean but there are few to no commitments.</p> <p>Commitments, preliminary mitigation measures and monitoring activities related to groundwater are documented in Section 5.1.4 of the Draft EIAR, and will be carried forward to subsequent phases of the project.</p> <p>The risk of spills during construction of the project will be primarily limited to petroleum products from machinery (fuels and lubricants). The use of best management practices for handling of hydrocarbons according to the Ministry of Environment, Conservation and Parks and the Technical Standards and Safety Authority of the Ministry of Government Services will reduce the potential of environmental adverse effects associated with petroleum product handling and uses. Spillage of petroleum products must be immediately remediated according to these standards such that groundwater quality is not impacted.</p> <p>Mitigation plans will be generated during future phases of work for the project and for any excavation and structure construction within areas of medium to high significant groundwater recharge areas as shown near the Holland River and Holland River East Branch. Mitigation plans would be specific to each excavation and structure construction and include erosion and sediment control, dewatering treatment and discharge piping away or towards from Significant Groundwater Recharge Areas, or municipal sewer discharge requirements. Dewatering discharge shall be directed away from Well Head Protection areas if excavation and dewatering activities are occurring within them.</p>

					<p>unforeseen environmental factors, new legislation and a full review of all reasonable alternatives including combinations of regional and local roadways. The following are reasonable alternatives that would need to be considered both individually and in combination with one or more other reasonable alternatives if the Class EA Study that was underway at the time Regulation 697 /21 was issued had not been terminated. Each of these proposed alternative solutions would then be evaluated against the then approved Bradford Bypass 4 lane controlled access freeway. Because the Class EA Study was canceled by this regulation, the only comparison AECOM have used throughout the Draft Impact Assessment Report is "Do Nothing". Given that the actual travel problem we are now faced with is local, rather than long distance traffic, we are confident one or more of the following reasonable alternatives would be dramatically preferable to the now 8 lane, Bradford Bypass. Alternatives to the Bradford Bypass:</p> <ol style="list-style-type: none"> 1. Construct a 4 lane arterial road bridge over the West Branch of the Holland River at the currently planned location for the Bradford Bypass bridge – together with paved 4 lane roadways to both Bathurst St. and a connection to Bradford's 8th Line. 2. Build a 4 lane arterial road bridge over the Holland River from Ravenshoe Road to connect with Simcoe Line 13 or another appropriate east – west arterial road on the west bank of the Holland River. 3. Extend and widen Green Lane to 6 lanes and create a diagonal transition from Green Lane to Hwy 9 and highway bridge intersection with Highway 9 around Dufferin St. The Green Lane / Highway 9 option will better serve and reduce both local and long distance traffic from 	<p>For more information about the Groundwater Protection and Well Monitoring Plan please refer to Section 5.1.4 of the Updated Draft EIAR.</p> <ol style="list-style-type: none"> b. How exactly is the province going to monitor groundwater discharges to ensure they meet Ontario's water quality standards? c. What penalties are contractors going to face for violating the discharge requirements? d. If penalties are not enough to compel adherence, what next? e. How is the public to have confidence that contaminated water will not be discharged to the Holland Rivers and Lake Simcoe? f. Please confirm is monitoring will continue or not, as this statement is totally vague: "It is expected that each unassessed monitoring well will continue to be monitored and assessed during the subsequent detail design phase of the project." <p>The Groundwater Monitoring Program includes groundwater level monitoring and groundwater quality monitoring to establish the pre-construction baseline conditions for comparison of data collected during and post-construction.</p> <p>During the Preliminary Design study, Golder Associates Ltd. (Golder) installed monitoring wells during the ongoing geotechnical investigations. Monitoring is expected to be completed within these same monitoring wells during all future phases of work for the Project, including construction. Residential monitoring wells will also be part of this program if they fall within the Radius of Influence of the excavation dewatering and permission to enter is granted to gain access to monitor the well. Detail Design will inform the need for further groundwater investigations. Penalties for discharging any deleterious substance or material to the lands will vary based on the federal, provincial or municipal legislation that might be violated. Beyond legislated penalties, contractor behavior is monitored by the Ministry and poor behavior may result</p>

						<p>i. Does this meager bit of help extend to those who did not provide baseline information about their well water?</p> <p>j. If there any effort being made to reach more than 12% of respondents to MTO's well water survey?</p> <p>MTO will work with owners of water wells who experience issues to determine if the issue is the result of Bradford Bypass project activities.</p> <p>If the well issue is confirmed to be a result of the project's activities, the Ministry will provide a letter to the property owner explaining the outcome of the well investigation and detail the recommended mitigation measures (including lowering / replacement of pump inlet, well rehab, new well installed or local watermain connection if available) the Ministry will undertake to remediate the issue. A temporary drinking water supply will be provided and connected to the resident if the project activities are found to be responsible, at the expense of the Ministry, until remediation measures have resolved the issue.</p> <p>A water well survey was completed for the project to determine the pre-construction assessment of private well supplies in the vicinity of the Study Area noted above. Where no response was provided from Property Owners as part of the water well survey, an additional attempt shall be undertaken during Detail Design to contact these owners via mail, email, phone calls, site visit, etc. This information will be used to provide a baseline for water wells prior to the proposed construction to determine existing water quality and quantity of each property.</p> <p>7. How much is this project going to cost?</p> <p>As we bring this project to market, we want to ensure we can retain the best value for the project. As such, the ministry will not be releasing cost estimates prior to the award of contracts to protect the procurement processes.</p> <p>8. When will the Bradford Bypass be completed?</p> <p>The Preliminary Design phase is anticipated to be completed in 2023. Detail Design and Construction Phases will follow.</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIA Edits Required? (Yes/No? If yes specify edits)
						<p>9. It is unclear how many lanes are being constructed at which times. Please clarify.</p> <p>The Ontario government is committed to fully funding the construction of the Bradford Bypass and is following through on its promise to improve and invest in the province's transportation corridors to get people moving within the region, connect people to jobs, make life easier and support a strong economy.</p> <p>A four-lane configuration is planned to be constructed first with two general purpose lanes in each direction. To plan for the future, the Ministry is also considering the design of an ultimate eight-lane design for the Bradford Bypass. The ultimate, eight-lane configuration for the project will feature three general purpose lanes and one HOV lanes in each direction.</p> <p>10. There is no cumulative health impact assessment to understand how traffic related air pollution, known to increase risks of cancers, leukemia, heart and lung disease, will impact the communities surrounding the route. There is also no mention of the cumulative impacts on our climate from construction and higher rates of car travel on this highway.</p> <ol style="list-style-type: none"> How will you be informing people living along the route about the increased risk of traffic related air pollution and its effects on human health? Will you put air quality monitors in Bradford? How do you explain the fact that you are NOT monitoring air quality in Bradford, and using the closest site, Newmarket? The Final Environmental Conditions Report identified numerous planned residential developments right beside the highway, including a planned new school. Have the land owners / developers / school boards received any information that tells them how bad the air quality is going to be there? 	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIAR Edits Required? (Yes/No? If yes specify edits)
						<p>The human health scoping implications of the project such as air quality, noise, land use, traffic congestion and safety, economic, social cohesion, and neighborhood resources have been summarized in Section 2.2.7 and Section 5.2.7 of the Draft EIA. To better understand the human health implications due to the Project as a next step, it is recommended for MTO to continue to consider the human health factors identified in this report and provide recommendations to enhance potential positive impacts and mitigate potential negative health impacts. Specifically, conducting a Screening-Level Human Health Risk Assessment of potential air quality impacts is recommended in order to evaluate and characterize Project-related air quality impacts to health.</p> <p>The project has undertaken an Air Quality Impact Assessment to explore pollutant emissions and dispersion modelling in an effort to predict the contribution of the project to future ambient pollutant concentrations. This contribution, added to background concentration levels, allows prediction of the cumulative impact of the proposed project and all other contributors to air pollution. Concentration levels are compared to provincial and federal ambient air quality criteria and standards to assist in the evaluation of project-specific mitigation needs and options.</p> <p>Areas of concentrated emission impact are influenced by traffic volumes along a given segment of roadway. The implementation of the Bradford Bypass is expected to redistribute traffic from local roads and freeway corridors surrounding the proposed Bradford Bypass. Reductions in traffic volumes are observed on corridors including Highway 11/1 (Bridge Street), Bathurst Street, Holland Landing Road, Yonge Street, Queensville Sideroad, Doane Road, Mount Albert Road, Green Lane, and Simcoe County Road 88/Holland Street, among other roads, which benefits the community of Bradford, Town of Bradford West Gwillimbury, by alleviating congestion during peak hours.</p> <p>The Project Team is currently utilizing the National Air Pollution Surveillance air quality monitoring stations to assess air quality levels. Five years of existing data sets were analyzed from stations within the region, and the complete data set from the closest station or most</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIAR Edits Required? (Yes/No? If yes specify edits)
						<p>representative station for each contaminant of concern was selected to represent the background air quality for the Study Area. Due to the proximity of the Study Area to the Toronto Area, monitoring stations within the City of Toronto were given preference as the one of the most representative locations for the air quality contaminants of concern. As such, Roadside Wallberg – University of Toronto monitoring station, North Downsview monitoring station, Gage Institute monitoring station (all located approximately 38 – 53 km from the Study Area) were used. The nearest monitoring station is in Newmarket. Additional information regarding the assessment of potential air quality impacts have been summarized in Section 2.2.4 and Section 5.2.4 of the Draft EIAR.</p> <p>Land has been designated for the Bradford Bypass since the 2002 Approved EA was completed. As noted above, consultation is an integral component of the Preliminary Design stage and project-specific assessment of environmental impacts and is critical to a project's success. The ministry is actively consulting and engaging with private landowners, developers and school boards within the Study Area. Engagement and consultation has included having a project website and telephone line, having a project contact list for regular project updates, providing notices and correspondence via email, mail, and Ontario Government Notices in local newspapers, hosting public information centres and online events, and holding meetings with Indigenous communities, municipalities, environmental agencies, and stakeholders. More information on the project consultation activities are included in Section 7 of the Updated Draft EIAR.</p> <p>11. Traffic modeling to produce the air dispersion model is not robust or transparent. The air modeling report and supporting reports fail to disclose the % of diesel truck traffic, or the component of that traffic that includes trucks dating from 2006 or earlier which comprise a significant component of air pollution load. The comparison of build with no-build is not valid because the values in Appendix E of the traffic modeling report show that there was an erroneous assumption that there would be significantly less truck traffic in the build scenario compared to the no-build scenario.</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIA Edits Required? (Yes/No? If yes specify edits)
						<p>There is no valid scientifically-based justification for this. Further, if there is an increase in truck traffic along 404 - as the model predicts - then sensitive receptors along highway 404 need to be included in a health impact study. Instead, impacts on traffic along the 400/404 corridors were excluded and the "air quality study area" was restricted to the bypass corridor itself without any explanation or justification. It is egregious that MTO did not conduct locally relevant air quality monitoring for background in Bradford, River Drive Park, Queensville and along the 404/400 corridors for traffic related air pollutants. Such baseline monitoring is generally inexpensive and could have been easily obtained. The study did not include the cumulative effects of future planned industrial uses along the Bypass corridor and along the 400/404 corridor which may significantly impact people's health along the route. The evaluation did not use 2022 World Health Organization criteria for contaminants which are much lower and more up-to-date than the CAAQS or the AAQCs. We disagree that the AAQCs and CAAQS represent the "lowest concentrations at which an adverse effect may be experienced" as they are not based on up-to-date understandings of the health impacts of air contaminants including pre-term births and neurodevelopmental and other impacts. The report predicts significant exceedances for NO₂ and benzo(a)pyrene even with the apparently non-conservative assumptions for diesel truck traffic used in the full build out scenario compared to the no-build scenario. The adverse health impacts of NO₂ exceedances may be extremely severe and will impact on the Charter rights and human rights of residents in the study area and beyond without justification for the need for the project.</p> <p>Study Area, MOVES3 data, vehicles and assumptions: In order to model relevant vehicle types within the Air Quality Impact Assessment Study Area, MOVES3 data was input to the model and refinements were made to exclude fuel types such as ethanol given these fuels are</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIAR Edits Required? (Yes/No? If yes specify edits)
						<p>not readily available for use in Ontario. Fuel inputs utilized in MOVES3.0 modelling at the time of the assessment included: Fuel Type IDs 1, 2, 3 and 9. ID 5 (ethanol) was not included as flex fuel cars and fuelling stations are not readily available in Ontario. The specific source type fractions utilized for various vehicle types applied within the project study area and the related fraction of expected vehicle usage for both passenger-class vehicles and heavy-class vehicles, including the distribution of vehicle types in the heavy truck vehicle category, were combined to create representative vehicle emission for vehicle class that can reasonable be expected to be in use in 2041.</p> <p>Highway 400/404 corridors were included in the Air Quality Impact Assessment. The full air quality study area is shown in Figure 2-9 of the Updated Draft EIAR and demonstrates that the air quality study area included emission sources within the boundary of assessment, including but not limited to Highway 400 (500 m south of Rural Rd. 88 to 500 m north of Concession Rd. 11), Highway 404 (500 m south of Queensville Sideroad E to 500 m north of Boag Road), the entirety of the proposed Bradford Bypass, Bridge Street, Holland Street W, 10th Sideroad, Young Street/Barrie Street, and Queensville Sideroad.</p> <p>Traffic distributions and truck traffic: The same Average Annual Daily Traffic (AADT) were used for all scenarios. AADT values for each air quality emission source vary between the three scenarios evaluated based on projected existing traffic within the study area, and future no-build and build traffic projections however the same 24-hour traffic distribution percentages were applied. Three representative 24-hour distribution percentages were applied to the air quality emission sources. These were applied to a given source of emission depending on the type of road in question, e.g. a "Leslie St." 24-hour distribution was applied to air quality emission sources which were categorized as community arterial roads; a "HWY 400" 24-hour distribution was applied to air quality emission sources categorized as highways; and, a "2nd Concession Rd" 24-hour distribution was applied to rural roads. These same 24-hr distributions were applied to the assigned source for all three scenarios of evaluation (existing conditions, future no-build, and future build).</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIAR Edits Required? (Yes/No? If yes specify edits)
						<p>Fuel usage distribution [i.e. diesel, gasoline, CNG, etc.] and vehicle age distribution within each vehicle type category were modelled based on MOVES3.0 default fuel use and age distribution database inputs assigned to the year of evaluation. Heavy truck traffic was included in the modelling with a percentage assigned to each air quality emission source anticipated from this vehicle type.</p> <p>Health Impacts, Critical Receptors and Background/Study Area Monitoring Data: The human health scoping implications of the project such as air quality, noise, land use, traffic congestion and safety, economic, social cohesion, and neighborhood resources have been summarized in Section 2.2.7 and Section 5.2.7 of the Updated Draft EIAR.</p> <p>The Project Team is aware some critical receptors have been identified as 'missing' by a number of stakeholders. Having reviewed the data, these 'missing' receptors were included as residences in the Air Quality Impact Assessment. Potential impacts at the 'missing' receptors within the Air Quality Impact Assessment Study Area are reflected in the assessment by other, nearby critical receptors and receptors identified on Figure 2-9 and 2-10 of the Updated Draft EIAR.</p> <p>The approach to identifying representative air quality levels is conservative and often ensures the worst-case conditions are reflected so as to not under-represent conditions within a study area; i.e. background air quality contaminant levels included within the assessment may be representative or higher than expected for the area in question.</p> <p>While it is recognized that localized in-situ monitoring may provide more accurate data, use of existing monitoring stations within the NAPS network for statistically relevant background monitoring data is a generally accepted and conservative methodology for provincial environmental impact air quality assessments. Stations selected for the background air quality assessment were chosen based on total data availability over a most recent five-year period as a minimum of 12 months of daily and hourly data is required to ensure statistical relevance. Stations were also selected based on their proximity to the air quality</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIAR Edits Required? (Yes/No? If yes specify edits)
						<p>study area with the meteorological station selected as representative of the air quality study area within 15 km north-west of the air quality study area. Stations must also be a relative representation of similar types of existing sources of air quality emission in the study area and it is notable that the meteorological station selected as representative of air quality in the study area was provided by the MECP in site-specific MET data requested for the project modelling.</p> <p>12. Many less expensive alternatives to this highway have not been considered. The Minister approved Terms of Reference for the Bradford Bypass Environmental Assessment Study overrode the requirements of the Environmental Assessment act to consider road alternatives that would not be a controlled access highway. As a result, the Hwy 9 / Green Lane corridor was the only existing roadway that was considered as a reasonable alternative. That roadway was rejected as it was not considered feasible to convert it to a controlled access facility. Consideration of these types of alternatives are, however, a requirement for all Class EA Studies. A major condition of the 2002 Bradford Bypass EA Approval, was a requirement to conduct a Class EA Study at the time MTO wished to proceed with this project. This study would ensure the currency of the proposed project in light of current travel demand, previously unforeseen environmental factors, new legislation and a full review of all reasonable alternatives including combinations of regional and local roadways. The following are reasonable alternatives that would need to be considered both individually and in combination with one or more other reasonable alternatives if the Class EA Study that was underway at the time Regulation 697 /21 was issued. Each of these proposed alternative solutions would then be evaluated against the then approved Bradford Bypass 4 lane controlled access freeway. Because the Class EA Study was canceled by this regulation, the</p>

						<p>only comparison AECOM have used throughout the Draft Impact Assessment Report is "Do Nothing". Given that the actual travel problem we are now faced with is local, rather than long distance traffic, we are confident one or more of the following reasonable alternatives would be dramatically preferable to the now 8 lane, Bradford Bypass.</p> <p>Alternatives to the Bradford Bypass:</p> <ul style="list-style-type: none"> a Construct a 4 lane arterial road bridge over the West Branch of the Holland River at the currently planned location for the Bradford Bypass bridge – together with paved 4 lane roadways to both Bathurst St. and a connection to Bradford's 8th Line. b Build a 4 lane arterial road bridge over the Holland River from Ravenshoe Road to connect with Simcoe Line 13 or another appropriate east – west arterial road on the west bank of the Holland River. c Extend and widen Green Lane to 6 lanes and create a diagonal transition from Green Lane to Hwy 9 and highway bridge intersection with Highway 9 around Dufferin St. The Green Lane / Highway 9 option will better serve and reduce both local and long distance traffic from Newmarket south to at least Aurora Sideroad. <p>Any one or a combination of these alternatives will address a substantial amount of local travel problems while being significantly less costly and environmentally invasive. Once again, what logic is being used to ignore these options given all of the rationale in favour of these other alternatives?</p> <p>The planning process that resulted in the 2002 approved Environmental Assessment (EA) for the Bradford Bypass evaluated alternatives from a broad range of potential solutions to address several transportation problems and to address significant opportunities identified in York Region and Simcoe County. The need for this freeway was confirmed during the Route Planning and EA Study as</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIAR Edits Required? (Yes/No? If yes specify edits)
						<p>the only reasonable solution that would make a significant contribution towards addressing the problem as the population in York Region and Simcoe County grows. The 2002 EA approved alignment is technically preferred for a freeway in terms of highway network expansion, ease of construction, relationship to provincial and municipal land use planning and the preferred route is already included in Official and Transportation Master Plans, as well as the Places to Grow Act), as well as having fewer negative impacts to residential and natural areas when compared to other route options considered.</p> <p>The Bradford Bypass Project has been modelled based on current local, regional, and provincial projections and data. This addresses the problem of "lack of long-term planning" per the Bradford Bypass 2002 approved EA..</p> <p>The 2002 approved EA reviewed a broad area of analysis which included several corridors, including areas south of the current corridor, and Highway 89/Ravenshoe Road.</p> <p>The Bradford Corridor was selected as the preferred corridor over Highway 89/Ravenshoe Road as it was beyond the maximum north limit of 10th Line / Boag Road which was assessed in a previous EA study and was determined that a Management Area or river crossing north of this would entail unacceptable environmental impact, which lead to the withdrawal of the Highway 89 EA studies in 1986-87.</p> <p>The Bradford Corridor was selected as the preferred corridor over the southern alternatives as there was no south alternative that met the primary purpose of the study to reduce out-of-way travel. The south limit was established as Highway 88 and Queensville Sideroad.</p> <p>The original purpose of the Bradford Bypass per the 2002 Approved EA was to address the "east-west" long-distance travel demand crossover between Highway 400 and Highway 404 which is a provincial responsibility and distinct from the locally generated trips which use a municipal road to access the provincial network. As noted in the report, the overall network benefits from vehicle-hours of travel time savings and vehicle-kilometres of travel distance savings are observed during the 2041 AM peak hour and during the 2041 PM peak hour in the</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIAR Edits Required? (Yes/No? If yes specify edits)
						<p>updated interchange locations. Local roads forecasted to exceed capacity by 2031 and 2041 under the No-Build scenarios see significant relief from traffic as a result of the diversion to the Bradford Bypass in the Build scenarios.</p> <p>While the Town of Bradford West Gwillimbury owns a closed road allowance east of Artesian Industrial Parkway for 8th Line to Holland River, Hochreiter Road itself is a private road. A connection at this location would not address the primary purpose of the Bradford Bypass to connect Highway 400 and Highway 404. The local benefit of this route is likely outweighed by the reduced congestion of Bridge Street created by the Bradford Bypass. A bridge across 8th Line would still require out-of-way travel, which this study is looking to reduce, to connect to provincial transportation facilities. Improvements would likely be required on Bathurst Street and Queensville Sideroad. Significant property impact (similar to the Bradford Bypass) would be required for a new corridor connection from 8th Line straight to Highway 404. For more information on the 2002 Approved EA, please see the enclosed linked: https://www.bradfordbypass.ca/wp-content/uploads/2020/09/BBP-RoutePlanningEA-1997.pdf</p> <p>For more information on the assessment of alternative routes, please refer to the response to question #3.</p> <p>The Project Team will continue to carefully consider all impacts to wetland areas and will continue to work with Indigenous communities, environmental agencies, municipalities, and other concerned stakeholders to identify principles and recommendations for mitigating the impacts of placing new or expanded provincial highways within wetland areas. The Bradford Bypass Project will continue to look at opportunities to minimize impacts to these wetlands through engineering refinements.</p> <p>If you have any other questions, please feel free to reach out to the Project Team at your earliest convenience. You can reach the Project Team via email at projectteam@bradfordbypass.ca, toll free at 1-877-247-6036, or by visiting the Project Website at www.bradfordbypass.ca.</p> <p>Sincerely,</p>

CT-DraftEIAR-82	To: Project Team From: [REDACTED]	Email: kevin.haley@york.ca	Health Impacts	June 30, 2023	<p>Hi The Bradford Bypass Project Team,</p> <p>Please find attached our York Region Public Health comments on the Draft Environmental Impact Assessment Report. I also uploaded them to your webpage but unfortunately the hyperlinks did not get copy and pasted so please see attachment which includes the hyperlinks.</p> <p>Thanks [REDACTED]</p> <hr/> <p>Although bicycles and pedestrians would not be allowed on the roadway itself, could the right of way include an active transportation (AT) corridor? This could provide space for recreation and AT (something like the Lake-to-Lake cycling route and walking trail). YRPH is recommending including safe space and possibly infrastructure for it now rather than trying to add it on later. Cycling between centres along the route would become more feasible since e-bikes can support cycling over longer distances.</p> <p>Re: the provision of HOV lanes. YRPH would like to know if the plan includes a requirement for a bus rapid transit or other rapid transit corridor (potentially with electric power)? This should be separated from other motor vehicle traffic so that the rapid transit cannot be impeded by it. This would go beyond requiring a HOV lane.</p> <p>YRPH is requesting to be informed about impacts to private drinking water as the project progresses through the planning phases.</p> <p>YRPH supports the implementation of appropriate noise mitigation measures as per the Ministry's policies and criteria, as well as an ongoing evaluation of the need for updated noise assessments should project design or</p>	<p>Hi [REDACTED]</p> <p>Thank you for your interest in the Bradford Bypass Preliminary Design Study and project-specific assessment of environmental impacts, undertaken in accordance with Ontario Regulation 697/21.</p> <p>1. Although bicycles and pedestrians would not be allowed on the roadway itself, could the right of way include an active transportation corridor? YRPH is recommending including safe spaces and possibly infrastructure for it now rather than trying to add it on later.</p> <p>As a controlled access freeway, the Bradford Bypass will not permit use by bicycles or pedestrians. Where the design interacts with regional and municipal roads, the Ministry has and continues to consult with local municipalities to consider active transportation, including sidewalks, multi-use trail, multi-use paths that are proposed on local roads.</p> <p>2. YRPH would like to know if the plan includes a requirement for a bus rapid transit or other rapid transit corridor?</p> <p>The current plan does not include bus rapid transit or a rapid transit corridor. The current design does not preclude future bus service.</p> <p>3. YRPH is requesting to be informed about impacts to private drinking water as the project progresses through the planning phases.</p> <p>Section 5.1.4 of the Draft EIAR documents the impacts, mitigation measures and monitoring requirements regarding groundwater and water wells that will be carried forward to subsequent phases of the project. As the York Region Public Health Unit is a designated consultation group for the groundwater studies, you will continue to be informed of project updates.</p> <p>4. YRPH is interested in reviewing the confirmed noise impacts and mitigation measures mentioned</p>	No

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIAR Edits Required? (Yes/No? If yes specify edits)
					<p>traffic data change during subsequent design phases. YRPH is interested in reviewing the confirmed noise impacts and mitigation measures mentioned in the report during the detailed design and construction phase of the project.</p> <p>The <i>Air Quality Assessment</i> (as outlined in the report) concluded that vehicle emissions within the study area were the primary source of air quality concerns and identified as a potential health impact. The report explained that potential mitigation actions to counteract the project emission impacts are limited due to the project's projected increase in vehicular travel along Hwy 400, Hwy 404, and connecting roads to Bradford Bypass. However, the report explains the increased percentage of electric vehicles and fuel-efficient vehicles, as well as transit authority-led initiatives and HOV lanes, can provide significant Criteria Air Contaminants (CAC) and GHG reductions in the short to medium term.</p> <p>There is strong evidence on the health impacts of traffic related air pollutants (TRAPs) for people residing near highways and roadways, including sensitive or critical receptors which have been identified in the Study Area. Further information on TRAPs can be found in two recent Health Canada reports <u>Exposure to Traffic Related Air Pollution in Canada: An Assessment of Population Proximity to Roadways and Health Impacts of Traffic-Related Air Pollution in Canada.</u></p> <p>Many factors influence how pollutants move and concentrations change, and therefore the potential for exposure. YRPH suggests that urban planning along the corridor avoid (where possible) planning and developing residential communities and other sensitive and critical receptors (e.g., Long Term Care Homes) in close proximity to the roadway. A review of the sensitive uses within the Study Area and incorporation of best management practices to</p>	<p>in the report during the detailed design and construction phase of the project.</p> <p>Section 5.2.3 of the Draft EIAR documents the impacts, mitigation measures and monitoring requirements regarding noise that will be carried forward in subsequent phases of the project. As you are currently on the Project Contact List, you will continue to be informed of project updates including work completed during future phases of work for the project.</p> <p>5. YRPH is requesting to receive a copy of the full Air Quality Impact Assessment Report if it has been provided under a separate cover. YRPH is also interested in reviewing the air quality and mitigation measures being considered/ implemented during the subsequent detailed design phases of the project.</p> <p>Section 5.2.4 of the Draft EIAR documents the impacts, mitigation measures and monitoring requirements regarding air quality that will be carried forward in subsequent phases of the project. The Air Quality Impact Assessment Report can be downloaded at the following links:</p> <p>[LINKS TO AQ REPORT]</p> <p>6. YRPH recommends that the Air Quality Management Plan includes a Best Management Practices Plan for Fugitive Dust during the construction Phase of the Project.</p> <p>Section 5.2.4.2 of the Draft EIAR documents the proposed mitigation measures and monitoring requirements regarding fugitive dust during construction of the project, and includes the following:</p> <ul style="list-style-type: none"> - Seeding, paving, covering, wetting, or otherwise treating disturbed soil surfaces - Minimizing storage and unnecessary transfers of spoils and debris on-site - Using wind screens or fences 	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIAR Edits Required? (Yes/No? If yes specify edits)
					<p>address TRAPs is recommended as the project progresses. YRPH supports the inclusion of receptor-based mitigation measures that can be further considered to help reduce exposure to TRAPs for existing and future development. These include mitigation measures outlined in the report such as vegetation (e.g., trees, shrubbery, etc.) or other types of screening/barriers that may be considered to help reduce cumulative particulate impacts as well as noise during the operational phase. Below are some resources that might be helpful related to TRAPs mitigation:</p> <ul style="list-style-type: none"> • <u>US EPA's Recommendations for Constructing Roadside Vegetation Barriers to Improve Near-Road Air Quality</u> summarizes the research findings on best practices for building roadside vegetative barriers to improve air quality. • New research findings from the <u>California Air Resources Board (CARB) on effective measures to reduce exposures to TRAPs</u>. • <u>US EPA's Best Practices for Reducing Near Road Pollution Exposure at Schools</u> <p>Page 539 of the report mentions the Air Quality Impact Assessment Report AECOM, 2023. Is this report provided under a separate cover or are all the air quality findings included in this report? YRPH is requesting to receive a copy of the full Air Quality Impact Assessment Report if it has been provided under a separate cover. YRPH is also interested in reviewing the air quality and mitigation measures being considered/implemented during the subsequent detailed design phases of the project.</p> <p>Fugitive Dust: YRPH supports the management of fugitive dust from construction activities through the implementation of an Air Quality Management Plan, where mitigation measures are specified for the planned</p>	<ul style="list-style-type: none"> - Covering all truckloads of dust-producing material - Removing all loose or unsecured debris or materials from empty trucks prior to leaving the site - Reducing traffic speeds on any unpaved surfaces - Vacuum sweeping or water truck spraying of all paved surfaces and roadways on which equipment and truck traffic enter and leave the construction areas - Using wheel washes and truck washes at site egresses, and - Modifying work schedules when weather conditions could lead to adverse impacts (e.g., very dry soil and high winds). <p>7. YRPH is requesting to receive a copy of the Qualitative Climate Change Report which will be provided under a separate cover as well as a copy of the Climate Change Resilience Assessment Report</p> <p>The Qualitative Climate Change Assessment Report, which documents the climate change resilience assessment undertaken as part of the project, can be downloaded at the following links:</p> <p>[LINK TO CC REPORT]</p> <p>Please note that the climate change resilience assessment was undertaken as part of the Qualitative Climate Change Report and is documented within it.</p> <p>For more information on the Qualitative Climate Change Assessment Report, please see Section 5.2.6 of the Updated Draft EIAR.</p> <p>8. YRPH recommends that the highway support and prioritize public transits which is one of the best ways to reduce GHG production.</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIAR Edits Required? (Yes/No? If yes specify edits)
					<p>construction activities and implemented on an as-needed basis. This is to ensure that sensitive or critical receptors are protected from fugitive dust emissions from construction activities. YRPH recommends that the Air Quality Management Plan includes a Best Management Practices Plan (BMPP) for Fugitive Dust during the construction Phase of the Project. YRPH supports the recommendation that mitigation measures detailed in "Best Practices for the Reduction of Air Emissions from Construction and Demolition Activities (March 2005)" prepared by Cheminfo for Environment Canada be implemented, where practical. YRPH is also requesting to receive a copy of the Air Quality Management Plan. This will help to provide context in the event YRPH receives dust complaints from the public during the construction phase.</p> <p>YRPH supports the climate change assessment being undertaken as part of the project under the Ministry of the Environment, Conservation and Parks' Climate Change guide to evaluate and assess the project's expected production of greenhouse gas emissions and impacts on carbon sinks (climate change mitigation), and the resilience or vulnerability of the undertaking to changing climatic conditions (climate change adaptation). YRPH supports climate change mitigation and adaption measures as they are important for human health YRPH is requesting to receive a copy of the Qualitative Climate Change Report which will be provided under a separate cover as well as a copy of the Climate Change Resilience Assessment report.</p> <p>Also, YRPH recommends that the highway support and prioritize public transit which is one of the best ways to reduce GHG production. Having more space allocated to public transit and prioritizing electric vehicles and carpool lanes over private vehicles can support climate change mitigation and health.</p>	<p>The province is keeping its promise to build better public transit to create good jobs, ensure communities are better connected by road and transit, and contribute to a strong economic recovery for every region of the province.</p> <p>In addition to the investments like the Bradford Bypass, Ontario is investing \$70.5 billion over 10 years for public transit, including Ontario's new subway transit plan for the Greater Toronto Area (GTA) and transforming the GO Transit network into a modern, reliable and fully integrated rapid transit network.</p> <p>Through continued collaboration with Metrolinx and Infrastructure Ontario, the province continues to move forward with critical transit projects.</p> <p>9. YRPH is requesting a copy of the Human Health Scoping Report. If a Health Impact Assessment is not undertaken for this project, further clarity is requested on how the findings from the Human Health Scoping Report will be addressed.</p> <p>The Human Health Scoping Report can be downloaded at the following links:</p> <p>[LINKS TO HH SCOPING REPORT WHEN IT IS FINISHED]</p> <p>The human health scoping implications of the project such as air quality, noise, land use, traffic congestion and safety, economic, social cohesion, and neighborhood resources have been summarized in Section 2.2.7 and Section 5.2.7 of the Updated Draft EIAR. To better understand the human health implications due to the project as a next step, it is recommended for MTO to continue to consider the human health factors identified in the Human Health Scoping Report and provide recommendations to enhance potential positive impacts and mitigate potential negative health impacts. Specifically, conducting a Screening-Level Human Health Risk Assessment of potential air quality impacts is recommended in order to evaluate and characterize project-related air quality impacts to health.</p>

					<p>The report mentions <i>The Human Health Scoping Report</i> which was produced by Intrinsic and is intended to identify potential positive and negative health impacts of the project and can be used to help inform mitigation measures. The report explains that a risk assessment of the identified health impacts and recommendations was not completed as part of a scoping report. YRPH is requesting a copy of the Human Health Scoping Report. If a Health Impact Assessment (HIA) is not undertaken for this project, further clarity is requested on how the findings from the Human Health Scoping Report will be addressed.</p>	<p>If you have any other questions, please feel free to reach out to the Project Team at your earliest convenience. You can reach the Project Team via email at projectteam@bradfordbypass.ca, toll free at 1-877-247-6036, or by visiting the Project Website at www.bradfordbypass.ca.</p> <p>Sincerely,</p> <p>The Bradford Bypass Project Team Email: projectteam@bradfordbypass.ca Toll-Free: 1 (877) 247-6036</p>

CT-DraftEIAR-83	To: Project Team From: [REDACTED]	Email: Alexandra.reznik@gmail.com	Draft EIAR	June 30, 2023	<p>Dear Sirs,</p> <p>We have many concerns with this project, the process it is following, and this report is no different. Please answer our questions below.</p> <ol style="list-style-type: none"> Timing and consultation are inadequate. You have provided an un-editable PDF and 30 days for a 576 page report. This follows the pattern of terrible public information and consultation. Will you extend the consultation period? Explain how a provincial highway was transformed into a very expensive regional road variant with five interchanges and two 400 series highway connections, paid for by all Ontario taxpayers. This is inconsistent with the MTO's mandate to provide long distance travel solutions. We maintain that there are better and cheaper, faster to implement, regional road and transit solutions that should be pursued, even if the Bypass does get built. We would like to see the traffic studies in their entirety. An environmental assessment used to be grounded in a demonstration of need and justification. The MTO has provided neither as it pertains to this particular project and at this time. There is no evidence that local traffic solutions MTO purports to be solving (actually a local traffic issue and not MTO's mandate) are best served by this potentially \$4 billion highway. <ol style="list-style-type: none"> Please share the links and the methodology, transparently, so that people can understand what travel time savings MTO is referring to. We have absolutely no idea because your write up is incredibly vague about the start and end of the routes used for analysis. For instance this meaningless babble from pg. 334: <small>On average, between the various origin-destination pairs using the Bradford drivers in the peak direction during the peak period, would save up to 75% of minutes of travel time when connecting between Highway 400 and Highway compared to existing routes in the No Build scenario</small> 	<p>Hello [REDACTED]</p> <p>Thank you for your interest in the Bradford Bypass Preliminary Design Study and project-specific assessment of environmental impacts, undertaken in accordance with Ontario Regulation 697/21.</p> <ol style="list-style-type: none"> Time and consultation are inadequate. You have provided an un-editable PDF and 30 days for a 576 page report. This follows the pattern of terrible public information and consultation. Will you extend the consultation period? <p>The process of planning the Bradford Bypass has included -- and will continue to include -- consultation with the public and Indigenous communities to ensure the project moves forward in an environmentally responsible way that is responsive to the needs and concerns of communities. In accordance with Ontario Regulation 697/21, an initial Draft Environmental Impact Assessment Report (EIAR) -- which documents the results of the studies undertaken for various environmental disciplines, proposed mitigation measures and environmental commitments to protect the environment -- was published for public review starting on June 1 and continuing until June 30, 2023. In addition, the Ministry has been providing Indigenous communities and stakeholders various opportunities for meaningful consultation since the project was re-initiated in September 2020 including two Public Information Centres.</p> <p>Additional archaeological investigations, which are necessary to complete the impact assessment in accordance with regulations, have recently been finalized and incorporated into an Updated Draft Environmental Impact Assessment Report. This updated report has been posted for an additional 30-day consultation period. The Updated Draft EIAR posting includes the information from the initial draft to ensure stakeholders can review additional information in full context of the project. As the initial Draft EIAR and the Updated Draft were available for public review for a total of 60 days, an extension of the public review period is not being considered at this time.</p> <p>The Updated Draft Environmental Impact Assessment Report was available for review on the Project Website</p>	No

					<p>2. What year do your studies indicate that the Bypass will be congested at peak rush hour times?</p> <p>4. The Draft Environmental Impact Assessment report shows on pg. 212 the Bypass touching the southern portion of the Lower Landing (AKA BaGv-42), a significant historical and archaeological site at a significant meander on the East Holland River. MTO has moved the highway 150 m to the south of the technically preferred route, which would have completely run over the Lower Landing (pg 148). The Draft Environmental Conditions Report indicated that a Stage 3 archaeological assessment "was required" (pg 225); the Draft IA report says that the Stage 3 was completed, and that Stage 4 is required. The Project team's website says, "<i>Currently, additional archaeological investigations are being completed to finalize the impact assessments in accordance with Ontario Regulation 697/21 and are not included in this posting. This information will be available for additional public and Indigenous community review once completed.</i>" The Draft IA states, "the southern portion of the site ... will be impacted by construction. Stage 4 Archaeological Assessment excavation plans will be submitted to the Ministry of Citizenship and Multiculturalism and Indigenous communities prior to the Stage 4 excavation being conducted," (pg 395). So the archeological work is not finished. And yet the route has been chosen. Property owners near the history-rich Lower Landing that are receiving expropriation notifications. We are staunchly opposed to this violation of this site particularly absent the completed stage 4 archaeological assessment of the Lower Landing and the endorsement of the First Nations.</p>	<p>(https://www.bradfordbypass.ca/study-process/) until August 14, 2023.</p> <p>2. Explain how a provincial highway was transformed into a very expensive regional road variant with five interchanges and two 400 series highway connections, paid for by all Ontario taxpayers. This is inconsistent with the MTO's mandate to provide long distance travel solutions. We maintain that there are better and cheaper, faster to implement, regional road and transit solutions that should be pursued, even if the Bypass does get built.</p> <p>The project is being assessed with consideration of the Ministry's mandate to provide for the safe, efficient movement of people and goods between regions and urban areas. In addition, the Project Team has consulted with local and regional municipalities, and the traffic analysis for the proposed Bradford Bypass has considered the planned local transportation and transit improvements to be implemented by others.</p> <p>The original route planning study (2002 Approved Environmental Assessment – EA) concluded that additional relief from congestion in this Study Area could only be accommodated through the protection and implementation of a provincial right of way.</p> <p>As part of the 2002 Approved EA, the Bradford Bypass evaluated alternatives from a broad range of potential solutions to address several transportation problems and to address significant opportunities identified in York Region and Simcoe County. The need for this freeway was confirmed as the only reasonable solution that would make a significant contribution towards addressing the problem as the population in York Region and Simcoe County grows. The 2002 Approved EA approved alignment is technically preferred for a freeway in terms of highway network expansion, ease of construction, relationship to provincial and municipal land use planning and the preferred route is already included in Official and Transportation Master Plans, as well as the Places to Grow Act), as well as having fewer negative impacts to</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIAR Edits Required? (Yes/No? If yes specify edits)
					 <p><i>Bradford Bypass is still too close to the Lower Landing. The Lower Landing is in the area of WC-25 in the image above. This clip of a map shows Provincially significant wetlands (orange); unevaluated wetlands (blue); cold water fish habitat (black) and warm (pink); Original / full map available on pg 55 of Draft IA report.</i></p> <ol style="list-style-type: none"> As stewards of these lands and water for time immemorial, additional time should be given to allow First Nation community members to fully digest the lengthy report. Georgina Island First Nation asked that this site be avoided in 1998, 25 years ago, stating, "It is obvious that there are other routes, which can be used to connect these major highways, and we hope that another will be selected." Is Ontario still ignoring this request? Have First Nations been consulted about this part of the plan? Please provide written evidence of their approval of this route. It is imperative that the Ontario Government uncover all evidence of burials where the highways are to be built. How this is done must follow affected First Nations' protocols and wishes. These are some thoughts from a non-native resident of the area on the topic: <ol style="list-style-type: none"> These burial sites must be preserved and protected or possibly moved to another location. Identifying registered and unregistered burial sites should be relatively simple for the Ontario Government as the information is 	<p>residential and natural areas when compared to other route options considered.</p> <p>For more information on the Analysis and Evaluation of alternatives, refer to Section 2.1.6 of the 2002 Approved EA, which can be found in the enclosed link: https://www.bradfordbypass.ca/wp-content/uploads/2020/09/BBP-RoutePlanningEA-1997.pdf</p> <p>Further to the conclusion of the 2002 Approved EA, as part of this Preliminary Design study, a traffic analysis was completed and the result of the review has confirmed the need of the highway. This analysis included the review of existing traffic conditions and modelling of future forecast traffic conditions and it has been confirmed that updates to regional and municipal roads alone will not address the transportation needs within the Study Area.</p> <p>Additionally, a feasibility assessment was conducted evaluating nine interchange location scenarios to determine the best interchange configuration through the Bradford Bypass corridor. The evaluation was conducted in accordance with satisfying the study objective to improve connectivity of the study area between Highway 400 and Highway 404, facilitating the improvement of traffic operations and movement of goods. Consideration included interchange utilization, overall network delay, out of way travel, environmental considerations and constraints, and preliminary costs. It was determined that interchanges at 10th Sideroad, County Road 4, Bathurst Street, 2nd Concession Road, and Leslie Street would be included as part of the Study.</p> <p>3. We would like to see the traffic studies in their entirety. An environmental assessment used to be grounded in a demonstration of need and justification. The MTO has provided neither as it pertains to this particular project and at this time. There is no evidence that local traffic solutions MTO purports to be solving (actually a local traffic issue and not MTO's mandate) are best served by this potentially \$4 billion highway.</p> <p>The Bradford Bypass project has been assessed in accordance with Ontario Regulation 697/21. Consistent</p>

					<p>readily available from their own ministries, authorities as well as from local governments and churches/cemeteries. While 'registered burial sites' are easy to identify, 'unregistered sites' need to be confirmed and registered as required under Ontario's Funeral, Burial and Cremation Services Act, 2002 while 'Still to be found sites' require sleuthing, historical research and boots on the ground investigation. One of the most extreme requirements that could be requested is for the Ontario Government to perform thorough Ground Penetrating Radar (GPR) surveying of every square foot of the Bradford Bypass. Anomalies called 'targets' would receive special attention via Archaeological digs. Human remains discovered would either be left in place or moved. All work and costs are to be borne by the Ontario government. This solution for 'Still to be found' burial sites is as necessary as the work done and currently being done for the former Residential Schools in Canada.</p> <p>5. Species at Risk</p> <p>1. Table 2-2 lays out the 12 species at risk present or very likely to be present. For instance, Blandings Turtles are likely affected as they are likely in the area. The only commitment we see is to do detailed study later on. This is a good example of study following decision or destruction, and is in violation of standard EA practices. There are no commitments to the protection of species at risk in this document.</p> <p>2. There is a requirement for the Minister of the Department of Fisheries and Oceans to consider, when making certain decisions related to the fish and</p>	<p>with the Regulation, the Project Team completed an update to the description of environmental conditions previously documented in the 2002 Approved Environmental Assessment (EA) for the project. This update included a review and assessment of the existing traffic conditions which was documented in the Environmental Conditions Report (ECR). The ECR was finalized in October 2022 following a public review period, and is available on the Project website. Significant population growth is projected for both Simcoe County and the Regional Municipality of York. Even with all currently planned transportation and transit investments, road congestion will continue to increase across the Greater Golden Horseshoe (GGH) including within the Bradford Bypass Study Area.</p> <p>The purpose of the Bradford Bypass is to relieve congestion on existing local roads between Highway 400 and Highway 404 and provide a northern freeway connection between Highways 400 and 404. Modeling results demonstrated that under the No Build (no Bradford Bypass) scenario, local roads were forecasted to exceed capacity by 2031 but saw significant relief under the Build (with Bradford Bypass) scenario. Alternative alignments for the Bradford Bypass were then compared within the model, including the 2002 Approved EA alignment and interchange locations and an updated preferred interchange location alternative developed by the Project Team.</p> <p>On average, between the various origin-destination pairs using the Bradford Bypass, drivers in the peak direction during the peak period, would save up to 73% or 33 minutes of travel time when connecting between Highway 400 and Highway 404 compared to existing routes in the No Build scenario.</p> <p>The development of the analysis and key results from the Traffic Study have been summarized in the Draft Environmental Impact Assessment Report and the Updated Draft Environmental Impact Assessment Report (EIAR), which were available for public review and comment from June 1, 2023 to June 30, 2023 and July 14, 2023 to August 14, 2023, respectively. The information in the draft EIAR includes the origin and destination locations that were reviewed to determine the average travel time</p>

					<p>fish habitat protection (and pollution prevention) provisions of the Act, the Indigenous knowledge of the Indigenous peoples of Canada that has been provided to the Minister (34.1(1) (g) of the Fisheries Act); and,</p> <p>3. Requirement to protect the confidentiality of Indigenous knowledge that is provided to the Minister in confidence, except under limited circumstances (subsection 61.2 (1) of the Fisheries Act)."</p> <p>4. The Draft IA report identifies that the Williams Treaties FN reported American Eel https://www.dfo-mpo.gc.ca/species-especies/publications/sara-lep/eel-anquille/index-eng.html and Northern Sunfish in the Holland River. This must be further investigated with new fieldwork. The American Eel is in decline and gets Federal protection. Ontario's Species at Risk legislation doesn't work anymore so it's all up to the Federal enforcement.</p> <p>1. What is Ontario going to do to stand by Canada's obligations to First Nations treaty and consultation rights?</p> <p>2. Will the American Eel's presence be investigated with new fieldwork?</p> <p>6. There are many concerns related to surface water and groundwater.</p> <p>1. Please confirm our understanding that there has been no discussion of, and that there are no studies looking at impacts to Lake Simcoe.</p> <p>2. The Groundwater Protection and Well Monitoring plan, which this Draft IA refers to, discusses the need to dewater the site for the building of piles for the elevated bridge sections of the highway. The Draft IA report says, "Construction dewatering activities have been identified as the primary risk to groundwater fed water wells in the Study Area," p 295. There is no</p>	<p>savings during the AM and PM peak hours. Similar to the process undertaken for MTO preliminary design studies, the Traffic Study will be finalized upon study completion and will be available if requested.</p> <p>a. Please share the links and the methodology, transparently, so that people can understand what travel time savings MTO is referring to. We have absolutely no idea because your write up is incredibly vague about the start and end of the routes used for analysis.</p> <p>b. What year do your studies indicate that the Bypass will be congested at peak rush hour times?</p> <p>As detailed in the Draft EIAR (Section 2.4.1), an Aimsun model was created to assess the existing traffic conditions for the road network in the Study Area. The model study area encompasses the Highway 400 corridor from south of Simcoe County Road 88 to north of Highway 89, as well as the Highway 404 corridor from south of Green Lane East to its terminal at Woodbine Avenue (Table 4-3 and 4-4 of the Draft EIAR).</p> <p>The model for this area was developed using pre-pandemic traffic volumes to identify peak hour volumes within the Study Area. This model has been calibrated and validated as it closely resembled actual operating conditions.</p> <p>As detailed in Section 4.4 of the Draft EIAR, traffic is assessed through modelling to identify Level Of Service (LOS). Having confirmed the model was consistent with current (base) conditions, and therefore appropriate to assess future conditions and design alternatives, the model was used to assess LOS under future 2031 and 2041 conditions. To assess future conditions, the model was updated to include all road network and transit improvements planned within the Study Area, and, forecast traffic volumes based on the projected growth within the Study Area.</p> <p>The alternative Build scenarios showed the mainline operations on the Bradford Bypass in 2031 would operate at acceptable LOS D in the interim four lane configuration.</p>

					<p>credible groundwater protection plan. There are many suggestions for how to keep it clean but there are few to no commitments.</p> <p>3. HOW exactly is the province (MoECP) going to monitor groundwater discharges to ensure they meet Ontario's water quality standards?</p> <p>4. What penalties are contractors going to face for violating the discharge requirements?</p> <p>5. If penalties are not enough to compel adherence, what next?</p> <p>6. How is the public to have confidence that contaminated water will not be discharged to the Holland Rivers and Lake Simcoe?</p> <p>7. Please confirm if monitoring will continue, or not, as this statement is totally vague: "It is expected that each unassessed monitoring well will continue to be monitored and assessed during the subsequent detail design phase of the project" P. 79.</p> <p>8. Explain what kind of environmental impact would make this project stop; or is any impact acceptable?</p> <p>9. Please confirm that the only financial support for affected well owners whose water quality is affected by the construction is the province providing them with a temporary water supply until the well owner fixes their well.</p> <p>1. Does this meager bit of help get extended to those who did not provide baseline information about their well water?</p> <p>2. Is there any effort being made to reach more than 12% of respondents to MTO's well water survey?</p> <p>7. How much is this project going to cost?</p> <p>8. When will the Bradford Bypass be completed?</p> <p>9. It is unclear how many lanes are being constructed at which times. Please clarify.</p>	<p>The model indicates that by expanding to the ultimate 8 lane configuration (implementing another general purpose lane and an HOV lane in each direction by 2041), LOS on the mainline improves to LOS B or C and accommodates the additional traffic forecast by 2041.</p> <p>For further information about the Traffic Study please refer to the response to Question #3 and Section 4.4 of the Updated Draft EIAR.</p> <p>4. The Draft Environmental Impact Assessment report shows on pg. 212 the Bypass touching the southern portion of the Lower Landing (AKA BaGv-42), a significant historical and archaeological site at a significant meander on the East Holland River. MTO has moved the highway 150 m to the south of the technically preferred route, which would have completely run over the Lower Landing (pg 148). But the Draft IA states," the southern portion of the site ... will be impacted by construction" (pg 395). The Draft Environmental Conditions Report indicated that a Stage 3 archaeological assessment "was required" (pg 225); the Draft IA report says that the Stage 3 was completed, and that Stage 4 is required. The Project team's website says, "Currently, additional archaeological investigations are being completed to finalize the impact assessments in accordance with Ontario Regulation 697/21 and are not included in this posting. This information will be available for additional public and Indigenous community review once completed." So the archeological work is not finished. And yet the route has been chosen. Property owners near the history-rich Lower Landing that are receiving expropriation notifications. We are staunchly opposed to this violation of this site particularly absent the stage 4 evaluation of the Lower Landing and the endorsement of the First Nations.</p> <p>a. As stewards of these lands and water for time immemorial, additional time should be given to allow First Nation community members to fully digest the lengthy report. Georgina Island First</p>

					<p>10. There is no cumulative health impact assessment to understand how traffic related air pollution, known to increase risks of cancers, leukemia, heart and lung disease, will impact the communities surrounding the route. There is also no mention of the cumulative impacts on our climate from construction and higher rates of car travel on this highway.</p> <ol style="list-style-type: none"> How will you be informing people living along the route about the increased risk of traffic related air pollution and its effects on human health? Will you put air quality monitors in Bradford? How do you explain the fact that you are NOT monitoring air quality in Bradford, and using the closest site, Newmarket? The Final Environmental Conditions Report identified numerous planned residential developments right beside the highway, including a planned new school. Have the land owners / developers / school boards received any information that tells them how bad the air quality is going to be there? <p>11. Traffic modeling to produce the air dispersion model is not robust or transparent. In order to understand traffic related air pollution, relevant vehicle types and assumptions need to be used. The air dispersion modeling report simply indicates that MOVES3 default data was used - but the EPA has emphasized the need to include relevant vehicle type inputs into the model.</p> <p>The air modeling report and supporting reports fail to disclose the % of diesel truck traffic, or the component of that traffic that includes trucks dating from 2006 or earlier which comprise a significant component of air pollution load. The air dispersion modeling report states that the vehicle type distributions were based on MOVES3.0 default database inputs even though there are no such inputs. It also says that the 24 hour traffic distribution was assumed to be equal to the AADT distribution. However the</p>	<p>Nation asked that this site be avoided in 1998, 25 years ago, stating, "It is obvious that there are other routes, which can be used to connect these major highways, and we hope that another will be selected." Is Ontario still ignoring this request.</p> <p>b. Have First Nations be consulted about this part of the plan? Please provide written evidence of their approval of this route.</p> <p>Field investigations for Stage 2 and Stage 3 works have been completed and additional details are included in the Updated Draft Environmental Impact Assessment Report available on the Project Website (https://www.bradfordbypass.ca/study-process/) for public review until August 14, 2023.</p> <p>The required Stage 4 Archaeological Assessment of BaGv-42 will be completed during future phases of work for the project and will be carried out in accordance with the Ministry of Citizenship and Multiculturalism Standards and Guidelines for Consultant Archaeologists (Ontario Government 2011). No ground disturbing activities will occur at this site until the Stage 4 assessment has been conducted.</p> <p>In accordance with Ontario Regulation 697/21, the Project Team completed site specific Stage 3 archaeological assessments for areas within the Study Area that were identified as having archaeological potential in accordance with the Stage 2 archaeological assessments.</p> <p>It is common practice for Stage 4 archaeology work to be completed during Detail Design. Limiting the impact to Stage 4 archaeological sites where feasible is one of the Project Team's main priorities. As a result, the Project Team will determine the exact impact limits to archaeological sites during subsequent design phases of the project. To avoid unnecessary excavation, the Project Team will then undertake the Stage 4 archaeological assessments. Any Stage 4 field work that will be undertaken must engage interested Indigenous communities.</p>

					<p>consultant appeared to use different AADT distributions for different scenarios without explanation and the distributions differed significantly as between build and no build scenarios. Mitigation in the form of frequent diesel heavy truck vehicle emission inspections should be included as a mitigation measure to ensure that newer vehicle emissions systems are not being tampered with. The air dispersion modeling report indicates that ethanol based fuels were excluded even though this goes against EPA recommendations for using the model. The report lacks transparency about assumptions made about future vehicle fleet characteristics for both passenger vehicles and heavy trucks.</p> <p>The comparison of build with no-build is not valid because the values in Appendix E of the traffic modeling report show that there was an erroneous assumption that there would be significantly less truck traffic in the build scenario compared to the no-build scenario. There is no valid scientifically-based justification for this. Further, if there is an increase in truck traffic along 404 - as the model predicts - then sensitive receptors along highway 404 need to be included in a health impact study. Instead, impacts on traffic along the 400/404 corridors were excluded and the "air quality study area" was restricted to the bypass corridor itself without any explanation or justification.</p> <p>It is egregious that MTO did not conduct locally relevant air quality monitoring for background in Bradford, River Drive Park, Queensville and along the 404/400 corridors for traffic related air pollutants. Such baseline monitoring is generally inexpensive and could have been easily obtained. Using existing monitors in Innisfil, Newmarket and other distant and irrelevant locations is not justifiable. For the air dispersion modeling, MTO appears to be relying on these distant locations (eg. Egbert) for preparation of the wind rose as well, even though meteorological conditions in the study area may be markedly different. MTO also did not identify numerous recreational and daycare</p>	<p>As recommended by the cultural heritage resource assessment undertaken by the Project Team, the Holland River watershed was identified as a Cultural Heritage Landscape requiring further research and evaluation to determine if it possesses cultural heritage value or interest. This further assessment will be completed in a Cultural Heritage Evaluation Report (CHER), and if the CHER determines that the Holland River Watershed meets the criteria in Ontario Regulation 9/06 or Ontario Regulation 10/06 of the Ontario Heritage Act, and may be adversely impacted by the Updated Technically Preferred Route, a Heritage Impact Assessment will be prepared to fully assess impacts on the resource's identified heritage attributes and propose alternatives and mitigation to conserve the property's Cultural Heritage Value or Interest. These commitments are included in Section 5.3.2 of the Updated Draft EIAR.</p> <p>Consultation is an integral component of the Preliminary Design stage, the project-specific assessment of environmental impacts process, and for future project phases, and is critical to a project's success. The ministry is actively consulting and engaging with Indigenous communities throughout the Bradford Bypass Project.</p> <p>The Project Team is engaging with and considers input provided by the following Indigenous communities:</p> <ul style="list-style-type: none"> - Alderville First Nation - Beausoleil First Nation - Chippewas of Georgina Island First Nation - Chippewas of Rama First Nation - Curve Lake First Nation - Hiawatha First Nation - Mississaugas of Scugog Island First Nation - Kawartha Nishnawbe First Nation - Georgian Bay Métis Council, and - Huron-Wendat Nation <p>Comments from Indigenous communities are accepted at any time in the study process.</p> <p>5. Table 2-2 lays out the 12 species present or very likely to be present. For instance, Blandings Turtles are likely affected as they are likely in the area. The only commitment we see is to do a detailed study later on. This is a good</p>

					<p>facilities adjacent to the Bradford Bypass corridor which were identified by Simcoe County Greenbelt Coalition. The study did not include the cumulative effects of future planned industrial uses along the Bypass corridor and along the 400/404 corridor which may significantly impact people's health along the route. The evaluation did not use 2022 World Health Organization criteria for contaminants which are much lower and more up-to-date than the CAAQS or the AAQCs. We disagree that the AAQCs and CAAQS represent the "lowest concentrations at which an adverse effect may be experienced" as they are not based on up-to-date understandings of the health impacts of air contaminants including pre-term births and neurodevelopmental and other impacts. These are described in the report by the Canadian Association of Physicians for the Environment (April 2022) Mobilizing Evidence report. The report predicts significant exceedances for NO2 and benzo(a)pyrene even with the apparently non-conservative assumptions for diesel truck traffic used in the full build out scenario compared to the no-build scenario. The adverse health impacts of NO2 exceedances may be extremely severe and will impact on the <i>Charter</i> rights and human rights of residents in the study area and beyond without justification for the need for the project. Source: Air Quality Impact Assessment Report - AECOM.</p>	<p>example of study following decision or destruction, and is in violation of the standard EA practices. There are no commitments to the protection of species at risk in this document.</p> <p>Targeted surveys for all species at risk with potential to occur in the Study Area will be required during future phases of work. These future studies will inform the need for any permits, authorizations, mitigation or compensation under the Endangered Species Act.</p> <p>The Updated Draft EIAI requires consideration and review of all recommendations throughout the corridor during future phases of work. This approach is necessary and standard practice for planning projects in that design is an iterative approach and this project is only completing design to a preliminary level. During future phases of work, additional design will be completed and may include refinements to the design as details are developed with greater accuracy. Limiting the future design phases by making certain elements of the project non-discretionary at the preliminary design stage limits the potential for future work to explore opportunities for further reducing impacts and / or increasing mitigation and offsetting measures.</p> <p>For Blanding's Turtle specifically, candidate habitat associated with the Holland River and Holland River East Branch open water and wetland communities has been identified within the Study Area. Blanding's Turtle may be impacted while moving in between habitats if these species enter the construction work area.</p> <p>As part of this phase of the project, preliminary mitigation and avoidance measures for the potential impacts to turtles are included in the Draft EIAI and include:</p> <ul style="list-style-type: none"> If stockpiles of gravel and sandy substrates or the removal of these substrates in the vicinity of turtle habitat are required during the active turtle season (April 1 to October 15), turtle exclusion fencing should be installed in accordance with the Reptile and Amphibian Exclusion Fencing Best Management Practices (Ministry of the Environment, Conservation and Parks, 2020) around stockpiles or area of disturbance prior to April 1. Fencing should be installed immediately after stockpiles are created if after April 1.

					<p>Figure 6-11: Inconcentration Contours for NO₂ in the Future World Scenario</p> <p>Figure 6-12: Inconcentration Contours for NO₂ in the Future No-Build Scenario</p> <p>The Air Quality Impact Assessment concluded that: Impacts from the Future Build Conditions with the new Bradford Bypass on a cumulative basis within the Air Quality Study Area <u>increases in comparison to a No-Build scenario for several contaminants and their respective averaging periods. This is predominately due to increased traffic along the Bradford Bypass, where in a No-Build scenario this traffic is dispersed along Holland Street and Bridget Street and within communities to the south of the Air Quality Study Area</u> (for example, demonstrated in the traffic reporting related to this project). This included significant increases in NO₂, SO₂, PM_{2.5}, Acetaldehyde, Benzo(a)pyrene, and formaldehyde and some increases in CO. Maximum concentrations which are relevant for acute events also saw significant increases, for example a 49% increase in SO₂ and more than 50% increases in fine and large particulates, acetaldehyde, formaldehyde etc. for critical receptor number 19 (other receptors' models were not displayed in a comparable manner). The results indicated that for NO₂, 1 hour averages 80% of the hours in the future build scenario would have a cumulative</p>	<ul style="list-style-type: none"> It is recommended that culverts be designed to provide openness ratios that would allow for the passage of small mammal and/or herpetofauna where possible. An openness ratio of 0.4 would permit usage by medium-sized mammals, while the minimum openness ratio to be considered should be 0.25, which would permit usage by reptiles such as turtles (Credit Valley Conservation, 2017). Avoid work within areas of candidate turtle overwintering habitat during the turtle overwintering period (October 31 to April 1), whenever possible. <p>These preliminary mitigation measures will be further refined as the project proceeds to Detail Design and impacts are assessed in more detail.</p> <p>For further detail on potential impacts to Species at Risk and proposed mitigation and avoidance measures, please refer to Section 5.1.1 of the Draft Environmental Impact Assessment Report.</p> <ol style="list-style-type: none"> The Draft IA report identifies that the Williams Treaties FN reported American Eel and Northern Sunfish in the Holland River. This must be further investigated with new fieldwork. The American Eel is in decline and gets Federal protection. Ontario's Species at Risk legislation doesn't work anymore so it's all up to the federal enforcement. What is Ontario going to do to stand by Canada's obligations to First Nation treaty and consultation rights? Will the American Eel's presence be investigated with new field work. <p>It was noted in discussion with William Treaties First Nations on December 1, 2022, that they had observed both American Eel (<i>Anguilla rostrata</i>; Endangered Species Act – Endangered, Species at Risk Act – Not at Risk) and Northern Sunfish (<i>Lepomis peltastes</i>; Endangered Species Act – Special Concern, Species at Risk Act – Special Concern) in the Holland River.</p>

					<p>concentration above the CAAQS limit of 79 ppm and a 100% of hours would exceed the AAQC for benzo(a)pyrene.</p> <p>In relation to GHGs, the MTO failed to incorporate induced demand in the future build scenario to calculate additional vehicle kilometers traveled that would be induced by the highway, and failed to give a transparent total vehicle assumption or a vehicle emissions factor. In any event the air quality impact assessment predicts that the proposed highway would be a significant contributor to regional GHG emissions even without incorporating the effect of induced demand. No mitigation measures are proposed to address the increase in greenhouse gas emissions from the project which will contribute to catastrophic climate disaster for all of humanity and the planet.</p> <p>12. Many less expensive alternatives to this highway have not been considered. The Minister approved Terms of Reference for the Bradford Bypass Environmental Assessment Study overrode the requirements of the Environmental Assessment act to consider road alternatives that would not be a controlled access highway. As a result, the Hwy 9 / Green Lane corridor was the only existing roadway that was considered as a reasonable alternative. That roadway was rejected as it was not considered feasible to convert it to a controlled access facility. Consideration of these types of alternatives are, however, a requirement for all Class EA Studies.</p> <p>A major condition of the 2002 Bradford Bypass EA Approval, was a requirement to conduct a Class EA Study at the time MTO wished to proceed with this project. This study would ensure the currency of the proposed project in light of current travel demand, previously unforeseen environmental factors, new legislation and a full review of all reasonable alternatives including combinations of regional and local roadways.</p> <p>The following are reasonable alternatives that would need to be considered both individually and in combination with one or more other</p>	<p>Subsequently, the Project Team consulted with the Ministry of the Environment, Conservation and Parks, in March 2023 and was advised that the Ministry of Environment, Conservation and Parks records have no documented observations of the American Eel or Northern Sunfish in the Study Area. They also noted that the Northern Sunfish is a species of special concern and does not have a permitting status with the Ministry of the Environment, Conservation and Parks, and therefore would not be reported. These discussions with Williams Treaties First Nations and MECP have been documented in the Fish and Fish Habitat Report and Section 2.1.2 of the Updated Draft EIAR.</p> <p>No records of aquatic Species at Risk that are afforded protection under the Species at Risk Act or Endangered Species Act are known to occur in the watercourses where culverts are anticipated to be installed. AECOM ecologists conducted a detailed fish and fish habitat assessment of the water features in the vicinity of the Study Area between September 14-18, 2020, with spring field investigations occurring over multiple days in June 2021. Field investigations were also completed in the spring of 2022 due to changes to the Study Area boundary that required further review for potential fish habitat. Based on these investigations, no Species at Risk were discovered in the Study Area. Regardless, the presence or absence of all aquatic Species at Risk will be re-confirmed in subsequent design phases through additional field investigations.</p> <p>6. Please confirm our understanding that has been no discussion of, and that there are no studies looking at impacts to Lake Simcoe.</p> <p>As the project falls within the jurisdiction of the Lake Simcoe Region Conservation Authority (LSRCA), pertaining to Ontario Regulation 179/06, the ministry has assessed impacts with respect to the <i>Lake Simcoe Protection Act</i> and the Lake Simcoe Protection Plan through consideration of water quality and quantity, stormwater management, groundwater management, landscaping and ecological restoration measures; as well as fluvial geomorphological designs for watercourses, erosion and sediment control and spills prevention and protection measures.</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIAR Edits Required? (Yes/No? If yes specify edits)
					<p>reasonable alternatives if the Class EA Study that was underway at the time Regulation 697 /21 was issued had not been terminated. Each of these proposed alternative solutions would then be evaluated against the then approved Bradford Bypass 4 lane controlled access freeway. Because the Class EA Study was canceled by this regulation, the only comparison AECOM have used throughout the Draft Impact Assessment Report is "Do Nothing". Given that the actual travel problem we are now faced with is local, rather than long distance traffic, we are confident one or more of the following reasonable alternatives would be dramatically preferable to the now 8 lane, Bradford Bypass. Alternatives to the Bradford Bypass:</p> <ol style="list-style-type: none"> 1. Construct a 4 lane arterial road bridge over the West Branch of the Holland River at the currently planned location for the Bradford Bypass bridge – together with paved 4 lane roadways to both Bathurst St. and a connection to Bradford's 8th Line. 2. Build a 4 lane arterial road bridge over the Holland River from Ravenshoe Road to connect with Simcoe Line 13 or another appropriate east – west arterial road on the west bank of the Holland River. 3. Extend and widen Green Lane to 6 lanes and create a diagonal transition from Green Lane to Hwy 9 and highway bridge intersection with Highway 9 around Dufferin St. The Green Lane / Highway 9 option will better serve and reduce both local and long distance traffic from Newmarket south to at least Aurora Sideroad. <p>Any one or a combination of these alternatives will address a substantial amount of local travel problems while being significantly less costly and environmentally invasive.</p> <p>As you can see, there are a lot of questions and concerns surrounding the approach the province is taking. It's too much money to spend on an unjustified project that will have significant environmental impacts!</p>	<p>a. The Groundwater Protection and Well Monitoring plan, which this Draft IA refers to, discusses the need to dewater the site for the building of piles for elevated bridge sections of the highway. The Draft IA report says, "Construction dewatering activities have been identified as the primary risk to groundwater fed water wells in the Study Area." There is no credible groundwater protection water. There are many suggestions for how to keep it clean but there are few to no commitments.</p> <p>Commitments, preliminary mitigation measures and monitoring activities related to groundwater are documented in Section 5.1.4 of the Draft EIAR, and will be carried forward to subsequent phases of the project.</p> <p>The risk of spills during construction of the project will be primarily limited to petroleum products from machinery (fuels and lubricants). The use of best management practices for handling of hydrocarbons according to the Ministry of Environment, Conservation and Parks and the Technical Standards and Safety Authority of the Ministry of Government Services will reduce the potential of environmental adverse effects associated with petroleum product handling and uses. Spillage of petroleum products must be immediately remediated according to these standards such that groundwater quality is not impacted.</p> <p>Mitigation plans will be generated during future phases of work for the project and for any excavation and structure construction within areas of medium to high significant groundwater recharge areas as shown near the Holland River and Holland River East Branch. Mitigation plans would be specific to each excavation and structure construction and include erosion and sediment control, dewatering treatment and discharge piping away or towards from Significant Groundwater Recharge Areas, or municipal sewer discharge requirements. Dewatering discharge shall be directed away from Well Head Protection areas if excavation and dewatering activities are occurring within them.</p>

					<p>We look forward to hearing back from the project team with answers to our questions. Enjoy the day,</p> <p>[REDACTED]</p>	<p>For more information about the Groundwater Protection and Well Monitoring Plan please refer to Section 5.1.4 of the Updated Draft EIAR.</p> <p>b. How exactly is the province going to monitor groundwater discharges to ensure they meet Ontario's water quality standards?</p> <p>c. What penalties are contractors going to face for violating the discharge requirements?</p> <p>d. If penalties are not enough to compel adherence, what next?</p> <p>e. How is the public to have confidence that contaminated water will not be discharged to the Holland Rivers and Lake Simcoe?</p> <p>f. Please confirm is monitoring will continue or not, as this statement is totally vague: "It is expected that each unassessed monitoring well will continue to be monitored and assessed during the subsequent detail design phase of the project."</p> <p>The Groundwater Monitoring Program includes groundwater level monitoring and groundwater quality monitoring to establish the pre-construction baseline conditions for comparison of data collected during and post-construction.</p> <p>During the Preliminary Design study, Golder Associates Ltd. (Golder) installed monitoring wells during the ongoing geotechnical investigations. Monitoring is expected to be completed within these same monitoring wells during all future phases of work for the Project, including construction. Residential monitoring wells will also be part of this program if they fall within the Radius of Influence of the excavation dewatering and permission to enter is granted to gain access to monitor the well. Detail Design will inform the need for further groundwater investigations. Penalties for discharging any deleterious substance or material to the lands will vary based on the federal, provincial or municipal legislation that might be violated. Beyond legislated penalties, contractor behavior is monitored by the Ministry and poor behavior may result</p>

						<p>in additional financial or reputational impacts. The Ministry's process for selecting contractors to support future phases of the work for the project also includes consideration of past performance and assessment of the contractors understanding of the project and sensitivities within the Study Area. Commitments, preliminary mitigation measures and monitoring activities related to groundwater are documented in Section 5.1.4 of the Draft EIAR, and will be carried forward to subsequent phases of the project.</p> <p>g. Explain what kind of environmental impact would make the project stop; or is any impact acceptable?</p> <p>This government takes environmental protection seriously and is implementing a path forward that will ensure environmental protections are not compromised while building this much needed project quickly and safely. Current work on the Bradford Bypass project will continue to be subject to all conditions under Ontario Regulation 697/21.</p> <p>In accordance with Ontario Regulation 697/21, the Project Team has undertaken several environmental impact assessments to identify and document the potential impacts, proposed mitigation measures, and environmental commitments, which are summarized in the Environmental Impact Assessment Report (EIAR).</p> <p>The Ministry of Transportation must also comply with all current federal and provincial environmental requirements. This includes consultation as set out in the regulation and obtaining permits and approvals for the project prior to the start of construction. Obtaining these permits and approvals, which are mechanisms to help protect the environment, confirms that the ministry has met or surpassed the environmental requirements.</p> <p>h. Please confirm that the only financial support for affected well owners whose water quality is affected by the construction is the province providing them with a temporary water supply until the well owner fixes their well.</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIAR Edits Required? (Yes/No? If yes specify edits)
						<p>i. Does this meager bit of help extend to those who did not provide baseline information about their well water?</p> <p>j. If there any effort being made to reach more than 12% of respondents to MTO's well water survey?</p> <p>MTO will work with owners of water wells who experience issues to determine if the issue is the result of Bradford Bypass project activities.</p> <p>If the well issue is confirmed to be a result of the project's activities, the Ministry will provide a letter to the property owner explaining the outcome of the well investigation and detail the recommended mitigation measures (including lowering / replacement of pump inlet, well rehab, new well installed or local watermain connection if available) the Ministry will undertake to remediate the issue. A temporary drinking water supply will be provided and connected to the resident if the project activities are found to be responsible, at the expense of the Ministry, until remediation measures have resolved the issue.</p> <p>A water well survey was completed for the project to determine the pre-construction assessment of private well supplies in the vicinity of the Study Area noted above. Where no response was provided from Property Owners as part of the water well survey, an additional attempt shall be undertaken during Detail Design to contact these owners via mail, email, phone calls, site visit, etc. This information will be used to provide a baseline for water wells prior to the proposed construction to determine existing water quality and quantity of each property.</p> <p>7. How much is this project going to cost?</p> <p>As we bring this project to market, we want to ensure we can retain the best value for the project. As such, the ministry will not be releasing cost estimates prior to the award of contracts to protect the procurement processes.</p> <p>8. When will the Bradford Bypass be completed?</p> <p>The Preliminary Design phase is anticipated to be completed in 2023. Detail Design and Construction Phases will follow.</p>

						<p>9. It is unclear how many lanes are being constructed at which times. Please clarify.</p> <p>The Ontario government is committed to fully funding the construction of the Bradford Bypass and is following through on its promise to improve and invest in the province's transportation corridors to get people moving within the region, connect people to jobs, make life easier and support a strong economy.</p> <p>A four-lane configuration is planned to be constructed first with two general purpose lanes in each direction. To plan for the future, the Ministry is also considering the design of an ultimate eight-lane design for the Bradford Bypass. The ultimate, eight-lane configuration for the project will feature three general purpose lanes and one HOV lanes in each direction.</p> <p>10. There is no cumulative health impact assessment to understand how traffic related air pollution, known to increase risks of cancers, leukemia, heart and lung disease, will impact the communities surrounding the route. There is also no mention of the cumulative impacts on our climate from construction and higher rates of car travel on this highway.</p> <ol style="list-style-type: none"> How will you be informing people living along the route about the increased risk of traffic related air pollution and its effects on human health? Will you put air quality monitors in Bradford? How do you explain the fact that you are NOT monitoring air quality in Bradford, and using the closest site, Newmarket? The Final Environmental Conditions Report identified numerous planned residential developments right beside the highway, including a planned new school. Have the land owners / developers / school boards received any information that tells them how bad the air quality is going to be there?

						<p>The human health scoping implications of the project such as air quality, noise, land use, traffic congestion and safety, economic, social cohesion, and neighborhood resources have been summarized in Section 2.2.7 and Section 5.2.7 of the Draft EIA. To better understand the human health implications due to the Project as a next step, it is recommended for MTO to continue to consider the human health factors identified in this report and provide recommendations to enhance potential positive impacts and mitigate potential negative health impacts. Specifically, conducting a Screening-Level Human Health Risk Assessment of potential air quality impacts is recommended in order to evaluate and characterize Project-related air quality impacts to health.</p> <p>The project has undertaken an Air Quality Impact Assessment to explore pollutant emissions and dispersion modelling in an effort to predict the contribution of the project to future ambient pollutant concentrations. This contribution, added to background concentration levels, allows prediction of the cumulative impact of the proposed project and all other contributors to air pollution. Concentration levels are compared to provincial and federal ambient air quality criteria and standards to assist in the evaluation of project-specific mitigation needs and options.</p> <p>Areas of concentrated emission impact are influenced by traffic volumes along a given segment of roadway. The implementation of the Bradford Bypass is expected to redistribute traffic from local roads and freeway corridors surrounding the proposed Bradford Bypass. Reductions in traffic volumes are observed on corridors including Highway 11/1 (Bridge Street), Bathurst Street, Holland Landing Road, Yonge Street, Queensville Sideroad, Doane Road, Mount Albert Road, Green Lane, and Simcoe County Road 88/Holland Street, among other roads, which benefits the community of Bradford, Town of Bradford West Gwillimbury, by alleviating congestion during peak hours.</p> <p>The Project Team is currently utilizing the National Air Pollution Surveillance air quality monitoring stations to assess air quality levels. Five years of existing data sets were analyzed from stations within the region, and the complete data set from the closest station or most</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIAR Edits Required? (Yes/No? If yes specify edits)
						<p>representative station for each contaminant of concern was selected to represent the background air quality for the Study Area. Due to the proximity of the Study Area to the Toronto Area, monitoring stations within the City of Toronto were given preference as the one of the most representative locations for the air quality contaminants of concern. As such, Roadside Wallberg – University of Toronto monitoring station, North Downsview monitoring station, Gage Institute monitoring station (all located approximately 38 – 53 km from the Study Area) were used. The nearest monitoring station is in Newmarket. Additional information regarding the assessment of potential air quality impacts have been summarized in Section 2.2.4 and Section 5.2.4 of the Draft EIAR.</p> <p>Land has been designated for the Bradford Bypass since the 2002 Approved EA was completed. As noted above, consultation is an integral component of the Preliminary Design stage and project-specific assessment of environmental impacts and is critical to a project's success. The ministry is actively consulting and engaging with private landowners, developers and school boards within the Study Area. Engagement and consultation has included having a project website and telephone line, having a project contact list for regular project updates, providing notices and correspondence via email, mail, and Ontario Government Notices in local newspapers, hosting public information centres and online events, and holding meetings with Indigenous communities, municipalities, environmental agencies, and stakeholders. More information on the project consultation activities are included in Section 7 of the Updated Draft EIAR.</p> <p>11. Traffic modeling to produce the air dispersion model is not robust or transparent. The air modeling report and supporting reports fail to disclose the % of diesel truck traffic, or the component of that traffic that includes trucks dating from 2006 or earlier which comprise a significant component of air pollution load. The comparison of build with no-build is not valid because the values in Appendix E of the traffic modeling report show that there was an erroneous assumption that there would be significantly less truck traffic in the build scenario compared to the no-build scenario.</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIA Edits Required? (Yes/No? If yes specify edits)
						<p>There is no valid scientifically-based justification for this. Further, if there is an increase in truck traffic along 404 - as the model predicts - then sensitive receptors along highway 404 need to be included in a health impact study. Instead, impacts on traffic along the 400/404 corridors were excluded and the "air quality study area" was restricted to the bypass corridor itself without any explanation or justification. It is egregious that MTO did not conduct locally relevant air quality monitoring for background in Bradford, River Drive Park, Queensville and along the 404/400 corridors for traffic related air pollutants. Such baseline monitoring is generally inexpensive and could have been easily obtained. The study did not include the cumulative effects of future planned industrial uses along the Bypass corridor and along the 400/404 corridor which may significantly impact people's health along the route. The evaluation did not use 2022 World Health Organization criteria for contaminants which are much lower and more up-to-date than the CAAQS or the AAQCs. We disagree that the AAQCs and CAAQS represent the "lowest concentrations at which an adverse effect may be experienced" as they are not based on up-to-date understandings of the health impacts of air contaminants including pre-term births and neurodevelopmental and other impacts. The report predicts significant exceedances for NO₂ and benzo(a)pyrene even with the apparently non-conservative assumptions for diesel truck traffic used in the full build out scenario compared to the no-build scenario. The adverse health impacts of NO₂ exceedances may be extremely severe and will impact on the Charter rights and human rights of residents in the study area and beyond without justification for the need for the project.</p> <p>Study Area, MOVES3 data, vehicles and assumptions: In order to model relevant vehicle types within the Air Quality Impact Assessment Study Area, MOVES3 data was input to the model and refinements were made to exclude fuel types such as ethanol given these fuels are</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIAR Edits Required? (Yes/No? If yes specify edits)
						<p>not readily available for use in Ontario. Fuel inputs utilized in MOVES3.0 modelling at the time of the assessment included: Fuel Type IDs 1, 2, 3 and 9. ID 5 (ethanol) was not included as flex fuel cars and fuelling stations are not readily available in Ontario. The specific source type fractions utilized for various vehicle types applied within the project study area and the related fraction of expected vehicle usage for both passenger-class vehicles and heavy-class vehicles, including the distribution of vehicle types in the heavy truck vehicle category, were combined to create representative vehicle emission for vehicle class that can reasonable be expected to be in use in 2041.</p> <p>Highway 400/404 corridors were included in the Air Quality Impact Assessment. The full air quality study area is shown in Figure 2-9 of the Updated Draft EIAR and demonstrates that the air quality study area included emission sources within the boundary of assessment, including but not limited to Highway 400 (500 m south of Rural Rd. 88 to 500 m north of Concession Rd. 11), Highway 404 (500 m south of Queensville Sideroad E to 500 m north of Boag Road), the entirety of the proposed Bradford Bypass, Bridge Street, Holland Street W, 10th Sideroad, Young Street/Barrie Street, and Queensville Sideroad.</p> <p>Traffic distributions and truck traffic: The same Average Annual Daily Traffic (AADT) were used for all scenarios. AADT values for each air quality emission source vary between the three scenarios evaluated based on projected existing traffic within the study area, and future no-build and build traffic projections however the same 24-hour traffic distribution percentages were applied. Three representative 24-hour distribution percentages were applied to the air quality emission sources. These were applied to a given source of emission depending on the type of road in question, e.g. a "Leslie St." 24-hour distribution was applied to air quality emission sources which were categorized as community arterial roads; a "HWY 400" 24-hour distribution was applied to air quality emission sources categorized as highways; and, a "2nd Concession Rd" 24-hour distribution was applied to rural roads. These same 24-hr distributions were applied to the assigned source for all three scenarios of evaluation (existing conditions, future no-build, and future build).</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIAR Edits Required? (Yes/No? If yes specify edits)
						<p>Fuel usage distribution [i.e. diesel, gasoline, CNG, etc.] and vehicle age distribution within each vehicle type category were modelled based on MOVES3.0 default fuel use and age distribution database inputs assigned to the year of evaluation. Heavy truck traffic was included in the modelling with a percentage assigned to each air quality emission source anticipated from this vehicle type.</p> <p>Health Impacts, Critical Receptors and Background/Study Area Monitoring Data: The human health scoping implications of the project such as air quality, noise, land use, traffic congestion and safety, economic, social cohesion, and neighborhood resources have been summarized in Section 2.2.7 and Section 5.2.7 of the Updated Draft EIAR.</p> <p>The Project Team is aware some critical receptors have been identified as 'missing' by a number of stakeholders. Having reviewed the data, these 'missing' receptors were included as residences in the Air Quality Impact Assessment. Potential impacts at the 'missing' receptors within the Air Quality Impact Assessment Study Area are reflected in the assessment by other, nearby critical receptors and receptors identified on Figure 2-9 and 2-10 of the Updated Draft EIAR.</p> <p>The approach to identifying representative air quality levels is conservative and often ensures the worst-case conditions are reflected so as to not under-represent conditions within a study area; i.e. background air quality contaminant levels included within the assessment may be representative or higher than expected for the area in question.</p> <p>While it is recognized that localized in-situ monitoring may provide more accurate data, use of existing monitoring stations within the NAPS network for statistically relevant background monitoring data is a generally accepted and conservative methodology for provincial environmental impact air quality assessments. Stations selected for the background air quality assessment were chosen based on total data availability over a most recent five-year period as a minimum of 12 months of daily and hourly data is required to ensure statistical relevance. Stations were also selected based on their proximity to the air quality</p>

						<p>study area with the meteorological station selected as representative of the air quality study area within 15 km north-west of the air quality study area. Stations must also be a relative representation of similar types of existing sources of air quality emission in the study area and it is notable that the meteorological station selected as representative of air quality in the study area was provided by the MECP in site-specific MET data requested for the project modelling.</p> <p>12. Many less expensive alternatives to this highway have not been considered. The Minister approved Terms of Reference for the Bradford Bypass Environmental Assessment Study overrode the requirements of the Environmental Assessment act to consider road alternatives that would not be a controlled access highway. As a result, the Hwy 9 / Green Lane corridor was the only existing roadway that was considered as a reasonable alternative. That roadway was rejected as it was not considered feasible to convert it to a controlled access facility. Consideration of these types of alternatives are, however, a requirement for all Class EA Studies. A major condition of the 2002 Bradford Bypass EA Approval, was a requirement to conduct a Class EA Study at the time MTO wished to proceed with this project. This study would ensure the currency of the proposed project in light of current travel demand, previously unforeseen environmental factors, new legislation and a full review of all reasonable alternatives including combinations of regional and local roadways. The following are reasonable alternatives that would need to be considered both individually and in combination with one or more other reasonable alternatives if the Class EA Study that was underway at the time Regulation 697 /21 was issued. Each of these proposed alternative solutions would then be evaluated against the then approved Bradford Bypass 4 lane controlled access freeway. Because the Class EA Study was canceled by this regulation, the</p>

						<p>only comparison AECOM have used throughout the Draft Impact Assessment Report is "Do Nothing". Given that the actual travel problem we are now faced with is local, rather than long distance traffic, we are confident one or more of the following reasonable alternatives would be dramatically preferable to the now 8 lane, Bradford Bypass.</p> <p>Alternatives to the Bradford Bypass:</p> <ul style="list-style-type: none"> a Construct a 4 lane arterial road bridge over the West Branch of the Holland River at the currently planned location for the Bradford Bypass bridge – together with paved 4 lane roadways to both Bathurst St. and a connection to Bradford's 8th Line. b Build a 4 lane arterial road bridge over the Holland River from Ravenshoe Road to connect with Simcoe Line 13 or another appropriate east – west arterial road on the west bank of the Holland River. c Extend and widen Green Lane to 6 lanes and create a diagonal transition from Green Lane to Hwy 9 and highway bridge intersection with Highway 9 around Dufferin St. The Green Lane / Highway 9 option will better serve and reduce both local and long distance traffic from Newmarket south to at least Aurora Sideroad. <p>Any one or a combination of these alternatives will address a substantial amount of local travel problems while being significantly less costly and environmentally invasive. Once again, what logic is being used to ignore these options given all of the rationale in favour of these other alternatives?</p> <p>The planning process that resulted in the 2002 approved Environmental Assessment (EA) for the Bradford Bypass evaluated alternatives from a broad range of potential solutions to address several transportation problems and to address significant opportunities identified in York Region and Simcoe County. The need for this freeway was confirmed during the Route Planning and EA Study as</p>

						<p>the only reasonable solution that would make a significant contribution towards addressing the problem as the population in York Region and Simcoe County grows. The 2002 EA approved alignment is technically preferred for a freeway in terms of highway network expansion, ease of construction, relationship to provincial and municipal land use planning and the preferred route is already included in Official and Transportation Master Plans, as well as the Places to Grow Act), as well as having fewer negative impacts to residential and natural areas when compared to other route options considered.</p> <p>The Bradford Bypass Project has been modelled based on current local, regional, and provincial projections and data. This addresses the problem of "lack of long-term planning" per the Bradford Bypass 2002 approved EA..</p> <p>The 2002 approved EA reviewed a broad area of analysis which included several corridors, including areas south of the current corridor, and Highway 89/Ravenshoe Road.</p> <p>The Bradford Corridor was selected as the preferred corridor over Highway 89/Ravenshoe Road as it was beyond the maximum north limit of 10th Line / Boag Road which was assessed in a previous EA study and was determined that a Management Area or river crossing north of this would entail unacceptable environmental impact, which lead to the withdrawal of the Highway 89 EA studies in 1986-87.</p> <p>The Bradford Corridor was selected as the preferred corridor over the southern alternatives as there was no south alternative that met the primary purpose of the study to reduce out-of-way travel. The south limit was established as Highway 88 and Queensville Sideroad.</p> <p>The original purpose of the Bradford Bypass per the 2002 Approved EA was to address the "east-west" long-distance travel demand crossover between Highway 400 and Highway 404 which is a provincial responsibility and distinct from the locally generated trips which use a municipal road to access the provincial network. As noted in the report, the overall network benefits from vehicle-hours of travel time savings and vehicle-kilometres of travel distance savings are observed during the 2041 AM peak hour and during the 2041 PM peak hour in the</p>

						<p>updated interchange locations. Local roads forecasted to exceed capacity by 2031 and 2041 under the No-Build scenarios see significant relief from traffic as a result of the diversion to the Bradford Bypass in the Build scenarios.</p> <p>While the Town of Bradford West Gwillimbury owns a closed road allowance east of Artesian Industrial Parkway for 8th Line to Holland River, Hochreiter Road itself is a private road. A connection at this location would not address the primary purpose of the Bradford Bypass to connect Highway 400 and Highway 404. The local benefit of this route is likely outweighed by the reduced congestion of Bridge Street created by the Bradford Bypass. A bridge across 8th Line would still require out-of-way travel, which this study is looking to reduce, to connect to provincial transportation facilities. Improvements would likely be required on Bathurst Street and Queensville Sideroad. Significant property impact (similar to the Bradford Bypass) would be required for a new corridor connection from 8th Line straight to Highway 404. For more information on the 2002 Approved EA, please see the enclosed linked: https://www.bradfordbypass.ca/wp-content/uploads/2020/09/BBP-RoutePlanningEA-1997.pdf</p> <p>For more information on the assessment of alternative routes, please refer to the response to question #3.</p> <p>The Project Team will continue to carefully consider all impacts to wetland areas and will continue to work with Indigenous communities, environmental agencies, municipalities, and other concerned stakeholders to identify principles and recommendations for mitigating the impacts of placing new or expanded provincial highways within wetland areas. The Bradford Bypass Project will continue to look at opportunities to minimize impacts to these wetlands through engineering refinements.</p> <p>If you have any other questions, please feel free to reach out to the Project Team at your earliest convenience. You can reach the Project Team via email at projectteam@bradfordbypass.ca, toll free at 1-877-247-6036, or by visiting the Project Website at www.bradfordbypass.ca.</p> <p>Sincerely,</p>

CT-DraftEIAR-84	To: Project Team From: [REDACTED]	Email: [REDACTED]	Draft EIAR Comments	June 30, 2023	<p>Good afternoon Bradford Bypass Project team.</p> <p>Attached to this email is our Association's comments with respect to your June 1, 2023 Draft Impact Assessment Report for the proposed Bradford Bypass.</p> <p>Due to the government's refusal to consider reasonable, dramatically less expensive, alternatives to this 8 lane, \$2 - \$4 billion, 16 Km highway, I am providing copies of this email to the Auditor General of Ontario, the provincial opposition parties, the Impact Assessment Agency of Canada, Minister Piccini and Minister Mulroney. Consideration of reasonable alternatives, such as arterial roads and combinations thereof, is a fundamental requirement of the Environmental Assessment Act including the Class EA Study that was in process when the government proclaimed O. Reg 697/21 which extinguished the requirement for that Study. Consideration of these types of reasonable alternatives was specifically excluded from the Terms of Reference of the original 1997 EA Study and thus, to this date, these types of alternative solutions have never been considered.</p> <p>Respectfully submitted.</p> <p>[REDACTED]</p> <hr/> <p>Attachment:</p> <p>Synopsis: This Project does not comply with the Environmental Assessment Act under which it was, and still is, approved.</p>	<p>Hello [REDACTED]</p> <p>Thank you for your interest in the Bradford Bypass Preliminary Design Study and project-specific assessment of environmental impacts, undertaken in accordance with Ontario Regulation 697/21.</p> <p>Please see below the responses to FROGS' questions from June 30, 2023.</p> <p>1. The Project does not comply with the Environmental Assessment Act under which it was, and still is approved.</p> <p>In September 2020, the ministry initiated the Preliminary Design and Class Environmental Assessment Study for the Bradford Bypass based on the 2002 Environmental Assessment approved Technically Preferred Route and alignment and began discussions with municipalities to coordinate projects within the Study Area. On October 7, 2021, Ministry of the Environment, Conservation and Parks announced that Ontario Regulation 697/21 came into force. The new regulation exempts the Bradford Bypass and Early Works components from the Environmental Assessment Act, on the condition that the proponent (the ministry) complies with the assessment process detailed therein. Therefore, the Preliminary Design and project-specific assessment of environmental impacts for the Bradford Bypass is proceeding in accordance with Ontario Regulation 697/21. The decision notice on the Environmental Registry of Ontario (https://ero.ontario.ca/notice/019-1883) provides further information on Ontario Regulation 697/21. Ontario Regulation 697/21 prescribes project-specific requirements for environmental impacts, including consultation requirements.</p> <p>2. EA Act requires proof of Need and Justification for each proposed project, based on a considered for all reasonable alternatives: noncompliance with EA ACT</p> <p>The Environmental Assessment Report that was prepared by McCormick Rankin Corporation, 1997 documented the</p>	No

					<ul style="list-style-type: none"> EA Act requires proof of Need and Justification for each proposed project, based on a consideration of all reasonable alternatives: noncompliance with EA Act, MTO was authorized to only consider controlled access capable corridors for this EA Study (EAS). When EA approval was granted in 2002, "Need" was to protect a controlled access highway corridor for use sometime in the future, once actual need materialized. Noncompliance with EA Act cured by conditions of approval which required a Class EA Study before the province commenced construction of this highway. Class EA Study requires consideration of all reasonable roadway alternatives or combinations thereof. MTO commenced Class EA Study in 2019 but this was stopped by O. Reg. 697/21 long before reasonable alternatives were considered. The Canadian Minister of Environment and Climate Change twice declined requests for a Federal Impact Assessment on the grounds that: <ul style="list-style-type: none"> the regulatory review processes that apply to the Project and related consultations with Indigenous peoples provide a framework to address the potential adverse aforementioned effects and public concerns raised in relation to those effects. [Emphasis added] With the elimination of the Class EA, unless MTO now seriously considers reasonable alternative roadway solutions, for current traffic problems, this highway, which is now likely outside of MTO's mandate to address long distance travel demand will be noncompliant of the EA Act. <p>To address this non compliance we provide the following Recommendations:</p> <p>RECOMMENDATIONS</p> <p>1. Given the dramatic, originally unanticipated,</p>	<p>environmental assessment process for the route selection, right-of-way designation and future commitments for the Highway 400-Highway 404 Link. The original Route Planning Study addressed several transportation needs which were identified in the northern part of York Region and southeastern part of Simcoe County. The identified problems were related to the Ministry's mandate to provide for the safe, efficient movement of people and goods between regions and urban areas.</p> <p>Significant population growth is projected for both Simcoe County and the Regional Municipality of York. Even with all currently planned transportation and transit investments, road congestion will continue to increase across the Greater Golden Horseshoe (GGH) including within the Bradford Bypass Study Area.</p> <p>The purpose of the Bradford Bypass is to relieve congestion on existing local roads between Highway 400 and Highway 404 and provide a northern freeway connection between Highways 400 and 404. Compared to the No Build scenario, the presence of the Bradford Bypass corridor would save approximately 2,500 vehicle-hours of travel time during the AM peak hour and approximately 1,400 vehicle-hours of travel time during the PM peak hour by 2041.</p> <p>3. The Canadian Minister of the Environment and Climate Change twice declined requested for a Federal Impact Assessment on the grounds that: the regulator review processes that that apply to the Project and related consultations with Indigenous peoples provide a framework to address the potential adverse aforementioned effects and public concerns raised in relation to those effects.</p> <p>The Ministry remains committed to fulfilling its legal Duty to Consult requirements and will continue to engage and consult with Indigenous communities and consider their interests in the Preliminary Design of this project, as well as future project stages.</p> <p>The Ministry prepared an Indigenous Consultation Plan in accordance with the Regulation and circulated the plan to</p>

					<p>projected growth surrounding the Bradford Bypass corridor, conduct a fresh travel demand study to determine the quantum and relationship of long distance travel demand versus local travel demand.</p> <p>2. Focus on current day solutions that separate, rather than combine, local with long distance travel.</p> <p>Consider the following combination of arterial roads as a reasonable alternative to the Bradford Bypass to satisfy local travel demand:</p> <p>3. Construct a 4 lane arterial road bridge at the location of the proposed Bradford Bypass Bridge spanning the west branch of the Holland River and adjacent roadways to connect Bradford's 8th Line to Bathurst St.</p> <p>4. Construct a 4 lane arterial road bridge crossing the Holland River immediately south of Cooks Bay to connect Ravenshoe Road to Simcoe Line 13.</p> <p>5. Operate these Arterial Road solutions for at least 5 years to determine their ability to address travel demands in the area between Cooks Bay and Queensville Sideroad. Thereafter, if necessary, conduct fresh long-distance travel demand studies.</p> <p>6. If travel demand warrants a connector highway, consider a study area encompassing the Ravenshoe Road corridor and a further study area south of Newmarket.</p> <p>COMMENTS ON DRAFT IMPACT ASSESSMENT REPORT - Bradford Bypass</p> <p>Salient Facts:</p> <p>The following are the key attributes of the Terms of Reference for the Bradford Bypass Environmental Assessment Study (EAS) and subsequent EA approved project:</p> <ul style="list-style-type: none"> 4 lane, controlled access highway to connect Hwy 400 with proposed extension of Hwy 404 Avoid residential areas and protect agricultural areas, where possible. 	<p>Indigenous communities and the Ministry of Environmental, Conservation, and Parks. The Indigenous Consultation Plan was provided to Indigenous communities that have or may have existing Aboriginal or treaty rights, as recognized and affirmed in Section 35 of the Constitution Act, 1982, that may be impacted by the project, and Indigenous communities that may otherwise be interested in the project.</p> <p>For more information on Indigenous Engagement and Consultation, please refer to section 7.4 of the Updated Draft EIAR.</p> <p>4. The 2002 EA Approved project is now seriously obsolete.</p> <p>The Bradford Bypass project has been assessed in accordance with Ontario Regulation 697/21. Consistent with the Regulation, the Project Team completed an update to the description of environmental conditions previously documented in the 2002 Approved Environmental Assessment (EA) for the project. This update included a review and assessment of the existing traffic conditions which was documented in the Environmental Conditions Report (ECR). The ECR was finalized in October 2022 following a public review period and is available on the Project website.</p> <p>5. Given the dramatic originally unanticipated, projected growth surrounding the Bradford Bypass corridor, conduct a fresh travel demand study to determine the quantum and relationship of long distance travel demand versus local travel demand. Focus on current day solutions that separate, rather than combine, local with long distance travel.</p> <p>Consistent with Ontario Regulation 697/21, the Project Team prepared an Environmental Impact Assessment Report to document the evaluation of alternatives considered for the project, present the Updated Technically Preferred Route (Recommended Plan), and document the environmental impacts, proposed mitigation measures and environmental commitments. The Updated</p>

					<ul style="list-style-type: none"> Resolve travel problems: <ul style="list-style-type: none"> Out-of-the-way travel: Both local and long distance Bradford traffic congestion Hwy 9 discontinuities / Newmarket congestion (Since resolved locally – Green Lane and Davis Drive upgrades) The Minister approved Terms of Reference for the Bradford Bypass Environmental Assessment Study overrode the requirements of the Environmental Assessment Act to consider road alternatives that would not be a controlled access highway. As a result, the Hwy 9 / Green Lane corridor was the only existing roadway that was considered as a reasonable alternative. That roadway was rejected as it was not considered feasible to convert it to a controlled access facility. Consideration of these types of alternatives are, however, a requirement for the EA Act and all Class EA Studies. The Terms of Reference also clearly stated: <i>"the responsibility for intra- municipal transportation is that of the appropriate municipal government, not the Province."</i>¹ [Emphasis added] "Long distance travel, for the purposes of the demand analysis, is considered to include all trips neither originating in or destined to the traffic zones in which the 400 - 404 link is located. All other trips are designated as locally-oriented travel."² [Emphasis added] There was No Travel Demand to prove "Need and Justification" when EA Approval was granted in 2002. Approval was based on government policy to protect a corridor for future forecasted travel need. Reason Alternatives: <ul style="list-style-type: none"> GO train not considered - deemed not feasible. Combinations of Arterial Roads not considered – excluded by EAS Terms of Reference. [Emphasis added] Conditions of EA approval required a Class 	<p>Environmental Impact Assessment Report includes a review and assessment of the existing traffic conditions (Section 2.4.1 and 4.4.1), and is available on the Project Website (https://www.bradfordbypass.ca/study-process/).</p> <p>A traffic microsimulation model was developed in 2020 using the Aimsun Next 20 software package provided by the Ministry to review available information, including a review of historical Annual Average Daily Traffic on Highway 400 for the sections within the Study Area, raw traffic count data provided by the Ministry for Highway 404, and speed and travel time data for Highway 400 and Highway 404. Traffic volumes were balanced after applying growth projections to develop the base year existing conditions volumes. Pre-pandemic traffic volumes were used to represent typical peak hour volumes to avoid reflecting the impact of the COVID-19 pandemic on traffic within the Study Area.</p> <p>For more information, please refer to the response to question 1.</p> <p>6. Consider the following combination of arterial roads as a reasonable alternative to the Bradford Bypass to satisfy local travel demand:</p> <ol style="list-style-type: none"> Construction a 4 lane arterial road bridge at the location of the proposed Bradford Bypass Bridge spanning the west branch of the Holland River and adjacent roadways to connect Bradford's 8th Line to Bathurst St. Construct a 4 lane arterial road bridge crossing the Holland River immediately south of Cooks bay to connect Ravenshoe Road to Simcoe Line 13. Operate these Arterial Road solutions for at least 5 years to determine their ability to address travel demands in the area between Cooks Bay and Queensville Sideroad. 					<p><i>EA Study prior to commencement of construction.</i></p> <ul style="list-style-type: none"> <i>Class EA Study employed to ensure currency of the proposed project in light of current travel demand, previously unforeseen environmental factors, new legislation and a full review of all reasonable alternatives including combinations of regional and local roadways. [Emphasis added]</i> <p>• Major developments since 2002 EA Approval.</p> <ul style="list-style-type: none"> Continually reducing long distance travel demand due to: <ul style="list-style-type: none"> Barrie Go Train – promised 15 minute all-day service coming soon. Work-from-home trend – (now in Federal Public Service contract, currently estimated at 35% of Toronto work force). Environmental protection statutes enacted or enhanced - <ul style="list-style-type: none"> Oak Ridges Moraine Act Greenbelt Act Lake Simcoe Protection Act Places to Grow Act Fisheries Act – S.36(3) – Deleterious substances prohibition Climate change related legislation and Greenhouse gas reduction initiatives Canadian Environmental Protection Act - Canadians have the right to a healthy environment. In response to publishing the planned Bradford Bypass in the Places To Grow Plan, Developers purchased large tracts of land within the vicinity of the approved route. East Gwillimbury and Bradford West Gwillimbury planned population levels are now at least 4 times the projections in the approved 1997 EAS. <p>• MTO's draft Impact Assessment Report –</p>	<p>Ravenshoe Road corridor and a further study area south of Newmarket.</p> <p>The planning process that resulted in the 2002 approved Environmental Assessment (EA) for the Bradford Bypass evaluated alternatives from a broad range of potential solutions to address several transportation problems and to address significant opportunities identified in York Region and Simcoe County. The need for this freeway was confirmed during the Route Planning and EA Study as the only reasonable solution that would make a significant contribution towards addressing the problem as the population in York Region and Simcoe County grows. The 2002 EA approved alignment is technically preferred for a freeway in terms of highway network expansion, ease of construction, relationship to provincial and municipal land use planning and the preferred route is already included in Official and Transportation Master Plans, as well as the Places to Grow Act), as well as having fewer negative impacts to residential and natural areas when compared to other route options considered.</p> <p>The Bradford Corridor was selected as the preferred corridor over Highway 89/Ravenshoe Road as it was beyond the maximum north limit of 10th Line / Boag Road which was assessed in a previous EA study and was determined that a Management Area or river crossing north of this would entail unacceptable environmental impact, which lead to the withdrawal of the Highway 89 EA studies in 1986-87.</p> <p>The Bradford Corridor was selected as the preferred corridor over the southern alternatives as there was no south alternative that met the primary purpose of the study to reduce out-of-way travel. The south limit was established as Highway 88 and Queensville Sideroad.</p> <p>The original purpose of the Bradford Bypass per the 2002 Approved EA was to address the "east-west" long-distance travel demand crossover between Highway 400 and Highway 404 which is a provincial responsibility and distinct from the locally generated trips which use a municipal road to access the provincial network. As noted in the report, the location of the transportation link is related to potential network benefits, with local service being secondary benefit.</p>

					<p>Failings</p> <ul style="list-style-type: none"> Impact Assessment Report does not meet requirements of Canada's Impact Assessment Act or any other Internationally accepted standards. <i>Travel demand focuses on local traffic within the Bradford Boundary – this is not MTO's mandate according to the EAS Terms of Reference. [Emphasis added]</i> <ul style="list-style-type: none"> The following origin and destination locations were reviewed to determine the average travel time savings during the AM and PM peak hours: <ul style="list-style-type: none"> Highway 400 at Simcoe County Road 88 - Highway 404 at Queensville Sideroad Highway 400 at Bradford Bypass - Highway 404 at Bradford Bypass Bradford Centre - East Gwillimbury Centre³ "On average, between the various origin-destination pairs using the Bradford Bypass, drivers in the peak direction during the peak period, would save up to 73% or 33 minutes of travel time when connecting between Highway 400 and Highway 404 compared to existing routes in the No Build scenario."⁴ Because these are all local, rather than long distance trips, the comparison should be against expanded arterial roads such as those recommended in this paper. Comparison of savings versus a No Build scenario is dishonest and contrary to the objects of both the Environmental Assessment Act and any properly performed Impact Assessment Time savings presented in the Draft Impact Assessment Report should be for long distance trips, such as those used in the EAS Proposal shown below. The travel time 	<p>While the town of Bradford owns a closed Road allowance east of Artesian Industrial Parkway for 8th Line to Holland River, Hochreiter Road itself is a private road. This connection would not address the primary purpose of the Bradford Bypass to address provincial responsibilities to connect Highway 400 and Highway 404. The local benefit of this route is likely outweighed by improvement to capacity of Bridge Street. A bridge across 8th Line would still require out-of-way travel, which this study is looking to reduce, to connect to provincial transportation facilities. Improvements are likely required on Bathurst Street and Queensville Sideroad. Significant additional property impact (similar to the Bradford Bypass) would be required for a new corridor connection from 8th Line straight to Highway 404.</p> <p>For more information on the 2002 EA, please see the enclosed linked: https://www.bradfordbypass.ca/wp-content/uploads/2020/09/BBP-RoutePlanningEA-1997.pdf</p> <p>7. The Minister approved Terms of Reference for the Bradford Bypass Environmental Assessment Study overrode the requirements of the Environmental Assessment Act to considered road alternatives that would not be a controlled access highway. As a result, the Hwy 9 / Green Lane corridor was the only existing roadway that was considered as a reasonable alternative. The roadway was rejected as it was not considered feasible to convert it to a controlled access facility. Consideration of these types of alternatives are, however, a requirement of the EA Act and all Class EA Studies.</p> <p>Please see the response to question #6.</p> <p>8. Major developments since 2002 EA Approval.</p> <p>As part of this project, a detailed review and update to the environmental conditions described in the 2002 Approved Environmental Assessment has been undertaken. Descriptions of environmental conditions are provided in the Final Environmental Conditions Report. The purpose of the Final Environmental Conditions Report was to provide an update to the description of environmental conditions from the 2002 Approved Environmental Assessment,</p>

					<p>Area due to encroachment on a residential subdivision on the southern border of the highway right-of-way.</p> <p>b. The project will result in the loss of some lands currently used for agriculture. "There is a potential that the agricultural viability of the remaining farmlands will be limited due to land severances and a consequent reduction in parcel size, potential irregular parcel shapes and access issues. Those impacts are being reviewed with further details on impacts to agriculture provided in Section 5.2.2. See Table 5-15: Potential Impacts to Agricultural Lands and Resources."</p> <p>4. Long Distance Travel Demand (MTO's mandate under this EA approved project) is also expected to be far less significant than originally planned.</p> <p>a. Prior to COVID 19, Metrolinx reported in excess of 3,000 person trips per day from the East Gwillimbury, Bradford and two Barrie Stations. This ridership will grow significantly in the next several years due to planned all day, 2-way, service and the recently announced proposed new station at Innisfil which will service the recently, MZO approved, Orbit Community which has an expected population of up to 150,000 people.</p> <p>b. The work from home movement continues to grow. The Toronto Star recently estimated that 35% of the Toronto workforce now works from home. There is no indication that this trend is temporary. If anything, it is becoming more predominant.</p> <p>RECOMMENDATIONS</p> <p>1. Given the dramatic, originally unanticipated, projected growth surrounding the Bradford Bypass corridor, conduct a fresh travel demand study to determine the quantum</p>	<p>For this project, any potential impacts to agricultural lands will be related to the loss of agricultural land, loss of prime agricultural land, creation of severed parcels, increased fragmentation of the land base on the designated agricultural lands. These potential impacts cannot be avoided. There will also be the potential of impacts on the adjacent agricultural lands and community by virtue of the proposed locations of the interchanges and by the proposed highway lighting.</p> <p>The Updated Technically Preferred Route has taken into consideration the 2002 Approved Environmental Assessment by maintaining parts of the original alignment and employing similar techniques to minimize the corridor footprint and impact the fewest agricultural buildings, investment and agricultural operations, thereby minimizing the potential impacts to the agricultural land base, agricultural operations, and the agricultural system.</p> <p>For more information on the potential impacts and proposed mitigation measures related to agricultural impacts, please refer to Section 5.2.2.2.3 of the Updated Draft EIAR.</p> <p>12. Long Distance Travel Demand is also expected to be far less significant than originally planned.</p> <p>Significant population growth is projected for both Simcoe County and the Regional Municipality of York. Even with all currently planned transportation and transit investments, road congestion will continue to increase across the Greater Golden Horseshoe (GGH) including within the Bradford Bypass Study Area.</p> <p>The purpose of the Bradford Bypass is to relieve congestion on existing local roads between Highway 400 and Highway 404 and provide a northern freeway connection between Highways 400 and 404. Compared to the No Build scenario, the presence of the Bradford Bypass corridor would save approximately 2,500 vehicle-hours of travel time during the AM peak hour and approximately 1,400 vehicle-hours of travel time during the PM peak hour by 2041.</p>

					<p>and relationship of long distance travel demand versus local travel demand.</p> <p>2. Focus on current day solutions that separate, rather than combine, local with long distance travel.</p> <p>Consider the following combination of arterial roads as a reasonable alternative to the Bradford Bypass to satisfy local travel demand:</p> <p>4. Construct a 4 lane arterial road bridge at the location of the proposed Bradford Bypass Bridge spanning the west branch of the Holland River and adjacent roadways to connect Bradford's 8th Line to Bathurst St.</p> <p>5. Construct a 4 lane arterial road bridge crossing the Holland River immediately south of Cooks bay to connect Ravenshoe Road to Simcoe Line 13.</p> <p>6. Operate these Arterial Road solutions for at least 5 years to determine their ability to address travel demands in the area between Cooks Bay and Queensville Sideroad. Thereafter, if necessary, conduct fresh long-distance travel demand studies.</p> <p>7. If travel demand warrants a connector highway, consider a study area encompassing the Ravenshoe Road corridor and a further study area south of Newmarket.</p> <p>Advantages</p> <p>These recommendations have numerous advantages over the proposed Bradford Bypass 8 lane controlled access highway. These advantages include, but are not limited to:</p> <ul style="list-style-type: none"> • Dramatically lower costs • Operational in approximately 1/3 of the time required to construct the Bradford Bypass • Ongoing maintenance will be regional / local responsibility - not MTO responsibility • Less environmentally intrusive due to: <ul style="list-style-type: none"> o Lower speed of arterial road traffic o 4 fewer lanes of highway traffic o Much shorter river crossing at Ravenshoe Road 	<p>Please see the response to question #6.</p> <p>13. These recommendations have numerous advantages over the proposed Bradford Bypass 8 lane controlled access highway</p> <p>1. Dramatically Lower Costs</p> <p>As part of this Preliminary Design study for the Bradford Bypass, the Ministry underwent a Value Engineering study. A Value Engineering study is a systematic, organized method of design investigation led by a facilitator. A multi-disciplinary team investigates, and analyzed the functional requirements of a project, considering current standards and environmental constraints to recommend a design function at the lowest cost (capital, operating, maintenance, societal and environmental). Where appropriate, design recommendations generated through this study were incorporated as part of the proposed design.</p> <p>As we bring this project to market, we want to ensure we can retain the best value for the project. As such, the ministry will not be releasing cost estimates prior to the award of contracts to protect the procurement processes.</p> <p>Please see the response to questions #6.</p> <p>2. Operational in approximately 1/3 of the time required to construct the Bradford Bypass</p> <p>The Bradford Bypass Project has been modelled based on current local, regional, and provincial projections and data.</p> <p>As detailed in Section 4.4 of the Updated Draft EIAR an Aimsun model was created to assess the existing traffic conditions for the road network in the Study Area. To assess future conditions, the model was updated to include all road network and transit improvements planned within the Study Area by regional / municipal authorities, and, forecast traffic volumes based on the projected growth within the Study Area. Modeling results demonstrated that under the No Build (no Bradford Bypass) scenario, local roads were forecasted to exceed capacity by 2031 but saw significant relief under the Build (with Bradford Bypass) scenario.</p>

					<ul style="list-style-type: none"> Significantly improved local traffic congestion many years sooner than with the Bradford Bypass <ul style="list-style-type: none"> Long distance traffic not mixed with local traffic Long distance, out-of-the-way travel, is dramatically reduced by a Ravenshoe Road bridge. The Bradford Bypass will not solve the significant issue of out-of-the-way travel between Barrie / Innisfil and Keswick / Brechin. Connecting Ravenshoe Road to Line 13 is the best "regional mandate" solution for this out-of-the-way travel Traffic on County Rd 4 will be substantially reduced by out-of-the-way component now using Ravenshoe Road link to Hwy 404 Local out-of-the-way travel is eliminated – Queensville Traffic can now reach Bradford without having to travel 4.7Km south on Bathurst then north on Bridge St to reach Bradford Avoids necessity to destroy the Historic Lower Landing Site – Our First Nations will welcome this! The need to protect Lake Simcoe from toxic salt runoff and other contaminants far outweighs any requirement for an 8 lane, controlled access, highway in this highly environmentally sensitive area. If a connecting link between Highways 400 and 404 is still required, it can now, just as easily and more environmentally safely, be built as a 4 lane highway further south between Newmarket and Aurora. An overall win for Ford the government. Faster, better local traffic congestion relief with somewhat reduced environmental impact and significantly less Agricultural impact. Validates Federal Minister of Environment and Climate Change's statement in his decision to decline requests for federal impact assessments thus precluding yet another request for designation: 	<p>3. Ongoing maintenance will be regional / local responsibility</p> <p>Please see the response to questions #6 and #13.2</p> <p>4. Less environmentally intrusive</p> <p>The project includes 15 environmental studies to update and document environmental conditions, identify, and evaluate potential impacts of the project and recommend mitigation measures to reduce potential impacts and meet current environmental legislative requirements. Each study has been summarized in the Updated Draft EIAR, including the recommended mitigation measures and monitoring activities that will be carried forward to the next phase of the project.</p> <p>Please see the response to question #6.</p> <p>5. Significant improved local traffic congestion many years sooner than with the Bradford Bypass</p> <p>As detailed in Section 4.4 of the Updated Draft EIAR, traffic is assessed through modelling to identify Level Of Service (LOS). Having confirmed the model was consistent with current (base) conditions, and therefore appropriate to assess future conditions and design alternatives, the model was used to assess LOS under future 2031 and 2041 conditions.</p> <p>The alternative Build scenarios showed the mainline operations on the Bradford Bypass in 2031 would operate at acceptable LOS D in the interim four lane configuration. By expanding to the ultimate 8 lane configuration (implementing another general purpose lane and an HOV lane in each direction by 2041), LOS on the mainline improves to LOS B or C and accommodates the additional traffic forecast by 2041.</p> <p>Provincial details and policies regarding where growth will occur in the Study Area are detailed in Section 1.5.3 of the Updated Draft EIAR. It must be noted the provincial policies related to growth are high level, framework type tools which do not dictate exactly what will be built where</p>

					<ul style="list-style-type: none"> The Minister has reached the decision that the designation of the Project is unwarranted for the following reasons: <ul style="list-style-type: none"> the regulatory review processes that apply to the Project and related consultations with Indigenous peoples provide a framework to address the potential adverse aforementioned effects and public concerns raised in relation to those effects. These include: provincial approvals and permits pursuant to the Environmental Assessment Act, Endangered Species Act, Environmental Protection Act, Ontario Heritage Act, Ontario Water Resources Act, and Safe Drinking Water Act. <p>Further comments concerning the June 1, 2023, Draft Impact Assessment Report</p> <p>The 577 pages of the report contain a multitude of items deserving comment. Given the short consultation window available, we have collaborated with a number of other associations which also have serious concerns about the appropriateness and integrity of this entire study process. For purposes of this submission, please be advised that we adopt and endorse the submission provided by Rescue Lake Simcoe Coalition and Simcoe County Greenbelt Coalition dated June 30, 2023. Kindly copy us in on your responses to that submission and copy those parties in on your response to this submission.</p> <p>Respectfully Submitted</p>  <p>MTO's Draft Impact Assessment Report – where's the beef?</p>	<p>and details related to where exactly residential, commercial, industrial uses will be built in the Study Area are detailed in the regional and municipal Official Plans. The Project Team has identified the land uses within the Study Area via review of Official Plans prepared by others and field investigations with a summary of the land use provided in Section 2.2.1 of the Updated Draft EIAR.</p> <p>Please see the response to question #6.</p> <p>6. Avoid necessity to destroy the Historic Lower Landing Site.</p> <p>In accordance with the Ministry's cultural heritage conservation process and the Ministry's obligations under the Standards and Guidelines for Conservation of Provincial Heritage Properties, 2010 (S&Gs) issued under section 25.2 of the Ontario Heritage Act (OHA) the Ministry has completed a Cultural Heritage Resource Assessment Report (CHRAR) to identify known and potential built heritage resources and cultural heritage landscapes within the Study Area, assess potential impacts and project alternatives and recommend mitigations and next steps. The cultural heritage resource assessment has informed the analysis of environmental conditions undertaken for this project and recorded in the Environmental Conditions Report and the Environmental Impact Assessment Report.</p> <p>The assessment has identified the Holland River watershed as having potential cultural heritage value or interest (CHVI). As recommended in the Environmental Impact Assessment Report (EIAR) and the CHRAR, a cultural heritage evaluation is being undertaken to determine CHVI for the property. This includes research and evaluation to determine if the property meets criteria in Ontario Regulation 9/06 and/or Ontario Regulation 10/06 of the Ontario Heritage Act to be considered a Provincial Heritage Property or a Provincial Heritage Property of Provincial Significance. Research includes, but is not limited to, review of heritage property databases, field review, archives, museums, planning offices and other facilities, archaeological reports, other relevant reports or studies, information from community engagement including input from Indigenous communities, oral histories etc. to provide the historic context of the</p>

					<p>We are now forced to rely upon an MTO directed and about to be MTO approved Impact Assessment Report.</p> <ul style="list-style-type: none"> While AECOM's name is included in the report their introduction to the Report makes it clear that this report is solely for the use of MTO and no other party is entitled to rely upon the contents of the report. This Draft Impact Assessment Report is a sham. It is nothing like Impact Assessments conducted by the Canada Impact Assessment Agency Basics of Impact Assessments - Canada.ca or the recommendations of the International Association for Impact Assessments: https://www.iaia.org/index.php While O. Reg. 697/21 specifies certain contents of and recipients for this report, it does not provide any guidance with respect to the Environment Assessment principles the report should follow such as those provided by Canada: Practitioner's Guide to the Impact Assessment Act - Canada.ca Furthermore there does not appear to be any other publicly available guidance concerning the preparation of an impact assessment on any other Ontario Government website. Attributes of a proper Impact Assessment Report: none of which are in the MTO Draft Impact Assessment Report include: <ul style="list-style-type: none"> Study is conducted by an independent expert environmental consultant that the public can rely upon Study is focussed on ensuring long term sustainability Study has the benefit of a significant degree of public consultation Study is conducted at the outset to determine if the project is 	<p>property including the history of Indigenous communities and post-contact communities.</p> <p>For properties, including the Holland River Watershed, that are determined by the Ministry to meet the criteria in O. Reg. 9/06 or O. Reg. 10/06 of the Ontario Heritage Act and that may be adversely impacted by the Updated Technically Preferred Route, a Heritage Impact Assessment (HIA) will be prepared to fully assess impacts and propose alternatives and mitigation to conserve the property's CHVI. In accordance with F.5 of the S&Gs, and as committed in Section 5.3.2.2 of the EIAR, if the Ministry determines that a property, including the Holland River Watershed, is a provincial heritage property of provincial significance, the Ministry must obtain the consent of the Minister of Citizenship and Multiculturalism before removing or demolishing buildings or structures on the property, or before transferring the property from provincial control. The Minister of Citizenship and Multiculturalism may not grant consent or may grant consent, with or without conditions, where the Minister is of the opinion that all alternatives to the removal, demolition or the transfer of the property have been considered by the Ministry, including alternatives that would not adversely affect the property, and the best alternative in all the circumstances has been adopted. The Minister, as a condition of consent, may require that such reasonable steps as the Minister may specify be taken to minimize or mitigate adverse effects on the property resulting from the removal, demolition or the transfer of the property.</p> <p>7. The need to protect Lake Simcoe from toxic salt runoff and other contaminants far outweighs any requirements for an 8 lane, controlled access, highway in this highly environmentally sensitive areas. If a connecting link between Highways 400 and 404 is still required, it can now, just as easily and more environmentally safely, be built as a 4 lane highway further south between Newmarket and Aurora.</p> <p>As the project falls within the jurisdiction of the Lake Simcoe Region Conservation Authority (LSRCA), pertaining to Ontario Regulation 179/06, the ministry has assessed impacts with respect to the Lake Simcoe</p>

					<p>audience with consultation restricted to responses to a few questions from the audience at the conclusion of the presentation and follow-up email correspondence from the public that may or may not receive a response.</p> <ul style="list-style-type: none"> Consultation concerning this extremely important Draft Impact Assessment Report is abysmal. The report was issued June 1 2023 (the traditional start of the summer) and available for consultation until June 30, 2023. Furthermore, unlike previous reports, this report is locked to prevent printing or comments making it extremely difficult for the reader to prepare an appropriate consultation response. The report does not address sustainability with respect to the study and any recommendations contained therein. The only references to sustainability appear to be in comments concerning transportation plans produced by local municipalities. The report glosses over Health and Climate Change impacts and related mitigation. The EA act, under which this project was approved, requires that the proponent establish that there is a significant need for their proposed project and that having reviewed all reasonable options, the need for the project clearly outweighs the post mitigation environmental impact of the project. Need and Justification are essentially brushed over in this report. Benefits are not set out in a definitive manner and impacts are not clearly determinable either due to lack of committed mitigation measures with expected residual impacts or, as with the case of public health and several other human focused impacts, no definitive impacts are provided. <p>"The overall impact of the Bradford Bypass is expected to be positive as it</p>	<p>8. An overall win for the Ford government. Faster, better local traffic congestion relief with somewhat reduced environmental impact and significantly less Agricultural impact.</p> <p>Please see the response to questions #6.</p> <p>9. Validates Federal Ministry of Environment and Climate Change's statement in his decision to decline requests for federal impact assessments thus precluding yet another request for designation.</p> <p>The Minister of Environment and Climate Change has considered the potential for the project to cause adverse effects within federal jurisdiction, adverse direct or incidental effects, public concern related to these effects, as well as adverse impacts on the Aboriginal and treaty rights of the Indigenous peoples of Canada. The Minister also considered the analysis of the Impact Assessment Agency of Canada. The Minister of the Environment and Climate Change determined that the Bradford Bypass proposed by the Ministry does not warrant designation under the Impact Assessment Act.</p> <p>14. The Bradford Bypass Draft Impact Assessment Report is not the report of an independent environmental expert that the public can reply upon. It's essentially a report written by AECOM working under MTO's direction.</p> <p>In accordance with Ontario Regulation 697/21, an Environmental Impact Assessment Report is required to be prepared. The purpose of the Environmental Impact Assessment Report is to document the evaluation of alternatives considered for this project, present the Updated Technically Preferred Route, and document the environmental impacts, proposed mitigation measures and environmental commitments.</p> <p>A description of mitigation measures and monitoring activities outlined in the report will be carried forward and updated as project planning progress to subsequent Detail Design phases.</p>

					<ul style="list-style-type: none"> None of the 18 reports referenced in the Draft Impact Assessment Report have been published for review or consultation. MTO policy is relied upon for impacts such as noise – Unless mitigation satisfies 3 MTO criteria, one of which is cost- benefit, no mitigation will be provided. The Draft Impact Assessment Report only identifies two areas where MTO expects to provide noise mitigation. No mention is made of what the impact will be on the numerous other noise receptors that will be ignored. The current information concerning noise seems at variance to the comments contained in the original Ministry of Environment's review of the 1997 EAS as part of their approval process. <p>"Noise: A detailed noise analysis was carried out to determine the proposed effects of noise in the vicinity of the alignment. Noise Sensitive Areas (NSA) were identified as being all single family homes. Noise levels in these areas for 49 homes could increase by more than 5 decibels (dBA). The Ministry of Transportation's Noise Protocol triggers immediate mitigation efforts for noise levels that increase more than 5 dBA. The proponent has identified a noise abatement strategy for those residences that will be affected by noise (Appendix H of the EA)." 4</p> <ul style="list-style-type: none"> Another issue is the mitigation strategy for well contamination. If contamination is found to be MTO's fault, MTO will provide replacement water until the well owner rectifies the problem at the well owner's expense. This is a very strange and unacceptable way for a proponent to mitigate harm they acknowledge they have caused. 	<p>As a result of the public health measures linked to COVID-19 in 2020, 2021 and 2022 that restricted large in-person gatherings, the Project Team has held consultation events virtually by leveraging various platforms.</p> <p>In accordance with Section 26(1) of the Regulation, the Ministry has undertaken engagement and consultation with Indigenous communities and interested persons throughout the project. As required by Section 26(4) of the Regulation, the Final Environmental Impact Assessment Report will include a description of the concerns raised by Indigenous communities and interested persons in the issues resolution process and the outcome of the process.</p> <p>The Ministry is committed to continuing stakeholder and public engagement and consultation beyond the regulatory requirements set out in Ontario Regulation 697/21.</p> <p>16. Consultation concerning this extremely important Draft Impact Assessment Report is abysmal. The report was issued July 1, 2023 and available for consultation until June 30, 2023. Furthermore , unlike previous reports, this report is locked to prevent printing or comments making it extremely difficult for the reader to prepare an appropriate consultation response.</p> <p>The process of planning the Bradford Bypass has included -- and will continue to include -- consultation with the public and Indigenous communities to ensure the project moves forward in an environmentally responsible way that is responsive to the needs and concerns of communities.</p> <p>In accordance with Ontario Regulation 697/21, an initial Draft Environmental Impact Assessment Report (EIAR) -- which documents the results of the studies undertaken for various environmental disciplines, proposed mitigation measures and environmental commitments to protect the environment -- was published for public review starting on June 1, 2023 and continuing until June 30, 2023. In addition, the Ministry has been providing Indigenous communities and stakeholders various opportunities for meaningful consultation since the project was re-initiated in September 2020 including two Public Information Centres.</p>

						<p>Additional archaeological investigations, which are necessary to complete the impact assessment in accordance with regulations, have been finalized and incorporated into an Updated Draft Environmental Impact Assessment Report. This updated report has been posted for an additional 30-day consultation period. The Updated Draft EIAR posting includes the information from the initial draft to ensure stakeholders can review additional information in full context of the project.</p> <p>For any report posted for public comment and feedback, the ministry has been and is happy to provide reports in a specific format upon request from the public or any stakeholders.</p> <p>17. The report does not address sustainability with respect to the study and any recommendations contained therein. The only references to sustainability appear to be in comments concerning transportation plans produced by local municipalities.</p> <p>As detailed in Section 1.5.4, a variety of planning policies have been considered during the course of the project. In terms of regional / municipal policies, it is important to note the Bradford Bypass has been identified in the municipal and regional master plans as a near-term need to accommodate the forecast growth, goods movement and future transit movements forecast within the Study Area and each of the regional / municipal plans.</p> <p>To support the continued growth in traffic and congestion and to support the sustainable transportation goals of the provincial Growth Plan for the Greater Golden Horseshoe, a preliminary site screening assessment for the implementation of carpool lots along the Bradford Bypass corridor was completed in accordance with Ministry Standards and Directives. For more information on Carpool Lots, please refer to the Section 4.2.6 of the Updated Draft EIAR.</p> <p>Please refer to the response to questions #8 and #13.4.</p> <p>18. The report glosses over Health and Climate Change impacts and related mitigations.</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIAR Edits Required? (Yes/No? If yes specify edits)
						<p>The human health implications of the project such as air quality, noise, land use, traffic congestion and safety, economic, social cohesion and neighborhood resources have been summarized in Section 2.2.7 and Section 5.2.7 of the Updated Draft EIAR. As a next step, MTO will continue to consider the human health factors identified in this report and will develop a workplan to evaluate and characterize project-related impacts to health, and provide recommendations to enhance potential positive impacts and mitigate potential negative health impacts.</p> <p>As detailed in Section 2.2.4 and 5.2.4 of the Updated Draft EIAR, the project has undertaken an Air Quality Impact Assessment to explore pollutant emissions and dispersion modelling in an effort to predict the contribution of the project to future ambient pollutant concentrations. This contribution, added to background concentration levels, allows prediction of the cumulative impact of the proposed project and all other contributors to air pollution. Concentration levels are compared to provincial and federal ambient air quality criteria and standards to assist in the evaluation of project-specific mitigation needs and options.</p> <p>Areas of concentrated emission impact are influenced by traffic volumes along a given segment of roadway. The implementation of the Bradford Bypass is expected to redistribute traffic from local roads surrounding the proposed Bradford Bypass to the new corridor and greater freeway network. Reductions in traffic volumes are observed on corridors including Highway 11/1 (Bridge Street), Bathurst Street, Holland Landing Road, Yonge Street, Queensville Sideroad, Doane Road, Mount Albert Road, Green Lane, and Simcoe County Road 88/Holland Street, among other roads. The alleviation of traffic on local roads benefits the area including but not limited to Town of Bradford West Gwillimbury, community of Holland Landing, Town of East Gwillimbury, and northern King Township by alleviating congestion during peak hours.</p> <p>A Qualitative Climate Change Assessment Report has been prepared for this project to address the Ministry of the Environment, Conservation and Parks comments submitted in September 2020 to the Bradford Bypass Project Team. The Qualitative Climate Change Report was</p>

						<p>prepared to outline the qualitative impacts of climate change related to the Preliminary Design of the Bradford Bypass.</p> <p>Potential impact and proposed mitigation measures regarding climate change include:</p> <ul style="list-style-type: none"> - Erection of cooling station, provision of sun-protective outfits, and scheduling the most intensive work package for cooler times - Considering the new wind patterns on the construction equipment, e.g. cranes (wind speed limit to operate a crane) - Enhanced grade of concrete and quality of protective surface coatings and barriers, or the use of stainless steel, or galvanized reinforcement - Use of higher-grade asphalt binders that have higher temperature ranges, and - Installation of windbreaks and wind fences. <p>For more information about Climate Change , please refer to Section 2.2.6 and 5.2.6 of the Updated Draft EIAI.</p> <p>19. The MTO study does not address mitigation commitments or expected results. This is left to the design build contractor once the project contract has been let. Unless required by a permit or license, mitigation decisions will be driven by cost rather than results.</p> <p>In accordance with Ontario Regulation, 697/21, the Updated Draft EIAI documents the results of the various environmental disciplines, proposed mitigation measures and environmental commitments.</p> <p>Section 5 of the Updated Draft EIAI described potential impacts, mitigation measures and monitoring activities to verify the effectiveness of mitigation measures associated with the project for the studies summarized in the report.</p> <p>The commitments and mitigations outlined in the Updated Draft EIAI shall be carried forward to subsequent design phases.</p> <p>20. None of the 18 reports referenced in the Draft Impact Assessment Reports have been published for review or consultation.</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIAR Edits Required? (Yes/No? If yes specify edits)
						<p>In accordance with Ontario Regulation 697/21, the Stormwater Management Plan, Groundwater Protection and Well Monitoring Plan and Noise Impact Assessment Report were made available for review and comment to relevant agencies and municipalities.</p> <p>In accordance with Ontario Regulation 697/21, a Draft EIAR was prepared to document the evaluation of alternatives considered for this project, present the Updated Technically Preferred Route, and document the environmental impacts, proposed mitigation measures and environmental commitments.</p> <p>The Draft and Updated Draft EIAR were made available to the public, technical stakeholders, elected officials, Indigenous communities, and other interested persons for review on the Project Website.</p> <p>21. MTO policy is relied upon for impacts such as noise – Unless mitigation satisfies 3 MTO criteria, one of which is cost-benefit, no mitigation will be provided. The Draft Impact Assessment Report only identifies two areas where MTO expect to provide mitigation. No mention is made of what the impact will be on the numerous other noise receptors will be ignored. The current information concerning noise seems at variance to the comments contained in the original Ministry of Environment's review of the 1997 EAS as part of their approval process.</p> <p>Results of the noise impact assessment indicate that noise mitigation investigation is required for several locations along the proposed Bradford Bypass right-of-way as per the Ministry Guide. Note that there are existing developer-built noise barriers providing noise attenuation in some areas. Noise control investigation has shown that noise barriers are feasible to address noise levels in two areas in accordance with the Ministry's policies and criteria. For more information on noise impacts and mitigation measures, please refer to Section 5.2.3 of the Updated Draft EIAR.</p>

						<p>22. Another issue is the mitigation strategy for well contamination. If contamination is found to be MTO's fault, MTO will provide replacement water until the well owner rectifies the problem at the well owner's expense. This is a very strange and unacceptable way for a proponent to mitigate harm they acknowledged they have caused.</p> <p>If the well issue is confirmed to be a result of the project's activities, the Ministry will provide a letter to the property owner explaining the outcome of the well investigation and detail the recommended mitigation measures (including lowering / replacement of pump inlet, well rehab, new well installed or local watermain connection if available) the Ministry will undertake to remediate the issue. A temporary drinking water supply will be provided and connected to the resident if the project activities are found to be responsible, at the expense of the Ministry, until remediation measures have resolved the issue.</p> <p>If you have any other questions, please feel free to reach out to the Project Team at your earliest convenience. You can reach the Project Team via email at projectteam@bradfordbypass.ca, toll free at 1-877-247-6036, or by visiting the Project Website at www.bradfordbypass.ca.</p> <p>Sincerely,</p> <p>The Bradford Bypass Project Team Email: projectteam@bradfordbypass.ca Toll-Free: 1 (877) 247-6036</p>

CT-DraftEIAR-84 Cont.	To: Project Team From: [REDACTED]	Email: [REDACTED]	Draft EIAR Comments	June 30, 2023	<p>Good afternoon Project Team.</p> <p>Attached are comments of my wife, Karen C Foster and myself with respect to identified likely impacts upon our house and us personally.</p> <p>Thank you.</p> <p>[REDACTED]</p> <hr/> <p>Attachment:</p> <p>We wish to endorse and adopt the submission dated June 30, 2023 of Rescue Lake Simcoe Coalition and Simcoe County Greenbelt Coalition and the submission of the same date from Forbid Roads Over Green Spaces.</p> <p>Having read the entire draft report, as affected homeowners we have the following concerns that, by means of this letter, we wish to bring to your attention:</p> <p>NOISE: We believe we are identified in your study as noise receptor location NSA 12. We are located in a rural, open space environment, with extremely low ambient noise levels. While we appreciate the difficulties MTO may have providing mitigation for outdoors noise, we want to be on record that we are very concerned about noise within our house. Our bedroom is on the second level of our house and overlooks what will, at some time in the future, be an 8 lane, controlled access highway. At the very least, we expect MTO to mitigate noise within our house by upgrading our windows and glass doors to</p>	<p>Hello [REDACTED]</p> <p>Thank you for your interest in the Bradford Bypass Preliminary Design Study and project-specific assessment of environmental impacts, undertaken in accordance with Ontario Regulation 697/21.</p> <p>Please see below the responses to your questions concerning your home from June 30, 2023.</p> <p>1. We believe we are identified in your study as noise receptor location NSA 12. We are located in a rural, open space environment, with extremely low ambient noise levels. While we appreciate the difficulties MTO may have providing mitigation for outdoor noise, we want to be on record that we are very concerned about noise within our house. At the very least, we expect MTO to mitigate noise within our house by upgrading our windows and glass doors to triple glazed, gas filled, low e. glass and such other measures as deemed appropriate.</p> <p>The noise impact assessment indicated that noise control investigation is required at several locations. Section 5.2.3.2 of the Draft Environmental Impact Assessment Report (EIAR) documents the proposed noise impact mitigation measures and monitoring commitments.</p> <p>The ministry considers noise mitigation based on an assessment of noise levels within the outdoor living areas of noise sensitive uses (e.g., backyard of a residence) as well as an evaluation of the mitigation measure for feasibility.</p> <p>One aspect of the evaluation is the administrative feasibility of the mitigation measure, i.e., whether the mitigation can be located on lands within public ownership and within project constraints.</p> <p>The modification of your home's windows and doors is not administratively feasible, and also not in line with the ministry's policy to evaluate noise mitigation for outdoor living areas.</p>	No

					<p>triple glazed, gas filled, low e. glass and such other measures as are deemed appropriate.</p> <p>WE RESPECTFULLY REQUEST AN AECOM CONSULTANT ATTEND AT OUR HOUSE BY AUGUST 31, 2023 TO OBTAIN AND RECORD SUMMER NOISE SAMPLES THAT WILL BE RETAINED BY BOTH OURSELVES AND MTO AS BASE LINE NOISE READINGS FOR OUR PROPERTY / RESIDENCE.</p> <p>WATER WELL: We consider MTO's proposed rectification measures for damage they do to our well as a result of this highway to be totally unacceptable. From our perspective, if MTO breaks it, MTO must fix it at MTO's expense and provide us suitable temporary water until the problem has been properly resolved.</p> <p>VIBRATION: This letter is to put you on notice that our house foundations are very likely susceptible to damage from construction related vibrations. When we built this house over 30 years ago, our contractor dug a 30 inch wide trench less than 18 inches deep for the foundations. At 18 inches, he hit the water table. He then installed rebar throughout the trench and then poured a deeper than code amount of concrete in the trench. The concrete was kept appropriately moist throughout the curing period. Approximately 1 year after we moved into the house, the north west corner of our foundation failed. A portion of the basement wall sitting on it had to be removed, the foundation area dug out, expanded and rebuilt and the basement wall rebuilt. Luckily the design of that portion of the house included a concrete core slab garage floor at the top of the basement wall. This core slab held the upper exterior stone siding thus maintaining the integrity of the upper section of our house over the failed foundation.</p> <p>We have no idea how resilient our foundation will be to any serious levels of reasonably near-by construction but, by means of this letter, want</p>	<p>2. We respectfully request an AECOM consultant attend at our house by August 31, 2023 to obtain and record summer noise samples that will be retained by both ourselves and MTO as base line noise readings for our property/ residence.</p> <p>The noise impact assessment compares the future sound levels with and without the project. Where the no-project scenario has no dominant future noise source, the no-project sound levels are then based on the area's Class as defined in Ministry of Environment, Conservation and Parks (MECP) NPC-300 noise guideline. NSA12 has already been assigned the lowest sound level among the defined Classes, being in a Class 3 (rural) area with an associated no-project sound level of 40 decibels. Field measurements of noise levels would not substantiate the use of a lower no-project sound level.</p> <p>3. We consider MTO's proposed rectification measures for damage they do to our as a result of this highway to be totally unacceptable. From our perspective, if MTO breaks it, MTO must fix it at MTO's expense and provide us suitable temporary water until the problem has been properly resolved.</p> <p>If a well issue is confirmed to be a result of the project's activities, the ministry will provide a letter explaining the outcome of the well investigation and detail the recommended mitigation measures (including lowering / replacement of pump inlet, well rehab, new well installed or local watermain connection if available) to remediate the issue. A temporary drinking water supply will be provided and connected to the resident if the project activities are found to be responsible, at the expense of the ministry, until remediation measures have resolved the issue. Please note this is a Ministry standard practice.</p> <p>4. This letter is to put you on notice that our house foundations are very likely susceptible to damage from construction vibrations. We have no idea how resilient our foundation will be to any serious levels of reasonable near-by construction but, by means of this letter, want to put you on notice of this potential problem.</p>

CT-DraftEIAR-85	To: Project Team From: [REDACTED]	Email: [REDACTED]	Draft EIAR Comments	June 30, 2023	<p>Hello,</p> <p>Thank you for the opportunity to comment on the Draft Environmental Impact Assessment Report. Upon review of the report, the ministry provides the following information to ensure clarity in relation to the drafted <i>Section 2.1.1.2.2. Vegetation and Vegetation Communities</i>, as well as to provide additional guidance to support any potential future wetland boundary delineation contemplated by <i>Table 6-1 Summary of Potential Permits, Licenses, Approval or Authorization Requirements for the Project</i>.</p> <p>The information provided through Land Information Ontario is the province's authoritative source for Provincially Significant Wetland boundaries. Further information collected by the proponent during field investigations can provide valuable information for consideration within the Environmental Assessment, and it is up to the proponent to determine how this information may be applicable, including whether there is any need for further wetland evaluation, re-evaluation or mapping updates. Consider revising Section 2.1.1.2.2 based on this information.</p> <p>Based on changes to Ontario Wetland Evaluation System (OWES) in effect as of January 1, 2023, the process for new wetland evaluations, re-evaluations and mapping updates has changed. Under the updated OWES, MNRF no longer reviews or confirms wetland evaluations.</p> <p>Table 6-1 discussed potential future wetland boundary delineation. Should OWES be utilised for wetland delineation, we provide the following information about the updated process.</p> <p>Trained evaluators can undertake wetland evaluations, re-evaluations and/or mapping updates by following the revised OWES manual. As per the revised manuals, the wetland evaluator must:</p>	<p>Hello [REDACTED]</p> <p>Thank you for your interest in the Bradford Bypass Preliminary Design Study and project-specific assessment of environmental impacts, undertaken in accordance with Ontario Regulation 697/21.</p> <p>Thank you for your comment. The OWES was considered when drafting the Draft Environmental Impact Assessment Report. Information collected during field investigations for the Project will be reviewed to determine whether there is any need for further wetland evaluation, re-evaluation or mapping updates.</p> <p>The Project Team will continue to carefully consider all impacts to wetland areas and will continue to work with Indigenous communities, environmental agencies, municipalities, and other concerned stakeholders to identify principles and recommendations for mitigating the impacts of placing new or expanded provincial highways within wetland areas. The Bradford Bypass Project will continue to look at opportunities to minimize impacts to these wetlands through engineering refinements.</p> <p>If you have any other questions, please feel free to reach out to the Project Team at your earliest convenience. You can reach the Project Team via email at projectteam@bradfordbypass.ca, toll free at 1-877-247-6036, or by visiting the Project Website at www.bradfordbypass.ca.</p> <p>Sincerely,</p> <p>The Bradford Bypass Project Team Email: projectteam@bradfordbypass.ca Toll-Free: 1 (877) 247-6036</p>	No

CT-DraftEIAR-86	To: Project Team From: [REDACTED]	Email: [REDACTED]	Draft EIAR	June 30, 2023	<p>To the project team trying to push through construction of the Bradford Bypass,</p> <p>We have many concerns with this project, the process it is following, and this report is no different. Please answer our questions below.</p> <ol style="list-style-type: none"> Timing and consultation are inadequate. You have provided an un-editable PDF and 30 days for a 576 page report. This follows the pattern of terrible public information and consultation. Will you extend the consultation period? Explain how a provincial highway was transformed into a very expensive regional road variant with five interchanges and two 400 series highway connections, paid for by all Ontario taxpayers. This is inconsistent with the MTO's mandate to provide long distance travel solutions. We maintain that there are better and cheaper, faster to implement, regional road and transit solutions that should be pursued, even if the Bypass does get built. We would like to see the traffic studies in their entirety. An environmental assessment used to be grounded in a demonstration of need and justification. The MTO has provided neither as it pertains to this particular project and at this time. There is no evidence that local traffic solutions MTO purports to be solving (actually a local traffic issue and not MTO's mandate) are best served by this potentially \$4 billion highway. <ol style="list-style-type: none"> Please share the links and the methodology, transparently, so that people can understand what travel time savings MTO is referring to. We have absolutely no idea because your write up is incredibly vague about the start and end of the routes used for analysis. For instance this meaningless babble from pg. 334: <p><small>On average, between the various origin-destination pairs along the Bradford Bypass, drivers in the peak direction during the peak period, would save up to 72% or 35 minutes of travel time when connecting between Highway 403 and Highway 404 compared to existing routes in the No-Build scenario.</small></p>	<p>Hi [REDACTED]</p> <p>Thank you for your interest in the Bradford Bypass Preliminary Design Study and project-specific assessment of environmental impacts, undertaken in accordance with Ontario Regulation 697/21.</p> <ol style="list-style-type: none"> Time and consultation are inadequate. You have provided an un-editable PDF and 30 days for a 576 page report. This follows the pattern of terrible public information and consultation. Will you extend the consultation period? <p>The process of planning the Bradford Bypass has included -- and will continue to include -- consultation with the public and Indigenous communities to ensure the project moves forward in an environmentally responsible way that is responsive to the needs and concerns of communities. In accordance with Ontario Regulation 697/21, an initial Draft Environmental Impact Assessment Report (EIAR) -- which documents the results of the studies undertaken for various environmental disciplines, proposed mitigation measures and environmental commitments to protect the environment -- was published for public review starting on June 1 and continuing until June 30, 2023. In addition, the Ministry has been providing Indigenous communities and stakeholders various opportunities for meaningful consultation since the project was re-initiated in September 2020 including two Public Information Centres.</p> <p>Additional archaeological investigations, which are necessary to complete the impact assessment in accordance with regulations, have recently been finalized and incorporated into an Updated Draft Environmental Impact Assessment Report. This updated report has been posted for an additional 30-day consultation period. The Updated Draft EIAR posting includes the information from the initial draft to ensure stakeholders can review additional information in full context of the project. As the initial Draft EIAR and the Updated Draft were available for public review for a total of 60 days, an extension of the public review period is not being considered at this time.</p> <p>The Updated Draft Environmental Impact Assessment Report was available for review on the Project Website (https://www.bradfordbypass.ca/study-process/) until August 14, 2023.</p>	No

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIAR Edits Required? (Yes/No? If yes specify edits)
					<p>b. What year do your studies indicate that the Bypass will be congested at peak rush hour times?</p> <p>4. The Draft Environmental Impact Assessment report shows on pg. 212 the Bypass touching the southern portion of the Lower Landing (AKA BaGv-42), a significant historical and archaeological site at a significant meander on the East Holland River. MTO has moved the highway 150 m to the south of the technically preferred route, which would have completely run over the Lower Landing (pg 148). The Draft Environmental Conditions Report indicated that a Stage 3 archaeological assessment "was required" (pg 225); the Draft IA report says that the Stage 3 was completed, and that Stage 4 is required. The Project team's website says, <i>"Currently, additional archaeological investigations are being completed to finalize the impact assessments in accordance with Ontario Regulation 697/21 and are not included in this posting. This information will be available for additional public and Indigenous community review once completed."</i> The Draft IA states, "the southern portion of the site ... will be impacted by construction. Stage 4 Archaeological Assessment excavation plans will be submitted to the Ministry of Citizenship and Multiculturalism and Indigenous communities prior to the Stage 4 excavation being conducted," (pg 395).</p> <p>So the archeological work is not finished. And yet the route has been chosen. Property owners near the history-rich Lower Landing that are receiving expropriation notifications. We are staunchly opposed to this violation of this site particularly absent the completed stage 4 archaeological</p>	<p>2. Explain how a provincial highway was transformed into a very expensive regional road variant with five interchanges and two 400 series highway connections, paid for by all Ontario taxpayers. This is inconsistent with the MTO's mandate to provide long distance travel solutions. We maintain that there are better and cheaper, faster to implement, regional road and transit solutions that should be pursued, even if the Bypass does get built.</p> <p>The project is being assessed with consideration of the Ministry's mandate to provide for the safe, efficient movement of people and goods between regions and urban areas. In addition, the Project Team has consulted with local and regional municipalities, and the traffic analysis for the proposed Bradford Bypass has considered the planned local transportation and transit improvements to be implemented by others.</p> <p>The original route planning study (2002 Approved Environmental Assessment – EA) concluded that additional relief from congestion in this Study Area could only be accommodated through the protection and implementation of a provincial right of way.</p> <p>As part of the 2002 Approved EA, the Bradford Bypass evaluated alternatives from a broad range of potential solutions to address several transportation problems and to address significant opportunities identified in York Region and Simcoe County. The need for this freeway was confirmed as the only reasonable solution that would make a significant contribution towards addressing the problem as the population in York Region and Simcoe County grows. The 2002 Approved EA approved alignment is technically preferred for a freeway in terms of highway network expansion, ease of construction, relationship to provincial and municipal land use planning and the preferred route is already included in Official and Transportation Master Plans, as well as the Places to Grow Act), as well as having fewer negative impacts to residential and natural areas when compared to other route options considered.</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIAR Edits Required? (Yes/No? If yes specify edits)
					<p>assessment of the Lower Landing and the endorsement of the First Nations.</p>  <p><i>Bradford Bypass is still too close to the Lower Landing. The Lower Landing is in the area of WC-25 in the image above. This clip of a map shows Provincially significant wetlands (orange); unevaluated wetlands (blue); cold water fish habitat (black) and warm (pink); Original / full map available on pg 55 of Draft IA report.</i></p> <p>a. As stewards of these lands and water for time immemorial, additional time should be given to allow First Nation community members to fully digest the lengthy report. Georgina Island First Nation asked that this site be avoided in 1998, 25 years ago, stating, "It is obvious that there are other routes, which can be used to connect these major highways, and we hope that another will be selected." Is Ontario still ignoring this request?</p> <p>b. Have First Nations been consulted about this part of the plan? Please provide written evidence of their approval of this route.</p> <p>c. It is imperative that the Ontario Government uncover all evidence of burials where the highways are to be built. How this is done must follow affected First Nations' protocols and wishes. These are some thoughts from a non-native resident of the area on the topic:</p> <p>i. These burial sites must be preserved and protected or possibly moved to another location. Identifying registered and unregistered burial sites should be relatively simple for the Ontario Government as the information is readily available from their own ministries, authorities as well as from local governments and churches/cemeteries. While 'registered burial sites' are easy to identify, 'unregistered sites' need to be confirmed and registered as required</p>	<p>For more information on the Analysis and Evaluation of alternatives, refer to Section 2.1.6 of the 2002 Approved EA, which can be found in the enclosed link: https://www.bradfordbypass.ca/wp-content/uploads/2020/09/BBP-RoutePlanningEA-1997.pdf</p> <p>Further to the conclusion of the 2002 Approved EA, as part of this Preliminary Design study, a traffic analysis was completed and the result of the review has confirmed the need of the highway. This analysis included the review of existing traffic conditions and modelling of future forecast traffic conditions and it has been confirmed that updates to regional and municipal roads alone will not address the transportation needs within the Study Area.</p> <p>Additionally, a feasibility assessment was conducted evaluating nine interchange location scenarios to determine the best interchange configuration through the Bradford Bypass corridor. The evaluation was conducted in accordance with satisfying the study objective to improve connectivity of the study area between Highway 400 and Highway 404, facilitating the improvement of traffic operations and movement of goods. Consideration included interchange utilization, overall network delay, out of way travel, environmental considerations and constraints, and preliminary costs. It was determined that interchanges at 10th Sideroad, County Road 4, Bathurst Street, 2nd Concession Road, and Leslie Street would be included as part of the Study.</p> <p>3. We would like to see the traffic studies in their entirety. An environmental assessment used to be grounded in a demonstration of need and justification. The MTO has provided neither as it pertains to this particular project and at this time. There is no evidence that local traffic solutions MTO purports to be solving (actually a local traffic issue and not MTO's mandate) are best served by this potentially \$4 billion highway.</p> <p>The Bradford Bypass project has been assessed in accordance with Ontario Regulation 697/21. Consistent with the Regulation, the Project Team completed an update to the description of environmental conditions previously documented in the 2002 Approved</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIAR Edits Required? (Yes/No? If yes specify edits)
					<p>under Ontario's Funeral, Burial and Cremation Services Act, 2002 while 'Still to be found sites' require sleuthing, historical research and boots on the ground investigation. One of the most extreme requirements that could be requested is for the Ontario Government to perform thorough Ground Penetrating Radar (GPR) surveying of every square foot of the Bradford Bypass. Anomalies called 'targets' would receive special attention via Archaeological digs. Human remains discovered would either be left in place or moved. All work and costs are to be borne by the Ontario government. This solution for 'Still to be found' burial sites is as necessary as the work done and currently being done for the former Residential Schools in Canada.</p> <p>5. Species at Risk</p> <p>a. Table 2-2 lays out the 12 species at risk present or very likely to be present. For instance, Blandings Turtles are likely affected as they are likely in the area. The only commitment we see is to do detailed study later on. This is a good example of study following decision or destruction, and is in violation of standard EA practices. There are no commitments to the protection of species at risk in this document.</p> <p>b. There is a requirement for the Minister of the Department of Fisheries and Oceans to consider, when making certain decisions related to the fish and fish habitat protection (and pollution prevention) provisions of the Act, the Indigenous knowledge of the Indigenous peoples of Canada that has been provided to the Minister (34.1(1) (g) of the Fisheries Act); and,</p> <p>c. Requirement to protect the confidentiality of Indigenous knowledge that is provided to the Minister in confidence, except under limited circumstances (subsection 61.2 (1) of the Fisheries Act)."</p> <p>d. The Draft IA report identifies that the Williams Treaties FN reported American Eel https://www.dfo-mpo.gc.ca/species-especies/publications/sara-lep/eel-</p>	<p>Environmental Assessment (EA) for the project. This update included a review and assessment of the existing traffic conditions which was documented in the Environmental Conditions Report (ECR). The ECR was finalized in October 2022 following a public review period, and is available on the Project website.</p> <p>Significant population growth is projected for both Simcoe County and the Regional Municipality of York. Even with all currently planned transportation and transit investments, road congestion will continue to increase across the Greater Golden Horseshoe (GGH) including within the Bradford Bypass Study Area.</p> <p>The purpose of the Bradford Bypass is to relieve congestion on existing local roads between Highway 400 and Highway 404 and provide a northern freeway connection between Highways 400 and 404. Modeling results demonstrated that under the No Build (no Bradford Bypass) scenario, local roads were forecasted to exceed capacity by 2031 but saw significant relief under the Build (with Bradford Bypass) scenario. Alternative alignments for the Bradford Bypass were then compared within the model, including the 2002 Approved EA alignment and interchange locations and an updated preferred interchange location alternative developed by the Project Team.</p> <p>On average, between the various origin-destination pairs using the Bradford Bypass, drivers in the peak direction during the peak period, would save up to 73% or 33 minutes of travel time when connecting between Highway 400 and Highway 404 compared to existing routes in the No Build scenario.</p> <p>The development of the analysis and key results from the Traffic Study have been summarized in the Draft Environmental Impact Assessment Report and the Updated Draft Environmental Impact Assessment Report (EIAR), which were available for public review and comment from June 1, 2023 to June 30, 2023 and July 14, 2023 to August 14, 2023, respectively. The information in the draft EIAR includes the origin and destination locations that were reviewed to determine the average travel time savings during the AM and PM peak hours. Similar to the process undertaken for MTO preliminary design studies,</p>	

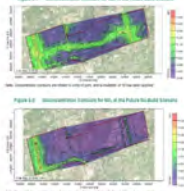

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIAR Edits Required? (Yes/No? If yes specify edits)
					<p>anquille/index-eng.html and Northern Sunfish in the Holland River. This must be further investigated with new fieldwork. The American Eel is in decline and is in the process of being listed for protection Federally.</p> <p>i. What is Ontario going to do to stand by Canada's obligations to First Nations treaty and consultation rights?</p> <p>j. Will the American Eel's presence be investigated with new fieldwork?</p> <p>6. There are many concerns related to surface water and groundwater.</p> <p>a. Please confirm our understanding that there has been no discussion of, and that there are no studies looking at impacts to Lake Simcoe.</p> <p>b. The Groundwater Protection and Well Monitoring plan, which this Draft IA refers to, discusses the need to dewater the site for the building of piles for the elevated bridge sections of the highway. The Draft IA report says, "Construction dewatering activities have been identified as the primary risk to groundwater fed water wells in the Study Area," p 295. There is no credible groundwater protection plan. There are many suggestions for how to keep it clean but there are few to no commitments.</p> <p>c. HOW exactly is the province (MoECP) going to monitor groundwater discharges to ensure they meet Ontario's water quality standards?</p> <p>d. What penalties are contractors going to face for violating the discharge requirements?</p> <p>e. If penalties are not enough to compel adherence, what next?</p> <p>f. How is the public to have confidence that contaminated water will not be discharged to the Holland Rivers and Lake Simcoe?</p> <p>g. Please confirm if monitoring will continue, or not, as this statement is totally vague: "It is expected that each unassessed monitoring well will continue to be monitored and assessed during the subsequent detail design phase of the project" P. 79.</p>	<p>the Traffic Study will be finalized upon study completion and will be available if requested.</p> <p>a. Please share the links and the methodology, transparently, so that people can understand what travel time savings MTO is referring to. We have absolutely no idea because your write up is incredibly vague about the start and end of the routes used for analysis.</p> <p>b. What year do your studies indicate that the Bypass will be congested at peak rush hour times?</p> <p>As detailed in the Draft EIAR (Section 2.4.1), an Aimsun model was created to assess the existing traffic conditions for the road network in the Study Area. The model study area encompasses the Highway 400 corridor from south of Simcoe County Road 88 to north of Highway 89, as well as the Highway 404 corridor from south of Green Lane East to its terminal at Woodbine Avenue (Table 4-3 and 4-4 of the Draft EIAR).</p> <p>The model for this area was developed using pre-pandemic traffic volumes to identify peak hour volumes within the Study Area. This model has been calibrated and validated as it closely resembled actual operating conditions.</p> <p>As detailed in Section 4.4 of the Draft EIAR, traffic is assessed through modelling to identify Level Of Service (LOS). Having confirmed the model was consistent with current (base) conditions, and therefore appropriate to assess future conditions and design alternatives, the model was used to assess LOS under future 2031 and 2041 conditions. To assess future conditions, the model was updated to include all road network and transit improvements planned within the Study Area, and, forecast traffic volumes based on the projected growth within the Study Area.</p> <p>The alternative Build scenarios showed the mainline operations on the Bradford Bypass in 2031 would operate at acceptable LOS D in the interim four lane configuration. The model indicates that by expanding to the ultimate 8 lane configuration (implementing another general purpose</p>

					<p>h. Explain what kind of environmental impact would make this project stop; or is any impact acceptable?</p> <p>i. Please confirm that the only financial support for affected well owners whose water quality is affected by the construction is the province providing them with a temporary water supply until the well owner fixes their well.</p> <p>i.Does this meager bit of help get extended to those who did not provide baseline information about their well water?</p> <p>i.Is there any effort being made to reach more than 12% of respondents to MTO's well water survey?</p> <p>7. How much is this project going to cost?</p> <p>8. When will the Bradford Bypass be completed?</p> <p>9. It is unclear how many lanes are being constructed at which times. Please clarify.</p> <p>10. There is no cumulative health impact assessment to understand how traffic related air pollution, known to increase risks of cancers, leukemia, heart and lung disease, will impact the communities surrounding the route. There is also no mention of the cumulative impacts on our climate from construction and higher rates of car travel on this highway.</p> <p>a. How will you be informing people living along the route about the increased risk of traffic related air pollution and its effects on human health?</p> <p>b. Will you put air quality monitors in Bradford?</p> <p>c. How do you explain the fact that you are NOT monitoring air quality in Bradford, and using the closest site, Newmarket?</p> <p>d. The Final Environmental Conditions Report identified numerous planned residential</p>	<p>lane and an HOV lane in each direction by 2041), LOS on the mainline improves to LOS B or C and accommodates the additional traffic forecast by 2041.</p> <p>For further information about the Traffic Study please refer to the response to Question #3 and Section 4.4 of the Updated Draft EIAR.</p> <p>4. The Draft Environmental Impact Assessment report shows on pg. 212 the Bypass touching the southern portion of the Lower Landing (AKA BaGv-42), a significant historical and archaeological site at a significant meander on the East Holland River. MTO has moved the highway 150 m to the south of the technically preferred route, which would have completely run over the Lower Landing (pg 148). But the Draft IA states," the southern portion of the site ... will be impacted by construction" (pg 395). The Draft Environmental Conditions Report indicated that a Stage 3 archaeological assessment "was required" (pg 225); the Draft IA report says that the Stage 3 was completed, and that Stage 4 is required. The Project team's website says, "Currently, additional archaeological investigations are being completed to finalize the impact assessments in accordance with Ontario Regulation 697/21 and are not included in this posting. This information will be available for additional public and Indigenous community review once completed." So the archeological work is not finished. And yet the route has been chosen. Property owners near the history-rich Lower Landing that are receiving expropriation notifications. We are staunchly opposed to this violation of this site particularly absent the stage 4 evaluation of the Lower Landing and the endorsement of the First Nations.</p> <p>a. As stewards of these lands and water for time immemorial, additional time should be given to allow First Nation community members to fully digest the lengthy report. Georgina Island First Nation asked that this site be avoided in 1998, 25 years ago, stating, "It is</p>

					<p>developments right beside the highway, including a planned new school. Have the land owners / developers / school boards received any information that tells them how bad the air quality is going to be there?</p> <p>11. Traffic modeling to produce the air dispersion model is not robust or transparent. In order to understand traffic related air pollution, relevant vehicle types and assumptions need to be used. The air dispersion modeling report simply indicates that MOVES3 default data was used - but the EPA has emphasized the need to include relevant vehicle type inputs into the model.</p> <p>The air modeling report and supporting reports fail to disclose the % of diesel truck traffic, or the component of that traffic that includes trucks dating from 2006 or earlier which comprise a significant component of air pollution load. The air dispersion modeling report states that the vehicle type distributions were based on MOVES3.0 default database inputs even though there are no such inputs. It also says that the 24 hour traffic distribution was assumed to be equal to the AADT distribution. However the consultant appeared to use different AADT distributions for different scenarios without explanation and the distributions differed significantly as between build and no build scenarios. Mitigation in the form of frequent diesel heavy truck vehicle emission inspections should be included as a mitigation measure to ensure that newer vehicle emissions systems are not being tampered with. The air dispersion modeling report indicates that ethanol based fuels were excluded even though this goes against EPA recommendations for using the model. The report lacks transparency</p>	<p>obvious that there are other routes, which can be used to connect these major highways, and we hope that another will be selected." Is Ontario still ignoring this request.</p> <p>b. Have First Nations be consulted about this part of the plan? Please provide written evidence of their approval of this route.</p> <p>Field investigations for Stage 2 and Stage 3 works have been completed and additional details are included in the Updated Draft Environmental Impact Assessment Report available on the Project Website (https://www.bradfordbypass.ca/study-process/) for public review until August 14, 2023.</p> <p>The required Stage 4 Archaeological Assessment of BaGv-42 will be completed during future phases of work for the project and will be carried out in accordance with the Ministry of Citizenship and Multiculturalism Standards and Guidelines for Consultant Archaeologists (Ontario Government 2011). No ground disturbing activities will occur at this site until the Stage 4 assessment has been conducted.</p> <p>In accordance with Ontario Regulation 697/21, the Project Team completed site specific Stage 3 archaeological assessments for areas within the Study Area that were identified as having archaeological potential in accordance with the Stage 2 archaeological assessments.</p> <p>It is common practice for Stage 4 archaeology work to be completed during Detail Design. Limiting the impact to Stage 4 archaeological sites where feasible is one of the Project Team's main priorities. As a result, the Project Team will determine the exact impact limits to archaeological sites during subsequent design phases of the project. To avoid unnecessary excavation, the Project Team will then undertake the Stage 4 archaeological assessments. Any Stage 4 field work that will be undertaken must engage interested Indigenous communities.</p> <p>As recommended by the cultural heritage resource assessment undertaken by the Project Team, the Holland</p>

					<p>about assumptions made about future vehicle fleet characteristics for both passenger vehicles and heavy trucks.</p> <p>The comparison of build with no-build is not valid because the values in Appendix E of the traffic modeling report show that there was an erroneous assumption that there would be significantly less truck traffic in the build scenario compared to the no-build scenario. There is no valid scientifically-based justification for this. Further, if there is an increase in truck traffic along 404 - as the model predicts - then sensitive receptors along highway 404 need to be included in a health impact study. Instead, impacts on traffic along the 400/404 corridors were excluded and the "air quality study area" was restricted to the bypass corridor itself without any explanation or justification.</p> <p>It is egregious that MTO did not conduct locally relevant air quality monitoring for background in Bradford, River Drive Park, Queensville and along the 404/400 corridors for traffic related air pollutants. Such baseline monitoring is generally inexpensive and could have been easily obtained. Using existing monitors in Innisfil, Newmarket and other distant and irrelevant locations is not justifiable. For the air dispersion modeling, MTO appears to be relying on these distant locations (eg. Egbert) for preparation of the wind rose as well, even though meteorological conditions in the study area may be markedly different. MTO also did not identify numerous recreational and daycare facilities adjacent to the Bradford Bypass corridor which were identified by Simcoe County Greenbelt Coalition, as pictured below.</p>	<p>River watershed was identified as a Cultural Heritage Landscape requiring further research and evaluation to determine if it possesses cultural heritage value or interest. This further assessment will be completed in a Cultural Heritage Evaluation Report (CHER), and if the CHER determines that the Holland River Watershed meets the criteria in Ontario Regulation 9/06 or Ontario Regulation 10/06 of the Ontario Heritage Act, and may be adversely impacted by the Updated Technically Preferred Route, a Heritage Impact Assessment will be prepared to fully assess impacts on the resource's identified heritage attributes and propose alternatives and mitigation to conserve the property's Cultural Heritage Value or Interest. These commitments are included in Section 5.3.2 of the Updated Draft EIAR.</p> <p>Consultation is an integral component of the Preliminary Design stage, the project-specific assessment of environmental impacts process, and for future project phases, and is critical to a project's success. The ministry is actively consulting and engaging with Indigenous communities throughout the Bradford Bypass Project.</p> <p>The Project Team is engaging with and considers input provided by the following Indigenous communities:</p> <ul style="list-style-type: none"> - Alderville First Nation - Beausoleil First Nation - Chippewas of Georgina Island First Nation - Chippewas of Rama First Nation - Curve Lake First Nation - Hiawatha First Nation - Mississaugas of Scugog Island First Nation - Kawartha Nishnawbe First Nation - Georgian Bay Métis Council, and - Huron-Wendat Nation <p>Comments from Indigenous communities are accepted at any time in the study process.</p> <p>5. Table 2-2 lays out the 12 species present or very likely to be present. For instance, Blandings Turtles are likely affected as they are likely in the area. The only commitment we see is to do a detailed study later on. This is a good example of study following decision or destruction, and is in violation of the standard</p>

					 <p>Map created by Adam Ballah, Simcoe County Greenbelt Coalition, based on publicly available information via Bradford Bypass team, plus additional desktop research to find missed critical receptors.</p> <p>The study did not include the cumulative effects of future planned industrial uses along the Bypass corridor and along the 400/404 corridor which may significantly impact people's health along the route. The evaluation did not use 2022 World Health Organization criteria for contaminants which are much lower and more up-to-date than the CAAQS or the AAQCs. We disagree that the AAQCs and CAAQS represent the "lowest concentrations at which an adverse effect may be experienced" as they are not based on up-to-date understandings of the health impacts of air contaminants including pre-term births and neurodevelopmental and other impacts. These are described in the report by the Canadian Association of Physicians for the Environment (April 2022) <i>Mobilizing Evidence</i> report. The Air Quality report predicts significant exceedances for NO₂ and benzo(a)pyrene even with the apparently non-conservative assumptions for diesel truck traffic used in the full build out scenario compared to the no-build scenario. The adverse health impacts of NO₂ exceedances may be extremely severe and will impact on the <i>Charter</i></p>	<p>EA practices. There are no commitments to the protection of species at risk in this document.</p> <p>Targeted surveys for all species at risk with potential to occur in the Study Area will be required during future phases of work. These future studies will inform the need for any permits, authorizations, mitigation or compensation under the Endangered Species Act.</p> <p>The Updated Draft EIAR requires consideration and review of all recommendations throughout the corridor during future phases of work. This approach is necessary and standard practice for planning projects in that design is an iterative approach and this project is only completing design to a preliminary level. During future phases of work, additional design will be completed and may include refinements to the design as details are developed with greater accuracy. Limiting the future design phases by making certain elements of the project non-discretionary at the preliminary design stage limits the potential for future work to explore opportunities for further reducing impacts and / or increasing mitigation and offsetting measures.</p> <p>For Blanding's Turtle specifically, candidate habitat associated with the Holland River and Holland River East Branch open water and wetland communities has been identified within the Study Area. Blanding's Turtle may be impacted while moving in between habitats if these species enter the construction work area.</p> <p>As part of this phase of the project, preliminary mitigation and avoidance measures for the potential impacts to turtles are included in the Draft EIAR and include:</p> <ul style="list-style-type: none"> If stockpiles of gravel and sandy substrates or the removal of these substrates in the vicinity of turtle habitat are required during the active turtle season (April 1 to October 15), turtle exclusion fencing should be installed in accordance with the Reptile and Amphibian Exclusion Fencing Best Management Practices (Ministry of the Environment, Conservation and Parks, 2020) around stockpiles or area of disturbance prior to April 1. Fencing should be installed immediately after stockpiles are created if after April 1. It is recommended that culverts be designed to provide openness ratios that would allow for the

					<p>rights and human rights of residents in the study area and beyond without justification for the need for the project.</p>  <p>Source: Air Quality Impact Assessment Report - AECOM.</p> <p>The Air Quality Impact Assessment concluded that: Impacts from the Future Build Conditions with the new Bradford Bypass on a cumulative basis within the Air Quality Study Area increases in comparison to a No-Build scenario for several contaminants and their respective averaging periods. This is predominately due to increased traffic along the Bradford Bypass, where in a No-Build scenario this traffic is dispersed along Holland Street and Bridget Street and within communities to the south of the Air Quality Study Area (for example, demonstrated in the traffic reporting related to this project). This included significant increases in NO₂, SO₂, PM_{2.5}, Acetaldehyde, Benzo(a)pyrene, and formaldehyde and some increases in CO. Maximum concentrations which are relevant for acute events also show significant increases, for example a 49% increase in SO₂ and more than 50% increases in fine and large particulates, acetaldehyde, formaldehyde etc. for critical receptor number 19 (other receptors' models were not displayed in a comparable manner). The results</p>	<p>passage of small mammal and/or herpetofauna where possible. An openness ratio of 0.4 would permit usage by medium-sized mammals, while the minimum openness ratio to be considered should be 0.25, which would permit usage by reptiles such as turtles (Credit Valley Conservation, 2017).</p> <ul style="list-style-type: none"> Avoid work within areas of candidate turtle overwintering habitat during the turtle overwintering period (October 31 to April 1), whenever possible. <p>These preliminary mitigation measures will be further refined as the project proceeds to Detail Design and impacts are assessed in more detail.</p> <p>For further detail on potential impacts to Species at Risk and proposed mitigation and avoidance measures, please refer to Section 5.1.1 of the Draft Environmental Impact Assessment Report.</p> <p>a. The Draft IA report identifies that the Williams Treaties FN reported American Eel and Northern Sunfish in the Holland River. This must be further investigated with new fieldwork. The American Eel is in decline and gets Federal protection. Ontario's Species at Risk legislation doesn't work anymore so it's all up to the federal enforcement.</p> <p>b. What is Ontario going to do to stand by Canada's obligations to First Nation treaty and consultation rights?</p> <p>c. Will the American Eel's presence be investigated with new field work.</p> <p>It was noted in discussion with William Treaties First Nations on December 1, 2022, that they had observed both American Eel (<i>Anguilla rostrata</i>; Endangered Species Act – Endangered, Species at Risk Act – Not at Risk) and Northern Sunfish (<i>Lepomis peltastes</i>; Endangered Species Act – Special Concern, Species at Risk Act – Special Concern) in the Holland River.</p> <p>Subsequently, the Project Team consulted with the Ministry of the Environment, Conservation and Parks, in</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIAR Edits Required? (Yes/No? If yes specify edits)
					<p>indicated that for NO₂, 1 hour averages 80% of the hours in the future build scenario would have a cumulative concentration above the CAAQS limit of 79 ppm and a 100% of hours would exceed the AAQC for benzo(a)pyrene.</p> <p>In relation to GHGs, the MTO failed to incorporate induced demand in the future build scenario to calculate additional vehicle kilometers traveled that would be induced by the highway, and failed to give a transparent total vehicle assumption, vehicle type assumption including the age of the emissions controls on heavy diesel trucks, or a vehicle emissions factor. In any event the air quality impact assessment predicts that the proposed highway would be a significant contributor to regional GHG emissions even without incorporating the effect of induced demand. No mitigation measures are proposed to address the increase in greenhouse gas emissions from the project which will contribute to catastrophic climate disaster for all of humanity and the planet.</p> <p>12. Many less expensive alternatives to this highway have not been considered. The Minister approved Terms of Reference for the Bradford Bypass Environmental Assessment Study overrode the requirements of the Environmental Assessment act to consider road alternatives that would not be a controlled access highway. As a result, the Hwy 9 / Green Lane corridor was the only existing roadway that was considered as a reasonable alternative. That roadway was rejected as it was not considered feasible to convert it to a controlled access facility. Consideration of these types of</p>	<p>March 2023 and was advised that the Ministry of Environment, Conservation and Parks records have no documented observances of the American Eel or Northern Sunfish in the Study Area. They also noted that the Northern Sunfish is a species of special concern and does not have a permitting status with the Ministry of the Environment, Conservation and Parks, and therefore would not be reported. These discussions with Williams Treaties First Nations and MECP have been documented in the Fish and Fish Habitat Report and Section 2.1.2 of the Updated Draft EIAR.</p> <p>No records of aquatic Species at Risk that are afforded protection under the Species at Risk Act or Endangered Species Act are known to occur in the watercourses where culverts are anticipated to be installed. AECOM ecologists conducted a detailed fish and fish habitat assessment of the water features in the vicinity of the Study Area between September 14-18, 2020, with spring field investigations occurring over multiple days in June 2021. Field investigations were also completed in the spring of 2022 due to changes to the Study Area boundary that required further review for potential fish habitat. Based on these investigations, no Species at Risk were discovered in the Study Area. Regardless, the presence or absence of all aquatic Species at Risk will be re-confirmed in subsequent design phases through additional field investigations.</p> <p>6. Please confirm our understanding that has been no discussion of, and that there are no studies looking at impacts to Lake Simcoe.</p> <p>As the project falls within the jurisdiction of the Lake Simcoe Region Conservation Authority (LSRCA), pertaining to Ontario Regulation 179/06, the ministry has assessed impacts with respect to the <i>Lake Simcoe Protection Act</i> and the Lake Simcoe Protection Plan through consideration of water quality and quantity, stormwater management, groundwater management, landscaping and ecological restoration measures; as well as fluvial geomorphological designs for watercourses, erosion and sediment control and spills prevention and protection measures.</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIAR Edits Required? (Yes/No? If yes specify edits)
					<p>alternatives are, however, a requirement for all Class EA Studies.</p> <p>A major condition of the 2002 Bradford Bypass EA Approval, was a requirement to conduct a Class EA Study at the time MTO wished to proceed with this project. This study would ensure the currency of the proposed project in light of current travel demand, previously unforeseen environmental factors, new legislation and a full review of all reasonable alternatives including combinations of regional and local roadways.</p> <p>The following are reasonable alternatives that would need to be considered both individually and in combination with one or more other reasonable alternatives if the Class EA Study that was underway at the time Regulation 697 /21 was issued had not been terminated. Each of these proposed alternative solutions would then be evaluated against the then approved Bradford Bypass 4 lane controlled access freeway. Because the Class EA Study was canceled by this regulation, the only comparison AECOM have used throughout the Draft Impact Assessment Report is "Do Nothing". Given that the actual travel problem we are now faced with is local, rather than long distance traffic, we are confident one or more of the following reasonable alternatives would be dramatically preferable to the now 8 lane, Bradford Bypass.</p> <p>Alternatives to the Bradford Bypass:</p> <ol style="list-style-type: none"> Construct a 4 lane arterial road bridge over the West Branch of the Holland River at the currently planned location for the Bradford Bypass bridge – together with paved 4 lane roadways to both Bathurst St. and a connection to Bradford's 8th Line. 	<p>a. The Groundwater Protection and Well Monitoring plan, which this Draft IA refers to, discusses the need to dewater the site for the building of piles for elevated bridge sections of the highway. The Draft IA report says, "Construction dewatering activities have been identified as the primary risk to groundwater fed water wells in the Study Area." There is no credible groundwater protection water. There are many suggestions for how to keep it clean but there are few to no commitments.</p> <p>Commitments, preliminary mitigation measures and monitoring activities related to groundwater are documented in Section 5.1.4 of the Draft EIAR, and will be carried forward to subsequent phases of the project.</p> <p>The risk of spills during construction of the project will be primarily limited to petroleum products from machinery (fuels and lubricants). The use of best management practices for handling of hydrocarbons according to the Ministry of Environment, Conservation and Parks and the Technical Standards and Safety Authority of the Ministry of Government Services will reduce the potential of environmental adverse effects associated with petroleum product handling and uses. Spillage of petroleum products must be immediately remediated according to these standards such that groundwater quality is not impacted.</p> <p>Mitigation plans will be generated during future phases of work for the project and for any excavation and structure construction within areas of medium to high significant groundwater recharge areas as shown near the Holland River and Holland River East Branch. Mitigation plans would be specific to each excavation and structure construction and include erosion and sediment control, dewatering treatment and discharge piping away or towards from Significant Groundwater Recharge Areas, or municipal sewer discharge requirements. Dewatering discharge shall be directed away from Well Head Protection areas if excavation and dewatering activities are occurring within them.</p>

					<p>2. Build a 4 lane arterial road bridge over the Holland River from Ravenshoe Road to connect with Simcoe Line 13 or another appropriate east – west arterial road on the west bank of the Holland River.</p> <p>3. Extend and widen Green Lane to 6 lanes and create a diagonal transition from Green Lane to Hwy 9 and highway bridge intersection with Highway 9 around Dufferin St. The Green Lane / Highway 9 option will better serve and reduce both local and long distance traffic from Newmarket south to at least Aurora Sideroad.</p> <p>Any one or a combination of these alternatives will address a substantial amount of local travel problems while being significantly less costly and environmentally invasive.</p> <p>As you can see, there are a lot of questions and concerns surrounding the approach the province is taking. It's too much money to spend on an unjustified project that will have significant environmental impacts!</p> <p>We look forward to hearing back from the project team with answers to our questions.</p> <p>Gord</p>	<p>For more information about the Groundwater Protection and Well Monitoring Plan please refer to Section 5.1.4 of the Updated Draft EIAR.</p> <p>b. How exactly is the province going to monitor groundwater discharges to ensure they meet Ontario's water quality standards?</p> <p>c. What penalties are contractors going to face for violating the discharge requirements?</p> <p>d. If penalties are not enough to compel adherence, what next?</p> <p>e. How is the public to have confidence that contaminated water will not be discharged to the Holland Rivers and Lake Simcoe?</p> <p>f. Please confirm is monitoring will continue or not, as this statement is totally vague: "It is expected that each unassessed monitoring well will continue to be monitored and assessed during the subsequent detail design phase of the project."</p> <p>The Groundwater Monitoring Program includes groundwater level monitoring and groundwater quality monitoring to establish the pre-construction baseline conditions for comparison of data collected during and post-construction.</p> <p>During the Preliminary Design study, Golder Associates Ltd. (Golder) installed monitoring wells during the ongoing geotechnical investigations. Monitoring is expected to be completed within these same monitoring wells during all future phases of work for the Project, including construction. Residential monitoring wells will also be part of this program if they fall within the Radius of Influence of the excavation dewatering and permission to enter is granted to gain access to monitor the well. Detail Design will inform the need for further groundwater investigations. Penalties for discharging any deleterious substance or material to the lands will vary based on the federal, provincial or municipal legislation that might be violated. Beyond legislated penalties, contractor behavior is monitored by the Ministry and poor behavior may result</p>

						<p>in additional financial or reputational impacts. The Ministry's process for selecting contractors to support future phases of the work for the project also includes consideration of past performance and assessment of the contractors understanding of the project and sensitivities within the Study Area. Commitments, preliminary mitigation measures and monitoring activities related to groundwater are documented in Section 5.1.4 of the Draft EIAR, and will be carried forward to subsequent phases of the project.</p> <p>g. Explain what kind of environmental impact would make the project stop; or is any impact acceptable?</p> <p>This government takes environmental protection seriously and is implementing a path forward that will ensure environmental protections are not compromised while building this much needed project quickly and safely. Current work on the Bradford Bypass project will continue to be subject to all conditions under Ontario Regulation 697/21.</p> <p>In accordance with Ontario Regulation 697/21, the Project Team has undertaken several environmental impact assessments to identify and document the potential impacts, proposed mitigation measures, and environmental commitments, which are summarized in the Environmental Impact Assessment Report (EIAR).</p> <p>The Ministry of Transportation must also comply with all current federal and provincial environmental requirements. This includes consultation as set out in the regulation and obtaining permits and approvals for the project prior to the start of construction. Obtaining these permits and approvals, which are mechanisms to help protect the environment, confirms that the ministry has met or surpassed the environmental requirements.</p> <p>h. Please confirm that the only financial support for affected well owners whose water quality is affected by the construction is the province providing them with a temporary water supply until the well owner fixes their well.</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIAR Edits Required? (Yes/No? If yes specify edits)
						<p>i. Does this meager bit of help extend to those who did not provide baseline information about their well water?</p> <p>j. If there any effort being made to reach more than 12% of respondents to MTO's well water survey?</p> <p>MTO will work with owners of water wells who experience issues to determine if the issue is the result of Bradford Bypass project activities.</p> <p>If the well issue is confirmed to be a result of the project's activities, the Ministry will provide a letter to the property owner explaining the outcome of the well investigation and detail the recommended mitigation measures (including lowering / replacement of pump inlet, well rehab, new well installed or local watermain connection if available) the Ministry will undertake to remediate the issue. A temporary drinking water supply will be provided and connected to the resident if the project activities are found to be responsible, at the expense of the Ministry, until remediation measures have resolved the issue.</p> <p>A water well survey was completed for the project to determine the pre-construction assessment of private well supplies in the vicinity of the Study Area noted above. Where no response was provided from Property Owners as part of the water well survey, an additional attempt shall be undertaken during Detail Design to contact these owners via mail, email, phone calls, site visit, etc. This information will be used to provide a baseline for water wells prior to the proposed construction to determine existing water quality and quantity of each property.</p> <p>7. How much is this project going to cost?</p> <p>As we bring this project to market, we want to ensure we can retain the best value for the project. As such, the ministry will not be releasing cost estimates prior to the award of contracts to protect the procurement processes.</p> <p>8. When will the Bradford Bypass be completed?</p> <p>The Preliminary Design phase is anticipated to be completed in 2023. Detail Design and Construction Phases will follow.</p>

						<p>9. It is unclear how many lanes are being constructed at which times. Please clarify.</p> <p>The Ontario government is committed to fully funding the construction of the Bradford Bypass and is following through on its promise to improve and invest in the province's transportation corridors to get people moving within the region, connect people to jobs, make life easier and support a strong economy.</p> <p>A four-lane configuration is planned to be constructed first with two general purpose lanes in each direction. To plan for the future, the Ministry is also considering the design of an ultimate eight-lane design for the Bradford Bypass. The ultimate, eight-lane configuration for the project will feature three general purpose lanes and one HOV lanes in each direction.</p> <p>10. There is no cumulative health impact assessment to understand how traffic related air pollution, known to increase risks of cancers, leukemia, heart and lung disease, will impact the communities surrounding the route. There is also no mention of the cumulative impacts on our climate from construction and higher rates of car travel on this highway.</p> <ol style="list-style-type: none"> How will you be informing people living along the route about the increased risk of traffic related air pollution and its effects on human health? Will you put air quality monitors in Bradford? How do you explain the fact that you are NOT monitoring air quality in Bradford, and using the closest site, Newmarket? The Final Environmental Conditions Report identified numerous planned residential developments right beside the highway, including a planned new school. Have the land owners / developers / school boards received any information that tells them how bad the air quality is going to be there?

						<p>The human health scoping implications of the project such as air quality, noise, land use, traffic congestion and safety, economic, social cohesion, and neighborhood resources have been summarized in Section 2.2.7 and Section 5.2.7 of the Draft EIA. To better understand the human health implications due to the Project as a next step, it is recommended for MTO to continue to consider the human health factors identified in this report and provide recommendations to enhance potential positive impacts and mitigate potential negative health impacts. Specifically, conducting a Screening-Level Human Health Risk Assessment of potential air quality impacts is recommended in order to evaluate and characterize Project-related air quality impacts to health.</p> <p>The project has undertaken an Air Quality Impact Assessment to explore pollutant emissions and dispersion modelling in an effort to predict the contribution of the project to future ambient pollutant concentrations. This contribution, added to background concentration levels, allows prediction of the cumulative impact of the proposed project and all other contributors to air pollution. Concentration levels are compared to provincial and federal ambient air quality criteria and standards to assist in the evaluation of project-specific mitigation needs and options.</p> <p>Areas of concentrated emission impact are influenced by traffic volumes along a given segment of roadway. The implementation of the Bradford Bypass is expected to redistribute traffic from local roads and freeway corridors surrounding the proposed Bradford Bypass. Reductions in traffic volumes are observed on corridors including Highway 11/1 (Bridge Street), Bathurst Street, Holland Landing Road, Yonge Street, Queensville Sideroad, Doane Road, Mount Albert Road, Green Lane, and Simcoe County Road 88/Holland Street, among other roads, which benefits the community of Bradford, Town of Bradford West Gwillimbury, by alleviating congestion during peak hours.</p> <p>The Project Team is currently utilizing the National Air Pollution Surveillance air quality monitoring stations to assess air quality levels. Five years of existing data sets were analyzed from stations within the region, and the complete data set from the closest station or most</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIAR Edits Required? (Yes/No? If yes specify edits)
						<p>representative station for each contaminant of concern was selected to represent the background air quality for the Study Area. Due to the proximity of the Study Area to the Toronto Area, monitoring stations within the City of Toronto were given preference as the one of the most representative locations for the air quality contaminants of concern. As such, Roadside Wallberg – University of Toronto monitoring station, North Downsview monitoring station, Gage Institute monitoring station (all located approximately 38 – 53 km from the Study Area) were used. The nearest monitoring station is in Newmarket. Additional information regarding the assessment of potential air quality impacts have been summarized in Section 2.2.4 and Section 5.2.4 of the Draft EIAR.</p> <p>Land has been designated for the Bradford Bypass since the 2002 Approved EA was completed. As noted above, consultation is an integral component of the Preliminary Design stage and project-specific assessment of environmental impacts and is critical to a project's success. The ministry is actively consulting and engaging with private landowners, developers and school boards within the Study Area. Engagement and consultation has included having a project website and telephone line, having a project contact list for regular project updates, providing notices and correspondence via email, mail, and Ontario Government Notices in local newspapers, hosting public information centres and online events, and holding meetings with Indigenous communities, municipalities, environmental agencies, and stakeholders. More information on the project consultation activities are included in Section 7 of the Updated Draft EIAR.</p> <p>11. Traffic modeling to produce the air dispersion model is not robust or transparent. The air modeling report and supporting reports fail to disclose the % of diesel truck traffic, or the component of that traffic that includes trucks dating from 2006 or earlier which comprise a significant component of air pollution load. The comparison of build with no-build is not valid because the values in Appendix E of the traffic modeling report show that there was an erroneous assumption that there would be significantly less truck traffic in the build scenario compared to the no-build scenario.</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIA Edits Required? (Yes/No? If yes specify edits)
						<p>There is no valid scientifically-based justification for this. Further, if there is an increase in truck traffic along 404 - as the model predicts - then sensitive receptors along highway 404 need to be included in a health impact study. Instead, impacts on traffic along the 400/404 corridors were excluded and the "air quality study area" was restricted to the bypass corridor itself without any explanation or justification. It is egregious that MTO did not conduct locally relevant air quality monitoring for background in Bradford, River Drive Park, Queensville and along the 404/400 corridors for traffic related air pollutants. Such baseline monitoring is generally inexpensive and could have been easily obtained. The study did not include the cumulative effects of future planned industrial uses along the Bypass corridor and along the 400/404 corridor which may significantly impact people's health along the route. The evaluation did not use 2022 World Health Organization criteria for contaminants which are much lower and more up-to-date than the CAAQS or the AAQCs. We disagree that the AAQCs and CAAQS represent the "lowest concentrations at which an adverse effect may be experienced" as they are not based on up-to-date understandings of the health impacts of air contaminants including pre-term births and neurodevelopmental and other impacts. The report predicts significant exceedances for NO₂ and benzo(a)pyrene even with the apparently non-conservative assumptions for diesel truck traffic used in the full build out scenario compared to the no-build scenario. The adverse health impacts of NO₂ exceedances may be extremely severe and will impact on the Charter rights and human rights of residents in the study area and beyond without justification for the need for the project.</p> <p>Study Area, MOVES3 data, vehicles and assumptions: In order to model relevant vehicle types within the Air Quality Impact Assessment Study Area, MOVES3 data was input to the model and refinements were made to exclude fuel types such as ethanol given these fuels are</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIAI Edits Required? (Yes/No? If yes specify edits)
						<p>not readily available for use in Ontario. Fuel inputs utilized in MOVES3.0 modelling at the time of the assessment included: Fuel Type IDs 1, 2, 3 and 9. ID 5 (ethanol) was not included as flex fuel cars and fuelling stations are not readily available in Ontario. The specific source type fractions utilized for various vehicle types applied within the project study area and the related fraction of expected vehicle usage for both passenger-class vehicles and heavy-class vehicles, including the distribution of vehicle types in the heavy truck vehicle category, were combined to create representative vehicle emission for vehicle class that can reasonable be expected to be in use in 2041.</p> <p>Highway 400/404 corridors were included in the Air Quality Impact Assessment. The full air quality study area is shown in Figure 2-9 of the Updated Draft EIAI and demonstrates that the air quality study area included emission sources within the boundary of assessment, including but not limited to Highway 400 (500 m south of Rural Rd. 88 to 500 m north of Concession Rd. 11), Highway 404 (500 m south of Queensville Sideroad E to 500 m north of Boag Road), the entirety of the proposed Bradford Bypass, Bridge Street, Holland Street W, 10th Sideroad, Young Street/Barrie Street, and Queensville Sideroad.</p> <p>Traffic distributions and truck traffic: The same Average Annual Daily Traffic (AADT) were used for all scenarios. AADT values for each air quality emission source vary between the three scenarios evaluated based on projected existing traffic within the study area, and future no-build and build traffic projections however the same 24-hour traffic distribution percentages were applied. Three representative 24-hour distribution percentages were applied to the air quality emission sources. These were applied to a given source of emission depending on the type of road in question, e.g. a "Leslie St." 24-hour distribution was applied to air quality emission sources which were categorized as community arterial roads; a "HWY 400" 24-hour distribution was applied to air quality emission sources categorized as highways; and, a "2nd Concession Rd" 24-hour distribution was applied to rural roads. These same 24-hr distributions were applied to the assigned source for all three scenarios of evaluation (existing conditions, future no-build, and future build).</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIAR Edits Required? (Yes/No? If yes specify edits)
						<p>Fuel usage distribution [i.e. diesel, gasoline, CNG, etc.] and vehicle age distribution within each vehicle type category were modelled based on MOVES3.0 default fuel use and age distribution database inputs assigned to the year of evaluation. Heavy truck traffic was included in the modelling with a percentage assigned to each air quality emission source anticipated from this vehicle type.</p> <p>Health Impacts, Critical Receptors and Background/Study Area Monitoring Data: The human health scoping implications of the project such as air quality, noise, land use, traffic congestion and safety, economic, social cohesion, and neighborhood resources have been summarized in Section 2.2.7 and Section 5.2.7 of the Updated Draft EIAR.</p> <p>The Project Team is aware some critical receptors have been identified as 'missing' by a number of stakeholders. Having reviewed the data, these 'missing' receptors were included as residences in the Air Quality Impact Assessment. Potential impacts at the 'missing' receptors within the Air Quality Impact Assessment Study Area are reflected in the assessment by other, nearby critical receptors and receptors identified on Figure 2-9 and 2-10 of the Updated Draft EIAR.</p> <p>The approach to identifying representative air quality levels is conservative and often ensures the worst-case conditions are reflected so as to not under-represent conditions within a study area; i.e. background air quality contaminant levels included within the assessment may be representative or higher than expected for the area in question.</p> <p>While it is recognized that localized in-situ monitoring may provide more accurate data, use of existing monitoring stations within the NAPS network for statistically relevant background monitoring data is a generally accepted and conservative methodology for provincial environmental impact air quality assessments. Stations selected for the background air quality assessment were chosen based on total data availability over a most recent five-year period as a minimum of 12 months of daily and hourly data is required to ensure statistical relevance. Stations were also selected based on their proximity to the air quality</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIAR Edits Required? (Yes/No? If yes specify edits)
						<p>study area with the meteorological station selected as representative of the air quality study area within 15 km north-west of the air quality study area. Stations must also be a relative representation of similar types of existing sources of air quality emission in the study area and it is notable that the meteorological station selected as representative of air quality in the study area was provided by the MECP in site-specific MET data requested for the project modelling.</p> <p>12. Many less expensive alternatives to this highway have not been considered. The Minister approved Terms of Reference for the Bradford Bypass Environmental Assessment Study overrode the requirements of the Environmental Assessment act to consider road alternatives that would not be a controlled access highway. As a result, the Hwy 9 / Green Lane corridor was the only existing roadway that was considered as a reasonable alternative. That roadway was rejected as it was not considered feasible to convert it to a controlled access facility. Consideration of these types of alternatives are, however, a requirement for all Class EA Studies. A major condition of the 2002 Bradford Bypass EA Approval, was a requirement to conduct a Class EA Study at the time MTO wished to proceed with this project. This study would ensure the currency of the proposed project in light of current travel demand, previously unforeseen environmental factors, new legislation and a full review of all reasonable alternatives including combinations of regional and local roadways. The following are reasonable alternatives that would need to be considered both individually and in combination with one or more other reasonable alternatives if the Class EA Study that was underway at the time Regulation 697 /21 was issued. Each of these proposed alternative solutions would then be evaluated against the then approved Bradford Bypass 4 lane controlled access freeway. Because the Class EA Study was canceled by this regulation, the</p>

						<p>only comparison AECOM have used throughout the Draft Impact Assessment Report is "Do Nothing". Given that the actual travel problem we are now faced with is local, rather than long distance traffic, we are confident one or more of the following reasonable alternatives would be dramatically preferable to the now 8 lane, Bradford Bypass.</p> <p>Alternatives to the Bradford Bypass:</p> <ul style="list-style-type: none"> a Construct a 4 lane arterial road bridge over the West Branch of the Holland River at the currently planned location for the Bradford Bypass bridge – together with paved 4 lane roadways to both Bathurst St. and a connection to Bradford's 8th Line. b Build a 4 lane arterial road bridge over the Holland River from Ravenshoe Road to connect with Simcoe Line 13 or another appropriate east – west arterial road on the west bank of the Holland River. c Extend and widen Green Lane to 6 lanes and create a diagonal transition from Green Lane to Hwy 9 and highway bridge intersection with Highway 9 around Dufferin St. The Green Lane / Highway 9 option will better serve and reduce both local and long distance traffic from Newmarket south to at least Aurora Sideroad. <p>Any one or a combination of these alternatives will address a substantial amount of local travel problems while being significantly less costly and environmentally invasive. Once again, what logic is being used to ignore these options given all of the rationale in favour of these other alternatives?</p> <p>The planning process that resulted in the 2002 approved Environmental Assessment (EA) for the Bradford Bypass evaluated alternatives from a broad range of potential solutions to address several transportation problems and to address significant opportunities identified in York Region and Simcoe County. The need for this freeway was confirmed during the Route Planning and EA Study as</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIAR Edits Required? (Yes/No? If yes specify edits)
						<p>the only reasonable solution that would make a significant contribution towards addressing the problem as the population in York Region and Simcoe County grows. The 2002 EA approved alignment is technically preferred for a freeway in terms of highway network expansion, ease of construction, relationship to provincial and municipal land use planning and the preferred route is already included in Official and Transportation Master Plans, as well as the Places to Grow Act), as well as having fewer negative impacts to residential and natural areas when compared to other route options considered.</p> <p>The Bradford Bypass Project has been modelled based on current local, regional, and provincial projections and data. This addresses the problem of "lack of long-term planning" per the Bradford Bypass 2002 approved EA..</p> <p>The 2002 approved EA reviewed a broad area of analysis which included several corridors, including areas south of the current corridor, and Highway 89/Ravenshoe Road.</p> <p>The Bradford Corridor was selected as the preferred corridor over Highway 89/Ravenshoe Road as it was beyond the maximum north limit of 10th Line / Boag Road which was assessed in a previous EA study and was determined that a Management Area or river crossing north of this would entail unacceptable environmental impact, which lead to the withdrawal of the Highway 89 EA studies in 1986-87.</p> <p>The Bradford Corridor was selected as the preferred corridor over the southern alternatives as there was no south alternative that met the primary purpose of the study to reduce out-of-way travel. The south limit was established as Highway 88 and Queensville Sideroad.</p> <p>The original purpose of the Bradford Bypass per the 2002 Approved EA was to address the "east-west" long-distance travel demand crossover between Highway 400 and Highway 404 which is a provincial responsibility and distinct from the locally generated trips which use a municipal road to access the provincial network. As noted in the report, the overall network benefits from vehicle-hours of travel time savings and vehicle-kilometres of travel distance savings are observed during the 2041 AM peak hour and during the 2041 PM peak hour in the</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIAR Edits Required? (Yes/No? If yes specify edits)
						<p>updated interchange locations. Local roads forecasted to exceed capacity by 2031 and 2041 under the No-Build scenarios see significant relief from traffic as a result of the diversion to the Bradford Bypass in the Build scenarios.</p> <p>While the Town of Bradford West Gwillimbury owns a closed road allowance east of Artesian Industrial Parkway for 8th Line to Holland River, Hochreiter Road itself is a private road. A connection at this location would not address the primary purpose of the Bradford Bypass to connect Highway 400 and Highway 404. The local benefit of this route is likely outweighed by the reduced congestion of Bridge Street created by the Bradford Bypass. A bridge across 8th Line would still require out-of-way travel, which this study is looking to reduce, to connect to provincial transportation facilities. Improvements would likely be required on Bathurst Street and Queensville Sideroad. Significant property impact (similar to the Bradford Bypass) would be required for a new corridor connection from 8th Line straight to Highway 404. For more information on the 2002 Approved EA, please see the enclosed linked: https://www.bradfordbypass.ca/wp-content/uploads/2020/09/BBP-RoutePlanningEA-1997.pdf</p> <p>For more information on the assessment of alternative routes, please refer to the response to question #3.</p> <p>The Project Team will continue to carefully consider all impacts to wetland areas and will continue to work with Indigenous communities, environmental agencies, municipalities, and other concerned stakeholders to identify principles and recommendations for mitigating the impacts of placing new or expanded provincial highways within wetland areas. The Bradford Bypass Project will continue to look at opportunities to minimize impacts to these wetlands through engineering refinements.</p> <p>If you have any other questions, please feel free to reach out to the Project Team at your earliest convenience. You can reach the Project Team via email at projectteam@bradfordbypass.ca, toll free at 1-877-247-6036, or by visiting the Project Website at www.bradfordbypass.ca.</p> <p>Sincerely,</p>

CT-DraftEIAR-87	To: Project Team From: [REDACTED]	Email: [REDACTED]	Draft EIAR Comments	June 30, 2023	<p>I am writing today because I want to express my concern about the Bradford Bypass:</p> <ul style="list-style-type: none"> Removing Greenbelt lands including Provincially Significant Wetlands from the Holland Marsh as well as some of its specialty crop areas. In fact, almost 70% of the land within the study area for this highway is prime agricultural land (class 1-3). Potential habitat destruction for twelve species at risk including the Blanding's turtle without any commitment to protect these species, their habitat or even to reduce damage. A commitment to do a future study is not good enough. Destruction and damage to a significant Indigenous site, the Lower Landing. The report outlines how a portion of this site will be impacted by construction. Georgina Island has been on record since 1998 that they want this site completely protected. This site is more significant than 95% of existing Canadian heritage sites; therefore, this site must be protected in its entirety and First Nations must be properly engaged as per the United Nations Declaration on the Rights of Indigenous People. Impacts to Lake Simcoe which have not been studied at all despite its headwaters in the Holland Marsh Wetland complex will be the receiver of pollutants and salt thanks to the Bypass. Impacts to people's health particularly around air pollution and the contamination of wells and groundwater. Considering that traffic related air pollution is well known to be a contributor to many diseases including cancers, heart disease and respiratory disease, a cumulative health impact study is required. 	<p>Hello [REDACTED]</p> <p>Thank you for your interest in the Bradford Bypass Preliminary Design Study and project-specific assessment of environmental impacts, undertaken in accordance with Ontario Regulation 697/21.</p> <p>1. Removing Greenbelt lands including Provincially Significant Wetlands from the Holland Marsh as well as some of its specialty crop areas. In fact, almost 70% of the land within the study area for this highway is prime agricultural land (class 1-3).</p> <p>As part of the Preliminary Design, the Project Team considered all impacts and will continue to work with environmental agencies, municipalities, and other concerned stakeholders to identify measures to avoid or mitigate the potential impacts of placing new or expanded provincial highways within areas of the existing and enhanced Greenbelt lands.</p> <p>The Greenbelt Plan acknowledges the necessity of building infrastructure. The Plan allows for existing, expanded or new infrastructure in the Greenbelt if the infrastructure serves the significant population growth expected in southern Ontario.</p> <p>Potential impacts to agricultural lands as a result of the Project have been assessed with regards to the loss of agricultural land, loss of prime agricultural land, creation of severed parcels, and increased fragmentation of the land base on the designated agricultural lands. These potential impacts cannot be avoided. There are also potential impacts to adjacent agricultural lands and communities based on the proposed locations of the interchanges and by the proposed highway lighting.</p> <p>The first method of addressing potential impacts is to avoid the potential impact. In this study, the proposed future development of the Bradford Bypass lands will be a permanent use with portions of the Bradford Bypass being located within designated agricultural areas. As a result, there will be designated agricultural lands lost due to the project, which cannot be avoided.</p>	No

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIAR Edits Required? (Yes/No? If yes specify edits)
					<ul style="list-style-type: none"> • Increase in greenhouse gas emissions without a cumulative impact assessment on regional climate. <p>I am requesting that you:</p> <ul style="list-style-type: none"> • Extend the consultation time past 30 days and give at least 120 days for the public, affected municipalities, Indigenous communities and Indigenous governments time to understand and respond to this lengthy report; • Mandate a cumulative health impact assessment that will outline specifically the public health costs of this highway due to air pollution, groundwater contamination and increased greenhouse gas emissions due to induced demand; • Detailed commitments on protection of species at risk and their habitat within the study area; • Commitment to do further field studies about the presence of American Eel and Northern Sunfish - two species that have Indigenous significance and have not been included in your reports; • Commitment to protect the Lower Landing in its entirety from any site alteration; • Detailed study about the impacts this highway will have on Lake Simcoe in particular how it could impact the fisheries as well as the harvesting rights of Indigenous people and their water quality. <p>Sincerely,</p> 	<p>When avoidance is not possible, the next priority is to minimize impacts to the extent feasible. The minimization of impacts may be achieved during the design process and through proactive planning measures that provide for the separation of land uses. The Updated Technically Preferred Route has taken into consideration the 2002 Approved Environmental Assessment by maintaining parts of the original alignment and employing similar techniques to minimize the corridor footprint and impact the fewest agricultural buildings, investment and agricultural operations, thereby minimizing the potential impacts to the agricultural land base, agricultural operations, and the agricultural system.</p> <p>When avoidance techniques and minimizing potential impact to agriculture have not achieved the desired effect the next priority is to mitigate any further impact. Potential mitigation measures may include:</p> <ul style="list-style-type: none"> - The use of salt management plans to reduce the amount of salt require for de-icing - The use of adequate fencing or berms and vegetated features between different land uses to reduce the potential for trespassing and potential vandalism - The use of plantings/vegetation as screens and buffers to reduce visual impacts and sounds - Implementation of surface and/ or groundwater monitoring in areas where agricultural operations make use of surface or groundwater as part of their normal farm practices - Construct or replace agricultural buildings to mitigate the loss of agricultural buildings - Provide new wells or other water access for any potential groundwater disruption <p>It should also be noted that there are opportunities for local agricultural operations with the future development of the Bradford Bypass lands. The future development of the Bradford Bypass lands will bring people closer to the agricultural areas and specialty crop areas, market garden, field vegetable areas which will result in increased potential for expanding sales of local vegetable crops from the farm markets.</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIAR Edits Required? (Yes/No? If yes specify edits)
						<p>Additional details on impacts to agricultural lands and proposed mitigation measures and monitoring activities are included in Section 5.2.2 of the Updated Draft EIAR, available on the Project Website:</p> <p>https://www.bradfordbypass.ca/study-process/</p> <p>2. Potential habitat destruction for twelve species at risk including the Blanding's turtle without any commitment to protect these species, their habitat or even to reduce damage. A commitment to do a future study is not good enough.</p> <p>Targeted surveys for all species at risk with potential to occur in the Study Area will be required during future phases of work. These future studies will inform the need for any permits, authorizations, mitigation or compensation under the Endangered Species Act.</p> <p>The Updated Draft EIAR requires consideration and review of all recommendations throughout the corridor during future phases of work. This approach is necessary and standard practice for planning projects in that design is an iterative approach and this project is only completing design to a preliminary level. During future phases of work, additional design will be completed and may include refinements to the design as details are developed with greater accuracy. Limiting the future design phases by making certain elements of the project non-discretionary at the Preliminary Design stage limits the potential for future work to explore opportunities for further reducing impacts and / or increasing mitigation and offsetting measures.</p> <p>For Blanding's Turtle specifically, candidate habitat associated with the Holland River and Holland River East Branch open water and wetland communities has been identified within the Study Area. Blanding's Turtle may be impacted while moving in between habitats if these species enter the construction work area.</p> <p>As part of this phase of the project, preliminary mitigation and avoidance measures for the potential impacts to turtles are included in the Draft EIAR and include:</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIAR Edits Required? (Yes/No? If yes specify edits)
						<ul style="list-style-type: none"> If stockpiles of gravel and sandy substrates or the removal of these substrates in the vicinity of turtle habitat are required during the active turtle season (April 1 to October 15), turtle exclusion fencing should be installed in accordance with the Reptile and Amphibian Exclusion Fencing Best Management Practices (Ministry of the Environment, Conservation and Parks, 2020) around stockpiles or area of disturbance prior to April 1. Fencing should be installed immediately after stockpiles are created if after April 1. It is recommended that culverts be designed to provide openness ratios that would allow for the passage of small mammal and/or herpetofauna where possible. An openness ratio of 0.4 would permit usage by medium-sized mammals, while the minimum openness ratio to be considered should be 0.25, which would permit usage by reptiles such as turtles (Credit Valley Conservation, 2017). Avoid work within areas of candidate turtle overwintering habitat during the turtle overwintering period (October 31 to April 1), whenever possible. <p>These proposed mitigation measures will be further refined as the project proceeds to Detail Design and impacts are assessed in more detail.</p> <p>For further information on potential impacts to Species at Risk and proposed mitigation and avoidance measures, please refer to Section 5.1.1 of the Draft Environmental Impact Assessment Report.</p> <p>3. Destruction and damage to a significant Indigenous site, the Lower Landing. The report outlines how a portion of this site will be impacted by construction. Georgina Island has been on record since 1998 that they want this site completely protected. This site is more significant than 95% of existing Canadian heritage sites; therefore, this site must be protected in its entirety and First Nations must be properly engaged as per the United Nations Declaration on the Rights of Indigenous People.</p>

						<p>receiver of pollutants and salt thanks to the Bypass.</p> <p>As the project falls within the jurisdiction of the Lake Simcoe Region Conservation Authority (LSRCA), pertaining to Ontario Regulation 179/06, the ministry has assessed impacts with respect to the <i>Lake Simcoe Protection Act</i> and the Lake Simcoe Protection Plan through consideration of water quality and quantity, stormwater management, groundwater management, landscaping and ecological restoration measures; as well as fluvial geomorphological designs for watercourses, erosion and sediment control and spills prevention and protection measures.</p> <p>Appropriate mitigation measures to prevent salt and treated sand from entering watercourses and salt-sensitive areas will be proposed based on various factors including the use of MTO's Salt Management Plan and the Ministry of Environment, Conservation and Parks (MECP) Guidelines on Snow Disposal and De-icing Operations in Ontario. The MTO Salt Management Plan outlines salt management operational practices and strategies and Best Management Practices (BMP) in terms of equipment, best practices, materials, storage, testing, storm response, application rules, snow and ice control trainings, snow removal and disposal, and technology review. This includes implementing a balanced approach to the highway salt application based on the amount of snow precipitation and highway conditions.</p> <p>In areas that are particularly sensitive, salt management measures may be necessary to mitigate environmental effects of road salt in accordance with the study objectives utilizing the Code of Practice for Environmental Management of Road Salts released by Environment Canada. The Code of Practice for Environmental Management of Road Salts can be viewed here: https://www.canada.ca/en/environment-climate-change/services/pollutants/road-salts/code-practice-environmental-management.html.</p> <p>In addition, snow removal and disposal will be utilized in accordance with the MECP Guidelines on Snow Disposal and De-icing Operations in Ontario. Further details on MECP's Guidelines on Snow Disposal and De-icing</p>

						<p>full context of the project. As the initial Draft EIAI and the Updated Draft were available for public review for a total of 60 days, an extension of the public review period is not being considered at this time.</p> <p>8. Mandate a cumulative health impact assessment that will outline specifically the public health costs of this highway due to air pollution, groundwater contamination and increased greenhouse gas emissions due to induced demand</p> <p>As noted in the response to Question #5, the human health implications of the project such as air quality, noise, land use, traffic congestion and safety, economic, social cohesion, and neighborhood resources have been summarized in Section 2.2.7 and Section 5.2.7 of the Draft EIAI and the Project Team will continue to evaluate and characterize project-related air quality impacts to health and provide recommendations to enhance potential positive impacts and mitigate potential negative health impacts.</p> <p>9. Detailed commitments on protection of species at risk and their habitat within the study area</p> <p>As noted above in the response to Question #2, details on Species at Risk and proposed mitigation measures and monitoring commitments are documented in Section 5.1.1 of the Updated Draft EIAI.</p> <p>10. Commitment to do further field studies about the presence of American Eel and Northern Sunfish - two species that have Indigenous significance and have not been included in your reports</p> <p>It was noted in discussion with William Treaties First Nations on December 1, 2022, that they had observed both American Eel (<i>Anguilla rostrata</i>; Endangered Species Act – Endangered, Species at Risk Act – Not at Risk) and Northern Sunfish (<i>Lepomis peltastes</i>; Endangered Species Act – Special Concern, Species at Risk Act – Special Concern) in the Holland River.</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIAR Edits Required? (Yes/No? If yes specify edits)
						<p>Subsequently, the Project Team consulted with the Ministry of the Environment, Conservation and Parks, in March 2023 and was advised that the Ministry of Environment, Conservation and Parks records have no documented observances of the American Eel or Northern Sunfish in the Study Area. They also noted that the Northern Sunfish is a species of special concern and does not have a permitting status with the Ministry of the Environment, Conservation and Parks, and therefore would not be reported. These discussions with Williams Treaties First Nations and MECP have been documented in the Fish and Fish Habitat Report and Section 2.1.2 of the Updated Draft EIAR.</p> <p>No records of aquatic Species at Risk that are afforded protection under the Species at Risk Act or Endangered Species Act are known to occur in the watercourses where culverts are anticipated to be installed. AECOM ecologists conducted a detailed fish and fish habitat assessment of the water features in the vicinity of the Study Area between September 14-18, 2020, with spring field investigations occurring over multiple days in June 2021. Field investigations were also completed in the spring of 2022 due to changes to the Study Area boundary that required further review for potential fish habitat. Based on these investigations, no Species at Risk were discovered in the Study Area. Regardless, the presence or absence of all aquatic Species at Risk will be re-confirmed in subsequent design phases through additional field investigations.</p> <p>11. Commitment to protect the Lower Landing in its entirety from any site alteration</p> <p>In accordance with the Ministry's cultural heritage conservation process and the Ministry's obligations under the Standards and Guidelines for Conservation of Provincial Heritage Properties, 2010 (S&Gs) issued under section 25.2 of the Ontario Heritage Act (OHA) the Ministry has completed a Cultural Heritage Resource Assessment Report (CHRAR) to identify known and potential built heritage resources and cultural heritage landscapes within the Study Area, assess potential impacts and project alternatives and recommend mitigations and next steps. The cultural heritage resource assessment has informed the analysis of environmental conditions undertaken for</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIAR Edits Required? (Yes/No? If yes specify edits)
						<p>this project and recorded in the Environmental Conditions Report and the Environmental Impact Assessment Report.</p> <p>The assessment has identified the Holland River watershed as having potential cultural heritage value or interest (CHVI). As recommended in the Environmental Impact Assessment Report (EIAR) and the CHRAR, a cultural heritage evaluation is being undertaken to determine CHVI for the property. This includes research and evaluation to determine if the property meets criteria in Ontario Regulation 9/06 and/or Ontario Regulation 10/06 of the Ontario Heritage Act to be considered a Provincial Heritage Property or a Provincial Heritage Property of Provincial Significance. Research includes, but is not limited to, review of heritage property databases, field review, archives, museums, planning offices and other facilities, archaeological reports, other relevant reports or studies, information from community engagement including input from Indigenous communities, oral histories etc. to provide the historic context of the property including the history of Indigenous communities and post-contact communities.</p> <p>For properties, including the Holland River Watershed, that are determined by the Ministry to meet the criteria in O. Reg. 9/06 or O. Reg. 10/06 of the Ontario Heritage Act and that may be adversely impacted by the Updated Technically Preferred Route, a Heritage Impact Assessment (HIA) will be prepared to fully assess impacts and propose alternatives and mitigation to conserve the property's CHVI. In accordance with F.5 of the S&Gs, and as committed in Section 5.3.2.2 of the EIAR, if the Ministry determines that a property, including the Holland River Watershed, is a provincial heritage property of provincial significance, the Ministry must obtain the consent of the Minister of Citizenship and Multiculturalism before removing or demolishing buildings or structures on the property, or before transferring the property from provincial control. The Minister of Citizenship and Multiculturalism may not grant consent or may grant consent, with or without conditions, where the Minister is of the opinion that all alternatives to the removal, demolition or the transfer of the property have been considered by the Ministry, including alternatives that would not adversely affect the property, and the best alternative in all the circumstances has been adopted. The Minister, as a condition of consent,</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIAR Edits Required? (Yes/No? If yes specify edits)
						<p>may require that such reasonable steps as the Minister may specify be taken to minimize or mitigate adverse effects on the property resulting from the removal, demolition or the transfer of the property.</p> <p>12. Detailed study about the impacts this highway will have on Lake Simcoe in particular how it could impact the fisheries as well as the harvesting rights of Indigenous people and their water quality.</p> <p>The Ministry has been and will continue to consult with Indigenous communities regarding potential impacts to their Aboriginal and Treaty Rights.</p> <p>The project has been assessed in accordance with the Interim Environmental Guide for Fisheries and the Protocol for Protecting Fish and Fish Habitat on Provincial Transportation Undertakings. Following the completion of the impact assessment, it was determined that many of the potential negative effects of the proposed works could be avoided or mitigated at many locations. However, due to the number and size of some of the required new crossings it is anticipated that not all negative effects could be avoided or mitigated entirely. At this time, it is assumed that a Request for Review will need to be submitted to Fisheries and Oceans Canada during Detail Design prior to construction.</p> <p>For more information on impacts to Lake Simcoe, please refer to the response to Question 4.</p> <p>If you have any other questions, please feel free to reach out to the Project Team at your earliest convenience. You can reach the Project Team via email at projectteam@bradfordbypass.ca, toll free at 1-877-247-6036, or by visiting the Project Website at www.bradfordbypass.ca.</p> <p>Sincerely,</p> <p>The Bradford Bypass Project Team Email: projectteam@bradfordbypass.ca Toll-Free: 1 (877) 247-6036</p>

CT-DraftEIAR-88	To: Project Team From: [REDACTED]	Email: [REDACTED]	Draft EIAR	June 30, 2023	<p>I am writing today because I want to express my concern about the Bradford Bypass:</p> <ul style="list-style-type: none"> Removing Greenbelt lands including Provincially Significant Wetlands from the Holland Marsh as well as some of its specialty crop areas. In fact, almost 70% of the land within the study area for this highway is prime agricultural land (class 1-3). Potential habitat destruction for twelve species at risk including the Blanding's turtle without any commitment to protect these species, their habitat or even to reduce damage. A commitment to do a future study is not good enough. Destruction and damage to a significant Indigenous site, the Lower Landing. The report outlines how a portion of this site will be impacted by construction. Georgina Island has been on record since 1998 that they want this site completely protected. This site is more significant than 95% of existing Canadian heritage sites; therefore, this site must be protected in its entirety and First Nations must be properly engaged as per the United Nations Declaration on the Rights of Indigenous People. Impacts to Lake Simcoe which have not been studied at all despite its headwaters in the Holland Marsh Wetland complex will be the receiver of pollutants and salt thanks to the Bypass. Impacts to people's health particularly around air pollution and the contamination of wells and groundwater. Considering that traffic related air pollution is well known to be a contributor to many diseases including cancers, heart disease and respiratory disease, a cumulative health impact study is required. 	<p>Hello [REDACTED]</p> <p>Thank you for your interest in the Bradford Bypass Preliminary Design Study and project-specific assessment of environmental impacts, undertaken in accordance with Ontario Regulation 697/21.</p> <p>1. Removing Greenbelt lands including Provincially Significant Wetlands from the Holland Marsh as well as some of its specialty crop areas. In fact, almost 70% of the land within the study area for this highway is prime agricultural land (class 1-3).</p> <p>As part of the Preliminary Design, the Project Team considered all impacts and will continue to work with environmental agencies, municipalities, and other concerned stakeholders to identify measures to avoid or mitigate the potential impacts of placing new or expanded provincial highways within areas of the existing and enhanced Greenbelt lands.</p> <p>The Greenbelt Plan acknowledges the necessity of building infrastructure. The Plan allows for existing, expanded or new infrastructure in the Greenbelt if the infrastructure serves the significant population growth expected in southern Ontario.</p> <p>Potential impacts to agricultural lands as a result of the Project have been assessed with regards to the loss of agricultural land, loss of prime agricultural land, creation of severed parcels, and increased fragmentation of the land base on the designated agricultural lands. These potential impacts cannot be avoided. There are also potential impacts to adjacent agricultural lands and communities based on the proposed locations of the interchanges and by the proposed highway lighting.</p> <p>The first method of addressing potential impacts is to avoid the potential impact. In this study, the proposed future development of the Bradford Bypass lands will be a permanent use with portions of the Bradford Bypass being located within designated agricultural areas. As a result, there will be designated agricultural lands lost due to the project, which cannot be avoided.</p>	No.

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIAR Edits Required? (Yes/No? If yes specify edits)
					<ul style="list-style-type: none"> Increase in greenhouse gas emissions without a cumulative impact assessment on regional climate. <p>I am requesting that you:</p> <ul style="list-style-type: none"> Extend the consultation time past 30 days and give at least 120 days for the public, affected municipalities, Indigenous communities and Indigenous governments time to understand and respond to this lengthy report; Mandate a cumulative health impact assessment that will outline specifically the public health costs of this highway due to air pollution, groundwater contamination and increased greenhouse gas emissions due to induced demand; Detailed commitments on protection of species at risk and their habitat within the study area; Commitment to do further field studies about the presence of American Eel and Northern Sunfish - two species that have Indigenous significance and have not been included in your reports; Commitment to protect the Lower Landing in its entirety from any site alteration; Detailed study about the impacts this highway will have on Lake Simcoe in particular how it could impact the fisheries as well as the harvesting rights of Indigenous people and their water quality. <p>Sincerely, </p>	<p>When avoidance is not possible, the next priority is to minimize impacts to the extent feasible. The minimization of impacts may be achieved during the design process and through proactive planning measures that provide for the separation of land uses. The Updated Technically Preferred Route has taken into consideration the 2002 Approved Environmental Assessment by maintaining parts of the original alignment and employing similar techniques to minimize the corridor footprint and impact the fewest agricultural buildings, investment and agricultural operations, thereby minimizing the potential impacts to the agricultural land base, agricultural operations, and the agricultural system.</p> <p>When avoidance techniques and minimizing potential impact to agriculture have not achieved the desired effect the next priority is to mitigate any further impact. Potential mitigation measures may include:</p> <ul style="list-style-type: none"> The use of salt management plans to reduce the amount of salt require for de-icing The use of adequate fencing or berms and vegetated features between different land uses to reduce the potential for trespassing and potential vandalism The use of plantings/vegetation as screens and buffers to reduce visual impacts and sounds Implementation of surface and/ or groundwater monitoring in areas where agricultural operations make use of surface or groundwater as part of their normal farm practices Construct or replace agricultural buildings to mitigate the loss of agricultural buildings Provide new wells or other water access for any potential groundwater disruption <p>It should also be noted that there are opportunities for local agricultural operations with the future development of the Bradford Bypass lands. The future development of the Bradford Bypass lands will bring people closer to the agricultural areas and specialty crop areas, market garden, field vegetable areas which will result in increased potential for expanding sales of local vegetable crops from the farm markets.</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIA Edits Required? (Yes/No? If yes specify edits)
						<p>Additional details on impacts to agricultural lands and proposed mitigation measures and monitoring activities are included in Section 5.2.2 of the Updated Draft EIA, available on the Project Website:</p> <p>https://www.bradfordbypass.ca/study-process/</p> <p>2. Potential habitat destruction for twelve species at risk including the Blanding's turtle without any commitment to protect these species, their habitat or even to reduce damage. A commitment to do a future study is not good enough.</p> <p>Targeted surveys for all species at risk with potential to occur in the Study Area will be required during future phases of work. These future studies will inform the need for any permits, authorizations, mitigation or compensation under the Endangered Species Act.</p> <p>The Updated Draft EIA requires consideration and review of all recommendations throughout the corridor during future phases of work. This approach is necessary and standard practice for planning projects in that design is an iterative approach and this project is only completing design to a preliminary level. During future phases of work, additional design will be completed and may include refinements to the design as details are developed with greater accuracy. Limiting the future design phases by making certain elements of the project non-discretionary at the Preliminary Design stage limits the potential for future work to explore opportunities for further reducing impacts and / or increasing mitigation and offsetting measures.</p> <p>For Blanding's Turtle specifically, candidate habitat associated with the Holland River and Holland River East Branch open water and wetland communities has been identified within the Study Area. Blanding's Turtle may be impacted while moving in between habitats if these species enter the construction work area.</p> <p>As part of this phase of the project, preliminary mitigation and avoidance measures for the potential impacts to turtles are included in the Draft EIA and include:</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIAR Edits Required? (Yes/No? If yes specify edits)
						<ul style="list-style-type: none"> • If stockpiles of gravel and sandy substrates or the removal of these substrates in the vicinity of turtle habitat are required during the active turtle season (April 1 to October 15), turtle exclusion fencing should be installed in accordance with the Reptile and Amphibian Exclusion Fencing Best Management Practices (Ministry of the Environment, Conservation and Parks, 2020) around stockpiles or area of disturbance prior to April 1. Fencing should be installed immediately after stockpiles are created if after April 1. • It is recommended that culverts be designed to provide openness ratios that would allow for the passage of small mammal and/or herpetofauna where possible. An openness ratio of 0.4 would permit usage by medium-sized mammals, while the minimum openness ratio to be considered should be 0.25, which would permit usage by reptiles such as turtles (Credit Valley Conservation, 2017). • Avoid work within areas of candidate turtle overwintering habitat during the turtle overwintering period (October 31 to April 1), whenever possible. <p>These proposed mitigation measures will be further refined as the project proceeds to Detail Design and impacts are assessed in more detail.</p> <p>For further information on potential impacts to Species at Risk and proposed mitigation and avoidance measures, please refer to Section 5.1.1 of the Draft Environmental Impact Assessment Report.</p> <p>3. Destruction and damage to a significant Indigenous site, the Lower Landing. The report outlines how a portion of this site will be impacted by construction. Georgina Island has been on record since 1998 that they want this site completely protected. This site is more significant than 95% of existing Canadian heritage sites; therefore, this site must be protected in its entirety and First Nations must be properly engaged as per the United Nations Declaration on the Rights of Indigenous People.</p>

						<p>60 days, an extension of the public review period is not being considered at this time.</p> <p>8. Mandate a cumulative health impact assessment that will outline specifically the public health costs of this highway due to air pollution, groundwater contamination and increased greenhouse gas emissions due to induced demand</p> <p>As noted in the response to Question #5, the human health implications of the project such as air quality, noise, land use, traffic congestion and safety, economic, social cohesion, and neighborhood resources have been summarized in Section 2.2.7 and Section 5.2.7 of the Draft EIAI and the Project Team will continue to evaluate and characterize project-related air quality impacts to health and provide recommendations to enhance potential positive impacts and mitigate potential negative health impacts.</p> <p>9. Detailed commitments on protection of species at risk and their habitat within the study area</p> <p>As noted above in the response to Question #2, details on Species at Risk and proposed mitigation measures and monitoring commitments are documented in Section 5.1.1 of the Updated Draft EIAI.</p> <p>10. Commitment to do further field studies about the presence of American Eel and Northern Sunfish - two species that have Indigenous significance and have not been included in your reports</p> <p>It was noted in discussion with William Treaties First Nations on December 1, 2022, that they had observed both American Eel (<i>Anguilla rostrata</i>; Endangered Species Act – Endangered, Species at Risk Act – Not at Risk) and Northern Sunfish (<i>Lepomis peltastes</i>; Endangered Species Act – Special Concern, Species at Risk Act – Special Concern) in the Holland River.</p> <p>Subsequently, the Project Team consulted with the Ministry of the Environment, Conservation and Parks, in March 2023 and was advised that the Ministry of</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIAR Edits Required? (Yes/No? If yes specify edits)
						<p>Environment, Conservation and Parks records have no documented observances of the American Eel or Northern Sunfish in the Study Area. They also noted that the Northern Sunfish is a species of special concern and does not have a permitting status with the Ministry of the Environment, Conservation and Parks, and therefore would not be reported. These discussions with Williams Treaties First Nations and MECP have been documented in the Fish and Fish Habitat Report and Section 2.1.2 of the Updated Draft EIAR.</p> <p>No records of aquatic Species at Risk that are afforded protection under the Species at Risk Act or Endangered Species Act are known to occur in the watercourses where culverts are anticipated to be installed. AECOM ecologists conducted a detailed fish and fish habitat assessment of the water features in the vicinity of the Study Area between September 14-18, 2020, with spring field investigations occurring over multiple days in June 2021. Field investigations were also completed in the spring of 2022 due to changes to the Study Area boundary that required further review for potential fish habitat. Based on these investigations, no Species at Risk were discovered in the Study Area. Regardless, the presence or absence of all aquatic Species at Risk will be re-confirmed in subsequent design phases through additional field investigations.</p> <p>11. Commitment to protect the Lower Landing in its entirety from any site alteration</p> <p>In accordance with the Ministry's cultural heritage conservation process and the Ministry's obligations under the Standards and Guidelines for Conservation of Provincial Heritage Properties, 2010 (S&Gs) issued under section 25.2 of the Ontario Heritage Act (OHA) the Ministry has completed a Cultural Heritage Resource Assessment Report (CHRAR) to identify known and potential built heritage resources and cultural heritage landscapes within the Study Area, assess potential impacts and project alternatives and recommend mitigations and next steps. The cultural heritage resource assessment has informed the analysis of environmental conditions undertaken for this project and recorded in the Environmental Conditions Report and the Environmental Impact Assessment Report.</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIAR Edits Required? (Yes/No? If yes specify edits)
						<p>The assessment has identified the Holland River watershed as having potential cultural heritage value or Interest (CHVI). As recommended in the Environmental Impact Assessment Report (EIAR) and the CHRAR, a cultural heritage evaluation is being undertaken to determine CHVI for the property. This includes research and evaluation to determine if the property meets criteria in Ontario Regulation 9/06 and/or Ontario Regulation 10/06 of the Ontario Heritage Act to be considered a Provincial Heritage Property or a Provincial Heritage Property of Provincial Significance. Research includes, but is not limited to, review of heritage property databases, field review, archives, museums, planning offices and other facilities, archaeological reports, other relevant reports or studies, information from community engagement including input from Indigenous communities, oral histories etc. to provide the historic context of the property including the history of Indigenous communities and post-contact communities.</p> <p>For properties, including the Holland River Watershed, that are determined by the Ministry to meet the criteria in O. Reg. 9/06 or O. Reg. 10/06 of the Ontario Heritage Act and that may be adversely impacted by the Updated Technically Preferred Route, a Heritage Impact Assessment (HIA) will be prepared to fully assess impacts and propose alternatives and mitigation to conserve the property's CHVI. In accordance with F.5 of the S&Gs, and as committed in Section 5.3.2.2 of the EIAR, if the Ministry determines that a property, including the Holland River Watershed, is a provincial heritage property of provincial significance, the Ministry must obtain the consent of the Minister of Citizenship and Multiculturalism before removing or demolishing buildings or structures on the property, or before transferring the property from provincial control. The Minister of Citizenship and Multiculturalism may not grant consent or may grant consent, with or without conditions, where the Minister is of the opinion that all alternatives to the removal, demolition or the transfer of the property have been considered by the Ministry, including alternatives that would not adversely affect the property, and the best alternative in all the circumstances has been adopted. The Minister, as a condition of consent, may require that such reasonable steps as the Minister may specify be taken to minimize or mitigate adverse</p>

CT-DraftEIAR-89	To: Project Team From: [REDACTED]	Email: [REDACTED]	Draft EIAR	June 30, 2023	<p>I am writing today because I want to express my concern about the Bradford Bypass:</p> <ul style="list-style-type: none"> Removing Greenbelt lands including Provincially Significant Wetlands from the Holland Marsh as well as some of its specialty crop areas. In fact, almost 70% of the land within the study area for this highway is prime agricultural land (class 1-3). Potential habitat destruction for twelve species at risk including the Blanding's turtle without any commitment to protect these species, their habitat or even to reduce damage. A commitment to do a future study is not good enough. Destruction and damage to a significant Indigenous site, the Lower Landing. The report outlines how a portion of this site will be impacted by construction. Georgina Island has been on record since 1998 that they want this site completely protected. This site is more significant than 95% of existing Canadian heritage sites; therefore, this site must be protected in its entirety and First Nations must be properly engaged as per the United Nations Declaration on the Rights of Indigenous People. Impacts to Lake Simcoe which have not been studied at all despite its headwaters in the Holland Marsh Wetland complex will be the receiver of pollutants and salt thanks to the Bypass. Impacts to people's health particularly around air pollution and the contamination of wells and groundwater. Considering that traffic related air pollution is well known to be a contributor to many diseases including cancers, heart disease and respiratory disease, a cumulative health impact study is required. 	<p>Hello [REDACTED]</p> <p>Thank you for your interest in the Bradford Bypass Preliminary Design Study and project-specific assessment of environmental impacts, undertaken in accordance with Ontario Regulation 697/21.</p> <p>1. Removing Greenbelt lands including Provincially Significant Wetlands from the Holland Marsh as well as some of its specialty crop areas. In fact, almost 70% of the land within the study area for this highway is prime agricultural land (class 1-3).</p> <p>As part of the Preliminary Design, the Project Team considered all impacts and will continue to work with environmental agencies, municipalities, and other concerned stakeholders to identify measures to avoid or mitigate the potential impacts of placing new or expanded provincial highways within areas of the existing and enhanced Greenbelt lands.</p> <p>The Greenbelt Plan acknowledges the necessity of building infrastructure. The Plan allows for existing, expanded or new infrastructure in the Greenbelt if the infrastructure serves the significant population growth expected in southern Ontario.</p> <p>Potential impacts to agricultural lands as a result of the Project have been assessed with regards to the loss of agricultural land, loss of prime agricultural land, creation of severed parcels, and increased fragmentation of the land base on the designated agricultural lands. These potential impacts cannot be avoided. There are also potential impacts to adjacent agricultural lands and communities based on the proposed locations of the interchanges and by the proposed highway lighting.</p> <p>The first method of addressing potential impacts is to avoid the potential impact. In this study, the proposed future development of the Bradford Bypass lands will be a permanent use with portions of the Bradford Bypass being located within designated agricultural areas. As a result, there will be designated agricultural lands lost due to the project, which cannot be avoided.</p>	No.

					<ul style="list-style-type: none"> Increase in greenhouse gas emissions without a cumulative impact assessment on regional climate. <p>I am requesting that you:</p> <ul style="list-style-type: none"> Extend the consultation time past 30 days and give at least 120 days for the public, affected municipalities, Indigenous communities and Indigenous governments time to understand and respond to this lengthy report; Mandate a cumulative health impact assessment that will outline specifically the public health costs of this highway due to air pollution, groundwater contamination and increased greenhouse gas emissions due to induced demand; Detailed commitments on protection of species at risk and their habitat within the study area; Commitment to do further field studies about the presence of American Eel and Northern Sunfish - two species that have Indigenous significance and have not been included in your reports; Commitment to protect the Lower Landing in its entirety from any site alteration; Detailed study about the impacts this highway will have on Lake Simcoe in particular how it could impact the fisheries as well as the harvesting rights of Indigenous people and their water quality. <p>Sincerely,</p> <p></p>	<p>When avoidance is not possible, the next priority is to minimize impacts to the extent feasible. The minimization of impacts may be achieved during the design process and through proactive planning measures that provide for the separation of land uses. The Updated Technically Preferred Route has taken into consideration the 2002 Approved Environmental Assessment by maintaining parts of the original alignment and employing similar techniques to minimize the corridor footprint and impact the fewest agricultural buildings, investment and agricultural operations, thereby minimizing the potential impacts to the agricultural land base, agricultural operations, and the agricultural system.</p> <p>When avoidance techniques and minimizing potential impact to agriculture have not achieved the desired effect the next priority is to mitigate any further impact. Potential mitigation measures may include:</p> <ul style="list-style-type: none"> The use of salt management plans to reduce the amount of salt require for de-icing The use of adequate fencing or berms and vegetated features between different land uses to reduce the potential for trespassing and potential vandalism The use of plantings/vegetation as screens and buffers to reduce visual impacts and sounds Implementation of surface and/ or groundwater monitoring in areas where agricultural operations make use of surface or groundwater as part of their normal farm practices Construct or replace agricultural buildings to mitigate the loss of agricultural buildings Provide new wells or other water access for any potential groundwater disruption <p>It should also be noted that there are opportunities for local agricultural operations with the future development of the Bradford Bypass lands. The future development of the Bradford Bypass lands will bring people closer to the agricultural areas and specialty crop areas, market garden, field vegetable areas which will result in increased potential for expanding sales of local vegetable crops from the farm markets.</p>

						<p>Additional details on impacts to agricultural lands and proposed mitigation measures and monitoring activities are included in Section 5.2.2 of the Updated Draft EIA, available on the Project Website:</p> <p>https://www.bradfordbypass.ca/study-process/</p> <p>2. Potential habitat destruction for twelve species at risk including the Blanding's turtle without any commitment to protect these species, their habitat or even to reduce damage. A commitment to do a future study is not good enough.</p> <p>Targeted surveys for all species at risk with potential to occur in the Study Area will be required during future phases of work. These future studies will inform the need for any permits, authorizations, mitigation or compensation under the Endangered Species Act.</p> <p>The Updated Draft EIA requires consideration and review of all recommendations throughout the corridor during future phases of work. This approach is necessary and standard practice for planning projects in that design is an iterative approach and this project is only completing design to a preliminary level. During future phases of work, additional design will be completed and may include refinements to the design as details are developed with greater accuracy. Limiting the future design phases by making certain elements of the project non-discretionary at the Preliminary Design stage limits the potential for future work to explore opportunities for further reducing impacts and / or increasing mitigation and offsetting measures.</p> <p>For Blanding's Turtle specifically, candidate habitat associated with the Holland River and Holland River East Branch open water and wetland communities has been identified within the Study Area. Blanding's Turtle may be impacted while moving in between habitats if these species enter the construction work area.</p> <p>As part of this phase of the project, preliminary mitigation and avoidance measures for the potential impacts to turtles are included in the Draft EIA and include:</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIAR Edits Required? (Yes/No? If yes specify edits)
						<ul style="list-style-type: none"> • If stockpiles of gravel and sandy substrates or the removal of these substrates in the vicinity of turtle habitat are required during the active turtle season (April 1 to October 15), turtle exclusion fencing should be installed in accordance with the Reptile and Amphibian Exclusion Fencing Best Management Practices (Ministry of the Environment, Conservation and Parks, 2020) around stockpiles or area of disturbance prior to April 1. Fencing should be installed immediately after stockpiles are created if after April 1. • It is recommended that culverts be designed to provide openness ratios that would allow for the passage of small mammal and/or herpetofauna where possible. An openness ratio of 0.4 would permit usage by medium-sized mammals, while the minimum openness ratio to be considered should be 0.25, which would permit usage by reptiles such as turtles (Credit Valley Conservation, 2017). • Avoid work within areas of candidate turtle overwintering habitat during the turtle overwintering period (October 31 to April 1), whenever possible. <p>These proposed mitigation measures will be further refined as the project proceeds to Detail Design and impacts are assessed in more detail.</p> <p>For further information on potential impacts to Species at Risk and proposed mitigation and avoidance measures, please refer to Section 5.1.1 of the Draft Environmental Impact Assessment Report.</p> <p>3. Destruction and damage to a significant Indigenous site, the Lower Landing. The report outlines how a portion of this site will be impacted by construction. Georgina Island has been on record since 1998 that they want this site completely protected. This site is more significant than 95% of existing Canadian heritage sites; therefore, this site must be protected in its entirety and First Nations must be properly engaged as per the United Nations Declaration on the Rights of Indigenous People.</p>

						<p>Field investigations for Stage 2 and Stage 3 works have been completed and additional details have been provided in the Updated Draft Environmental Impact Assessment Report.</p> <p>The required Stage 4 Archaeological Assessment of BaGv-42 will be completed during future phases of work for the project and will be carried out in accordance with the Ministry of Citizenship and Multiculturalism Standards and Guidelines for Consultant Archaeologists (Ontario Government 2011). No ground disturbing activities will occur at this site until the Stage 4 assessment has been conducted.</p> <p>As recommended by the cultural heritage resource assessment undertaken by the Project Team, the Holland River watershed was identified as a Cultural Heritage Landscape requiring further research and evaluation to determine if it possesses cultural heritage value or interest. This further assessment will be completed in a Cultural Heritage Evaluation Report (CHER), and if the CHER determines that the Holland River Watershed meets the criteria in Ontario Regulation 9/06 or Ontario Regulation 10/06 of the Ontario Heritage Act, and may be adversely impacted by the Updated Technically Preferred Route, a Heritage Impact Assessment will be prepared to fully assess impacts on the resource's identified heritage attributes and propose alternatives and mitigation to conserve the property's Cultural Heritage Value or Interest. These commitments are included in Section 5.3.2 of the Updated Draft EIAI.</p> <p>Consultation is an integral component of the Preliminary Design stage, the project-specific assessment of environmental impacts process, and for future project phases, and is critical to a project's success. The ministry is actively consulting and engaging with Indigenous communities throughout the Bradford Bypass Project.</p> <p>Comments from Indigenous communities are accepted at any time in the study process.</p> <p>4. Impacts to Lake Simcoe which have not been studied at all despite its headwaters in the Holland Marsh Wetland complex will be the</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIAR Edits Required? (Yes/No? If yes specify edits)
						<p>receiver of pollutants and salt thanks to the Bypass.</p> <p>As the project falls within the jurisdiction of the Lake Simcoe Region Conservation Authority (LSRCA), pertaining to Ontario Regulation 179/06, the ministry has assessed impacts with respect to the <i>Lake Simcoe Protection Act</i> and the Lake Simcoe Protection Plan through consideration of water quality and quantity, stormwater management, groundwater management, landscaping and ecological restoration measures; as well as fluvial geomorphological designs for watercourses, erosion and sediment control and spills prevention and protection measures.</p> <p>Appropriate mitigation measures to prevent salt and treated sand from entering watercourses and salt-sensitive areas will be proposed based on various factors including the use of MTO's Salt Management Plan and the Ministry of Environment, Conservation and Parks (MECP) Guidelines on Snow Disposal and De-icing Operations in Ontario. The MTO Salt Management Plan outlines salt management operational practices and strategies and Best Management Practices (BMP) in terms of equipment, best practices, materials, storage, testing, storm response, application rules, snow and ice control trainings, snow removal and disposal, and technology review. This includes implementing a balanced approach to the highway salt application based on the amount of snow precipitation and highway conditions.</p> <p>In areas that are particularly sensitive, salt management measures may be necessary to mitigate environmental effects of road salt in accordance with the study objectives utilizing the Code of Practice for Environmental Management of Road Salts released by Environment Canada. The Code of Practice for Environmental Management of Road Salts can be viewed here: https://www.canada.ca/en/environment-climate-change/services/pollutants/road-salts/code-practice-environmental-management.html.</p> <p>In addition, snow removal and disposal will be utilized in accordance with the MECP Guidelines on Snow Disposal and De-icing Operations in Ontario. Further details on MECP's Guidelines on Snow Disposal and De-icing</p>

						<p>Operations in Ontario can be found here: https://www.ontario.ca/page/guidelines-snow-disposal-and-de-icing-operations-ontario#:~:text=Ministry%20Approval-If%20special%20circumstances&text=As%20a%20general%20rule%2C%20the.be%20approved%20for%20direct%20disposal.</p> <p>5. Impacts to people's health particularly around air pollution and the contamination of wells and groundwater. Considering that traffic related air pollution is well known to be a contributor to many diseases including cancers, heart disease and respiratory disease, a cumulative health impact study is required.</p> <p>The human health scoping implications of the project such as air quality, noise, land use, traffic congestion and safety, economic, social cohesion, and neighborhood resources have been summarized in Section 2.2.7 and Section 5.2.7 of the Updated Draft EIAR. To better understand the human health implications due to the Project as a next step, it is recommended for MTO to continue to consider the human health factors identified in this report and provide recommendations to enhance potential positive impacts and mitigate potential negative health impacts. Specifically, conducting a Screening-Level Human Health Risk Assessment of potential air quality impacts is recommended in order to evaluate and characterize Project-related air quality impacts to health.</p> <p>The project has undertaken an Air Quality Impact Assessment to explore pollutant emissions and dispersion modelling in an effort to predict the contribution of the project to future ambient pollutant concentrations. This contribution, added to background concentration levels, allows prediction of the cumulative impact of the proposed project and all other contributors to air pollution. Concentration levels are compared to provincial and federal ambient air quality criteria and standards to assist in the evaluation of project-specific mitigation needs and options.</p> <p>Areas of concentrated emission impact are influenced by traffic volumes along a given segment of roadway. The implementation of the Bradford Bypass is expected to</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIAR Edits Required? (Yes/No? If yes specify edits)
						<p>redistribute traffic from local roads surrounding the proposed Bradford Bypass to the new corridor and greater freeway network. Reductions in traffic volumes are observed on corridors including Highway 11/1 (Bridge Street), Bathurst Street, Holland Landing Road, Yonge Street, Queensville Sideroad, Doane Road, Mount Albert Road, Green Lane, and Simcoe County Road 88/Holland Street, among other roads. The alleviation of traffic on local roads benefits the area including but not limited to Town of Bradford West Gwillimbury, community of Holland Landing, Town of East Gwillimbury, and northern King Township by alleviating congestion during peak hours.</p> <p>Recognizing the potential impacts to groundwater and private wells in the Study Area, the Project Team has completed and initial assessment of the groundwater and surficial soils within the Study Area and documented the findings in a Hydrogeological Data Report. In addition, a Water Well Survey was completed and included a review of available secondary should information as well as data from stakeholders in the Study Area regarding their existing water wells.</p> <p>Additional well surveys and a detailed assessment of potential groundwater interference will be completed during future phases of the project. A Construction Dewatering Plan will also be prepared to identify potential impacts to groundwater and measures to be implemented to avoid or mitigate the impacts. In addition, all groundwater taking must adhere to the municipal, regional, provincial and federal policies and any permits or approvals required for the Project will be obtained prior to construction.</p> <p>Impacts to groundwater and proposed mitigation measures and monitoring activities are also summarized in the Updated Draft EIAR (Section 5.1.4).</p> <p>6. Increase in greenhouse gas emissions without a cumulative impact assessment on regional climate.</p> <p>The Project Team has undertaken a Qualitative Climate Change Assessment to assess potential impacts and suggest mitigation options for consideration. The assessment was completed accordance with MECP's</p>

						<p>March 2023 and was advised that the Ministry of Environment, Conservation and Parks records have no documented observances of the American Eel or Northern Sunfish in the Study Area. They also noted that the Northern Sunfish is a species of special concern and does not have a permitting status with the Ministry of the Environment, Conservation and Parks, and therefore would not be reported. These discussions with Williams Treaties First Nations and MECP have been documented in the Fish and Fish Habitat Report and Section 2.1.2 of the Updated Draft EIA.</p> <p>No records of aquatic Species at Risk that are afforded protection under the Species at Risk Act or Endangered Species Act are known to occur in the watercourses where culverts are anticipated to be installed. AECOM ecologists conducted a detailed fish and fish habitat assessment of the water features in the vicinity of the Study Area between September 14-18, 2020, with spring field investigations occurring over multiple days in June 2021. Field investigations were also completed in the spring of 2022 due to changes to the Study Area boundary that required further review for potential fish habitat. Based on these investigations, no Species at Risk were discovered in the Study Area. Regardless, the presence or absence of all aquatic Species at Risk will be re-confirmed in subsequent design phases through additional field investigations.</p> <p>11. Commitment to protect the Lower Landing in its entirety from any site alteration</p> <p>In accordance with the Ministry's cultural heritage conservation process and the Ministry's obligations under the Standards and Guidelines for Conservation of Provincial Heritage Properties, 2010 (S&Gs) issued under section 25.2 of the Ontario Heritage Act (OHA) the Ministry has completed a Cultural Heritage Resource Assessment Report (CHRAR) to identify known and potential built heritage resources and cultural heritage landscapes within the Study Area, assess potential impacts and project alternatives and recommend mitigations and next steps. The cultural heritage resource assessment has informed the analysis of environmental conditions undertaken for this project and recorded in the Environmental Conditions Report and the Environmental Impact Assessment Report.</p>

						<p>The assessment has identified the Holland River watershed as having potential cultural heritage value or interest (CHVI). As recommended in the Environmental Impact Assessment Report (EIAR) and the CHRAR, a cultural heritage evaluation is being undertaken to determine CHVI for the property. This includes research and evaluation to determine if the property meets criteria in Ontario Regulation 9/06 and/or Ontario Regulation 10/06 of the Ontario Heritage Act to be considered a Provincial Heritage Property or a Provincial Heritage Property of Provincial Significance. Research includes, but is not limited to, review of heritage property databases, field review, archives, museums, planning offices and other facilities, archaeological reports, other relevant reports or studies, information from community engagement including input from Indigenous communities, oral histories etc. to provide the historic context of the property including the history of Indigenous communities and post-contact communities.</p> <p>For properties, including the Holland River Watershed, that are determined by the Ministry to meet the criteria in O. Reg. 9/06 or O. Reg. 10/06 of the Ontario Heritage Act and that may be adversely impacted by the Updated Technically Preferred Route, a Heritage Impact Assessment (HIA) will be prepared to fully assess impacts and propose alternatives and mitigation to conserve the property's CHVI. In accordance with F.5 of the S&Gs, and as committed in Section 5.3.2.2 of the EIAR, if the Ministry determines that a property, including the Holland River Watershed, is a provincial heritage property of provincial significance, the Ministry must obtain the consent of the Minister of Citizenship and Multiculturalism before removing or demolishing buildings or structures on the property, or before transferring the property from provincial control. The Minister of Citizenship and Multiculturalism may not grant consent or may grant consent, with or without conditions, where the Minister is of the opinion that all alternatives to the removal, demolition or the transfer of the property have been considered by the Ministry, including alternatives that would not adversely affect the property, and the best alternative in all the circumstances has been adopted. The Minister, as a condition of consent, may require that such reasonable steps as the Minister may specify be taken to minimize or mitigate adverse</p>

						<p>effects on the property resulting from the removal, demolition or the transfer of the property.</p> <p>12. Detailed study about the impacts this highway will have on Lake Simcoe in particular how it could impact the fisheries as well as the harvesting rights of Indigenous people and their water quality.</p> <p>The Ministry has been and will continue to consult with Indigenous communities regarding potential impacts to their Aboriginal and Treaty Rights.</p> <p>The project has been assessed in accordance with the Interim Environmental Guide for Fisheries and the Protocol for Protecting Fish and Fish Habitat on Provincial Transportation Undertakings. Following the completion of the impact assessment, it was determined that many of the potential negative effects of the proposed works could be avoided or mitigated at many locations. However, due to the number and size of some of the required new crossings it is anticipated that not all negative effects could be avoided or mitigated entirely. At this time, it is assumed that a Request for Review will need to be submitted to Fisheries and Oceans Canada during Detail Design/ prior to construction.</p> <p>For more information on impacts to Lake Simcoe, please refer to the response to Question 4.</p> <p>If you have any other questions, please feel free to reach out to the Project Team at your earliest convenience. You can reach the Project Team via email at projectteam@bradfordbypass.ca, toll free at 1-877-247-6036, or by visiting the Project Website at www.bradfordbypass.ca.</p> <p>Sincerely,</p> <p>The Bradford Bypass Project Team Email: projectteam@bradfordbypass.ca Toll-Free: 1 (877) 247-6036</p>

CT-DraftEIAR-90	To: Project Team From: [REDACTED]	Email: [REDACTED]	Draft EIAR	June 30, 2023	<p>Good evening,</p> <p>I have been following this Project since inception having lived in Bradford for 17 years (2005-2022); now living in Barrie, ON since 2022. I travel 3-4 days a week, sometimes weekends, between Barrie, Bradford and Newmarket for business meetings and appointments.</p> <p>My travel is well within the early morning (8-9am and evening 4-6pm) time frame and I am well aware of the heavy but 99% free-flowing traffic at these hours. Having a Bradford-Bypass just N of Bradford and S of Innisfil, in my opinion and frankly that of my business associates and clients will not alleviate the steady flow off HWY 400 N/S by shifting off traffic onto a Bypass.</p> <p>The supposed traffic "issues" the Town of Bradford currently has is mainly due to locally managed routes and perhaps lack of enforcement to redirect <u>very large and heavy trucking</u> OFF the main street: Holland St. This is a Municipal issue and the Town needs to manage this NOT the Provincial or Federal government. The Town Council apparently is in favour of the Bypass as they feel this will alleviate the current and future congestion of traffic in the early hours and evening hours. This is a short-sighted view. In my observations through my travels I find the biggest headache is the very large and heavy vehicles that take up road-space, slowly moving through intersections and in turning corners due to on-coming traffic. Secondly, the short-sightedness which local businesses <u>will suffer</u> from the current flux of morning/evening shoppers (coffee, gas, services and grocery) because the Bypass will move traffic N to a 16.3Km Bypass of highway-bridges. The economic retail loss will be substantial not to mention the small-medium financial transactions that take place-daily.</p>	<i>Response drafted in CT-DraftUEIAR-53</i>	No

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	EIAR Edits Required? (Yes/No? If yes specify edits)
					<p>The Bradford Bypass is a bad, bad idea from environmental, ecological, financial (4 BILLION?) and socialization points of view. I'm not against proper transportation planning but this particular Plan is in the wrong place. I believe it will, if not now over time (10 years to build) cause more ill reputable environmental harm, air pollution, increased traffic congestion as "feeder" lanes into the 404/400 HWY roads. Thus compounding the problems we face now.</p> <p>After hearing the historical time-line involving multiple suggestions, studies and some actual preliminary plans drawn up back in the 1980-1990's; I could only see how bad, ill-conceived and in some cases proposals that would do irreparable damage if they were implemented at that time. One Project I did see seemed to be a <u>more logical and viable</u> proposal for a route through Ravenshoe just under the Lake Simcoe shoreline connecting over at HWY 404. I feel this should be re-visited.</p> <p>The current Bypass proposed site is cutting through some of the best, most beautifully managed farmland that has taken decades and likely a few generations of families to clear, cultivate and produce consumer products for the Province and perhaps for export outside of Ontario. This truly is a destructive waste of prime agricultural land.</p> <p>There are alternatives which I believe should be N of Innisfil. The most recent upgrade of infrastructure on HWY 89 (E/W) is exceptional and to be commended for planning this. Perhaps a more northerly "off-shoot" should be a consideration? The bulk of traffic I see, daily and weekends (holidays especially) needs to branch off E/W above Innisfil as there is considerable volume coming into and out of the City of Barrie!</p> <p>I'm sure the most recent preliminary building Projects by AECOM for road/bridge building was</p>

					<p>a necessary precursor to the larger Project but I believe these Projects do have value regardless if the Bypass goes or doesn't. We in Ontario / Canada build, I believe, the BEST highways-bridges and supporting infrastructure in North America. It (building) creates jobs, industries, commerce and is a positive influence to the people of Ontario - tax dollars well spent with the <i>exception</i> at this point of the proposed 4-BILLION for the Bradford Bypass!</p> <p>I have attached two letters that I'm in agreement with that are proposed by FROGS, Simcoe County Greenbelt Coalition and the Rescue Lake Simcoe Coalition. I have addressed this Email to several parties that I wish to voice my opinion and objection to this Bypass.</p> <p>I trust you will consider my view and register it as a valid objection. Please re-think the entire concept of alleviating future traffic concerns and build a sustainable, environmentally pro-active transportation corridor between HWY 400 and HWY 404.</p> <p>It <i>can be</i> done; but not as a Bradford Bypass.</p> <p>Sincerely,</p>

CT-DraftEIAR-91	To: Project Team From: [REDACTED]	Email: [REDACTED]	Interchange	July 3, 2023	<p>Dear Designers (and Caroline Mulroney)</p> <p>I have studied the proposed plan for the Bradford Bypass and have a single complaint. You show a "partial interchange" at Leslie St. WHY?????</p> <p>For years I have been trying to get someone to listen to me about the idiocy of the "partial interchange" at 404 and Mullock but nobody seems to want to hear it. This has been a thorn-in-the-side of many, especially those who use southbound and intend head west but also the reverse, for several years now. The rationale that was used when the 404 only went as far as Davis Dr. no longer exists. The same thing is going to happen on the Bypass. Many people, northbound on 404, who want to head up Leslie St. using the Bypass to avoid the village of Queensville will be unable to do so. All the other interchanges on the Bypass are "FULL". This one should be as well.</p> <p>Best regards, [REDACTED]</p>	<p>Hello [REDACTED]</p> <p>Thank you for your interest in the Bradford Bypass Preliminary Design Study and project-specific assessment of environmental impacts, undertaken in accordance with Ontario Regulation 697/21.</p> <p>The Partial Interchange at Leslie Street was selected as there is insufficient spacing between Highway 404 and Leslie Street to fit a full interchange. Additionally, it results in the least impact to the environment, properties and heritage resources.</p> <p>The Updated Technically Preferred Route will not preclude a future widening of Leslie Street to four lanes, and corresponding Active Transportation improvements, if and when the Town of East Gwillimbury chooses to pursue this initiative.</p> <p>Further details regarding the interchange at Leslie Street are available in Section 3.2.8 4.2.3.5 of the Updated Draft Environmental Impact Assessment Report, which is available on the project website.</p> <p>If you have any other questions, please feel free to reach out to the Project Team at your earliest convenience. You can reach the Project Team via email at projectteam@bradfordbypass.ca, toll free at 1-877-247-6036, or by visiting the Project Website at www.bradfordbypass.ca.</p> <p>Sincerely,</p> <p>The Bradford Bypass Project Team Email: projectteam@bradfordbypass.ca Toll-Free: 1 (877) 247-6036</p>	No

					<p>website some 6 days from the date it is said to have been posted.</p> <p>From my perspective, the only way you can rectify this serious regulatory failure is to withdraw the notice I found in my local paper and thereafter start the process all over again, so at the very least, the public will have a full 30 days – or more – to retrieve the updated version of the draft report from your project website, consider it in detail and provide comments thereon, within this very short consultation period, should they wish to do so. Also, this time, please remove the restrictions on the .pdf file so the reader can both print the document and add comments to it.</p> <p>As we are now in the dead of summer, I also respectfully request that you show some consideration to the public that MTO is imposing this most inappropriate highway upon, by delaying the entire reissuance process until at least September 1, 2023.</p> <p>Respectfully submitted.</p> <p> Chair Forbid Roads Over Green Spaces</p>

CT-DraftUEIAR-02	To: Project Team From: [REDACTED] [REDACTED]	Phone: [REDACTED]	Draft EIAR	July 6, 2023	Yeah just it seems like it's basically the same thing I keep getting sent from the MTO. What are they actually gonna have a rather preliminary are they gonna have a final draft of this thing like what why is it taking so many years to get anything on paper I know that they're doing some work like they're doing some preliminary construction in areas by I don't know can someone give me a call and update on really what's going on here cause the paperwork doesn't really tell me anything [REDACTED] thank you	<p>[REDACTED] called [REDACTED] on July 14, 2023.</p> <p>[REDACTED] introduced herself and followed up on [REDACTED]'s concerns regarding the project timeline.</p> <p>[REDACTED] asked if he could call back at a later time.</p> <p>[REDACTED] stated he could and asked when a better time would be to call.</p> <p>[REDACTED] did not specify a time and noted he would call back later.</p> <p>[REDACTED] thanked him for his time and the call ended.</p> <p>[REDACTED] called back on July 14, 2023</p> <p>[REDACTED] asked about his concerns regarding the project timeline.</p> <p>[REDACTED] requested to know more on when construction will actually begin as he feels that the project has been assessed enough and for too long.</p> <p>[REDACTED] understood his concerns and said that the Updated Draft EIAR has been released on July 13th, 2023. Following the public review period for the Updated Draft EIAR, the Final EIAR will be released, along with adjustments in the EIAR regarding any concerns.</p> <p>[REDACTED] stated he wished there was more support for the residents of Bradford as they are building more homes in the area, however it is difficult to travel within the area, especially with trucks, and would really like the project to start its construction.</p> <p>[REDACTED] said that with the way the project is going in terms of timeline he may not even see the final construction and is frustrated as a business owner in the area.</p> <p>[REDACTED] understood his concerns and asked if he had any additional comments and concerns he would like to address.</p> <p>[REDACTED] said no and thanked [REDACTED] for her time and the call ended.</p>	No

CT-DraftUEIAR-15	To: Project Team From: [REDACTED]	Email: [REDACTED]	Park Impacts	July 12, 2023	<p>Hello,</p> <p>1. I've been reviewing the documentation and I am wondering if the Henderson Memorial Park which is on the 9th line will in any way be impacted by the Bradford By-Pass?</p> <p>2. Kudos to you for sending out and circulating information. However I'd appreciate if you added a section that identifies any changes. There is a lot of repetitive information in your circulars which I understand is needed for potentially new audiences.</p> <p>Below is an example of a high level change request log. Hopefully this is a feasible ask? Or some if there is something you are able to provide that is easy at a glance to see what is changing and why and when. Sorry I haven't found anything like that and hope I haven't missed it.</p>	<p>Hello [REDACTED]</p> <p>Thank you for your interest in the Bradford Bypass Preliminary Design Study and project-specific assessment of environmental impacts, undertaken in accordance with Ontario Regulation 697/21.</p> <p>The Project Team has had several discussions with the Town of Bradford West Gwillimbury on Henderson Park. The town has provided their input on the Project's alternative and the Project Team developed the alternative based on the inputs provided. At this time, it is anticipated that the interchange at 10th Sideroad will impact the park property.</p> <p>A summary of the changes made to the Draft Environmental Impact Assessment Report is available in Table ES-3 of the Updated Draft Environmental Impact Assessment Report. The Updated Draft Environmental Impact Assessment Report includes the completed archaeological investigations in Section 5.3.1</p> <p>If you have any other questions, please feel free to reach out to the Project Team at your earliest convenience. You can reach the Project Team via email at projectteam@bradfordbypass.ca, toll free at 1-877-247-6036, or by visiting the Project Website at www.bradfordbypass.ca.</p> <p>Sincerely,</p> <p>The Bradford Bypass Project Team</p> <p>Email: projectteam@bradfordbypass.ca</p> <p>Toll-Free: 1 (877) 247-6036</p>	No.

CT-DraftUEIAR-22	To: Project Team From: [REDACTED]	Email: [REDACTED]	New Stakeholder Comment Entry	July 15, 2023	<p>--- 1) Does your organization wish to participate in the study and continue to receive notices of project activities or information as this study progresses? If you do not wish to participate, you will be removed from the mailing list. ---</p> <p>No</p> <p>--- Name ---</p> <p>[REDACTED]</p> <p>--- Email ---</p> <p>[REDACTED]</p> <p>--- Mailing Address ---</p> <p>[REDACTED]</p> <p>--- 2) Please indicate if the above noted project will affect the delivery of your organization's programs or services, and/or provide project related comments to the Project Team. ---</p> <p>I want to voice my concern what this project will do to the Holland Marsh. How is Ontario going to feed itself when every inch of farm land has been destroyed?</p> <p>--- 3) Navigability of the Holland River and Holland River East Branch: The design and future construction of the bridges may affect current navigability within the rivers. For the purpose of protecting the existing navigable function of these waterways, please complete the following: Does your organization use the Holland River or Holland River East Branch within the project limits for navigation (i.e., recreation or commercial uses), or are you aware of others doing so? ---</p> <p>No</p>	<p>Hello [REDACTED]</p> <p>Thank you for your interest in the Bradford Bypass Preliminary Design Study and project-specific assessment of environmental impacts, undertaken in accordance with Ontario Regulation 697/21.</p> <p>As detailed in Section 5.2.2 of the Updated Draft EIAR, potential impacts to agricultural lands as a result of the Project have been assessed and will be related to the loss of agricultural land, loss of prime agricultural land, creation of severed parcels, increased fragmentation of the land base on the designated agricultural lands. Impacts may be minimized by directing impacts away from the adjacent agricultural lands.</p> <p>There are opportunities for local agricultural operations with the future development of the Bradford Bypass lands. The future development of the Bradford Bypass lands will bring people closer to the agricultural areas and specialty crop areas/market garden/field vegetable areas which will result in increased potential for expanding sales of local vegetable crops from the farm markets.</p> <p>Details on impacts to agricultural lands and proposed mitigation measures and monitoring activities are included in Section 5.2.2 of the Updated Draft EIAR.</p> <p>The Holland Marsh Wetland Complex extends beyond the Bradford Bypass corridors and consists of over 3,000 hectares (ha) of designated wetland area. Currently the Bradford Bypass corridor will cross approximately 12.73 ha which accounts for only 4 percent of the entire Provincially Significant Wetland (PSW) area. The crossing locations were chosen because they are consistent with the Ministry's effort to minimize impacts to this sensitive wetland and are among the narrowest portions of Holland Marsh. A portion of the crossing will be accommodated on an elevated structure in order to provide marine navigation clearance over the Holland River and Holland River East Branch below.</p> <p>The Project Team will continue to carefully consider all impacts to wetland areas and will continue to work with Indigenous communities, environmental agencies,</p>	No.

CT-DraftUEIAR-24	To: Project Team From: [REDACTED]	Phone: [REDACTED] Email: [REDACTED]	Property affected by Bypass	July 17, 2023	Good Afternoon my name is [REDACTED] we have two properties affected by this this 4 bypass I have some concerns regarding the environmental assessments please call me back at [REDACTED] the two companies we are calling on behalf of is one [REDACTED] and my [REDACTED] and this is for the Bradford bypass thank you	<p>[REDACTED] called on July 17, 2023</p> <p>[REDACTED] introduced herself and told [REDACTED] that she is following up on her concerns regarding the properties</p> <p>[REDACTED] said that AECOM released a map on the Project Website regarding the contamination levels within the Study Area. [REDACTED] inquired how the two properties, [REDACTED] and [REDACTED] are shown in red on the map but property next to it is green. She wanted to know the rationale behind the AECOM having those two properties be labelled as contaminated sites and not the one next to it.</p> <p>[REDACTED] noted she is representing both properties and is frustrated with this as this was brought to her attention by a potential buyer that the site was contaminated, and the potential buyer saw the report on the Project Website and backed out of the deal. She also noted that [REDACTED] is owned by [REDACTED] and she has partial ownership of [REDACTED]</p> <p>[REDACTED] acknowledged her concerns and said she would have another member of the team follow up with her on the reasons as to why they were noted as such.</p> <p>-----</p> <p>[REDACTED] called on August 3, 2023 and August 4, 2023.</p> <p>[REDACTED] Requested follow up phone call and mail. Stated she does not use email.</p> <p>[REDACTED] explained that the information related to contamination is solely a risk rating based on potential for contamination and a review of background data.</p> <p>[REDACTED] noted the High risk rating given to [REDACTED] is because historical information indicated that a landfill was located on the property.</p> <p>[REDACTED] stated there was no landfill.</p> <p>[REDACTED] stated he would confirm if there was additional information the Project Team could provide that would</p>	No

					<p>– in particular Highways 400 & 404 – WITH the Bradford Bypass</p> <p>4. Traffic is only marginally improved for Bradford West Gwillimbury</p> <p>5. The Project Website acknowledged that the scenarios were with Bypass and without Bypass. Are these really the only two scenarios that were run? No analysis about whether regional roads could do the job for less damage and money? No consideration of transit use of the planned all day two way GO train to Barrie?</p> <p>6. The chosen route, with 5 interchanges is no longer a freeway to freeway connector; it now combines local and long distance travel and promises to improve local traffic, so why is that not a regional road improvement as opposed to a provincial "highway"?</p> <p>7. The province estimates the project completion at 2032; and the Bradford Bypass will be congested 5 years after it is built</p> <p>8. The EA does not include studying impacts to Lake Simcoe</p> <p>9. There are no air quality standards that the province has to meet while bringing a new highway into an existing residential neighborhood. People affected by elevated levels of air pollution get no notice, explanation, or health warnings from the government of Ontario.</p> <p>10. There was a regulatory required to create a groundwater plan which can be found on the Project Website. It finds there are several inorganic / metal parameters which exceed the provincial water quality objectives in the groundwater of the proposed groundwater taking locations, which would have to be dewatered for construction. This water cannot be released to the natural environment without being treated. There is nowhere</p>	<p>operations along those roads will be improved. Specifically, Queensville Sideroad, County Road 4 (former Highway 11), Holland Street, and Highway 88 will be relieved of a significant portion of through traffic, thereby reducing demand and improving Level of Service (LOS) at signalized and unsignalized intersections along their length.</p> <p>As detailed in Section 4.4 of the Updated Draft EIAR, traffic is assessed through modelling to identify LOS. Having confirmed the model was consistent with current (base) conditions, and therefore appropriate to assess future conditions and design alternatives, the model was used to assess LOS under future 2031 and 2041 conditions. To assess future conditions, the model was updated to include all local road network and transit improvements planned within the Study Area and forecast traffic volumes based on the projected growth within the Study Area. For more information on updates to local road networks, please refer to Section 1.5.4 of the Updated Draft EIAR.</p> <p>Modeling results demonstrated that under the No Build (no Bradford Bypass) scenario, local roads were forecast to exceed capacity by 2031 but saw significant relief under the Build (with Bradford Bypass) scenario. Alternatives for the Bradford Bypass were then compared within the model by running different, including the 2002 Approved EA alignment and interchange locations and an updated preferred interchange location alternative developed by the Project Team.</p> <p>The alternative Build scenarios showed the mainline operations on the Bradford Bypass in 2031 would operate at LOS D. By implementing another general purpose lane and an HOV lane in each direction by 2041, LOS on the mainline improves to LOS B or C and accommodates the additional traffic forecast by 2041.</p> <p>On average, between the various origin-destination pairs modeled in the peak periods, drivers are expected to save up to 73% or 33 minutes of travel time connecting between Highway 400 and Highway 404 compared to existing local routes.</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	DRAFT EIA edits required? (Yes/No) If yes, specify edits.
					<p>nearby to treat it. There is no nearby sanitary sewer. The contractor that makes the bridge piles will have to manage and mitigate these impacts. This is an incomplete plan. This is an identification of serious issues and a dereliction of duty.</p> <p>11. This streamlined Environmental Assessment process is how the province proposes to build another 54 KM of highway connecting Hwy 404 and Hwy 12. We submit that this is not the way to advance a sustainable region.</p>	<p>The development of the analysis and key results from the Traffic Study have been summarized in the Draft Environmental Impact Assessment Report and the Updated Draft Environmental Impact Assessment Report (EIA), which were available for public review and comment from June 1, 2023 to June 30, 2023 and July 14, 2023 to August 14, 2023, respectively. The information in the draft EIA includes the origin and destination locations that were reviewed to determine the average travel time savings during the AM and PM peak hours. Similar to the process undertaken for MTO preliminary design studies, the Traffic Study will be finalized upon study completion and will be available if requested.</p> <p>3. Traffic analysis that we have seen show traffic worsening on many nearby roads – in particular Highways 400 & 404 – WITH the Bradford Bypass</p> <p>Compared to the No Build scenario, the presence of the Bradford Bypass corridor would save a total of approximately 2,500 vehicle-hours of travel time during the AM peak hour and approximately 1,400 vehicle-hours of travel time during the PM peak hour by 2041. Vehicle hours are defined as the product of the number of vehicles and their time travelled. Travel times savings are calculated across the subarea model limits which include the entirety of York Region south of the community of Keswick as well as Simcoe County south of Innisfil Beach Road.</p> <p>The implementation of the Bradford Bypass is expected to redistribute traffic from local roads surrounding the proposed Bradford Bypass to the new corridor and greater freeway network. Reductions in traffic volumes are observed on corridors including Highway 11/1 (Bridge Street), Bathurst Street, Holland Landing Road, Yonge Street, Queensville Sideroad, Doane Road, Mount Albert Road, Green Lane, and Simcoe County Road 88/Holland Street, among other roads. The alleviation of traffic on local roads benefits the area including but not limited to Town of Bradford West Gwillimbury, community of Holland Landing, Town of</p>

						<p>East Gwillimbury, and northern King Township by alleviating congestion during peak hours.</p> <p>For more information on Travel Time Savings, please refer to Section 4.4.3 of the Updated Draft EIA</p> <p>4. Traffic is only marginally improved for Bradford West Gwillimbury</p> <p>Please refer to the response to Question #3.</p> <p>5. The Project Website acknowledged that the scenarios were with Bypass and without Bypass. Are these really the only two scenarios that were run? No analysis about whether regional roads could do the job for less damage and money? No consideration of transit use of the planned all day two way GO train to Barrie?</p> <p>The Bradford Bypass 2002 Approved EA reviewed a broad area of analysis which included several corridors, including areas south of the current corridor road, and Highway 89/Ravenshoe Road.</p> <p>For more information on the 2002 EA, please see the enclosed linked: https://www.bradfordbypass.ca/wp-content/uploads/2020/09/BBP-RoutePlanningEA-1997.pdf</p> <p>Future weekday AM and PM peak hour forecasts were developed from the Emme subarea model extracted from the Province's Greater Golden Horseshoe Model (GGHMv4). The subarea model reflects all road network and transit improvements planned for the 2031 and 2041 horizon years. The options comparison identified a scenario with all five interchanges at major crossing roads along the corridor as the preferred option.</p> <p>A comparison of travel patterns in the Emme subarea model between Build and No-Build scenarios indicates network wide improvements to connectivity and traffic flow with the inclusion of the Bradford Bypass. While a minor increase in additional auto-based trips in the region would occur, the overall network benefits from</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	DRAFT EIA edits required? (Yes/No) If yes, specify edits.
						<p>vehicle-hours of travel time savings and vehicle-kilometres of travel distance savings are observed during the 2041 AM peak hour and during the 2041 PM peak hour in the updated interchange locations. Local roads forecasted to exceed capacity by 2031 and 2041 under the No-Build scenarios see significant relief from traffic as a result of the diversion to the Bradford Bypass in the Build scenarios.</p> <p>The Bradford Bypass has been proposed as a response to the dramatic growth in population and travel demand anticipated within the Study Area, including the forecasted increase in congestion on key east-west roadways linking Highway 400 to Highway 404. The purpose of the Bradford Bypass is to relieve congestion on existing local roads between Highway 400 and Highway 404 and provide a northern freeway connection between Highways 400 and 404. The technically preferred route chosen for the Bradford Bypass was based on the 2002 approved Environmental Assessment (EA) Study and minimizes the environmental footprint wherever possible.</p> <p>As part of the 2002 EA, the Bradford Bypass evaluated alternatives from a broad range of potential solutions to address several transportation problems and to address significant opportunities identified in York Region and Simcoe County. The need for this freeway was confirmed as the only reasonable solution that would make a significant contribution towards addressing the problem as the population in York Region and Simcoe County grows. The 2002 EA approved alignment is technically preferred for a freeway in terms of highway network expansion, ease of construction, relationship to provincial and municipal land use planning and the preferred route is already included in Official and Transportation Master Plans, as well as the Places to Grow Act), as well as having fewer negative impacts to residential and natural areas when compared to other route options considered.</p> <p>The Bradford Corridor was selected as the preferred corridor over Highway 89/Ravenshoe Road as it was beyond the maximum north limit of 10th Line / Boag Road which was assessed in a previous EA study and was determined that a Management Area or river</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	DRAFT EIAR edits required? (Yes/No) If yes, specify edits.
						<p>crossing north of this would entail unacceptable environmental impact, which lead to the withdrawal of the Highway 89 EA studies in 1986-87.</p> <p>The Bradford Corridor was selected as the preferred corridor over the southern alternatives as there was no south alternative that met the primary purpose of the study to reduce out-of-way travel. The south limit was established as Highway 88 and Queensville Sideroad.</p> <p>The original purpose of the Bradford Bypass per the 2002 Approved EA was to address the "east-west" long-distance travel demand crossover between Highway 400 and Highway 404 which is a provincial responsibility and distinct from the locally generated trips which use a municipal road to access the provincial network. As noted in the report, the location of the transportation link is related to potential network benefits, with local service being secondary benefit.</p> <p>While the town of Bradford owns a closed Road allowance east of Artesian Industrial Parkway for 8th Line to Holland River, Hochreiter Road itself is a private road. This connection would not address the primary purpose of the Bradford Bypass to address provincial responsibilities to connect Highway 400 and Highway 404. The local benefit of this route is likely outweighed by improvement to capacity of Bridge Street. A bridge across 8th Line would still require out-of-way travel, which this study is looking to reduce, to connect to provincial transportation facilities. Improvements are likely required on Bathurst Street and Queensville Sideroad. Significant additional property impact (similar to the Bradford Bypass) would be required for a new corridor connection from 8th Line straight to Highway 404.</p> <p>For more information on the 2002 EA, please see the enclosed linked: https://www.bradfordbypass.ca/wp-content/uploads/2020/09/BBP-RoutePlanningEA-1997.pdf</p> <p>In addition to the investments like the Bradford Bypass, Ontario is investing \$70.5 billion over 10 years for public transit, including Ontario's new subway transit plan for the Greater Toronto Area (GTA) and</p>

						<p>transforming the GO Transit network into a modern, reliable and fully integrated rapid transit network.</p> <p>For more information on traffic model development, please refer to section 4.4 of the Updated Draft EIAR.</p> <p>For more information on the traffic studies please see the response to Question #2.</p> <p>6. Significant population growth is projected for both Simcoe County and the Regional Municipality of York. Even with all currently planned transportation and transit investments, road congestion will continue to increase across the Greater Golden Horseshoe (GGH) including within the Bradford Bypass Study Area. The chosen route, with 5 interchanges is no longer a freeway to freeway connector; it now combines local and long distance travel and promises to improve local traffic, so why is that not a regional road improvement as opposed to a provincial "highway"?</p> <p>The purpose of the Bradford Bypass is to relieve congestion on existing local roads between Highway 400 and Highway 404 and provide a northern freeway connection between Highways 400 and 404.</p> <p>The analysis of municipal development plans indicated that there will be a continuation of dramatic growth in travel demand, which has been characteristic of Simcoe County and York Region for many years. This growth continues to contribute to congestion on key roadways linking Highway 400 to the extension of Highway 404. At the time of the Route Planning Study and Environmental Assessment, the approved plans to upgrade regional roads were only expected to accommodate a fraction of this travel demand. Alternative transportation solutions to regional road widening alone were therefore warranted. As part of the Route Planning Study and Environmental Assessment, key problem areas included: traffic, road discontinuities, future demand growth implications, and lack of long-term plan. The original study considered</p>

						<p>need for relief of congestion and protection of property for the future transportation right-of-way.</p> <p>7. The province estimates the project completion at 2032; and the Bradford Bypass will be congested 5 years after it is built</p> <p>The alternative Build scenarios showed the mainline operations on the Bradford Bypass in 2031 would operate at acceptable LOS D in the interim four lane configuration. By expanding to the ultimate 8 lane configuration (implementing another general purpose lane and an HOV lane in each direction by 2041), LOS on the mainline improves to LOS B or C and accommodates the additional traffic forecast by 2041.</p> <p>For more information, please refer to the response to Question #1.</p> <p>8. The EA does not include studying impacts to Lake Simcoe</p> <p>As the project falls within the jurisdiction of the Lake Simcoe Region Conservation Authority (LSRCA), pertaining to Ontario Regulation 179/06, the ministry has assessed impacts with respect to the Lake Simcoe Protection Act and the Lake Simcoe Protection Plan through consideration of water quality and quantity, stormwater management, groundwater management, landscaping and ecological restoration measures; as well as fluvial geomorphological designs for watercourses, erosion and sediment control and spills prevention and protection measures.</p> <p>9. There are no air quality standards that the province has to meet while bringing a new highway into an existing residential neighborhood. People affected by elevated levels of air pollution get no notice, explanation, or health warnings from the government of Ontario.</p> <p>The Project Team will endeavour to minimize impacts on air quality and green house gas emissions where applicable. An Air Quality Impact Assessment has been completed that takes into account the Ministry of</p>

Ct-DraftUEIAR-35	To: Project Team From: [REDACTED] FROGS	Email: [REDACTED]	Complaint to Ombudsman's Office	July 26, 2023	<p>Attention: [REDACTED] MTO Senior Project Manager Ministry of Transportation</p> <p>Sir: I have been advised by [REDACTED] Early Resolutions Officer, Ontario Ombudsman's Office that I failed to follow proper protocol in filing the complaint copied below: I was advised that I should first file this complaint with you. I have been further requested to advise Ms. Amaral of the outcome of this action.</p> <p>Complaint to Ontario Ombudsman filed June 13, 2023: This is further to my earlier, June 6th, complaint about MTO's conduct of the Bradford Bypass Study that is currently in process. Details concerning my initial complaint are provided at the end of this new complaint.</p> <p>My "New Complaint: Today, July 13th, MTO issued an updated, Draft Environmental Impact Assessment Report. https://www.bradfordbypass.ca/wp-content/uploads/2023/07/RPT_2022-07-13_Bradford-ByPass-Updated-Draft-Environmental-Impact-Assessment_60636190_optimized_locked.pdf</p> <p>This report is said to update archaeological information that was still in process when the June 1st draft report was issued. The Revision History table, however, just identifies the revision as "Updated Draft Environment Impact Assessment Report". This new amended report is now 581 pages long and contains the same restrictions to commenting and printing as did the June 1 report. Table ES 3 on page x of this amended report</p>	<p>Hi [REDACTED] Thank you for your interest in the Bradford Bypass Preliminary Design Study and project-specific assessment of environmental impacts, undertaken in accordance with Ontario Regulation 697/21.</p> <p>Thank you for sharing the complaint you sent to the Ontario Ombudsman's Office. The Project Team recognizes that the Bradford Bypass is of interest to the public and we welcome input as the project progresses. This includes acknowledging and responding to the concerns of all stakeholders. To gather as much input as possible, since the project was reinitiated in 2020, the ministry has provided Indigenous communities, stakeholders and other interest groups with multiple opportunities in a variety of formats to encourage meaningful consultation. This includes two Public Information Centres in Spring 2021 and Fall 2022. We also hosted two Environment, Community and Agriculture Meetings in December 2021 and December 2022 as well as an engagement and consultation review opportunity via the project website for interchange considerations at 10th Sideroad and 2nd Concession Road.</p> <p>I can assure you that the process of planning the Bradford Bypass will continue to include, consultation with Indigenous communities and the public to ensure the project moves forward in an environmentally responsible way that is responsive to the needs and concerns of communities.</p> <p>In accordance with Ontario Regulation 697/21, an initial Draft Environmental Impact Assessment Report (EIAR), which documents the results of the studies undertaken for various environmental disciplines, proposed mitigation measures and environmental commitments to protect the environment was published for public review from starting on June 1 until June 30, 2023.</p> <p>As you have noted, an Updated Draft EIAR was necessary to provide additional archaeological investigation information and complete the Draft EIAR in accordance with the regulations. The Updated Draft EIAR was published for public review from starting on July 13, 2023 and will continue until August 14, 2023. The Updated Draft EIAR includes Table ES-3 which lists the</p>	No

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	DRAFT EIAR edits required? (Yes/No) If yes, specify edits
					<p>lists 16 sections together with the executive summary where changes have been made. There does not appear to be any form of Black Lining or other notification to the reader of what wording has been changed throughout the report. This leads me to think that proper due diligence by any reader who had provided comments to the June 1 Draft Report requires a complete re-read of this report to ensure that nothing untoward has been slipped in necessitating a revision of comments already submitted for the June 1 report.</p> <p>And once again, this updated Draft report will only be available on the project website for comment for 30 days. (i.e. to August 14th). From my perspective, MTO have gone out of their way to make it nearly impossible for interested parties to conduct a competent review of their report and provide their updated comments within this extremely limited 30 day review period. As noted below, shortly after filing my initial complaint with your office, Aecom provided me with a download link to a copy of their report that could be printed and commented upon. They did not, however, make this unrestricted version available to the general public. Simply put, MTO and Aecom are displaying a highly disrespectful attitude towards the public with whom they are required by O. Reg 697/21 to consult. From my perspective, I believe this is an appropriate matter for your office to address.</p> <p>My new request of your office is:</p> <ol style="list-style-type: none"> 1. Cause MTO / AECOM to publish a report on their project website available for review by the public that does not restrict printing and commenting. 2. You cause AECOM to post this printable version on their website for at least 60 days and amend their initial notice of 	<p>sections of the report that have been updated and also includes details of the updates made to inform readers of the specific changes throughout the report. The Draft EIAR and Updated Draft EIAR were available for a total of 60 days.</p> <p>Similar to previous documents posted for public comment and feedback, the ministry has been and is happy to provide the report in a specific format upon request from the public or any stakeholders. Please find the copies of both the Draft EIAR and Updated Draft EIAR that you can 'copy/paste' and print in the following link:</p> <p><<LINK to be inserted>></p> <p>If you have any other questions, please feel free to reach out to the Project Team at your earliest convenience. You can reach the Project Team via email at projectteam@bradfordbypass.ca, toll free at 1-877-247-6036, or by visiting the Project Website at www.bradfordbypass.ca</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	DRAFT EIA edits required? (Yes/No) If yes, specify edits
					<p>publication so that all parties will have a full 60 days to review and presumably comment on this report. Issuing this updated report in the height of the summer in such a manner that the reader cannot readily identify the updated information in all portions of the report is both unfair and disrespectful.</p> <p>My initial Complaint My initial complaint was about MTO's conduct of the Bradford Bypass Study that is nearing its final stage: Issuance of a final Environmental Impact Assessment Report for which MTO is the sole approval authority. The study is being conducted pursuant to O. Reg. 697/21. This regulation requires that MTO, through its consultants AECOM, undertake a series of studies to achieve final approval to construct the proposed Bradford Bypass. The regulation specifies certain studies and consultations to be undertaken and sets out requirements concerning these activities. The final report required to satisfy the requirements of this regulation is an Environmental Impact Assessment Report. Section 20 of the regulation addresses the preparation and publication and approval of this Report. Once the final Environmental Impact Assessment Report has been issued, it will be approved by MTO (author and sole approval authority). Thereafter, MTO will have obtained final Environmental Assessment Approval to proceed with the construction of this 8 lane, 16 Km, controlled access highway.</p> <p>AECOM, under MTO's direction (as essentially stated in their Statement of Qualifications and Limitations at the commencement of their report), posted the Draft Environmental Impact Assessment Report on the project website on June 1</p>		

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	DRAFT EIAR edits required? (Yes/No) If yes, specify edits
					<p>stating that it would be available for review on the web site until June 30.</p> <p>https://www.bradfordbypass.ca/wp-content/uploads/2023/06/RPT_2022-06-01_Bradford-ByPass-Draft-Environmental-Impact-Assessment_60636190_AODA_locked-1.pdf</p> <p>I downloaded the 576 page .pdf report on June 1. I was most distressed to see that I could not print any part of that report. This was the first publication from AECOM that I am aware of that contains these "protections". I have provided comments on many of AECOM's previous reports all of which permitted printing. On June 1, I emailed the appropriate AECOM project manager to respectfully request that they provide me and preferably everyone a copy of their report where printing was enabled. I explained in my email that I needed the ability to print the report so that I could bookmark items of interest and add notes which I would need to be able to provide comments to AECOM concerning the report. It is a requirement that AECOM consult with interested / affected parties and include comments in their final version of every report, stating what if anything they would do to address the concerns raised by the various parties who submitted comments. S 20 (2) 12. of the Regulation addresses the duty to consult both with First Nations Communities (Rightsholders) but also other parties such as me (Stakeholders).</p> <p>Having not received a response from AECOM to my June 1 email I filed a complaint with your office. My request of your office is: 1. You cause AECOM to publish a report that does not restrict printing</p>		

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	DRAFT EIAR edits required? (Yes/No) If yes, specify edits
					<p>2. You cause AECOM to post this printable version on their website for 30 days and amend their initial notice of publication so that all parties will have a full 30 days to review and presumably comment on this report. If possible please have AECOM extend the length of the review period to at least 60 days. Issuing this report at the commencement of the summer period and giving everyone only 30 days to review and comment is both unreasonable and disrespectful.</p> <p>Outcome achieved: On June 7th at 3:49 pm I received an email from the "projectteam@bradfordbypass.ca" providing me with a link to a downloadable copy of their report that permitted printing and commenting.</p> <p>Thank you.</p>

CT-DraftUEIAR-37	To: Project Team From: [REDACTED]	Email: [REDACTED]	New Stakeholder Comment Form	July 29, 2023	<p>--- 1) Does your organization wish to participate in the study and continue to receive notices of project activities or information as this study progresses? If you do not wish to participate, you will be removed from the mailing list. ---</p> <p>Yes</p> <p>--- Name --- [REDACTED]</p> <p>--- Email --- [REDACTED]</p> <p>--- Phone Number --- [REDACTED]</p> <p>--- Mailing Address --- [REDACTED]</p> <p>--- 2) Please indicate if the above noted project will affect the delivery of your organization's programs or services, and/or provide project related comments to the Project Team. --- [REDACTED]</p> <p>--- 3) Navigability of the Holland River and Holland River East Branch: The design and future construction of the bridges may affect current navigability within the rivers. For the purpose of protecting the existing navigable function of these waterways, please complete the following: Does your organization use the Holland River or Holland River East Branch within the project limits for navigation (i.e., recreation or commercial uses), or are you aware of others doing so? ---</p>	<p>Hello [REDACTED]</p> <p>Thank you for your interest in the Bradford Bypass Preliminary Design Study and project-specific assessment of environmental impacts, undertaken in accordance with Ontario Regulation 697/21.</p> <p>Please see below responses to your questions noted in the YouTube video linked to your email.</p> <p>1. Why would you build the Bradford Bypass through prime farmland?</p> <p>As part of the Preliminary Design, the Project Team considered all impacts and will continue to work with environmental agencies, municipalities, and other concerned stakeholders to identify measures to avoid or mitigate the potential impacts of placing new or expanded provincial highways within areas of the existing and enhanced Greenbelt lands.</p> <p>The Greenbelt Plan acknowledges the necessity of building infrastructure. The Plan allows for existing, expanded or new infrastructure in the Greenbelt if the infrastructure serves the significant population growth expected in southern Ontario.</p> <p>Potential impacts to agricultural lands as a result of the Project have been assessed with regards to the loss of agricultural land, loss of prime agricultural land, creation of severed parcels, and increased fragmentation of the land base on the designated agricultural lands. These potential impacts cannot be avoided. There are also potential impacts to adjacent agricultural lands and communities based on the proposed locations of the interchanges and by the proposed highway lighting.</p> <p>The first method of addressing potential impacts is to avoid the potential impact. In this study, the proposed future development of the Bradford Bypass lands will be a permanent use with portions of the Bradford Bypass being located within designated agricultural areas. As a result, there will be designated agricultural lands lost due to the project, which cannot be avoided.</p>	No

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	DRAFT EIA edits required? (Yes/No) If yes, specify edits
					No	<p>When avoidance is not possible, the next priority is to minimize impacts to the extent feasible. The minimization of impacts may be achieved during the design process and through proactive planning measures that provide for the separation of land uses. The Updated Technically Preferred Route has taken into consideration the 2002 Approved Environmental Assessment by maintaining parts of the original alignment and employing similar techniques to minimize the corridor footprint and impact the fewest agricultural buildings, investment and agricultural operations, thereby minimizing the potential impacts to the agricultural land base, agricultural operations, and the agricultural system.</p> <p>When avoidance techniques and minimizing potential impact to agriculture have not achieved the desired effect the next priority is to mitigate any further impact. Potential mitigation measures may include:</p> <ul style="list-style-type: none"> - The use of salt management plans to reduce the amount of salt require for de-icing - The use of adequate fencing or berms and vegetated features between different land uses to reduce the potential for trespassing and potential vandalism - The use of plantings/vegetation as screens and buffers to reduce visual impacts and sounds - Implementation of surface and/ or groundwater monitoring in areas where agricultural operations make use of surface or groundwater as part of their normal farm practices - Construct or replace agricultural buildings to mitigate the loss of agricultural buildings - Provide new wells or other water access for any potential groundwater disruption <p>It should also be noted that there are opportunities for local agricultural operations with the future development of the Bradford Bypass lands. The future development of the Bradford Bypass lands will bring people closer to the agricultural areas and specialty crop areas, market garden, field vegetable areas which will result in increased potential for expanding sales of local vegetable crops from the farm markets.</p>

						<p>Additional details on impacts to agricultural lands and proposed mitigation measures and monitoring activities are included in Section 5.2.2 of the Updated Draft EIA, available on the Project Website:</p> <p>https://www.bradfordbypass.ca/study-process/</p> <p>2. There is not enough traffic to warrant the Bradford Bypass.</p> <p>Significant population growth is projected for both Simcoe County and the Regional Municipality of York. Even with all currently planned transportation and transit investments, road congestion will continue to increase across the Greater Golden Horseshoe (GGH) including within the Bradford Bypass Study Area.</p> <p>The purpose of the Bradford Bypass is to relieve congestion on existing local roads between Highway 400 and Highway 404 and provide a northern freeway connection between Highways 400 and 404. On average, between the various origin-destination pairs using the Bradford Bypass, drivers in the peak direction during the peak period, would save up to 73% or 33 minutes of travel time when connecting between Highway 400 and Highway 404 compared to existing routes in the No Build scenario.</p> <p>Modeling results demonstrated that under the No Build (no Bradford Bypass) scenario, local roads were forecasted to exceed capacity by 2031 but saw significant relief under the Build (with Bradford Bypass) scenario. Alternative alignments for the Bradford Bypass were then compared within the model, including the 2002 Approved EA alignment and interchange locations and an updated preferred interchange location alternative developed by the Project Team.</p> <p>On average, between the various origin-destination pairs using the Bradford Bypass, drivers in the peak direction during the peak period, would save up to 73% or 33 minutes of travel time when connecting between Highway 400 and Highway 404 compared to existing routes in the No Build scenario.</p>

						<p>The development of the analysis and key results from the Traffic Study have been summarized in the Draft Environmental Impact Assessment Report and the Updated Draft Environmental Impact Assessment Report (EIAR), which were available for public review and comment from June 1, 2023 to June 30, 2023 and July 14, 2023 to August 14, 2023, respectively. The information in the draft EIAR includes the origin and destination locations that were reviewed to determine the average travel time savings during the AM and PM peak hours. Similar to the process undertaken for MTO preliminary design studies, the Traffic Study will be finalized upon study completion and will be available if requested.</p> <p>3. Why not use the roads that already exist? Green Lane, Ravenshoe Road, Queensville Sideroad, etc.</p> <p>The planning process that resulted in the 2002 approved Environmental Assessment (EA) for the Bradford Bypass evaluated alternatives from a broad range of potential solutions to address several transportation problems and to address significant opportunities identified in York Region and Simcoe County. The need for this freeway was confirmed during the Route Planning and EA Study as the only reasonable solution that would make a significant contribution towards addressing the problem as the population in York Region and Simcoe County grows. The 2002 Approved EA approved alignment is technically preferred for a freeway in terms of highway network expansion, ease of construction, relationship to provincial and municipal land use planning and the preferred route is already included in Official and Transportation Master Plans, as well as the Places to Grow Act), as well as having fewer negative impacts to residential and natural areas when compared to other route options considered.</p> <p>The Bradford Bypass Project has been modelled based on current local, regional, and provincial projections and data. This addresses the problem of "lack of long-term planning" per the Bradford Bypass 2002 Approved EA.</p> <p>The 2002 Approved EA reviewed a broad area of analysis which included several corridors, including areas</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	DRAFT EIAR edits required? (Yes/No) If yes, specify edits
						<p>south of the current corridor, and Highway 89/Ravenshoe Road.</p> <p>The Bradford Corridor was selected as the preferred corridor over Highway 89/Ravenshoe Road as it was beyond the maximum north limit of 10th Line / Boag Road which was assessed in a previous EA study and was determined that a Management Area or river crossing north of this would entail unacceptable environmental impact, which lead to the withdrawal of the Highway 89 EA studies in 1986-87.</p> <p>The Bradford Corridor was selected as the preferred corridor over the southern alternatives as there was no south alternative that met the primary purpose of the study to reduce out-of-way travel. The south limit was established as Highway 88 and Queensville Sideroad.</p> <p>The original purpose of the Bradford Bypass per the 2002 Approved EA was to address the "east-west" long-distance travel demand crossover between Highway 400 and Highway 404 which is a provincial responsibility and distinct from the locally generated trips which use a municipal road to access the provincial network. As noted in the report, the overall network benefits from vehicle-hours of travel time savings and vehicle-kilometres of travel distance savings are observed during the 2041 AM peak hour and during the 2041 PM peak hour in the updated interchange locations. Local roads forecasted to exceed capacity by 2031 and 2041 under the No-Build scenarios see significant relief from traffic as a result of the diversion to the Bradford Bypass in the Build scenarios.</p> <p>While the Town of Bradford West Gwillimbury owns a closed road allowance east of Artesian Industrial Parkway for 8th Line to Holland River, Hochreiter Road itself is a private road. A connection at this location would not address the primary purpose of the Bradford Bypass to connect Highway 400 and Highway 404. The local benefit of this route is likely outweighed by the reduced congestion of Bridge Street created by the Bradford Bypass. A bridge across 8th Line would still require out-of-way travel, which this study is looking to reduce, to connect to provincial transportation facilities. Improvements would likely be required on Bathurst Street</p>

CT-DraftUEIAR-44	██████	To: Project Team From: ██████	Phone: ██████ Email: ██████	Concerns on the structure adjacent to Industrial Road	August 4, 2023	Hi my name is ██████ my number is ██████ my email is ██████ I have a I live in Bradford I back onto ██████ and I have some concerns of the structure on industrial road in joset its adjacent to a park and I have some questions regarding that	<p>██████ called on August 4, 2023.</p> <p>No response.</p> <p>██████ called back on August 4, 2023.</p> <p>██████ introduced herself and asked about ██████ concerns regarding the structure on industrial road.</p> <p>██████ asked if ██████ was an engineer on the team.</p> <p>██████ stated she's an Environmental Planner on the team.</p> <p>██████ said that she is opposed to the Bradford Bypass and its location near, especially around 10th and 11th Line. She said it would be more appropriate to build it along 7th and the 8th Line. She also noted environmental concerns regarding the Scanlon Creek Marshland that is near her home and the effects that this highway would have on it. She also had concerns regarding the effects of noise and pollution near her home, as there is already heavy traffic in the area and is concerned that it would only increase with the Bradford Bypass. She lives near Industrial Parkway and Disette St, and there is a proposed structure near there and wants to know what that structure will be. She also shared her concerns on how the provincial and federal governments would be achieving their climate change targets</p> <p>██████ said that she noted down her concerns and will get back to her with clarification on the structure being built near her home. She also asked ██████ if she has looked at the EIAR's that are on the website.</p>	No

							<p>A Noise Impact Assessment Report has been prepared in accordance with the methods and procedures recommended in the Ministry Environmental Guide for Noise (the Ministry Guide). Relevant guidelines from the Ontario Ministry of the Environment, Conservation and Parks and local municipal noise control bylaws are also considered in this assessment.</p> <p>More information on noises impacts within the project study area and initial recommendations for noise mitigation can be found in Section 5.2.3 of the Updated Draft EIAR.</p> <p>The project has undertaken an Air Quality Impact Assessment to explore pollutant emissions and dispersion modelling in an effort to predict the contribution of the project to future ambient pollutant concentrations. This contribution, added to background concentration levels, allows prediction of the cumulative impact of the proposed project and all other contributors to air pollution. Concentration levels are compared to provincial and federal ambient air quality criteria and standards to assist in the evaluation of project-specific mitigation needs and options. The Project Team has also undertaken a Qualitative Climate Change Assessment to assess potential impacts and suggest mitigation options for consideration. The assessment was completed accordance with MECP's Climate Change Guide (Considering Climate Change in the Environmental Assessment Process, 2017), and considers the project's resilience or vulnerability of the undertaking to changing climatic conditions. Findings are summarized in Section 5.2.6 of the Updated Draft EIAR.</p>

CT-DraftUEIAR-44 Cont.	To: Project Team From: [REDACTED]	Email: [REDACTED]	Concerns on the Structure Adjacent to Industrial Road	August 8, 2023	<p>Hello Team,</p> <p>I called last week with a question Bradford Bypass. I was impressed with the quick return call. I was not impressed with the person who said she was a planner and her lack of knowledge. She couldn't answer any of my questions. I asked her to have the engineer return my call. I have yet to receive a return call.</p> <p>My question is what is the structure that is being constructed at the intersection of Dissette and Industrial Parkway. [REDACTED]</p> <p>[REDACTED] Also is a park that backs onto this intersection as well. Noise pollution increases year to year. My sleep is interrupted and the tranquility of the park has disappeared. I understand that there is a piece of land expropriated for this structure which would place it adjacent to park.</p> <p>You can call me [REDACTED] or email.</p> <p>Thank you,</p> <p>.. [REDACTED]</p>	<i>Response drafted in CT-DraftUEIAR-44</i>	No

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	DRAFT EIAR edits required? (Yes/No) If yes, specify edits
CT-DraftUEIAR-47	To: Project Team From: [REDACTED]	Email: [REDACTED]	New Entry: Updated Draft Environmental Impact Assessment Report	August 8, 2023	<p>--- Name ---</p> <p>[REDACTED]</p> <p>--- Email ---</p> <p>[REDACTED]</p> <p>--- Please provide your comments on the Draft Environmental Impact Assessment Report here: ---</p> <p>Updated Draft Environmental Impact Assessment Report July 2023</p> <p>Feedback and Questions</p> <p>In general, I found the language of the second report easier to understand and appreciate the amount of time taken to complete it, given the amount of time it took to read it. I see that a number of my questions in an email sent previously have been somewhat addressed.</p> <p>Having said that, I still feel I must pose the questions and statements below given the grave concerns I have about the damage this highway will cause and simply can't fathom in this day and age that the Ontario government would engage in such a venture when there are far more viable, cost effective, safer options available that would be farless impactful on the environment and the climate. 'Our house is burning' if not flooding and this bypass will only contribute to more damage, short and long term.</p> <p>Please note that I tried to align comments and questions from the different sections of the report however this became challenging given the 581 pages where mitigations and summary tables were in different sections, and the very short turnaround time given.</p>	<p>Hello [REDACTED]</p> <p>Thank you for your interest in the Bradford Bypass Preliminary Design Study and project-specific assessment of environmental impacts, undertaken in accordance with Ontario Regulation 697/21.</p> <p>Please see below the responses to your comments sent on June 28, 2023.</p> <p>1. Time and consultation are inadequate. You have provided an un-editable PDF and 30 days for a 576 page report. This follows the pattern of terrible public information and consultation. Will you extend the consultation period?</p> <p>The process of planning the Bradford Bypass has included -- and will continue to include -- consultation with the public and Indigenous communities to ensure the project moves forward in an environmentally responsible way that is responsive to the needs and concerns of communities. In accordance with Ontario Regulation 697/21, an initial Draft Environmental Impact Assessment Report (EIAR) -- which documents the results of the studies undertaken for various environmental disciplines, proposed mitigation measures and environmental commitments to protect the environment -- was published for public review starting on June 1 and continuing until June 30, 2023. In addition, the Ministry has been providing Indigenous communities and stakeholders various opportunities for meaningful consultation since the project was re-initiated in September 2020 including two Public Information Centres.</p> <p>Additional archaeological investigations, which are necessary to complete the impact assessment in accordance with regulations, have recently been finalized and incorporated into an Updated Draft Environmental Impact Assessment Report. This updated report has been posted for an additional 30-day consultation period. The Updated Draft EIAR posting includes the information from the initial draft</p>	No

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	DRAFT EIAR edits required? (Yes/No) If yes, specify edits
					<p>Has the previous draft report from April/May 2023 been removed? The reader is not able to ascertain, nor does the summary of changes provide what specific additions/alterations were made for this updated draft aside from dates and 'wording'. Please make the first draft visible to the public.</p> <p>One of the qualifications and limitations provided by AECOM is that information has not been independently verified, and may be based on limited testing and on the assumption that such conditions are uniform and not variable geographically or over time. We are talking about using outdated and limited assessments that are not now being verified as accurate current information, be it within 100 metres, 500 metres or 2 km of the proposed route in what pertains to water, air and soil pollution, threats to endangered species of wildlife, trees and aquatic life, let alone the greenhouse gas emissions caused by construction, future development of urban sprawl and local traffic congestion that will not be resolved by this non-local proposal and negates the federal Emissions Reduction Plan. Regulation 697/21, used after the first PIC, gives reliance on 1997 environmental assessment reports, for which the provincial government at the time decided that the impact was too significant to warrant going forward. Therefore, how can this project continue without a full updated environmental assessment to show things have, or haven't changed in regards especially to climate impact?</p> <p>Another qualification or limitation noted in this version is that AECOM doesn't assume responsibility for any incorrect information provided to them. Then who does and how can this project team go ahead when information could be inaccurate?</p>	<p>to ensure stakeholders can review additional information in full context of the project. As the initial Draft EIAR and the Updated Draft were available for public review for a total of 60 days, an extension of the public review period is not being considered at this time.</p> <p>The Updated Draft Environmental Impact Assessment Report was available for review on the Project Website (https://www.bradfordbypass.ca/study-process/) until August 14, 2023.</p> <p>2. Explain how a provincial highway was transformed into a very expensive regional road variant with five interchanges and two 400 series highway connections, paid for by all Ontario taxpayers. This is inconsistent with the MTO's mandate to provide long distance travel solutions. We maintain that there are better and cheaper, faster to implement, regional road and transit solutions that should be pursued, even if the Bypass does get built.</p> <p>The project is being assessed with consideration of the Ministry's mandate to provide for the safe, efficient movement of people and goods between regions and urban areas. In addition, the Project Team has consulted with local and regional municipalities, and the traffic analysis for the proposed Bradford Bypass has considered the planned local transportation and transit improvements to be implemented by others.</p> <p>The original route planning study (2002 Approved Environmental Assessment – EA) concluded that additional relief from congestion in this Study Area could only be accommodated through the protection and implementation of a provincial right of way.</p> <p>As part of the 2002 Approved EA, the Bradford Bypass evaluated alternatives from a broad range of potential solutions to address several transportation problems and to address significant opportunities</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	DRAFT EIAR edits required? (Yes/No) If yes, specify edits
					<p>Alternative #2 East Holland River Branch now states there is greater encroachment into natural areas and still impacts the river. Mitigation for any impact is unclear and only to be discussed at the time as the design moves forward. How much encroachment in square metres will there be? How much and which 'nature' will be impacted, even if only based on 1997 and 2002 assessments? How is this mitigation strategy addressing prior and effective public consultation?</p> <p>How is alternative 3 less impactful than 1 or 2 for the 400 freeway to freeway exchange?</p> <p>How is alternative 1 the least impactful for the 404 freeway to freeway exchange?</p> <p>How does alternative 2 minimize impacts on the environment for the west of Leslie Hydro One towers?</p> <p>15th sideroad and 2nd concession Rd interchanges - report doesn't indicate level of impact on environment. Why is that? What would the impact be?</p> <p>Bathurst St interchange - report states 'Smallest footprint and lowest environmental area of disturbance'. What disturbance would this be and what is meant in numerical terms by 'smallest footprint' in comparison to other alternatives considered?</p> <p>Leslie street interchange - Lowest environmental and property impacts are stated. What is this specifically?</p> <p>Overpasses and underpasses - the report doesn't indicate impact to the environment. What will the impact be? How will it be mitigated?</p>	<p>identified in York Region and Simcoe County. The need for this freeway was confirmed as the only reasonable solution that would make a significant contribution towards addressing the problem as the population in York Region and Simcoe County grows. The 2002 Approved EA approved alignment is technically preferred for a freeway in terms of highway network expansion, ease of construction, relationship to provincial and municipal land use planning and the preferred route is already included in Official and Transportation Master Plans, as well as the Places to Grow Act), as well as having fewer negative impacts to residential and natural areas when compared to other route options considered.</p> <p>For more information on the Analysis and Evaluation of alternatives, refer to Section 2.1.6 of the 2002 Approved EA, which can be found in the enclosed link: https://www.bradfordbypass.ca/wp-content/uploads/2020/09/BBP-RoutePlanningEA-1997.pdf</p> <p>Further to the conclusion of the 2002 Approved EA, as part of this Preliminary Design study, a traffic analysis was completed and the result of the review has confirmed the need of the highway. This analysis included the review of existing traffic conditions and modelling of future forecast traffic conditions and it has been confirmed that updates to regional and municipal roads alone will not address the transportation needs within the Study Area.</p> <p>Additionally, a feasibility assessment was conducted evaluating nine interchange location scenarios to determine the best interchange configuration through the Bradford Bypass corridor. The evaluation was conducted in accordance with satisfying the study objective to improve connectivity of the study area between Highway 400 and Highway 404, facilitating the improvement of traffic operations and movement of goods. Consideration included interchange utilization, overall network delay, out of way travel, environmental considerations and constraints, and preliminary costs. It was determined that interchanges at 10th Sideroad, County Road 4,</p>

					<p>Interchange locations - report states 'Early integration and consideration of environmental impacts to the design'. What does this mean in real terms? The environment is being impacted significantly - wildlife, wetlands, water systems, ground water, air quality - where is the integration of early mitigations for all of this to the design?</p> <p>The original plan was for a 4 lane highway. Now it is planned at some point to be 8 lanes. Reg 697/21 avoids duplication of paperwork where an already previous study exists yet for the Bypass the 1997 and 2002 studies did not consider the area required for 8 lanes, interchanges and carpool spaces. How is this project in accordance with 697/21 without a full environmental study for the additional land being considered?</p> <p>It is unacceptable that mitigations on the environment will only be considered at the time that the issue arises. This planning doesn't fall within the protection of Regulation 697/21, therefore since no previous study of what the mitigations would likely have been in 1997 or 2002 applies, a full environmental assessment is needed to know what mitigations are going to have to be put in place prior to going ahead in the design. What mitigations will be put in place for each and every encroachment into waterways, wetlands and endangered species habitat?</p> <p>Some of the waterways have already been deemed hazardous so any displacement of these waters creates bigger mitigation issues. What will be put in place to safeguard no cross contamination, especially in addition due to construction and future runoff?</p> <p>How does this bypass meet the official municipal and regional master plans to</p>	<p>Bathurst Street, 2nd Concession Road, and Leslie Street would be included as part of the Study.</p> <p>3. We would like to see the traffic studies in their entirety. An environmental assessment used to be grounded in a demonstration of need and justification. The MTO has provided neither as it pertains to this particular project and at this time. There is no evidence that local traffic solutions MTO purports to be solving (actually a local traffic issue and not MTO's mandate) are best served by this potentially \$4 billion highway.</p> <p>The Bradford Bypass project has been assessed in accordance with Ontario Regulation 697/21. Consistent with the Regulation, the Project Team completed an update to the description of environmental conditions previously documented in the 2002 Approved Environmental Assessment (EA) for the project. This update included a review and assessment of the existing traffic conditions which was documented in the Environmental Conditions Report (ECR). The ECR was finalized in October 2022 following a public review period, and is available on the Project website.</p> <p>Significant population growth is projected for both Simcoe County and the Regional Municipality of York. Even with all currently planned transportation and transit investments, road congestion will continue to increase across the Greater Golden Horseshoe (GGH) including within the Bradford Bypass Study Area.</p> <p>The purpose of the Bradford Bypass is to relieve congestion on existing local roads between Highway 400 and Highway 404 and provide a northern freeway connection between Highways 400 and 404. Modeling results demonstrated that under the No Build (no Bradford Bypass) scenario, local roads were forecasted to exceed capacity by 2031 but saw significant relief under the Build (with Bradford Bypass) scenario. Alternative alignments for the Bradford Bypass were then compared within the model, including the 2002 Approved EA alignment</p>

					<p>provide ' multi-modal transportation system, improving safety, and supporting the development of healthy communities' when it is only for vehicle access, unlike a regional road system. Why is there a hold on Mulock and Innisfil GO-stations if a multi-layered approach is the plan?</p> <p>This 4-8 lane bypass will create substantial health concerns to everyone, especially children, living, learning, walking, cycling and playing in its 100-500 metre vicinity. Studies show the vulnerable locations, although outside agencies needed to correct the information missed by the project team. How is the project team and province planning to mitigate and compensate for the increase in childhood cancers, low lung function and premature birth rates?</p> <p>How is this project going to mitigate the decrease in revenue for First Nations due to contamination of Lake Simcoe, the Holland River and the Lower Landing? There is yet to be compensation or mitigation for the deterioration of the Maskinonge and Black Rivers due to 404 expansion and increased human activity in the subwatershed area. The conservation authority 2010 report also noted that a decrease in wetlands, new roads, industry and new residential, not including climate change, were impacting water quality and habitat of these systems. Even in 2008, Black River fish were downgraded to a 'C' grade and I can find no data since that indicates it has been upgraded.</p> <p>Guiding principles that the construction of the Bradford Bypass addresses include: ■ Establishing an efficient and integrated multi-modal transportation network ■ Supporting safe and reliable movement of people and goods, and ■ Integrative transportation and land use planning. PICs</p>	<p>and interchange locations and an updated preferred interchange location alternative developed by the Project Team.</p> <p>On average, between the various origin-destination pairs using the Bradford Bypass, drivers in the peak direction during the peak period, would save up to 73% or 33 minutes of travel time when connecting between Highway 400 and Highway 404 compared to existing routes in the No Build scenario.</p> <p>The development of the analysis and key results from the Traffic Study have been summarized in the Draft Environmental Impact Assessment Report and the Updated Draft Environmental Impact Assessment Report (EIAR), which were available for public review and comment from June 1, 2023 to June 30, 2023 and July 14, 2023 to August 14, 2023, respectively. The information in the draft EIAR includes the origin and destination locations that were reviewed to determine the average travel time savings during the AM and PM peak hours. Similar to the process undertaken for MTO preliminary design studies, the Traffic Study will be finalized upon study completion and will be available if requested.</p> <p>a. Please share the links and the methodology, transparently, so that people can understand what travel time savings MTO is referring to. We have absolutely no idea because your write up is incredibly vague about the start and end of the routes used for analysis.</p> <p>b. What year do your studies indicate that the Bypass will be congested at peak rush hour times?</p> <p>As detailed in the Draft EIAR (Section 2.4.1), an Aimsun model was created to assess the existing traffic conditions for the road network in the Study Area. The model study area encompasses the Highway 400 corridor from south of Simcoe County Road 88 to north of Highway 89, as well as the</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	DRAFT EIAR edits required? (Yes/No) If yes, specify edits
					<p>have yet to share detailed information about the pending development both residential and industrial around the interchanges and route so that the public is aware of the degree of development that will once again congest the proposed bypass soon after it opens and why now the project is changing it to an 8 lane configuration. When will this information be shared and the data that shows the impact on congestion by 2041?</p> <p>The bypass will not be efficient to remove local gridlock, and in fact will compound it, requiring even more adjustments to regional roads in order to address this issue. Why were the regional road alternatives ruled out?</p> <p>This project team is attempting to solve a local traffic issue with a long distance transit plan. The research shows congestion will only be reduced going one way and that will be temporary as new growth around the route's corridor will increase the traffic again. What will the mitigation be for this? Both Simcoe County and York Region Master Transportation Plans advocate for efficient systems, lower to net-zero emissions, electrification of public fleets, coordination of services between regions and was only added in 2022 into their appendices when the province approved it - in other words, they had no choice. Is this not accurate?</p> <p>Bradford West Gwillimbury's Plan and East Gwillimbury's Plan were created with the understanding that the bypass would solve its local congestion issues. Has renewed consultation with all of these councils, municipal and regional, taken place now that the bypass is going to be 8 lanes prior to 2051 and will increase air and water pollution for their residents as well as increase hospital and medical needs prior to</p>	<p>Highway 404 corridor from south of Green Lane East to its terminal at Woodbine Avenue (Table 4-3 and 4-4 of the Draft EIAR).</p> <p>The model for this area was developed using pre-pandemic traffic volumes to identify peak hour volumes within the Study Area. This model has been calibrated and validated as it closely resembled actual operating conditions.</p> <p>As detailed in Section 4.4 of the Draft EIAR, traffic is assessed through modelling to identify Level Of Service (LOS). Having confirmed the model was consistent with current (base) conditions, and therefore appropriate to assess future conditions and design alternatives, the model was used to assess LOS under future 2031 and 2041 conditions. To assess future conditions, the model was updated to include all road network and transit improvements planned within the Study Area, and, forecast traffic volumes based on the projected growth within the Study Area.</p> <p>The alternative Build scenarios showed the mainline operations on the Bradford Bypass in 2031 would operate at acceptable LOS D in the interim four lane configuration. The model indicates that by expanding to the ultimate 8 lane configuration (implementing another general purpose lane and an HOV lane in each direction by 2041), LOS on the mainline improves to LOS B or C and accommodates the additional traffic forecast by 2041.</p> <p>For further information about the Traffic Study please refer to the response to Question #3 and Section 4.4 of the Updated Draft EIAR.</p> <p>4. The Draft Environmental Impact Assessment report shows on pg. 212 the Bypass touching the southern portion of the Lower Landing (AKA BaGv-42), a significant historical and archaeological site at a significant meander on the East Holland River. MTO has moved the highway 150 m to the south of the technically preferred route, which would have completely run over the Lower</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	DRAFT EIAR edits required? (Yes/No) If yes, specify edits
					<p>2051 at least for those residing within 500 metres of this highway?</p> <p>Where is the guiding principle for the protection of the environment and human health?</p> <p>Have the councils been appraised and are they getting a renewed opportunity to address the increased encroachment into nature and the greater risk now to already threatened species due to the increase to 8 lanes?</p> <p>Are these councils getting a renewed opportunity to address the fact that tier traffic demand expectations will not be met by 2051 since the population and growth around the route corridor will create more traffic and remove any reduction of travel time saved?</p> <p>The Township of King's plan also speaks to environmental conservation and 'no adverse impact'. Are they getting an opportunity to adjust their commitment now that there is greater encroachment into nature, that there is adverse impact?</p> <p>The Township of King, and all the other plans include 'Promot(ion of) alternative modes of transportation to the private vehicle to address the impacts on climate change'. Aside from an HOV lane to come much later, how does this bypass meet that component?</p> <p>Wetlands are crucial to drawing down greenhouse gas emissions; highways create more GHGs. 81-216 metric tons of carbon can be absorbed per year per acre of wetland. So for 10.75 hectares that's 5735 metric tons when the highway was only to be 4 lanes. How much more will be lost to 8 lanes? How can the team justify taking away this climate saving wetland?</p>	<p>Landing (pg 148). But the Draft IA states, "the southern portion of the site ... will be impacted by construction" (pg 395). The Draft Environmental Conditions Report indicated that a Stage 3 archaeological assessment "was required" (pg 225); the Draft IA report says that the Stage 3 was completed, and that Stage 4 is required. The Project team's website says, "Currently, additional archaeological investigations are being completed to finalize the impact assessments in accordance with Ontario Regulation 697/21 and are not included in this posting. This information will be available for additional public and Indigenous community review once completed." So the archeological work is not finished. And yet the route has been chosen. Property owners near the history-rich Lower Landing that are receiving expropriation notifications. We are staunchly opposed to this violation of this site particularly absent the stage 4 evaluation of the Lower Landing and the endorsement of the First Nations.</p> <p>a. As stewards of these lands and water for time immemorial, additional time should be given to allow First Nation community members to fully digest the lengthy report. Georgina Island First Nation asked that this site be avoided in 1998, 25 years ago, stating, "It is obvious that there are other routes, which can be used to connect these major highways, and we hope that another will be selected." Is Ontario still ignoring this request.</p> <p>b. Have First Nations be consulted about this part of the plan? Please provide written evidence of their approval of this route.</p>

					<p>What will it do to mitigate the loss of this amount of carbon capture?</p> <p>How will the team mitigate for the 19 unevaluated wetlands as well as the provincially significant ones, given that a full study has not been done to know what mitigation is required?</p> <p>147 hectares of possible endangered and threatened species habitat and vegetation removal with a general statement that hopefully not all 147 hectares will have to be removed. How much of the unmoved 147 hectares would then become useless as habitat?</p> <p>97.87 hectares of mature forest with 31.02 impacted directly. How much of the remaining 66.85 hectares of forest will be damaged long term due to concentration of air, soil and water pollution? 98 hectares of healthy mature forest absorbs approximately 980 tons per year. What are the specifics to mitigate this?</p> <p>64.16 hectares of meadowland - critical to biodiversity in this region. How many of the remaining 43.8 hectares will be contaminated from runoff, air, soil and water pollution?</p> <p>9.03 hectares of thicket impacted directly - critical to the habitat of endangered birds in the area; how much of the remaining 7.78 hectares will be damaged by pollution?</p> <p>22.44 hectares of marsh with 6.25 hectares impacted directly; once you drain from an area of marshland, does the water level of the whole marsh not change? As such, almost all of the 22.44 hectares would be impacted? When a marsh is drained, it also alters its composition as it is exposed to more oxygen and thus more chemical changes occur and in fact carbon emissions occur instead of being captured. How will</p>	<p>Field investigations for Stage 2 and Stage 3 works have been completed and additional details are included in the Updated Draft Environmental Impact Assessment Report available on the Project Website (https://www.bradfordbypass.ca/study-process/) for public review until August 14, 2023.</p> <p>The required Stage 4 Archaeological Assessment of BaGv-42 will be completed during future phases of work for the project and will be carried out in accordance with the Ministry of Citizenship and Multiculturalism Standards and Guidelines for Consultant Archaeologists (Ontario Government 2011). No ground disturbing activities will occur at this site until the Stage 4 assessment has been conducted.</p> <p>In accordance with Ontario Regulation 697/21, the Project Team completed site specific Stage 3 archaeological assessments for areas within the Study Area that were identified as having archaeological potential in accordance with the Stage 2 archaeological assessments.</p> <p>It is common practice for Stage 4 archaeology work to be completed during Detail Design. Limiting the impact to Stage 4 archaeological sites where feasible is one of the Project Team's main priorities. As a result, the Project Team will determine the exact impact limits to archaeological sites during subsequent design phases of the project. To avoid unnecessary excavation, the Project Team will then undertake the Stage 4 archaeological assessments. Any Stage 4 field work that will be undertaken must engage interested Indigenous communities.</p> <p>As recommended by the cultural heritage resource assessment undertaken by the Project Team, the Holland River watershed was identified as a Cultural Heritage Landscape requiring further research and evaluation to determine if it possesses cultural heritage value or interest. This further assessment will be completed in a Cultural Heritage Evaluation Report (CHER), and if the CHER determines that the Holland River Watershed meets the criteria in Ontario Regulation 9/06 or Ontario Regulation 10/06</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	DRAFT EIAR edits required? (Yes/No) If yes, specify edits
					<p>this loss of carbon capture marshland be mitigated?</p> <p>59.13 hectares of various swampland, with 30.26 impacted directly. How much of the remaining 28.87 hectares will be impacted by the drainage, pollution and the change in water level? Swampland is a very sensitive component of our ecosystem and if the water table changes, microorganisms become invasive and degrade the soil/peat/swamp structure. Ecosystems of this nature are very difficult to replicate. How, specifically, will this damage to climate efforts and biodiversity be addressed?</p> <p>The loss of marshland to this project may be 0.4% of the provincial total yet it does not consider the amounts that will also be destroyed by the proposed 413, greenbelt 'land grab' sprawl, so to justify as a provincially assigned team that it's really not that much, is misguided and inaccurate on the grander provincial scale. Furthermore, when other alternative options exist, manipulating the definition of 'development' to suit this project is undermining the true intent of the Greenbelt Provincial Policy Statement and frankly, deplorable.</p> <p>A total of 332.08 hectares of environmentally sensitive and carbon capture land will be impacted, not only the stated 146.72 hectares. And in its place the government is putting a major highway that will increase the carbon footprint rather than decrease it over the next 20 years. How can this be justified to save 33 minutes for anyone going from 404 to 400 for the purpose of what? Recreational? Most people have their limit on how far they will drive for work. How many people will be going from say Barrie to Markham to justify that amount of damage and expense? We are supposed to be moving to buy local, farm to table, live where you work. How</p>	<p>of the Ontario Heritage Act, and may be adversely impacted by the Updated Technically Preferred Route, a Heritage Impact Assessment will be prepared to fully assess impacts on the resource's identified heritage attributes and propose alternatives and mitigation to conserve the property's Cultural Heritage Value or Interest. These commitments are included in Section 5.3.2 of the Updated Draft EIAR.</p> <p>Consultation is an integral component of the Preliminary Design stage, the project-specific assessment of environmental impacts process, and for future project phases, and is critical to a project's success. The ministry is actively consulting and engaging with Indigenous communities throughout the Bradford Bypass Project.</p> <p>The Project Team is engaging with and considers input provided by the following Indigenous communities:</p> <ul style="list-style-type: none"> - Alderville First Nation - Beausoleil First Nation - Chippewas of Georgina Island First Nation - Chippewas of Rama First Nation - Curve Lake First Nation - Hiawatha First Nation - Mississaugas of Scugog Island First Nation - Kawartha Nishnawbe First Nation - Georgian Bay Métis Council, and - Huron-Wendat Nation <p>Comments from Indigenous communities are accepted at any time in the study process.</p> <p>5. Table 2-2 lays out the 12 species present or very likely to be present. For instance, Blandings Turtles are likely affected as they are likely in the area. The only commitment we see is to do a detailed study later on. This is a good example of study following decision or destruction, and is in violation of the standard EA practices. There are no commitments to the protection of species at risk in this document.</p>

					<p>does this bypass support that when it doesn't even alleviate local traffic issues?</p> <p>The report notes that the banks of the Holland River East Branch are not good habitat sites but that is where the deer are now forced to live due to human encroachment. This project encroaches further into their habitat, dismal as it is. This bypass in effect will 'corner' the deer population or force them out during construction? Is that the intended mitigation, that the deer will move on? What mitigations will be put in place to protect the deer wintering areas?</p> <p>Is the project team addressing the fact that designated 'significant' wetlands and environmentally sensitive lands between Yonge and 2nd Concession Rd may also cause the Minister of Climate Change to intervene? What mitigations are in place to protect these areas that are critical to Canada's role in drawing down carbon emissions. No percentage is worth losing at this point.</p> <p>Greenbelt land - the federal government is now looking into the impact of development on the Greenbelt in regards to endangered species. It has intervened in Quebec, it is intervening for the Rouge National Park and is considering intervention for the Duffins Creek area. Will the project team be considering greater mitigations like using alternative regional roads in order to avoid federal intervention?</p> <p>How will the rare Deciduous Hickory Forest be protected?</p> <p>The Eastern Meadowlark lives primarily in grasslands; this project will be taking away its habitat; the Mallard duck and Blanding's Turtle will be impacted by runoff into the water systems where it lives; and the Yellow Warbler breeds in thickets, dense shrubs</p>	<p>Targeted surveys for all species at risk with potential to occur in the Study Area will be required during future phases of work. These future studies will inform the need for any permits, authorizations, mitigation or compensation under the Endangered Species Act.</p> <p>The Updated Draft EIAR requires consideration and review of all recommendations throughout the corridor during future phases of work. This approach is necessary and standard practice for planning projects in that design is an iterative approach and this project is only completing design to a preliminary level. During future phases of work, additional design will be completed and may include refinements to the design as details are developed with greater accuracy. Limiting the future design phases by making certain elements of the project non-discretionary at the preliminary design stage limits the potential for future work to explore opportunities for further reducing impacts and / or increasing mitigation and offsetting measures.</p> <p>For Blanding's Turtle specifically, candidate habitat associated with the Holland River and Holland River East Branch open water and wetland communities has been identified within the Study Area. Blanding's Turtle may be impacted while moving in between habitats if these species enter the construction work area.</p> <p>As part of this phase of the project, preliminary mitigation and avoidance measures for the potential impacts to turtles are included in the Draft EIAR and include:</p> <ul style="list-style-type: none"> If stockpiles of gravel and sandy substrates or the removal of these substrates in the vicinity of turtle habitat are required during the active turtle season (April 1 to October 15), turtle exclusion fencing should be installed in accordance with the Reptile and Amphibian Exclusion Fencing Best Management Practices (Ministry of the Environment, Conservation and Parks, 2020) around stockpiles or area of disturbance prior to April

					<p>and willows; this project is removing/reducing its breeding areas. What specific mitigations will be put in place for the 9 birds that are either MBCA protected or species of concern?</p> <p>12 species of wildlife at risk - the mitigation seems to imply that the species either move themselves elsewhere or when it comes to it, if there are any left, they will be removed elsewhere. Is this a correct interpretation of statements like 'all agricultural fields present within the Study Area may provide future opportunities for nesting depending on the crop selection in a given year' and 'targeted crepuscular bird surveys will be completed during Detail Design'?</p> <p>When the mitigation states it will take a survey, what will it do with the survey information even though construction will already be under way at that point?</p> <p>Black Ash - endangered and confirmed present yet there is no mitigation noted, just its location and where it tends to grow. What is the specific mitigation to protect it? Clearly, if not already killed by the Emerald Ash Borer, we should be protecting them. How will the project team protect them?</p> <p>Butternut - endangered and confirmed and also likely habitat for the Yellow Warbler et al yet no mitigation is specified. How will it be protected?</p> <p>4 species of concern were confirmed present in the study area yet no mitigation is noted. The turtles and Western Chorus frog, eluding observance so far, will be impacted by the runoff into the water systems. What mitigations will be put in place about runoff such as using a salt alternative in the zones that are applicable?</p>	<p>1. Fencing should be installed immediately after stockpiles are created if after April 1.</p> <ul style="list-style-type: none"> It is recommended that culverts be designed to provide openness ratios that would allow for the passage of small mammal and/or herpetofauna where possible. An openness ratio of 0.4 would permit usage by medium-sized mammals, while the minimum openness ratio to be considered should be 0.25, which would permit usage by reptiles such as turtles (Credit Valley Conservation, 2017). Avoid work within areas of candidate turtle overwintering habitat during the turtle overwintering period (October 31 to April 1), whenever possible. <p>These preliminary mitigation measures will be further refined as the project proceeds to Detail Design and impacts are assessed in more detail.</p> <p>For further detail on potential impacts to Species at Risk and proposed mitigation and avoidance measures, please refer to Section 5.1.1 of the Draft Environmental Impact Assessment Report.</p> <p>a. The Draft IA report identifies that the Williams Treaties FN reported American Eel and Northern Sunfish in the Holland River. This must be further investigated with new fieldwork. The American Eel is in decline and gets Federal protection. Ontario's Species at Risk legislation doesn't work anymore so it's all up to the federal enforcement.</p> <p>b. What is Ontario going to do to stand by Canada's obligations to First Nation treaty and consultation rights?</p> <p>c. Will the American Eel's presence be investigated with new field work.</p>

					<p>Why will the Final Assessment report be written before the Fish and Fish Habitat assessment is completed?</p> <p>'Fisheries ecologists visited the sites to document existing habitat conditions to assist in determining whether the proposed works may result in a Harmful Alteration, Disruption or Destruction, or the death of fish, and therefore requires a Request for Review by Fisheries and Oceans Canada and potentially a Fisheries Act Authorization in subsequent design phases.' Does this mean potential was found for harmful alteration, disruption or destruction and therefore the project team has to consult at other stages to ensure this doesn't happen?</p> <p>Am I correct in understanding that the project team overruled or ignored the consultation information provided by Williams Treaty First Nations in regards to the American eel and Northern sunfish being present in the Holland River and that because their presence wasn't documented with the Ministry, the team can ignore their possible presence? Not only is this an insult to the First Nations reporting it to you, but clearly further study is required with the support of that First Nation who has noted their presence. Will this occur to comply with the spirit of reconciliation and such programs as Indigenous Guardians and Networks, and Target 21 from COP15?</p> <p>What does it mean in real terms if the EX-CL-400-4 has been abandoned? Has it been abandoned by this project team or by the municipality in question? What does that mean in either case for the runoff in that location from the bypass?</p> <p>While the report indicates the current runoffs along the proposed route, it doesn't state the impact that the bypass will have on these runoffs.</p>	<p>It was noted in discussion with William Treaties First Nations on December 1, 2022, that they had observed both American Eel (<i>Anguilla rostrata</i>; Endangered Species Act – Endangered, Species at Risk Act – Not at Risk) and Northern Sunfish (<i>Lepomis peltastes</i>; Endangered Species Act – Special Concern, Species at Risk Act – Special Concern) in the Holland River.</p> <p>Subsequently, the Project Team consulted with the Ministry of the Environment, Conservation and Parks, in March 2023 and was advised that the Ministry of Environment, Conservation and Parks records have no documented observances of the American Eel or Northern Sunfish in the Study Area. They also noted that the Northern Sunfish is a species of special concern and does not have a permitting status with the Ministry of the Environment, Conservation and Parks, and therefore would not be reported. These discussions with Williams Treaties First Nations and MECP have been documented in the Fish and Fish Habitat Report and Section 2.1.2 of the Updated Draft EIAR.</p> <p>No records of aquatic Species at Risk that are afforded protection under the Species at Risk Act or Endangered Species Act are known to occur in the watercourses where culverts are anticipated to be installed. AECOM ecologists conducted a detailed fish and fish habitat assessment of the water features in the vicinity of the Study Area between September 14-18, 2020, with spring field investigations occurring over multiple days in June 2021. Field investigations were also completed in the spring of 2022 due to changes to the Study Area boundary that required further review for potential fish habitat. Based on these investigations, no Species at Risk were discovered in the Study Area. Regardless, the presence or absence of all aquatic Species at Risk will be re-confirmed in subsequent design phases through additional field investigations.</p>	<p>6. Please confirm our understanding that has been no discussion of, and that there</p>

					<p>The Maskinonge River is already contaminated with a number of environmental groups indicating to governments the problems due to current runoff, invasive species and Aerodrome Fill/dump issue. July 19, 2023, the federal government released \$48,800 in funding of the needed \$77,000 to clean the river up for species. As stated in the report, this river runs into Lake Simcoe. The conservation authority also received funding to reduce phosphorus and soil erosion by planting riparian areas along the East Holland River and \$17,150 for the Roches Point Eco Park project on July 17, 2023. These projects are part of the federal government's \$30 million program over five years to preserve and protect Lake Simcoe. What financial contributions will this project team recommend to the provincial government to offset the additional cleanup that will be needed due to runoff from the bypass, that will both flow into the Maskinonge, Humber, potentially Black River watershed and consequently into Lake Simcoe?</p> <p>Will the team also be mitigating the use of a salt alternative to minimize the potential pollution as this wasn't clearly stated in their best practices?</p> <p>Culverts EX-CL-400-1 and EX-CL-400-5 do not satisfy any of the three Design Criteria, Culvert EX-CL-20 did not satisfy the Overtopping Criterion (no road overtopping during the 100-year storm) and the 50-year Freeboard Criterion, Culvert EX-CL-404-2 is an existing structural culvert (but does not note if it meets the three Design Criteria), EX-CL-14 (Metrolinx Culvert) does not meet any of the standards - management plan section 5. What happens now with this information?</p> <p>Changes from 2002 to 2020 in groundwater and hydrogeology including applicable</p>	<p>are no studies looking at impacts to Lake Simcoe.</p> <p>As the project falls within the jurisdiction of the Lake Simcoe Region Conservation Authority (LSRCA), pertaining to Ontario Regulation 179/06, the ministry has assessed impacts with respect to the <i>Lake Simcoe Protection Act</i> and the Lake Simcoe Protection Plan through consideration of water quality and quantity, stormwater management, groundwater management, landscaping and ecological restoration measures; as well as fluvial geomorphological designs for watercourses, erosion and sediment control and spills prevention and protection measures.</p> <p>a. The Groundwater Protection and Well Monitoring plan, which this Draft IA refers to, discusses the need to dewater the site for the building of piles for elevated bridge sections of the highway. The Draft IA report says, "Construction dewatering activities have been identified as the primary risk to groundwater fed water wells in the Study Area." There is no credible groundwater protection water. There are many suggestions for how to keep it clean but there are few to no commitments.</p> <p>Commitments, preliminary mitigation measures and monitoring activities related to groundwater are documented in Section 5.1.4 of the Draft EIAR, and will be carried forward to subsequent phases of the project.</p> <p>The risk of spills during construction of the project will be primarily limited to petroleum products from machinery (fuels and lubricants). The use of best management practices for handling of hydrocarbons according to the Ministry of Environment, Conservation and Parks and the Technical Standards and Safety Authority of the Ministry of Government Services will reduce the potential of</p>

					<p>legislation and environmental conditions are noted yet the public needs to wait until the final report to know about what the concerns may be and what mitigations are being offered. Why is this not something that will be prepared and made public before the final report?</p> <p>'In the case of this project, potential well interference is anticipated to most likely be limited to shallow drilled or dug wells completed at similar depths to the respective excavation and dewatering depths. These water supply wells could potentially experience lowering of the water levels where they access permeable shallow surficial soils that are under active dewatering. The potential radius of influence from the project needs to be determined during the subsequent Detail Design dewatering assessments for each excavation that extends below the water table.' Are the minimum 27 residents that will be impacted by this being informed now about this issue? Seems like many have not responded to the 'survey'. Is the municipality not able to identify which residential wells would meet the possible criteria for mitigation? What will be the mitigation for these wells and will this increase the overall cost of the project and by how much?</p> <p>'The calculated radius of influence at each dewatering location shall be summarized and reported on by the subsequent Detail Design designer.' Please explain why appropriate scientific studies cannot be implemented now in order to advise the public of the potential issues instead of when the project is underway and it is too late to consider an alternative?</p> <p>'If it is determined during subsequent Detail Design and Construction that such a potential exists (deeper wells), measures to</p>	<p>environmental adverse effects associated with petroleum product handling and uses. Spillage of petroleum products must be immediately remediated according to these standards such that groundwater quality is not impacted.</p> <p>Mitigation plans will be generated during future phases of work for the project and for any excavation and structure construction within areas of medium to high significant groundwater recharge areas as shown near the Holland River and Holland River East Branch. Mitigation plans would be specific to each excavation and structure construction and include erosion and sediment control, dewatering treatment and discharge piping away or towards from Significant Groundwater Recharge Areas, or municipal sewer discharge requirements. Dewatering discharge shall be directed away from Well Head Protection areas if excavation and dewatering activities are occurring within them.</p> <p>For more information about the Groundwater Protection and Well Monitoring Plan please refer to Section 5.1.4 of the Updated Draft EIAR.</p> <p>b. How exactly is the province going to monitor groundwater discharges to ensure they meet Ontario's water quality standards?</p> <p>c. What penalties are contractors going to face for violating the discharge requirements?</p> <p>d. If penalties are not enough to compel adherence, what next?</p> <p>e. How is the public to have confidence that contaminated water will not be discharged to the Holland Rivers and Lake Simcoe?</p> <p>f. Please confirm is monitoring will continue or not, as this statement is totally vague: "It is expected that each unassessed monitoring well will continue to be monitored and assessed during the subsequent detail design phase of the project."</p>

					<p>address this issue should be considered.' What measures to address issues will be considered and will those residents be informed prior to the final report?</p> <p>Approximately 260 wells will likely be impacted. Are all those resident owners/businesses also aware in addition to those in close proximity?</p> <p>What further steps will be taken for the 88% of well owners who didn't respond to the survey? Why is this number so high for non-respondents? Typically survey responses range from 40-60% completion. Has the team considered the wording of the survey, the timing of the Door to Door? What further support will be provided for these residents?</p> <p>'Some of the installed monitoring wells could not be accessed during the hydrogeological investigation'. How many are 'some'?</p> <p>'Approximately seven monitoring wells were installed after August 2022 by Golder/WSP which are to be assessed during Detail Design'. If 7 of the 13 wells were installed after August 2022, does that mean there were only 6 wells in the assessment and of which 'some' of those six were damaged? Is the report stating that only 2 wells have been assessed and those are the 2 that are being assessed now?</p> <p>Why did the team not wait until the majority of wells were in place prior to the assessment?</p> <p>Monitoring the wells as the project continues is a positive thing, however, the purpose of the Golder/WSP wells is to anticipate possible impact on water level and issues that might arise and give reassurances. How does waiting until later in the project design help address this?</p>	<p>The Groundwater Monitoring Program includes groundwater level monitoring and groundwater quality monitoring to establish the pre-construction baseline conditions for comparison of data collected during and post-construction.</p> <p>During the Preliminary Design study, Golder Associates Ltd. (Golder) installed monitoring wells during the ongoing geotechnical investigations. Monitoring is expected to be completed within these same monitoring wells during all future phases of work for the Project, including construction. Residential monitoring wells will also be part of this program if they fall within the Radius of Influence of the excavation dewatering and permission to enter is granted to gain access to monitor the well. Detail Design will inform the need for further groundwater investigations.</p> <p>Penalties for discharging any deleterious substance or material to the lands will vary based on the federal, provincial or municipal legislation that might be violated. Beyond legislated penalties, contractor behavior is monitored by the Ministry and poor behavior may result in additional financial or reputational impacts. The Ministry's process for selecting contractors to support future phases of the work for the project also includes consideration of past performance and assessment of the contractors understanding of the project and sensitivities within the Study Area. Commitments, preliminary mitigation measures and monitoring activities related to groundwater are documented in Section 5.1.4 of the Draft EIAR, and will be carried forward to subsequent phases of the project.</p> <p>g. Explain what kind of environmental impact would make the project stop; or is any impact acceptable?</p> <p>This government takes environmental protection seriously and is implementing a path forward that will ensure environmental protections are not compromised while building this much needed project quickly and safely. Current work on the Bradford Bypass project will continue to be subject to all conditions under Ontario Regulation 697/21.</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	DRAFT EIA edits required? (Yes/No) If yes, specify edits
					<p>One bypass crossing was deemed to be in "Transitional or Stressed" conditions and with "Moderate" erosion risk - which?</p> <p>Bypass Crossings - 3 reaches were deemed to have degradation - which?</p> <p>The predominant peat and muck located around the Holland River and Holland River East Branch are carbon capture locations. Previous studies demonstrate how runoff compromises the composition of peat and muck (Journal of Hydrology Volume 182, Issues 1-4, July 1996). Therefore, the high water table will not continue to 'preserve' the peat and muck once salt runoff begins. What will be done to mitigate this and/or the loss of carbon capture in this area?</p> <p>Future development plans indicated through 5,7, 8, 9 & 10 on the provided map are residential in nature, within the study area of the bypass route. There are significant impacts to human health due to proximity of this bypass to these developments. How will this issue be specifically mitigated in planning? Are municipalities being made aware of this issue by the Ontario government's Ministry of Health?</p> <p>Figure 2.7 shows the significant amount of prime and specialty crop land in the study area that will be impacted by soil contamination, runoff, air pollution etc. 42/61 farms have class 1-3 soil; are these the farms that will no longer be active agricultural land?</p> <p>Is there no scientific research that would indicate the degree of vibrational concern in relation to proximity to a highway of this nature, rather than 'wait and see' if we need to do anything about it after the fact? The federal government provides recommendations such as increasing the distance between the proposed highway</p>	<p>In accordance with Ontario Regulation 697/21, the Project Team has undertaken several environmental impact assessments to identify and document the potential impacts, proposed mitigation measures, and environmental commitments, which are summarized in the Environmental Impact Assessment Report (EIA).</p> <p>The Ministry of Transportation must also comply with all current federal and provincial environmental requirements. This includes consultation as set out in the regulation and obtaining permits and approvals for the project prior to the start of construction. Obtaining these permits and approvals, which are mechanisms to help protect the environment, confirms that the ministry has met or surpassed the environmental requirements.</p> <p>h. Please confirm that the only financial support for affected well owners whose water quality is affected by the construction is the province providing them with a temporary water supply until the well owner fixes their well.</p> <p>i. Does this meager bit of help extend to those who did not provide baseline information about their well water?</p> <p>j. If there any effort being made to reach more than 12% of respondents to MTO's well water survey?</p> <p>MTO will work with owners of water wells who experience issues to determine if the issue is the result of Bradford Bypass project activities.</p> <p>If the well issue is confirmed to be a result of the project's activities, the Ministry will provide a letter to the property owner explaining the outcome of the well investigation and detail the recommended mitigation measures (including lowering / replacement of pump inlet, well rehab, new well installed or local watermain connection if available)</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	DRAFT EIAR edits required? (Yes/No) If yes, specify edits
					<p>and buildings, improving the soil structure and utilization of in-ground pile barriers. Humans are sensitive to vibrations in the range of 8-80 Hz; a highway with traffic vibrations typically are 5-25 Hz. Therefore, it is logical to presume that the residential, educational and business locations in proximity to this highway will face sensitivities to its vibrations during construction and over time. One doesn't need to 'wait and see' based on research from other studies. Why is this team choosing to wait? Moreover, are any current buildings in the study area being inspected prior to, during and after construction for vibrational damage? Conversely, would the construction of pile barriers be an early mitigation to prevent issues arising?</p> <p>Nitrogen dioxide is dangerous at very low levels - it is shown at 98% of the standard so is very quickly going to be a greater concern once population and development grows in the study area, as well as the indicated Benzene and Benzo pyrene. What studies show that these numbers will drop within the 10 years after construction of this bypass? Research and science indicate that fossil fuel combustion, especially car fuel, increases the levels of nitrogen dioxide (SOCAAR Near-Road Air Pollution Pilot Study 2019). Without this bypass, the study area is only 2% away from exceeding the national ambient air quality guideline, let alone the impact for acid rain on crops and soil deemed class 1-3 in the area and the corrosive nature to building structures. Smaller local road systems accumulate less concentrations, especially from large trucks. The Bypass attracts large transportation vehicles and therefore, concentrations of toxic gasses will be higher when the bypass is built. What is the province's assigned project team proposing to mitigate to deal with this aside from hoping that there will be more EVs on the road?</p>	<p>the Ministry will undertake to remediate the issue. A temporary drinking water supply will be provided and connected to the resident if the project activities are found to be responsible, at the expense of the Ministry, until remediation measures have resolved the issue.</p> <p>A water well survey was completed for the project to determine the pre-construction assessment of private well supplies in the vicinity of the Study Area noted above. Where no response was provided from Property Owners as part of the water well survey, an additional attempt shall be undertaken during Detail Design to contact these owners via mail, email, phone calls, site visit, etc. This information will be used to provide a baseline for water wells prior to the proposed construction to determine existing water quality and quantity of each property.</p> <p>7. How much is this project going to cost?</p> <p>As we bring this project to market, we want to ensure we can retain the best value for the project. As such, the ministry will not be releasing cost estimates prior to the award of contracts to protect the procurement processes.</p> <p>8. When will the Bradford Bypass be completed?</p> <p>The Preliminary Design phase is anticipated to be completed in 2023. Detail Design and Construction Phases will follow.</p> <p>9. It is unclear how many lanes are being constructed at which times. Please clarify.</p> <p>The Ontario government is committed to fully funding the construction of the Bradford Bypass and is following through on its promise to improve and invest in the province's transportation corridors to get people moving within the region, connect people to jobs, make life easier and support a strong economy.</p> <p>A four-lane configuration is planned to be constructed first with two general purpose lanes in</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	DRAFT EIA edits required? (Yes/No) If yes, specify edits
					<p>Benzene and benzo pyrene cause red blood cell damage, damage respiratory systems and are cancer causing, all especially in children. Benzo pyrene is already in the lethally critical to health zone and the % level of benzene has tripled in 4 years to 75%, and that was 3 years ago. Previous studies show that major highways and major highway intersections have greater concentrations than typical roads. Why is the project team not revisiting the alternative regional road options when seeing all this critical health, climate and environmental impact data? Even though there is no apparent mandate to relay the health impacts in PICs, surely moral ethics should be involved. Would you raise your child and have them attend a daycare and school 100-500 metres from this bypass?</p> <p>The team updated 2002 contamination studies that had been done in regards to future highway encroachment into contaminated land use waste sites. How do the 2020 Contamination studies compare to this information?</p> <p>Why are the assessments of 159 new possible contaminated locations waiting until Detail Design phases?</p> <p>It is highly likely given the multiple red zones in the designated route area that construction will encroach into waste contamination locations. What are the specific environmental work and mitigation plans when construction meets with contamination? How will the river sections that are there be protected against further contamination?</p> <p>Figure 2.11 shows high and medium contamination areas. Are any of the 159 new locations in these areas?</p>	<p>each direction. To plan for the future, the Ministry is also considering the design of an ultimate eight-lane design for the Bradford Bypass. The ultimate, eight-lane configuration for the project will feature three general purpose lanes and one HOV lanes in each direction.</p> <p>10. There is no cumulative health impact assessment to understand how traffic related air pollution, known to increase risks of cancers, leukemia, heart and lung disease, will impact the communities surrounding the route. There is also no mention of the cumulative impacts on our climate from construction and higher rates of car travel on this highway.</p> <ul style="list-style-type: none"> a. How will you be informing people living along the route about the increased risk of traffic related air pollution and its effects on human health? b. Will you put air quality monitors in Bradford? c. How do you explain the fact that you are NOT monitoring air quality in Bradford, and using the closest site, Newmarket? d. The Final Environmental Conditions Report identified numerous planned residential developments right beside the highway, including a planned new school. Have the land owners / developers / school boards received any information that tells them how bad the air quality is going to be there? <p>The human health scoping implications of the project such as air quality, noise, land use, traffic congestion and safety, economic, social cohesion, and neighborhood resources have been summarized in Section 2.2.7 and Section 5.2.7 of the Draft EIA. To better understand the human health implications due to the Project as a next step, it is recommended for MTO to continue to consider the human health</p>

					<p>5.2.7 Where can the Human Health Implications Scoping Report (Intrinsik, May 2023) be located?</p> <p>The Snowflux Profile is a 6.6 year study but dated 2008. What considerations have been made for a change in this in the last 15 years due to climate change?</p> <p>Landscaping impacts and mitigations - will mature trees be replaced with mature trees?</p> <p>The traffic study indicated "The majority of movements were shown to operate at acceptable levels during both peak hours. Traffic operations at intersections throughout the Study Area are shown to operate at mostly acceptable levels." Given this is the case, surely this shows that simple lane expansion of some of these regional roads would suffice to alleviate both local and long distance traffic? Does this not reinforce the argument for alternatives to the proposed Bypass plans?</p> <p>3.1.1.3 Alternative 2 preferred I agree with this given it leaves more mature trees intact, if indeed those trees will remain and it indicates full consideration of the environment at that location.</p> <p>Holland River East Branch conceptual alternatives 2 and 3, while meeting the criteria mentioned for the desired change, also appear to take out substantially more trees and wetland than the original. Is this the case? Will this be mitigated with mature trees to replace mature trees? Have the environmental impact studies previously considered this area in regards to endangered species location and habitat?</p> <p>10th Sideroad alternatives: the still preferred alternative 1 favours human and traffic considerations over the environment when</p>	<p>factors identified in this report and provide recommendations to enhance potential positive impacts and mitigate potential negative health impacts. Specifically, conducting a Screening-Level Human Health Risk Assessment of potential air quality impacts is recommended in order to evaluate and characterize Project-related air quality impacts to health.</p> <p>The project has undertaken an Air Quality Impact Assessment to explore pollutant emissions and dispersion modelling in an effort to predict the contribution of the project to future ambient pollutant concentrations. This contribution, added to background concentration levels, allows prediction of the cumulative impact of the proposed project and all other contributors to air pollution. Concentration levels are compared to provincial and federal ambient air quality criteria and standards to assist in the evaluation of project-specific mitigation needs and options.</p> <p>Areas of concentrated emission impact are influenced by traffic volumes along a given segment of roadway. The implementation of the Bradford Bypass is expected to redistribute traffic from local roads and freeway corridors surrounding the proposed Bradford Bypass. Reductions in traffic volumes are observed on corridors including Highway 11/1 (Bridge Street), Bathurst Street, Holland Landing Road, Yonge Street, Queensville Sideroad, Doane Road, Mount Albert Road, Green Lane, and Simcoe County Road 88/Holland Street, among other roads, which benefits the community of Bradford, Town of Bradford West Gwillimbury, by alleviating congestion during peak hours.</p> <p>The Project Team is currently utilizing the National Air Pollution Surveillance air quality monitoring stations to assess air quality levels. Five years of existing data sets were analyzed from stations within the region, and the complete data set from the closest station or most representative station for each contaminant of concern was selected to represent the background air quality for the Study Area. Due to the proximity of the Study Area to the</p>

					<p>alternative 3 is a feasible alternative and does less damage to the environment. Alternative 3 should be used vs Alternative 1.</p> <p>While I am totally opposed to the Bypass given the amount of mature forest and woodland removed, I am especially opposed to the Bathurst interchange for this reason and the damage that air and runoff pollution will cause to the remaining trees. Why is an interchange necessary at this location at all? It is forest, field, marina and farmland with no adjacent developed residential and existing roads would suffice. As stated, the main users are trailers and farm equipment. Even proposed sites for transportation facilities have not yet been approved by municipalities.</p> <p>2nd Concession Road: the 'preferred' alternative 1 does nothing to consider the environmental footprint. Alternative 3 is a viable option, and alternative 2 is at least a compromise. Alternative 3 should be used. Environment should take priority over human benefit for an offramp.</p> <p>Roundabouts should be used wherever possible to reduce energy footprint and need for further infrastructure, however, not to the detriment of the environment - ie. taking out forested areas.</p> <p>BR 12 & 14: Have designs been approved?</p> <p>Traffic Model Analysis: How long will the local roads forecasted to exceed capacity by 2031 and 2041 under No Build scenarios see relief in a 'build' scenario? There are already development plans along the route and so this data is misleading.</p> <p>What are the traffic and time saving scenarios if regional roads were expanded instead of Bypass build? 33 minutes should</p>	<p>Toronto Area, monitoring stations within the City of Toronto were given preference as the one of the most representative locations for the air quality contaminants of concern. As such, Roadside Wallberg – University of Toronto monitoring station, North Downsview monitoring station, Gage Institute monitoring station (all located approximately 38 – 53 km from the Study Area) were used. The nearest monitoring station is in Newmarket. Additional information regarding the assessment of potential air quality impacts have been summarized in Section 2.2.4 and Section 5.2.4 of the Draft EIAR.</p> <p>Land has been designated for the Bradford Bypass since the 2002 Approved EA was completed. As noted above, consultation is an integral component of the Preliminary Design stage and project-specific assessment of environmental impacts and is critical to a project's success. The ministry is actively consulting and engaging with private landowners, developers and school boards within the Study Area. Engagement and consultation has included having a project website and telephone line, having a project contact list for regular project updates, providing notices and correspondence via email, mail, and Ontario Government Notices in local newspapers, hosting public information centres and online events, and holding meetings with Indigenous communities, municipalities, environmental agencies, and stakeholders. More information on the project consultation activities are included in Section 7 of the Updated Draft EIAR.</p> <p>11. Traffic modeling to produce the air dispersion model is not robust or transparent. The air modeling report and supporting reports fail to disclose the % of diesel truck traffic, or the component of that traffic that includes trucks dating from 2006 or earlier which comprise a significant component of air pollution load. The comparison of build with no-build is not valid because the values in Appendix E of the traffic modeling report show that there was an erroneous assumption that there would be</p>

					<p>be compared to the no build scenario with expansion of regional and local roads, or GO station development.. Repeatedly stated, it has been argued that the latter would be less costly, less damaging to health, environment and climate yet no comparison is being initiated by the Team. Why is that?</p> <p>Action 5 recognizes the pending damage to wildlife, habitat, endangered species yet the mitigation is non existent. Moving a few nests with permission, hoping that the wildlife will come back after construction, that it will adapt to humanization, light and noise pollution is not mitigation. Waiting to see what will be done also is not planned mitigation. IF there is not a viable solution, then the Department of Natural Resources and/or the federal Ministry for the Environment and Climate Change must intervene. There is mandated legislation to prevent exactly this kind of destruction from occurring for human gain.</p> <p>Section 5 also states wildlife will be likely, especially deer losing 42 hectares of wintering area. by injury or mortality during construction without mitigation. This also doesn't mention the impact on human injury or mortality. What then is the mitigation prior to construction?</p> <p>Chimney Swift - the Endangered Species Act must be invoked to protect not authorize.</p> <p>Bat species at risk: 58.91 hectares of habitat impacted but the mitigation is to move things prior to their roosting. The Endangered Species Act must be invoked to protect not get authorization; likewise for Eastern Whip-poor-will, Bobolink and Eastern Meadowlark, Blandings Turtle and Least Bittern. How many species will this project knowingly/eradicate?</p>	<p>significantly less truck traffic in the build scenario compared to the no-build scenario. There is no valid scientifically-based justification for this. Further, if there is an increase in truck traffic along 404 - as the model predicts - then sensitive receptors along highway 404 need to be included in a health impact study. Instead, impacts on traffic along the 400/404 corridors were excluded and the "air quality study area" was restricted to the bypass corridor itself without any explanation or justification. It is egregious that MTO did not conduct locally relevant air quality monitoring for background in Bradford, River Drive Park, Queensville and along the 404/400 corridors for traffic related air pollutants. Such baseline monitoring is generally inexpensive and could have been easily obtained. The study did not include the cumulative effects of future planned industrial uses along the Bypass corridor and along the 400/404 corridor which may significantly impact people's health along the route. The evaluation did not use 2022 World Health Organization criteria for contaminants which are much lower and more up-to date than the CAAQS or the AAQCs. We disagree that the AAQCs and CAAQS represent the "lowest concentrations at which an adverse effect may be experienced" as they are not based on up-to-date understandings of the health impacts of air contaminants including pre-term births and neurodevelopmental and other impacts. The report predicts significant exceedances for NO2 and benzo(a)pyrene even with the apparently non-conservative assumptions for diesel truck traffic used in the full build out scenario compared to the no-build scenario. The adverse health impacts of NO2 exceedances may be extremely severe and will impact on the Charter rights and human rights of</p>

					<p>Black Ash: Nothing should be done to these trees until a decision is made as stated in January 2024, otherwise, the Endangered Species Act should be invoked to protect.</p> <p>Notably the deer may benefit from a pass in conjunction with the fencing. Thank you for including this recommendation and others such as that to ensure monarch milkweed is reinstated if removed and avoiding nesting and habitat areas, and also protecting fish and their habitat during the proposed Holland River East Branch construction (though riparian habitat will be lost).</p> <p>I will concede that the recommendations to protect wildlife are better than in the first draft, however, that does not balance the irrevocable damage this bypass will do and many mitigations are still too vague.</p> <p>How do we know which of the mitigations are commitments vs recommendations? Seems to me that a recommendation does not need to be followed unless it is supported by the Endangered Species Act requirements. How will accountability for this be managed and how will the public be made aware?</p> <p>Is the Access Management Plan mandatory to follow?</p> <p>In the tables listed in Section 5, the term 'shall' is used. Is the team's understanding that this is the same as 'must'?</p> <p>Stormwater management was used for the 404 extension yet damage still occurred to the Maskinonge River and watershed. What is the difference between what was done then and what is proposed now for the Bypass?</p>	<p>residents in the study area and beyond without justification for the need for the project.</p> <p>Study Area, MOVES3 data, vehicles and assumptions:</p> <p>In order to model relevant vehicle types within the Air Quality Impact Assessment Study Area, MOVES3 data was input to the model and refinements were made to exclude fuel types such as ethanol given these fuels are not readily available for use in Ontario. Fuel inputs utilized in MOVES3.0 modelling at the time of the assessment included: Fuel Type IDs 1, 2, 3 and 9. ID 5 (ethanol) was not included as flex fuel cars and fuelling stations are not readily available in Ontario. The specific source type fractions utilized for various vehicle types applied within the project study area and the related fraction of expected vehicle usage for both passenger-class vehicles and heavy-class vehicles, including the distribution of vehicle types in the heavy truck vehicle category, were combined to create representative vehicle emission for vehicle class that can reasonably be expected to be in use in 2041.</p> <p>Highway 400/404 corridors were included in the Air Quality Impact Assessment. The full air quality study area is shown in Figure 2-9 of the Updated Draft EIAR and demonstrates that the air quality study area included emission sources within the boundary of assessment, including but not limited to Highway 400 (500 m south of Rural Rd. 88 to 500 m north of Concession Rd. 11), Highway 404 (500 m south of Queensville Sideroad E to 500 m north of Boag Road), the entirety of the proposed Bradford Bypass, Bridge Street, Holland Street W, 10th Sideroad, Young Street/Barrie Street, and Queensville Sideroad.</p> <p>Traffic distributions and truck traffic:</p> <p>The same Average Annual Daily Traffic (AADT) were used for all scenarios. AADT values for each air quality emission source vary between the three scenarios evaluated based on projected existing traffic within the study area, and future no-build and build traffic projections however the same 24-hour</p>

					<p>It is good to see Salt Management includes Canada's Climate Change Code and the best options are being proposed however it doesn't state specifics. Who will be monitoring this?</p> <p>Well water contamination. The report states: "If the well issue is confirmed to be a result of the project's activities, the Ministry will provide a letter to the property owner explaining the outcome of the well investigation and detail the recommended mitigation measures." yet it does not specify if the Ministry will pay for the remediation except for the temporary bottled water. Will the Ministry pay for remediation?</p> <p>Are the residents in the noise sensitive area aware that a noise barrier wall is being considered? When will they know it will be built?</p> <p>Will the potential noise barrier wall cause further impact to the water it crosses?</p> <p>Emissions of construction vehicles and equipment: the report uses the term 'should be' for mitigations to reduce emissions. Is this the same as mandatory and who will oversee to ensure accountability? Does this fall under the Compliance Monitoring Plan?</p> <p>Fugitive dust: the term 'may be used by the construction contractor'. Who is ensuring accountability for this? Does this fall under the Compliance Monitoring Plan?</p> <p>Similarly, for contaminated soils, the term 'should be' is used. Who will be overseeing the contractors to ensure accountability as it also states that it is the contractor's responsibility. Is it the latter's responsibility alone? Does this fall under the Compliance Monitoring Plan?</p>	<p>traffic distribution percentages were applied. Three representative 24-hour distribution percentages were applied to the air quality emission sources. These were applied to a given source of emission depending on the type of road in question, e.g. a "Leslie St." 24-hour distribution was applied to air quality emission sources which were categorized as community arterial roads; a "HWY 400" 24-hour distribution was applied to air quality emission sources categorized as highways; and, a "2nd Concession Rd" 24-hour distribution was applied to rural roads. These same 24-hr distributions were applied to the assigned source for all three scenarios of evaluation (existing conditions, future no-build, and future build).</p> <p>Fuel usage distribution [i.e. diesel, gasoline, CNG, etc.] and vehicle age distribution within each vehicle type category were modelled based on MOVES3.0 default fuel use and age distribution database inputs assigned to the year of evaluation. Heavy truck traffic was included in the modelling with a percentage assigned to each air quality emission source anticipated from this vehicle type.</p> <p>Health Impacts, Critical Receptors and Background/Study Area Monitoring Data: The human health scoping implications of the project such as air quality, noise, land use, traffic congestion and safety, economic, social cohesion, and neighborhood resources have been summarized in Section 2.2.7 and Section 5.2.7 of the Updated Draft EIAR.</p> <p>The Project Team is aware some critical receptors have been identified as 'missing' by a number of stakeholders. Having reviewed the data, these 'missing' receptors were included as residences in the Air Quality Impact Assessment. Potential impacts at the 'missing' receptors within the Air Quality Impact Assessment Study Area are reflected in the assessment by other, nearby critical receptors and receptors identified on Figure 2-9 and 2-10 of the Updated Draft EIAR.</p>

					<p>Emissions, pollution levels and climate change: table 5.17 indicates that emission conditions at 100 km/hr speed, are better in the future with a no-build scenario for almost all the gases: 8.3 vs 13.49 NO₂; 697.07 vs 737.27 CO₂ and so on except PM and Acrolein and in fact, PM_{2.5} and Acetaldehyde and Benzo Pyrene are worse with the build than current conditions therefore how is building this bypass beneficial to climate change, let alone air pollution and human health? It doesn't matter what the notes are that spike the projected readings for the build scenario emissions, the emissions are clearly still higher than a no build scenario. Am I reading the chart incorrectly?</p> <p>This goes likewise for table 5.18 at 110 km an hour.</p> <p>Table 5.19 only compares the data of build with the 2019 emissions - where is the percent for the future no build scenario? Based on tables 5.17 and 5.18, it would be even less than that of the build percentage and therefore better overall.</p> <p>Where is the Climate Change Resilience Assessment?</p> <p>The Climate Change Resilience Assessment reports there are high risk factors especially on hot or windy days yet only uses terminology like 'may be used', 'recommended for guidance' and 'potential measures' for mitigations. Again, why does mitigation language remain noncommittal and vague?</p> <p>How many days are we talking about in a year in an area that is known locally for its wind tunnel, snow belt effects, that incidentally would likely be much better suited for wind turbines?</p>	<p>The approach to identifying representative air quality levels is conservative and often ensures the worst-case conditions are reflected so as to not under-represent conditions within a study area; i.e. background air quality contaminant levels included within the assessment may be representative or higher than expected for the area in question.</p> <p>While it is recognized that localized in-situ monitoring may provide more accurate data, use of existing monitoring stations within the NAPS network for statistically relevant background monitoring data is a generally accepted and conservative methodology for provincial environmental impact air quality assessments. Stations selected for the background air quality assessment were chosen based on total data availability over a most recent five-year period as a minimum of 12 months of daily and hourly data is required to ensure statistical relevance. Stations were also selected based on their proximity to the air quality study area with the meteorological station selected as representative of the air quality study area within 15 km north-west of the air quality study area. Stations must also be a relative representation of similar types of existing sources of air quality emission in the study area and it is notable that the meteorological station selected as representative of air quality in the study area was provided by the MECP in site-specific MET data requested for the project modelling.</p> <p>12. Many less expensive alternatives to this highway have not been considered. The Minister approved Terms of Reference for the Bradford Bypass Environmental Assessment Study overrode the requirements of the Environmental Assessment act to consider road alternatives that would not be a controlled access highway. As a result, the Hwy 9 / Green Lane corridor was the only existing roadway that was considered as a reasonable alternative. That roadway was rejected as it was not considered feasible to convert it to a controlled access facility. Consideration of these types of</p>

					<p>Landscaping: The statement reads "Depending on the final space available...woodland vegetation will be used as an opportunity for replanting compensation trees (reforestation planting)". Earlier in the report, it was a commitment to return tree for tree. Where will the reforestation occur if/when there is not enough 'final space' and what is the age of the reforested trees, that is, will mature trees be matched with mature replacement trees? The mitigation states "Reforestation plantings will consist predominately (predominantly) of large growing tree species" but doesn't specify the age of the replanting trees.</p> <p>Table 5.25 "Financial" - again, no cost for the entire project nor any of the components is listed. There are 'jobs and benefits for years to come' by simply widening existing roads and many more long term benefits for climate and environment remain intact. There is a financial cost to mitigate the damage caused by this highway in carbon capture and farmland which is not factored in here.</p> <p>Table 5.25 notes "Minimal long term environmental impact of the Link through design and mitigation". Where is the mitigation for carbon capture loss over time? How is this minimal? If a project is not increasing the amount of carbon capture, the damage is not 'minimal'.</p> <p>Table 5.25 notes "Minimal long term environmental impact of the Link through design and mitigation" and " High priority given to environmental work as design proceeds". How is this the case for the endangered species that are likely going to be eradicated by this project? Unless you can guarantee that there is no loss of the endangered and threatened species, this project shouldn't be happening. Critical links</p>	<p>alternatives are, however, a requirement for all Class EA Studies. A major condition of the 2002 Bradford Bypass EA Approval, was a requirement to conduct a Class EA Study at the time MTO wished to proceed with this project. This study would ensure the currency of the proposed project in light of current travel demand, previously unforeseen environmental factors, new legislation and a full review of all reasonable alternatives including combinations of regional and local roadways. The following are reasonable alternatives that would need to be considered both individually and in combination with one or more other reasonable alternatives if the Class EA Study that was underway at the time Regulation 697 /21 was issued. Each of these proposed alternative solutions would then be evaluated against the then approved Bradford Bypass 4 lane controlled access freeway. Because the Class EA Study was canceled by this regulation, the only comparison AECOM have used throughout the Draft Impact Assessment Report is "Do Nothing". Given that the actual travel problem we are now faced with is local, rather than long distance traffic, we are confident one or more of the following reasonable alternatives would be dramatically preferable to the now 8 lane, Bradford Bypass. Alternatives to the Bradford Bypass:</p> <ul style="list-style-type: none"> a Construct a 4 lane arterial road bridge over the West Branch of the Holland River at the currently planned location for the Bradford Bypass bridge – together with paved 4 lane roadways to both Bathurst St. and a connection to Bradford's 8th Line. b Build a 4 lane arterial road bridge over the Holland River from Ravenshoe Road to connect with

					<p>in our biodiversity are being lost to human activity such as this. How can this be considered 'minimal long term impact'?</p> <p>This report states that loss of wildlife may occur even during mitigation to protect them. How is this considered "minimal long term impact" for an endangered species?</p> <p>Please explain the premise for this statement from Table 5.25: "Where possible, larger blocks of vegetation were avoided. However, 22.1 hectares of higher quality woodlands will be removed. The total area of the Holland Marsh Endangered Species Act affected by the proposed facility is 17.2 hectares. The impact will not affect the status of the Endangered Species Act."</p> <p>Table 5.25 states: "The Ministry has assessed potential impacts to vegetation, wildlife habitat and sensitive natural areas to propose appropriate mitigation measures to avoid, minimize and mitigate potential impacts to natural areas along the Updated Technically Preferred Route." Is this based on assessment data that is over twenty years old?</p> <p>Table 5.25 states: "9.5 hectares of Provincially Significant Wetlands will be crossed by the right-of-way; the remaining 8.9 hectares are composed of marsh and swamp community types. The above figures refer to the total land area taken by the 100 metres right-of-way to be designated for the route. In fact, the direct physical impacts will be significantly less and will be limited to the construction of widely separated bridge piers." Why can the team then not specify with better accuracy the amount of marshland that will be impacted?</p> <p>Throughout Table 5.25 I do not see any consultation with First Nations listed for mitigations. Is this because it is all listed in the separate table?</p>	<p>Simcoe Line 13 or another appropriate east – west arterial road on the west bank of the Holland River.</p> <p>c Extend and widen Green Lane to 6 lanes and create a diagonal transition from Green Lane to Hwy 9 and highway bridge intersection with Highway 9 around Dufferin St. The Green Lane / Highway 9 option will better serve and reduce both local and long distance traffic from Newmarket south to at least Aurora Sideroad.</p> <p>Any one or a combination of these alternatives will address a substantial amount of local travel problems while being significantly less costly and environmentally invasive. Once again, what logic is being used to ignore these options given all of the rationale in favour of these other alternatives?</p> <p>The planning process that resulted in the 2002 approved Environmental Assessment (EA) for the Bradford Bypass evaluated alternatives from a broad range of potential solutions to address several transportation problems and to address significant opportunities identified in York Region and Simcoe County. The need for this freeway was confirmed during the Route Planning and EA Study as the only reasonable solution that would make a significant contribution towards addressing the problem as the population in York Region and Simcoe County grows. The 2002 EA approved alignment is technically preferred for a freeway in terms of highway network expansion, ease of construction, relationship to provincial and municipal land use planning and the preferred route is already included in Official and Transportation Master Plans, as well as the Places to Grow Act), as well as having fewer negative impacts to residential and natural areas when compared to other route options considered.</p> <p>The Bradford Bypass Project has been modelled based on current local, regional, and provincial</p>

					<p>Table 5.25 states: " The proposed 400-404 Link will remove 23.7 hectares of significant wildlife habitat, potentially affect two Provincially and Nationally "vulnerable" species (Louisiana Waterthrush and Red-shouldered Hawk) currently nesting in proximity to the recommended plan, and potentially interrupt wildlife movement along some stream corridors and woodlots, particularly in the area between Highway 400 and Simcoe County Road 4 (Highway 11)." How is this "minimizing" the impact on wildlife? 2 endangered species will be eradicated, movement of wildlife will be restricted causing potential mortality and 23.7 hectares of carbon capture and wildlife land gone. How is this "minimizing"?</p> <p>Table 5.25 states: " Preserve agricultural land and minimizing negative impacts on agricultural operations" yet "The total land area, currently in active agricultural production, directly affected by the proposed facility is 84.4 hectares in the western section and 69.9 hectares in the east and central section totaling 154.3 hectares." Not only does this impact local food security, it also impacts carbon capture yet again.</p> <p>What is the cost for lost agricultural production of the 154.3 hectares of active agricultural production? Has this financial total been subtracted from whatever positive benefit to the GDP the Bypass presumes to claim?</p> <p>Table 5.25 states: " In supporting mobility of people and goods and in supporting the economic development of the Study Area (Bradford in particular), the Link may contribute to a reduction in dependence on long-distance commuting for residents of northern York Region as a significant proportion currently travel to jobs outside</p>	<p>projections and data. This addresses the problem of "lack of long-term planning" per the Bradford Bypass 2002 approved EA..</p> <p>The 2002 approved EA reviewed a broad area of analysis which included several corridors, including areas south of the current corridor, and Highway 89/Ravenshoe Road.</p> <p>The Bradford Corridor was selected as the preferred corridor over Highway 89/Ravenshoe Road as it was beyond the maximum north limit of 10th Line / Boag Road which was assessed in a previous EA study and was determined that a Management Area or river crossing north of this would entail unacceptable environmental impact, which lead to the withdrawal of the Highway 89 EA studies in 1986-87.</p> <p>The Bradford Corridor was selected as the preferred corridor over the southern alternatives as there was no south alternative that met the primary purpose of the study to reduce out-of-way travel. The south limit was established as Highway 88 and Queensville Sideroad.</p> <p>The original purpose of the Bradford Bypass per the 2002 Approved EA was to address the "east-west" long-distance travel demand crossover between Highway 400 and Highway 404 which is a provincial responsibility and distinct from the locally generated trips which use a municipal road to access the provincial network. As noted in the report, the overall network benefits from vehicle-hours of travel time savings and vehicle-kilometres of travel distance savings are observed during the 2041 AM peak hour and during the 2041 PM peak hour in the updated interchange locations. Local roads forecasted to exceed capacity by 2031 and 2041 under the No-Build scenarios see significant relief from traffic as a result of the diversion to the Bradford Bypass in the Build scenarios.</p> <p>While the Town of Bradford West Gwillimbury owns a closed road allowance east of Artesian Industrial Parkway for 8th Line to Holland River, Hochreiter Road itself is a private road. A connection at this location would not address the primary purpose of</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	DRAFT EIAR edits required? (Yes/No) If yes, specify edits
					<p>the area." This creates an antithesis. The BBypass is being created to cut down the travel time for long distance travel but there is an assumption that some of these long distance travellers will no longer need to use the Bypass because they will find jobs in their own area due to the development around the Bypass. Moreover, there is development of businesses in the area without the Bypass. Furthermore a study or survey has not been done to verify who is travelling from Bradford to their place of work, nor how far, so this statement is a weak hypothesis at best.</p> <p>Table 5-25 states: 'Avoidance of contributing to unsustainable development patterns'. On the premise that that development begets development, this project is contributing to unsustainable development patterns. Municipalities have repeatedly started within the past 2 years that they cannot afford the infrastructure costs that come with urban sprawl development. This Bypass has already attracted further development as the report itself states and therefore is part of the problem.</p> <p>Table 5-26 contains an array of "should", "may" that must be 'shall' or 'must'</p> <p>Terr 2-04 in table 5-26 - age of tree must be added.</p> <p>Thank you again for your time on a project that clearly must be challenging to be a part of.</p> <p>Sincerely, </p>	<p>the Bradford Bypass to connect Highway 400 and Highway 404. The local benefit of this route is likely outweighed by the reduced congestion of Bridge Street created by the Bradford Bypass. A bridge across 8th Line would still require out-of-way travel, which this study is looking to reduce, to connect to provincial transportation facilities. Improvements would likely be required on Bathurst Street and Queensville Sideroad. Significant property impact (similar to the Bradford Bypass) would be required for a new corridor connection from 8th Line straight to Highway 404. For more information on the 2002 Approved EA, please see the enclosed linked: https://www.bradfordbypass.ca/wp-content/uploads/2020/09/BBP-RoutePlanningEA-1997.pdf</p> <p>For more information on the assessment of alternative routes, please refer to the response to question #3.</p> <p>Please see below the responses to your comments sent on August 8, 2023.</p> <p>1. Has the previous draft report from April/May 2023 been removed? The reader is not able to ascertain, nor does the summary of changes provide what specific additions/alterations were made for this updated draft aside from dates and 'wording'. Please make the first draft visible to the public.</p> <p>The Draft Environmental Impact Assessment Report (EIAR) can be found on the Project Website at the following link: https://www.bradfordbypass.ca/wp-content/uploads/2023/06/RPT_2022-06-01_Bradford-ByPass-Draft-Environmental-Impact-Assessment_60636190_AODA_locked-1.pdf</p> <p>A summary of the changes made to the Draft Environmental Impact Assessment Report is available in Table ES-3 of the Updated Draft Environmental Impact Assessment Report which</p>

						<p>can be found on the Project Website at the following link: https://www.bradfordbypass.ca/wp-content/uploads/2023/07/RPT_2022-07-13_Bradford-ByPass-Updated-Draft-Environmental-Impact-Assessment_60636190_optimized_locked.pdf.</p> <p>2. Regulation 697/21, used after the first PIC, gives reliance on 1997 environmental assessment reports, for which the provincial government at the time decided that the impact was too significant to warrant going forward. Therefore, how can this project continue without a full updated environmental assessment to show things have, or haven't changed in regards especially to climate impact?</p> <p>The 2002 Approved Environmental Assessment identified a number of Conditions of Approval set out by the Ministry of the Environment, Conservation and Parks. The 2002 Conditions of Approval identified in the 2002 Approved Environmental Assessment are to be carried forward to Detail Design, with the exception of Condition 4. The complete list of commitments carried forward from the 2002 Approved Environmental Assessment are listed in Table 5-24 of the Updated Draft EIAR.</p> <p>The Bradford Bypass project has been assessed in accordance with Ontario Regulation 697/21. Consistent with the Regulation, the Project Team completed an update to the description of environmental conditions previously documented in the 2002 Approved Environmental Assessment (EA) for the project. The Environmental Conditions Report (ECR) was finalized in October 2022 following a public review period and is available on the Project website: https://www.bradfordbypass.ca/wp-content/uploads/2022/10/RPT_2022-10-27_BBP-Final-ECR_60636190_AODA.pdf</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	DRAFT EIAR edits required? (Yes/No) If yes, specify edits
						<p>As part of the project, the Ministry of Transportation (MTO) has undertaken 15 environmental studies to update and document existing conditions, identify and evaluate potential impacts of the Project on the existing conditions and recommend mitigation measures to reduce these impacts to meet current environmental legislative requirements. To view the full list of environmental studies being conducted, please visit the Project Website at the following link: https://www.bradfordbypass.ca/overview/.</p> <p>3. Another qualification or limitation noted in this version is that AECOM doesn't assume responsibility for any incorrect information provided to them. Then who does and how can this project team go ahead when information could be inaccurate?</p> <p>The Statement of Qualifications and Limitations included in the Environmental Impact Assessment Reports is standard practice for technical studies that rely on background information and which are then augmented by field studies.</p> <p>Based on the data gathered during the Preliminary Design project, including background data gathered from others and data obtained through field investigations, MTO considers the information in each of the technical studies and is summarized in the EIAR to be accurate at the time of report drafting. Additional investigations will be completed during future phases of work for the project to gather additional data and verify the information prepared during Preliminary Design.</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	DRAFT EIAR edits required? (Yes/No) If yes, specify edits
						<p>4. Alternative #2 East Holland River Branch now states there is greater encroachment into natural areas and still impacts the river. Mitigation for any impact is unclear and only to be discussed at the time as the design moves forward. How much encroachment in square metres will there be? How much and which 'nature' will be impacted, even if only based on 1997 and 2002 assessments? How is this mitigation strategy addressing prior and effective public consultation?</p> <p>All impacts identified during this Preliminary Design project have been identified based on the existing conditions information gathered during this study and the design of the Updated Technically Preferred Route developed by this Project Team. Information from the previous studies for the Project has been considered during this Preliminary Design Study but has been updated where necessary to reflect existing conditions.</p> <p>In addition, based on the Updated Draft EIA, the Report progresses through the existing conditions (Section 2), the alternatives (Section 3), the Updated Technically Preferred Route (Section 4) and then speaks to the mitigation strategies (Section 5). Mitigation measures were considered at a high level when assessing the alternatives (Section 2) and based on technical expertise of each discipline (e.g., fisheries, terrestrial, traffic, etc.). Further mitigation measures were then determined based on the Updated Technically Preferred Route and when more details of the Preliminary Design for the preferred alternatives were available.</p> <p>Lastly, it is important to note that the evaluation of Holland River East Branch alternatives has only been summarized in the Updated Draft EIA. In accordance with Section 16 of the Regulation, a detailed assessment and evaluation of the impacts of the proposed</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	DRAFT EIAR edits required? (Yes/No) If yes, specify edits
						<p>changes to the 2002 Approved EA alignment in the vicinity of Holland River East Branch was first documented in the Environmental Conditions Report for the Project. The Final Environmental Conditions Reports (ECR) is available on the Project website: https://www.bradfordbypass.ca/wp-content/uploads/2022/10/RPT_2022-10-27_BBP-Final-ECR_60636190_AODA.pdf</p> <p>Table 3-3 of the Updated Draft EIAR provides the comparative evaluation of alternative alignments in the vicinity of Holland River East Branch. The preferred alternative results in approximately 20% more impact to areas identified as unevaluated wetland and deer wintering areas when compared to the 2002 Approved EA alignment. While there are greater impacts to these natural areas, the preferred alternative does result in less impact to other natural areas including areas identified as Provincially Significant Wetlands (the Holland Marsh Wetland Complex), and significant fish habitat such as an identified backwater refuge area. The anticipated benefits to the Provincially Significant Wetlands and significant fish habitat outweighs the additional impacts to unevaluated wetlands and woodlots. As well, the preferred alternative results in no impacts to two recreational properties in the area.</p> <p>5. How is alternative 3 less impactful than 1 or 2 for the 400 freeway to freeway exchange?</p> <p>For each of the alternatives generated for the project, the Project Team evaluated the advantages and disadvantages of each alternative and ultimately select the preferred design refinement and alternative (i.e., reasoned argument (trade-off) method). This assessment encompassed a variety of evaluation factors and criteria including Transportation and Engineering (traffic operations, highway geometrics,</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	DRAFT EIA edits required? (Yes/No) If yes, specify edits
						<p>structural considerations, utilities, etc.), Natural Environment, Socio-Economic Environment, and Cultural Environment. Based on the identified advantages and disadvantages associated with each alternative alignment, the Project Team then determines which alternative or refinement best maximizes the benefits associated with each criterion. Further details about the evaluation factors and criteria are in Table 3-1 of the Updated Draft EIA. Environmental impacts are just one factor area considered across the assessment of alternatives. Sometimes, the complete avoidance of environmental impacts is not feasible when considering all highway engineering disciplines.</p> <p>The assessment process aims to identify impacts, investigate avoidance/minimization/mitigation strategies, and identify any necessary permits from the ministry's regulatory agencies where impacts are carried forward.</p> <p>As detailed in Section 3.2.1 of the Updated Draft EIA, the preferred alternative (Alternative 3) is less impactful as it has a smaller footprint than the other alternatives which means less area is disturbed. Notably, the preferred alternative avoids impacts to a cemetery on the west side of Highway 400. The preferred alternative also allows for access between Highway 400 and County Road 88 to be maintained and for a connection to County Road 88 from the Bradford Bypass, therefore access in the area is increased.</p> <p>6. How is alternative 1 the least impactful for the 404 freeway to freeway exchange? As detailed in Section 3.2.2 of the Updated Draft EIA, the preferred alternative (Alternative 3) is less impactful as it has a smaller footprint than the other alternatives</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	DRAFT EIA edits required? (Yes/No) If yes, specify edits
						<p>which means less area is disturbed. The preferred alternative also allows for access between Highway 404 and Queensville Sideroad to be maintained and for a connection to Queensville Sideroad from the Bradford Bypass, therefore access in the area is increased.</p> <p>7. How does alternative 2 minimize impacts on the environment for the west of Leslie Hydro One towers? The design change at the Hydro One towers was necessary to avoid impacting the towers / transmission lines. As detailed in Section 3.2.3 of the Updated Draft EIA, the preferred alternative (Alternative 2) is less impactful as it avoids relocation of the towers which would have resulted in additional footprint impacts. Alternative 2 is also preferred as it allows for Hydro One access roads to be adjacent to the proposed Bradford Bypass rather than in the median / middle of the proposed freeway lanes.</p> <p>8. 15th sideroad and 2nd concession Rd interchanges - report doesn't indicate level of impact on environment. Why is that? What would the impact be? Please note the Project Team has developed the below response assuming 15th Sideroad was a typo and you were referring to 10th Sideroad. Environmental impacts associated with the 10th Sideroad interchange are detailed in Section 3.2.5.4 wherein it is noted that Alternative 1 was preferred as it provides the best traffic operations. As noted, opportunities to minimize impacts will continue to be explored during detail design. Environmental impacts associated with the 2nd Concession Road interchange are detailed in Section 3.2.7.4 wherein it is noted that</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	DRAFT EIAR edits required? (Yes/No) If yes, specify edits
						<p>Alternative 1 was preferred as it provides the best traffic operations. As noted, opportunities to minimize impacts will continue to be explored during detail design.</p> <p>Note also that both the 10th Sideroad and 2nd Concession Road interchanges were included as part of the Preliminary Design at the request of local municipal/regional authorities and in response to feedback provided after PIC 1 for the Project. In particular, both local authorities noted that the proposed interchanges were important in supporting future planning objectives in the towns.</p> <p>9. Bathurst St interchange – report states ‘Smallest footprint and lowest environmental area of disturbance’. What disturbance would this be and what is meant in numerical terms by ‘smallest footprint’ in comparison to other alternatives considered?</p> <p>As detailed in Section 3.2.6 of the Updated Draft EIAR, the preferred alternative (Alternative 1) is less impactful as it has the least impact to Provincially Significant Wetland areas and minimizes the overall realignment of the intersection entrances. Alternative 2 requires an additional 7,421 m² of land and Alternative 3 requires an additional 3,173 m² of land. As a result, Alternatives 2 and 3 would result in greater impacts to property and the natural environment.</p> <p>10. Leslie street interchange - Lowest environmental and property impacts are stated. What is this specifically?</p> <p>As detailed in Section 3.2.8 of the Updated Draft EIAR, the preferred alternative (Alternative 1) is less impactful as it avoids a designated cultural heritage resource in the northeast quadrant of the interchange and</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	DRAFT EIA edits required? (Yes/No) If yes, specify edits
						<p>avoids ecological features. Alternative 2 requires an additional 24,920 m² of land which would result in greater impacts to property and the natural environment. Alternative 2 includes an interchange loop which would result in a larger impact to fish habitat, domestic properties, natural heritage, and prime agricultural areas.</p> <p>11. Overpasses and underpasses - the report doesn't indicate impact to the environment. What will the impact be? How will it be mitigated?</p> <p>The overpass and underpass recommendations in the Updated Draft EIA were recommended based on optimized profiles associated with the proposed Bradford Bypass and the crossing road / railway. As part of the Preliminary Design, the Ministry has undertaken an independent Value Engineering Study in 2022. The Value Engineering Study is an important part of the overall study process, and resulted in refinements to the alternatives that best achieved a balance between cost and benefit while taking into consideration impacts to the environment. The overpasses and underpasses were considered as part of the Value Engineering Study. Regardless of the configuration (overpass or underpass), the crossing remains within the limits of the Updated Technically Preferred Route.</p> <p>While the specific impacts of each overpass or underpass have not been described in the Updated Draft EIA, the impacts of these crossings have been included in the impact assessment for the project detailed in Section 5 of the Updated Draft EIA and mitigation measures have been identified.</p> <p>12. Interchange locations - report states 'Early integration and consideration of environmental impacts to the design'.</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	DRAFT EIAR edits required? (Yes/No) If yes, specify edits
						<p>What does this mean in real terms? The environment is being impacted significantly - wildlife, wetlands, water systems, ground water, air quality - where is the integration of early mitigations for all of this to the design?</p> <p>As detailed in Section 3.3, location-specific considerations for each potential interchange location were identified prior to completing the preliminary design for each interchange. The specific considerations for each interchange that were identified early in the design process are detailed in Table 3-13 with considerations at each interchange noted in the corresponding row within the table. The "Interchange Locations" row of Table 3-13 which states "early integration and consideration of environmental impacts" is intended to provide a summary of the early approach taken to minimize impacts to the environment at each interchange. These measures include avoiding a cultural heritage resource (e.g. Leslie Street), developing alternatives with the smallest footprint and area of disturbance (e.g. Bathurst Street), etc. Avoidance and design solutions which use the smallest footprint are the initial mitigation measures integrated into the design process.</p> <p>13. The original plan was for a 4 lane highway. Now it is planned at some point to be 8 lanes. Reg 697/21 avoids duplication of paperwork where an already previous study exists yet for the Bypass the 1997 and 2002 studies did not consider the area required for 8 lanes, interchanges and carpool spaces. How is this project in accordance with 697/21 without a full environmental study for the additional land being considered?</p> <p>The interim Bradford Bypass will be comprised of a four-lane cross section featuring two general purpose lanes in each direction. The ultimate cross section will be widened towards</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	DRAFT EIAR edits required? (Yes/No) If yes, specify edits
						<p>the highway median within the already established right-of-way footprint for the corridor and will be comprised of three general purpose lanes and one High Occupancy Vehicle (HOV) lane in each direction.</p> <p>As noted in Question 2, the Project Team has undertaken 15 environmental studies to update and document existing conditions as they are today and has not relied solely on the work previously completed in 1997 or 2002. Similarly, the process of identifying and evaluating potential impacts of the Project (Section 5 of the Updated Draft EIAR) is based on the preliminary design for the project that has been documented in the Updated Draft EIAR. The impact assessment has considered the ultimate cross section of three general purpose lanes plus an HOV lane and additional property beyond the proposed right-of-way is not required to facilitate this future widening. This is the Ministry of Transportation's normal planning practice. The Ministry always considers future growth in demand instead of only considering immediate need.</p> <p>14. Some of the waterways have already been deemed hazardous so any displacement of these waters creates bigger mitigation issues. What will be put in place to safeguard no cross contamination, especially in addition due to construction and future runoff?</p> <p>Watercourses will be carefully managed during construction to minimize impacts to the greatest extent possible. It is important to note that construction management of water within existing or realigned watercourses will be limited to managing flows within the channel and that flooding outside of the channel is not permitted. The Ministry is committed to delivering robust water quality and quantity treatment facilities within the Bradford Bypass corridor and runoff</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	DRAFT EIAR edits required? (Yes/No) If yes, specify edits
						<p>from the proposed Bradford Bypass will be managed properly. As detailed in Section 5.1.3 of the Updated Draft EIAR, a stormwater management plan for the corridor has been developed to minimize impacts to the drainage system and surrounding environment. The stormwater management design includes relocation of two existing stormwater ponds in the Study Area, nine new stormwater management ponds, and over 15,200 metres of flat bottom grassed swales with permanent rock flow check dams. The ponds will provide enhanced protection level (80% long-term Suspended Solids removal) or greater and the grass bottomed swales will provide water quality treatment of runoff generated from the paved areas of the Bypass not already treated by the proposed ponds. Design of the stormwater management measures will be further assessed and defined during future phases of design. In addition, the Project Team has included a number of environmental management plans that must be developed prior to construction. These plans include erosion and sediment control plan(s), groundwater management plan(s), spill management plan, access management plan, waste and excess material management plan, etc. Adherence to the plans during construction will be required and it is important to note that contractor behavior is monitored by the Ministry and poor behavior may result in financial or reputational impacts. Further, the Ministry's process for selecting contractors to support future phases of the work for the project also includes consideration of past performance and assessment of the contractors understanding of the project and sensitivities within the Study Area.</p> <p>15. How does this bypass meet the official municipal and regional master plans to provide ' multi-modal transportation</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	DRAFT EIAR edits required? (Yes/No) If yes, specify edits
						<p>system, improving safety, and supporting the development of healthy communities' when it is only for vehicle access, unlike a regional road system. Why is there a hold on Mulock and Innisfil GO-stations if a multi-layered approach is the plan?</p> <p>The project is being assessed with consideration of the Ministry's mandate to provide for the safe, efficient movement of people and goods between regions and urban areas. The nature of this provincial mandate and the characteristics of the proposed Bradford Bypass mean that pedestrian and cyclist traffic is prohibited from using the freeway due to significant safety concerns.</p> <p>Provisions for future Active Transportation facilities at municipal north-south crossing roads within the Bradford Bypass corridor are recommended. These proposed routes were identified in both the municipal Active Transportation plans and Transportation Master Plans, and by the municipalities in meetings with the Project Team. For more information on active transportation provisions, please see Sections 4.2.3 and 4.2.5 of the Updated Draft EIAR.</p> <p>Also detailed in Section 1.5.4 of the Updated Draft EIAR is a variety of planning policies that have been considered during the course of the Project. In terms of regional / municipal policies, it is important to note the Bradford Bypass has been identified in the municipal and regional master plans as a near-term need to accommodate the forecast growth, goods movement and future transit movements forecast within the Study Area and each of the regional / municipal plans.</p> <p>With regards to supporting regional / municipal plans to provide 'multi-modal systems with improved safety and healthy communities, the</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	DRAFT EIAR edits required? (Yes/No) If yes, specify edits
						<p>Project Team has consulted with these stakeholders throughout the Project and developed a thorough understanding of the planning objectives in each authority's Official Plans and Transportation Master Plans. Based on the consultation and objectives outlined in the plans, and as detailed in Section 4.2 of the Updated Draft EIAR, recommendations for active transportation (sidewalks, multi-use paths, etc.) have been incorporated to the design of various crossing roads and interchanges.</p> <p>In addition to investments like the Bradford Bypass, Ontario is investing \$70.5 billion over 10 years in public transit, including Ontario's new subway transit plan for the Greater Toronto Area (GTA) and transforming the GO Transit network into a modern reliable and fully integrated rapid transit network.</p> <p>16. This 4-8 lane bypass will create substantial health concerns to everyone, especially children, living, learning, walking, cycling and playing in its 100-500 metre vicinity. Studies show the vulnerable locations, although outside agencies needed to correct the information missed by the project team. How is the project team and province planning to mitigate and compensate for the increase in childhood cancers, low lung function and premature birth rates?</p> <p>The human health implications of the project such as air quality, noise, land use, traffic congestion and safety, economic, social cohesion and neighborhood resources have been summarized in Section 2.2.7 and Section 5.2.7 of the Updated Draft Environmental Impact Assessment Report (EIAR). To better understand the human health implications due to the project as a next step, it is recommended for</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	DRAFT EIAR edits required? (Yes/No) If yes, specify edits
						<p>MTO to continue to consider the human health factors identified in this report and provide recommendations to enhance potential positive impacts and mitigate potential negative health impacts. Specifically, conducting a Screening-Level Human Health Risk Assessment of potential air quality impacts is recommended in order to evaluate and characterize project-related air quality impacts to health.</p> <p>As detailed in Section 2.2.4 and 5.2.4 of the Updated Draft EIAR, the project has undertaken an Air Quality Impact Assessment to explore pollutant emissions and dispersion modelling in an effort to predict the contribution of the project to future ambient pollutant concentrations. This contribution, added to background concentration levels, allows prediction of the cumulative impact of the proposed project and all other contributors to air pollution. Concentration levels are compared to provincial and federal ambient air quality criteria and standards to assist in the evaluation of project-specific mitigation needs and options.</p> <p>Areas of concentrated emission impact are influenced by traffic volumes along a given segment of roadway. The implementation of the Bradford Bypass is expected to redistribute traffic from local roads surrounding the proposed Bradford Bypass to the new corridor and greater freeway network. Reductions in traffic volumes are observed on corridors including Highway 11/1 (Bridge Street), Bathurst Street, Holland Landing Road, Yonge Street, Queensville Sideroad, Doane Road, Mount Albert Road, Green Lane, and Simcoe County Road 88/Holland Street, among other roads. The alleviation of traffic on local roads benefits the area including but not limited to Town of</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	DRAFT EIAR edits required? (Yes/No) If yes, specify edits
						<p>Bradford West Gwillimbury, community of Holland Landing, Town of East Gwillimbury, and northern King Township by alleviating congestion during peak hours.</p> <p>It is also important to note that land has been designated for the Bradford Bypass since the 2002 Approved EA was completed and the Project Team has been actively consulting and engaging with private landowners, developers and school boards within the Study Area. Developers would have been made aware of the land's designation prior to development. Engagement and consultation have included having a Project Website and telephone line, a Project Contact List for regular project updates, providing notices and correspondence via email, mail, and Ontario Government Notices in local newspapers, hosting Public Information Centres and online events, and holding meetings with Indigenous communities, municipalities, environmental agencies, and stakeholders. More information on the project consultation activities is included in Section 7 of the Updated Draft EIAR.</p> <p>In terms of missing data, the Project Team is aware some critical receptors have been identified as 'missing' by a number of stakeholders. Having reviewed the data, the project team can confirm that these 'missing' receptors were included as residences in the Air Quality Impact Assessment. Potential impacts at the 'missing' receptors within the Air Quality Impact Assessment Study Area are reflected in the assessment by other, nearby critical receptors and receptors identified on Figure 2-9 and 2-10 of the Updated Draft EIAR.</p> <p>The methodology for receptor selection is a mix of both being based on the MTO Air Quality</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	DRAFT EIAR edits required? (Yes/No) If yes, specify edits
						<p>Guideline and based on the professional judgement of Air Quality Specialists. The Project Team selected representative Sensitive and Critical Receptors with the intent of capturing likely worst case potential impacts throughout the entire geography of the Air Quality Study Area.</p> <p>17. How is this project going to mitigate the decrease in revenue for First Nations due to contamination of Lake Simcoe, the Holland River and the Lower Landing? There is yet to be compensation or mitigation for the deterioration of the Maskinonge and Black Rivers due to 404 expansion and increased human activity in the subwatershed area. The conservation authority 2010 report also noted that a decrease in wetlands, new roads, industry and new residential, not including climate change, were impacting water quality and habitat of these systems. Even in 2008, Black River fish were downgraded to a 'C' grade and I can find no data since that indicates it has been upgraded.</p> <p>Consultation is an integral component of the Preliminary Design stage and project-specific assessment of environmental impacts process and is critical to a project's success. The ministry is actively consulting and engaging with Indigenous communities throughout the Bradford Bypass Project.</p> <p>As part of the Preliminary Design and in accordance with O. Reg. 697/21, the ministry is required to follow all relevant provincial and federal legislative requirements, standards, and practices as they apply to the design, construction, and operation of the project to ensure environmental protection. This includes but is not limited to the <i>Federal Fisheries Act</i>, <i>Endangered Species Act</i>, <i>Species at Risk Act</i>,</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	DRAFT EIAR edits required? (Yes/No) If yes, specify edits
						<p><i>Canadian Navigable Waters Act (CNWA)</i>, Permits to Take Water (PTTW)/Environmental Activity and Sector Registry (EASR) Registration for Groundwater. Further details will be confirmed during subsequent Detail Design and Construction phases.</p> <p>The Drainage and Hydrology Assessment for the Preliminary Design has been undertaken to satisfy relevant provincial and regulatory legislative requirements. As the project falls within the jurisdiction of the Lake Simcoe Region Conservation Authority (LSRCA), the Project Team is assessing impacts with respect to the <i>Lake Simcoe Protection Act</i> and the Lake Simcoe Protection Plan through consideration of water quality and quantity, stormwater management, groundwater management, landscaping and ecological restoration measures; as well as fluvial geomorphological designs for watercourses, erosion and sediment control and spills prevention and protection measures. Refer also to Question 14 and note that where stormwater management facilities occur within the jurisdiction of the Nottawasaga Valley Conservation Authority (NVCA) and potentially influence the sub-watershed, the Project Team is considering NVCA water quantity and quality control guidelines.</p> <p>Furthermore, appropriate mitigation measures to prevent salt and treated sand from entering watercourses and salt-sensitive areas have been proposed based on various factors including the use of MTO's Salt Management Plan and the Ministry of Environment, Conservation and Parks (MECP) Guidelines on Snow Disposal and De-icing Operations in Ontario. The MTO Salt Management Plan outlines salt management operational practices and strategies and Best Management Practices (BMP) in terms of equipment, best practices, materials, storage, testing, storm response,</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	DRAFT EIAR edits required? (Yes/No) If yes, specify edits
						<p>application rules, snow and ice control trainings, snow removal and disposal, and technology review. This includes implementing a balanced approach to the highway salt application based on the amount of snow precipitation and highway conditions.</p> <p>In areas that are particularly sensitive, salt management measures may be necessary to mitigate environmental effects of road salt in accordance with the study objectives utilizing the Code of Practice for Environmental Management of Road Salts released by Environment Canada. The Code of Practice for Environmental Management of Road Salts can be viewed here: https://www.canada.ca/en/environment-climate-change/services/pollutants/road-salts/code-practice-environmental-management.html. Please refer to Table 5-26 of the Updated Draft EIAR, row SW-2.00 for additional details. In addition, snow removal and disposal will be utilized in accordance with the MECP Guidelines on Snow Disposal and De-icing Operations in Ontario. Further details on MECP's Guidelines on Snow Disposal and De-icing Operations in Ontario can be found here: https://www.ontario.ca/page/guidelines-snow-disposal-and-de-icing-operations-ontario#:~:text=Ministry%20Approval,If%20special%20circumstances&text=As%20a%20general%20rule%2C%20the.be%20approved%20for%20direct%20disposal. Results of the above studies, including recommended mitigation measures and commitments to future work, are summarized in the Updated Draft EIAR and the discipline specific, project commitments and anticipated permits and approvals identified in the studies will be carried forward to subsequent design and construction phases.</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	DRAFT EIAR edits required? (Yes/No) If yes, specify edits
						<p>The Project Team recommends consultation with Lake Simcoe Region Conservation Authority and / or review of the various reports and studies prepared by the Conservation Authority (https://www.lsrca.on.ca/watershed-health/reports) for the most recent information related to watershed health.</p> <p>18.Guiding principles that the construction of the Bradford Bypass addresses include: ■ Establishing an efficient and integrated multi-modal transportation network ■ Supporting safe and reliable movement of people and goods, and ■ Integrative transportation and land use planning. PICs have yet to share detailed information about the pending development both residential and industrial around the interchanges and route so that the public is aware of the degree of development that will once again congest the proposed bypass soon after it opens and why now the project is changing it to an 8 lane configuration. When will this information be shared and the data that shows the impact on congestion by 2041?</p> <p>As detailed in Section 1.5 of the Updated Draft EIAR, the Study Area for the Project is anticipated to see significant growth in population and employment by the year 2031. In order to assess the impacts of this growth, a traffic simulation model was created to assess the existing traffic conditions for the road network in the Study Area. To assess future conditions, the model was updated to include all road network and transit improvements planned within the Study Area by regional / municipal authorities, and, forecast traffic volumes based on the projected growth within the Study Area.</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	DRAFT EIA edits required? (Yes/No) If yes, specify edits
						<p>Please refer to Section 1.5.4 of the Updated Draft EIA to understand the regional and municipal Official Plans and also to the relevant authority's website for additional details.</p> <p>As detailed in Section 4.4 of the Updated Draft EIA, traffic is assessed through modelling to identify Level Of Service (LOS). Having confirmed the model was consistent with current (base) conditions, and therefore appropriate to assess future conditions and design alternatives, the model was used to assess LOS under future 2031 and 2041 conditions. The Build scenarios showed the mainline operations on the Bradford Bypass in 2031 would operate at acceptable LOS D in the interim four lane configuration. By expanding to the ultimate 8 lane configuration (implementing another general purpose lane and an HOV lane in each direction by 2041), LOS on the mainline improves to LOS B or C and accommodates the additional traffic forecast by 2041.</p> <p>Provincial details and policies regarding where growth will occur in the Study Area are detailed in Section 1.5.3 of the Updated Draft EIA. It must be noted the provincial policies related to growth are high level, framework-type tools which do not dictate exactly what will be built where and details related to where exactly residential, commercial, industrial uses will be built in the Study Area are detailed in the regional and municipal Official Plans. The Project Team has identified the land uses within the Study Area via review of Official Plans prepared by others and field investigations with a summary of the land use provided in Section 2.2.1 of the Updated Draft EIA.</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	DRAFT EIAR edits required? (Yes/No) If yes, specify edits
						<p>19. The bypass will not be efficient to remove local gridlock, and in fact will compound it, requiring even more adjustments to regional roads in order to address this issue. Why were the regional road alternatives ruled out?</p> <p>The Bradford Bypass Project has been modelled based on current local, regional, and provincial projections and data. This addresses the problem of "lack of long-term planning" . the Bradford Bypass 2002 approved EA reviewed a broad range of alternatives including several corridors, areas south of the current corridor road, and Highway 89/Ravenshoe Road.</p> <p>The Bradford Corridor was selected as the preferred corridor over Highway 89/Ravenshoe Road as it was beyond the maximum north limit of 10th Line / Boag Road which was assessed in a previous EA study and was determined that a Management Area or river crossing north of this would entail unacceptable environmental impact, which lead to the withdrawal of the Highway 89 EA studies in 1986-87. The Bradford Corridor was also selected as the preferred corridor over the southern alternatives as there was no south alternative that met the primary purpose of the study to reduce out-of-way travel. The south limit was established as Highway 88 and Queensville Sideroad.</p> <p>As detailed in Section 4.4 of the Updated Draft EIAR, and as noted in Question 18, an Aimsun model was created to assess the existing traffic conditions for the road network in the Study Area. To assess future conditions, the model was updated to include all road network and transit improvements planned within the Study</p>

						<p>Area by regional / municipal authorities, and, forecast traffic volumes based on the projected growth within the Study Area. Modeling results demonstrated that under the No Build (no Bradford Bypass) scenario, local roads were forecasted to exceed capacity by 2031 but saw significant relief under the Build (with Bradford Bypass) scenario.</p> <p>20. This project team is attempting to solve a local traffic issue with a long distance transit plan. The research shows congestion will only be reduced going one way and that will be temporary as new growth around the route's corridor will increase the traffic again. What will the mitigation be for this? Both Simcoe County and York Region Master Transportation Plans advocate for efficient systems, lower to net-zero emissions, electrification of public fleets, coordination of services between regions and was only added in 2022 into their appendices when the province approved it - in other words, they had no choice. Is this not accurate?</p> <p>Once the previous alignment was approved with conditions by the Ministry of Environment, Conservation and Parks in 2002, regional and municipal authorities would have updated Official Plans and Transportation Master Plans to include the Project. Exact timing for the Project being included in these plans is unknown. However, as detailed in Section 1.5 of the Updated Draft EIAR, the 2016 Official Plan developed by the County of Simcoe identifies the Bradford Bypass as a potential provincial corridor and the 2014 County of Simcoe Transportation Master Plan was developed assuming the Bradford Bypass will be constructed. York Region Official Plan 2010 and</p>

						<p>Transportation Master Plan 2022 also identify the Bradford Bypass as part of the base network for roads in the area. Similarly, Town of Bradford West Gwillimbury 2021 Official Plan and 2022 Transportation Master Plan, as well as Town of East Gwillimbury 2022 Official Plan and 2010 Transportation Master Plan all identify the Bradford Bypass project / right of way and have considered the proposed freeway in developing their land use and transportation objectives. As detailed in Section 1.2 of the Updated Draft EIAR, the Bradford Bypass project was initiated to address several transportation needs in northern York Region and southeastern areas of Simcoe County. As a provincial agency, the Ministry's mandate is to provide for the safe, efficient movement of people and goods between regions and urban areas. In reviewing the transportation needs of the Study Area, continued, dramatic growth in travel demand was identified as a characteristic of Simcoe County and York Region for many years. One of the key contributors to this growth, and the resulting congestion is a lack of provincial roadway connecting Highway 400 to the extension of Highway 404. At the time of the original route planning study (1992-1997), the road network was expected to exceed capacity before 2021, and upgrades to regional and municipal roads alone were not anticipated to accommodate the forecasted travel demands and future needs of the area.</p> <p>As a result, the original route planning study concluded that additional relief from congestion in the Study Area could only be accommodated through the protection and implementation of a provincial right of way.</p> <p>The traffic analysis completed as part of this Preliminary Design study has reviewed and confirmed the conclusions of the original route planning study. As detailed in prior responses, the Project Team has completed a review and</p>

						<p>update of environmental conditions described in the previous studies for the Project. This review and update has included review of existing traffic conditions, modelling of future forecast traffic conditions and confirmation that updates to regional and municipal roads alone will not address the transportation needs within the Study Area.</p> <p>21. Bradford West Gwillimbury's Plan and East Gwillimbury's Plan were created with the understanding that the bypass would solve its local congestion issues. Has renewed consultation with all of these councils, municipal and regional, taken place now that the bypass is going to be 8 lanes prior to 2051 and will increase air and water pollution for their residents as well as increase hospital and medical needs prior to 2051 at least for those residing within 500 metres of this highway?</p> <p>Yes, renewed consultation with all regional and municipal stakeholders has taken place. The County of Simcoe, Town of Bradford West Gwillimbury, Regional Municipality of York, Township of King, and Town of East Gwillimbury have been involved in the project through regular correspondence, meetings, notices, council presentations, technical input, and report consultation. In addition to the municipalities listed, the Town of Newmarket also received all report and Public Information Centre notices in accordance with the Regulation.</p> <p>Prior to Public Information Centre #2, the Project Team met with staff from the five municipalities within the Study Area and offered to meet with their respective municipal councils. The Town of Bradford West Gwillimbury staff agreed to arrange a council meeting with the Project Team on February 7, 2023 to discuss project updates. Please refer to the Town of Bradford West</p>

						<p>Gwillimbury's website for the minutes of the February 7, 2023, meeting with Bradford West Gwillimbury council. Additionally, the meeting minutes can also be accessed at the following link: https://pub-bradfordwestgwillimbury.escibemeetings.com/Meeting.aspx?Id=7ebd71cd-ce3a-4b6a-9238-bdfc3fe7f36b&Agenda=PostMinutes&lang=English</p> <p>Please refer to Question 15 and Section 7.5 of the Updated Draft EIAR for additional details regarding the consultation with regional and municipal staff that has been completed during the Project.</p> <p>22. Where is the guiding principle for the protection of the environment and human health?</p> <p>The guiding principles for the Project are outlined in Section 1.5 of the Updated Draft EIAR. In achieving the Ministry's mandate for the safe and efficient of movement and goods between regions and urban areas, the Project is guided by a number of Provincial policies including the Growth Plan, the Provincial Policy Statement, the Greenbelt Plan, etc. As noted in response to Question 18, these policies are frameworks used to guide decision making and they act to promote overarching policies which are implemented at various levels, e.g. growth policies at the provincial level include the Growth Plan which provides a framework for local regional and municipal policies to follow as they develop their own growth plans (Official Plans). Additionally, the human health implications have been identified in accordance with the Ministry of Transportation's Environmental Guide for Assessing Human Health Implications of Provincial Transportation Projects and the Environmental Reference for Highway Design. Examples of provincial policies related to protection of the environment and human health</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	DRAFT EIAR edits required? (Yes/No) If yes, specify edits
						<p>and how those policies related to the Project have been detailed in Sections 1.5.2 and 2.2.7 of the Updated Draft EIAR.</p> <p>23. Have the councils been appraised and are they getting a renewed opportunity to address the increased encroachment into nature and the greater risk now to already threatened species due to the increase to 8 lanes? Are these councils getting a renewed opportunity to address the fact that tier traffic demand expectations will not be met by 2051 since the population and growth around the route corridor will create more traffic and remove any reduction of travel time saved?</p> <p>Please refer to the responses to questions #20 and #21 regarding consultation with regional and municipal stakeholders completed as part of the Project.</p> <p>the proposed Bypass, is to provide for the safe and efficient movement of people and goods between regions and urban areas. The growth forecast for Simcoe County and York Region will occur even without the Bradford Bypass in place. The locations of the forecasted growth are also determined by regional and municipal growth objectives and Official Plan policies.</p> <p>24. The Township of King's plan also speaks to environmental conservation and 'no adverse impact'. Are they getting an opportunity to adjust their commitment now that there is greater encroachment into nature, that there is adverse impact?</p> <p>Please refer to the responses to questions #20 and #21 regarding consultation with regional and municipal stakeholders completed as part of the Project.</p> <p>Local authorities like regional, municipal and township offices typically complete an update to</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	DRAFT EIAR edits required? (Yes/No) If yes, specify edits
						<p>their Official Plan policies every 5 years. The Township of King's Official Plan is approved by York Region . The Township of King's Official Plan will be updated at the end of the 5-year timeframe.</p> <p>25. Wetlands are crucial to drawing down greenhouse gas emissions; highways create more GHGs. 81-216 metric tons of carbon can be absorbed per year per acre of wetland. So for 10.75 hectares that's 5735 metric tons when the highway was only to be 4 lanes. How much more will be lost to 8 lanes? How can the team justify taking away this climate saving wetland? What will it do to mitigate the loss of this amount of carbon capture?</p> <p>How will the team mitigate for the 19 unevaluated wetlands as well as the provincially significant ones, given that a full study has not been done to know what mitigation is required? Ecosystems of this nature are very difficult to replicate. How, specifically, will this damage to climate efforts and biodiversity be addressed? The loss of marshland to this project may be 0.4% of the provincial total yet it does not consider the amounts that will also be destroyed by the proposed 413, greenbelt 'land grab' sprawl, so to justify as a provincially assigned team that it's really not that much, is misguided and inaccurate on the grander provincial scale. Furthermore, when other alternative options exist, manipulating the definition of 'development' to suit this project is undermining the true intent of the Greenbelt Provincial Policy Statement and frankly, deplorable.</p> <p>Please refer to Question 13 and note the impact assessment detailed in the Updated Draft EIAR has considered the ultimate cross section of three general purpose lanes plus an HOV lane.</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	DRAFT EIAR edits required? (Yes/No) If yes, specify edits
						<p>Impacts to wetlands as a result of the proposed Bradford Bypass have therefore been assessed and are described in Section 5.1.1.</p> <p>As part of the Preliminary Design, the Project Team considered all impacts and will continue to work with environmental agencies, municipalities, and other concerned stakeholders to identify measures to avoid or mitigate the potential impacts of placing new or expanded provincial highways within wetlands. Maintaining of the volume and pattern of water flow through the wetland (both surface water and groundwater) and the post-construction restoration of areas affected by construction related activities has been a focal point of the mitigation measures identified during this Preliminary Design study.</p> <p>As detailed in Section 5.5 of the Updated Draft EIAR, commitments to explore opportunities to further reduce impacts, mitigation measures, monitoring requirements and future work related to wetlands identified in previous studies for the Project included:</p> <ul style="list-style-type: none"> • Development of restoration plans for areas of wetland temporarily disturbed by construction installation of equalizer culverts to preserve dynamics of wetland hydrology by maintaining sheet flow through the wetland and facilitating wildlife crossing for small mammals and amphibians • Delineation of areas to be protected with sediment fences to prevent intrusion during construction • Employing timing constraints that restrict construction activities immediately adjacent to or within wetlands to respect the intent of the federal Migratory Bird Regulations (1994) and the Ontario Game and Fish Act (1980) 	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	DRAFT EIAR edits required? (Yes/No) If yes, specify edits
						<ul style="list-style-type: none"> Salvage of wetland plant material to be used for re-establishment in identified areas of significant disturbance Minimization of dewatering within wetlands and irrigation to maximize survival in disturbed areas that will be re-established, and Retention of lands which are surplus to transportation needs for the purpose of mitigation by allowing these lands to revert to wetlands. <p>As part of the 2002 approved EA, the Ministry also committed to construct the crossing of the Holland Marsh Wetland Complex as an elevated pier structure, with emphasis on minimizing backwater effects and maintaining groundwater flows and patterns, thereby minimizing longer term effects on the fen wetland type. That commitment has been upheld during this Preliminary Design study and additional measures have been identified in Table 5-26 (TERR 2.00, 3.00, 6.00, 15.00 and 16.00 rows; ESC 1.00; and LAND 1.00).</p> <p>The Project Team understands that areas not currently designated as Provincially Significant Wetlands are also important and as detailed in Section 5.5, where other wetlands are encountered, similar mitigative measures will be employed.</p> <p>The intent of the Greenbelt Plan, Provincial Policy Statement and all other provincial policies is being maintained. Each of the provincial policies, including those that focus on conservation of natural areas, acknowledge the necessity of building infrastructure. As an example, the Greenbelt Plan, Section 1.2.2.5.a) includes a Protected Countryside Goal that promotes "support for infrastructure which achieves the social and economic aims of the Greenbelt Plan and the Growth Plan and</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	DRAFT EIAR edits required? (Yes/No) If yes, specify edits
						<p>improves integration with land use planning while seeking to minimize environmental impacts". In short, the Greenbelt Plan promotes existing, expanded or new infrastructure in the Greenbelt if the infrastructure serves the significant population growth expected in southern Ontario (and detailed in the Growth Plan).</p> <p>Bill 23 More Homes Built Faster Act, 2022 was passed by government of Ontario in November 2022. At this time, no lands within the Study Area are to be impacted as a result of this passed Bill 23 (November 28, 2022).</p> <p>26. The report notes that the banks of the Holland River East Branch are not good habitat sites but that is where the deer are now forced to live due to human encroachment. This project encroaches further into their habitat, dismal as it is. This bypass in effect will 'corner' the deer population or force them out during construction? Is that the intended mitigation, that the deer will move on? What mitigations will be put in place to protect the deer wintering areas?</p> <p>As detailed in Section 2.1.1.2.5 of the Updated Draft EIAR, while confirmed Deer Wintering Areas are in close proximity to both banks of the Holland River East Branch, this section of river is unlikely to provide conditions suitable to be considered significant wildlife habitat. This is largely based upon the residential and commercial developments present both north and south of the alignment.</p> <p>Additionally, the alignment intersects with other areas of Deer Wintering Area to the east and west of the river, however, impacts are limited to the edges of the areas and there is little habitat directly north or south of these that deer would be traveling to or from, particularly for seasonal movement.</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	DRAFT EIAR edits required? (Yes/No) If yes, specify edits
						<p>Potential impacts to significant wildlife habitat associated with the Project have been determined and are described in Section 5.1.1 of the Updated Draft EIAR. Mitigation measures have also been determined and are detailed in Section 5.1.1.1.2 of the Updated Draft EIAR and include:</p> <ul style="list-style-type: none"> • Various Ministry Provisions – Ontario Provincial Standard Specifications, Special Provisions and Non-Standard Special Provisions • Wildlife exclusion fencing • Provision for eco passages • Restoration of disturbed areas • Timing constraints, prohibiting some works during sensitive windows such as breeding seasons • Minimizing temporary lighting in areas adjacent to significant wildlife habitat • Requirements to review the design during future phases of work and examine additional opportunities to reduce impacts to significant wildlife habitat <p>The need to provide wildlife crossing opportunities have also been noted along the banks of both branches of the Holland River and between 2nd Concession Road and Leslie Street. To encourage wildlife use of these crossings, plantings proposed in these areas have been extended to run underneath the bridges to provide vegetated cover for wildlife through a combination of plantings and seeding. While specific details of height, width, etc. are to be confirmed during Detail Design, an openness ratio large enough to accommodate larger wildlife has been identified in the Updated Draft EIAR (Table 5-26, TERR-16.05).</p>

						<p>27. Is the project team addressing the fact that designated 'significant' wetlands and environmentally sensitive lands between Yonge and 2nd Concession Rd may also cause the Minister of Climate Change to intervene? What mitigations are in place to protect these areas that are critical to Canada's role in drawing down carbon emissions. No percentage is worth losing at this point.</p> <p>The Impact Assessment Agency of Canada reviewed the project in 2021, 2022 and again in 2023. In February 2021, the Minister of Environment and Climate Change received a request to designate the Bradford Bypass under subsection 9(1) of the Impact Assessment Act. In May 2021, the Minister of the Environment and Climate Change determined that the Bradford Bypass proposed by MTO does not warrant designation under the Impact Assessment Act.</p> <p>The May 2021 decision was upheld in February 2022, following a further request for the project to be reviewed under the Federal Impact Assessment Act. The response on February 11, 2022, from the Impact Assessment Agency of Canada stated that since there are no material changes to the project, there is no basis for the Minister to revise the former Minister's determination.</p> <p>On April 20, 2023, the Federal Court declared that the February 2022 response from the Impact Assessment Agency of Canada was unreasonable and requested the May 2021 decision to be revisited. On September 12, 2023, the Minister stated that they remain satisfied with the former Minister's determination from May 2021. The Bradford Bypass is a non-designated project. With regards to climate change, as detailed in Section 5.2.6 of the</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	DRAFT EIAR edits required? (Yes/No) If yes, specify edits
						<p>Updated Draft EIAR the Project Team has completed a Climate Change Resilience Assessment to:</p> <ul style="list-style-type: none"> anticipate climate change-related risks that may have an impact on the assets or activities under study, and identify potential design features or actions to help prevent, withstand, respond to, recover from, and adapt to these risks. <p>The Climate Change Resilience Assessment was undertaken following the five key steps described by the ISO 31000 Risk Management Standard (i.e., establishing the context, risk identification, risk analysis, risk evaluation, risk treatment, and adaptation measures), as well as the Ministry of the Environment, Conservation and Parks guidance for Considering Climate Change in the Environmental Assessment Process.</p> <p>The potential impacts climate change will have on various components and elements of the project were analyzed. Twelve climate indicators were grouped into four themes – temperature, precipitation, wind, and humidity and the assessment determined that certain climate variables introduce high risk levels to the project while most interactions between the project and climate are low-moderate risks; higher risks originating from hot days and extreme winds.</p> <p>Please also refer to the Project Team responses to Questions 16 and 25.</p> <p>28. Greenbelt land - the federal government is now looking into the impact of development on the Greenbelt in regards to endangered species. It has intervened in Quebec, it is intervening for the Rouge</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	DRAFT EIAR edits required? (Yes/No) If yes, specify edits
						<p>National Park and is considering intervention for the Duffins Creek area. Will the project team be considering greater mitigations like using alternative regional roads in order to avoid federal intervention?</p> <p>The Project Team will be proceeding with the next steps of the Project as outlined in Ontario Regulation 697/21 and is currently working to respond to comments submitted on the Project and in response to the Updated Draft EIAR. As detailed in Section 2.1.1 of the Updated Draft EIAR, the Project Team has completed a detailed review of the existing conditions in the Study Area, including investigations to understand the potential presence of Species at Risk and their habitat. Potential impacts as a result of the Project and corresponding mitigation measures have also been described in the Updated Draft EIAR (Section 5.1.1). As noted in Section 5.1.1.1 specifically, additional species-specific surveys are required and further examination of opportunities to minimize or avoid impacts to Species at Risk will take place during future phases of work.</p> <p>The planning process that resulted in the 2002 Approved Environmental Assessment (EA) for the Bradford Bypass evaluated alternatives from a broad range of potential solutions to address several transportation problems and to address significant opportunities identified in York Region and Simcoe County. The need for this freeway was confirmed during the Route Planning and EA Study as the only reasonable solution that would make a significant contribution towards addressing the problem as the population in York Region and Simcoe County grows. The 2002 Approved EA approved alignment is technically preferred for a freeway in terms of highway network expansion, ease of construction, relationship to provincial and municipal land use planning and the preferred</p>

						<p>route is already included in Official and Transportation Master Plans, as well as the Places to Grow Act), as well as having fewer negative impacts to residential and natural areas when compared to other route options considered.</p> <p>The Greenbelt Plan recognizes that infrastructure is important to Ontarians' economic well-being, human health, and quality of life. The Bradford Bypass transportation corridor will reduce greenhouse gas emissions that result from bumper-to-bumper traffic, help Ontario's businesses remain competitive in an increasingly global marketplace, and make it easier for people to move around the Greater Golden Horseshoe.</p> <p>Please also refer to the Project Team response to Question 27.</p> <p>29. How will the rare Deciduous Hickory Forest be protected?</p> <p>As detailed in Section 2.1.1 of the Updated Draft EIA, the Fresh Hickory Deciduous Forest was identified within the Study Area, west of County Road 4. However, this Forest is outside of the proposed right-of-way for the Project, therefore it will not be impacted.</p> <p>30. The Eastern Meadowlark lives primarily in grasslands; this project will be taking away its habitat; the Mallard duck and Blanding's Turtle will be impacted by runoff into the water systems where it lives; and the Yellow Warbler breeds in thickets, dense shrubs and willows; this project is removing/reducing its breeding areas. What specific mitigations will be put in place for the 9 birds that are either MBCA protected or species of concern? 12 species of wildlife at risk - the mitigation seems to imply that the species either move themselves elsewhere or when it comes to it, if there</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	DRAFT EIAR edits required? (Yes/No) If yes, specify edits
						<p>are any left, they will be removed elsewhere. Is this a correct interpretation of statements like 'all agricultural fields present within the Study Area may provide future opportunities for nesting depending on the crop selection in a given year' and 'targeted crepuscular bird surveys will be completed during Detail Design'? When the mitigation states it will take a survey, what will it do with the survey information even though construction will already be under way at that point?</p> <p>The recommended additional surveys, studies, investigations included in the Updated Draft EIAR must be completed prior to construction. Recommendations for further surveys, such as those noted in response to Question 29, must take place before construction to determine the specific avoidance, protection or mitigation measures. The additional investigations, assessment of impacts, and identification of mitigation measures must be complete before wildlife habitat is disturbed.</p> <p>Please refer to the response to Question 27 and Section 5.1.1 of the Updated Draft EIAR where the mitigation measures associated with wildlife have been identified. The Project Team has also considered wildlife and wildlife habitat together in assessing impacts to wildlife. In Detail Design, the Project Team will be engaging with regulatory agencies, such as the Ministry of Environment Conservation and Parks (MECP), to discuss anticipated impacts to Species at Risk, and acquire any required permits should Species at Risk presence be confirmed. These permits typically include requirements for the proponent to demonstrate that impacts will be temporary in nature, minimized through the application of Design and Construction best management principles, or provide overall benefit to the identified species</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	DRAFT EIAR edits required? (Yes/No) If yes, specify edits
						<p>at risk where avoidance is not possible (e.g., habitat compensation).</p> <p>31. Why will the Final Assessment report be written before the Fish and Fish Habitat assessment is completed?</p> <p>A Fish and Fish Habitat Existing Conditions and Impact Assessment Report has been prepared for the Project. The report classifies the fish and fish habitat within the Study Area and has identified impacts, mitigation measures and next steps that must be completed in order to minimize impacts to fish / fish habitat. The key highlights of the report have been summarized in Sections 2.1.2 and 5.1.2 of the Updated Draft EIAR.</p> <p>It is important to note that design of any project is iterative and with each phase, the specific elements of a project become more defined. During future phases of work for the Project, additional review, investigation and assessment of impacts to fish and fish habitat will be required based on the detail design for the Project. Any impacts to fish and / or fish habitat will require consultation and review of the works by Fisheries and Oceans Canada – Fish and Fish Habitat Protection Program. Fisheries and Oceans Canada will also confirm the approval requirements for each fisheries watercourse under the Fisheries Act.</p> <p>32. Am I correct in understanding that the project team overruled or ignored the consultation information provided by Williams Treaty First Nations in regards to the American eel and Northern sunfish being present in the Holland River and that because their presence wasn't documented with the Ministry, the team can ignore their possible presence? Not only is this an insult to the First Nations reporting it to you, but clearly further</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	DRAFT EIAR edits required? (Yes/No) If yes, specify edits
						<p>study is required with the support of that First Nation who has noted their presence. Will this occur to comply with the spirit of reconciliation and such programs as Indigenous Guardians and Networks, and Target 21 from COP15?</p> <p>■</p> <p>As detailed in Section 2.1.2.2 of the Updated Draft EIAR, it was noted in discussion with William Treaties First Nations on December 1, 2022, that they had observed both American Eel (<i>Anguilla rostrata</i>; Endangered Species Act – Endangered, Species at Risk Act – Not at Risk) and Northern Sunfish (<i>Lepomis peltastes</i>; Endangered Species Act – Special Concern, Species at Risk Act – Special Concern) in the Holland River.</p> <p>Subsequently, the Project Team consulted with the Ministry of the Environment, Conservation and Parks, in March 2023 and was advised that the Ministry of Environment, Conservation and Parks records have no documented observances of the American Eel or Northern Sunfish in the Study Area. They also noted that the Northern Sunfish is a species of special concern and does not have a permitting status with the Ministry of the Environment, Conservation and Parks, and therefore would not be reported.</p> <p>No records of aquatic Species at Risk that are afforded protection under the Species at Risk Act or Endangered Species Act are known to occur in the watercourses where culverts are anticipated to be installed. AECOM ecologists conducted a detailed fish and fish habitat assessment of the water features in the vicinity of the Study Area between September 14-18, 2020, with spring field investigations occurring</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	DRAFT EIA edits required? (Yes/No) If yes, specify edits
						<p>over multiple days in June 2021. Field investigations were also completed in the spring of 2022 due to changes to the Study Area boundary that required further review for potential fish habitat. Based on these investigations, no Species at Risk were discovered in the Study Area. Regardless, the presence or absence of all aquatic Species at Risk will be re-confirmed in subsequent design phases through additional field investigations.</p> <p>33. What does it mean in real terms if the EX-CL-400-4 has been abandoned? Has it been abandoned by this project team or by the municipality in question? What does that mean in either case for the runoff in that location from the bypass? While the report indicates the current runoffs along the proposed route, it doesn't state the impact that the bypass will have on these runoffs.</p> <p>EX-CL-400-4 is located under Highway 400, the culvert no longer exists as it has been previously abandoned by the Ministry of Transportation. Abandoning a culvert means that the culvert has been removed or filled in as it is no longer required to facilitate the existing drainage conditions.</p> <p>The combined runoff from the Bradford Bypass and the portion of Highway 400 impacted by design of the Bypass has been assessed and mitigation measures have been developed. Please refer to the response to Question #14 and the information in Section 5.1.3 of the Update Draft EIA regarding the stormwater management plan for the corridor which has been developed to minimize impacts to the drainage system and surrounding environment. Surface runoff from the Bradford Bypass will be treated by the stormwater management measures prior to flowing downstream.</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	DRAFT EIAR edits required? (Yes/No) If yes, specify edits
						<p>34. The Maskinonge River is already contaminated with a number of environmental groups indicating to governments the problems due to current runoff, invasive species and Aerodrome Fill/dump issue. July 19, 2023, the federal government released \$48,800 in funding of the needed \$77,000 to clean the river up for species. As stated in the report, this river runs into Lake Simcoe. The conservation authority also received funding to reduce phosphorus and soil erosion by planting riparian areas along the East Holland River and \$17,150 for the Roches Point Eco Park project on July 17, 2023. These projects are part of the federal government's \$30 million program over five years to preserve and protect Lake Simcoe. What financial contributions will this project team recommend to the provincial government to offset the additional cleanup that will be needed due to runoff from the bypass, that will both flow into the Maskinonge, Humber, potentially Black River watershed and consequently into Lake Simcoe?</p> <p>Please refer to the response to Questions #14, #17 and #30. Surface runoff from the Bradford Bypass will be treated by the stormwater management measures prior to flowing downstream.</p> <p>35. Will the team also be mitigating the use of a salt alternative to minimize the potential pollution as this wasn't clearly stated in their best practices?</p> <p>Please refer to the response to Question 17 and Section 5.1.3 / Table 5-26 of the Updated Draft EIAR, (row SW-2.00) for additional details related to salt management.</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	DRAFT EIAR edits required? (Yes/No) If yes, specify edits
						<p>36. Culverts EX-CL-400-1 and EX-CL-400-5 do not satisfy any of the three Design Criteria, Culvert EX-CL-20 did not satisfy the Overtopping Criterion (no road overtopping during the 100-year storm) and the 50-year Freeboard Criterion, Culvert EX-CL-404-2 is an existing structural culvert (but does not note if it meets the three Design Criteria), EX-CL-14 (Metrolinx Culvert) does not meet any of the standards - management plan section 5. What happens now with this information?</p> <p>Existing culverts that do not meet design criteria shall be reviewed and replaced where required in subsequent design phases of the project to facilitate the proposed design..</p> <p>37. Changes from 2002 to 2020 in groundwater and hydrogeology including applicable legislation and environmental conditions are noted yet the public needs to wait until the final report to know about what the concerns may be and what mitigations are being offered. Why is this not something that will be prepared and made public before the final report?</p> <p>As detailed in Section 2.1.4 and 5.1.4, a Groundwater Protection and Well Monitoring Plan was prepared by AECOM in accordance with Section 23 of the Regulation to characterize the local physical and groundwater setting, quantify potential dewatering requirements for construction, assess possible impacts to local water wells and groundwater dependent environmental features, and recommend appropriate monitoring and/or mitigation measures, as required. The Groundwater Protection and Well Monitoring Plan has been completed recognizing the existing (2023) conditions for the project including groundwater conditions and applicable legislation.</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	DRAFT EIAR edits required? (Yes/No) If yes, specify edits
						<p>In accordance with the Regulation, the Draft Groundwater Protection and Well Monitoring Plan was prepared and distributed to the Ministry of the Environment, Conservation and Parks, the Ministry of Natural Resources and Forestry, Lake Simcoe Region Conservation Authority, Nottawasaga Valley Conservation Authority, the York Region Health Unit, the Simcoe Muskoka District Health Unit, all municipalities within the Study Area, every assessed owner of land within 500 metres of the Study Area. For more information on the Groundwater Protection and Well Monitoring Plan review period, please refer to Section 7.5.3.2 of the Updated Draft EIAR.</p> <p>38. 'In the case of this project, potential well interference is anticipated to most likely be limited to shallow drilled or dug wells completed at similar depths to the respective excavation and dewatering depths. These water supply wells could potentially experience lowering of the water levels where they access permeable shallow surficial soils that are under active dewatering. The potential radius of influence from the project needs to be determined during the subsequent Detail Design dewatering assessments for each excavation that extends below the water table.' Are the minimum 27 residents that will be impacted by this being informed now about this issue? Seems like many have not responded to the 'survey'. Is the municipality not able to identify which residential wells would meet the possible criteria for mitigation? What will be the mitigation for these wells and will this increase the overall cost of the project and by how much?</p> <p>39. 'The calculated radius of influence at each dewatering location shall be</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	DRAFT EIA edits required? (Yes/No) If yes, specify edits
						<p>summarized and reported on by the subsequent Detail Design designer.' Please explain why appropriate scientific studies cannot be implemented now in order to advise the public of the potential issues instead of when the project is underway and it is too late to consider an alternative?</p> <p>40. Approximately 260 wells will likely be impacted. Are all those resident owners/businesses also aware in addition to those in close proximity? What further steps will be taken for the 88% of well owners who didn't respond to the survey? Why is this number so high for non-respondents? Typically survey responses range from 40-60% completion. Has the team considered the wording of the survey, the timing of the Door to Door? What further support will be provided for these residents?</p> <p>As noted in Section 2.1.4.2.1 of the Updated Draft EIA, detailed groundwater interference assessment cannot be completed until design of the Project is completed during subsequent phases. There is detailed information with respect to design, construction methodologies, construction sequencing, dewatering volumes, time of year and timelines, amongst other factors, in addition to groundwater investigations that would need to take place during Detail Design to develop an interference assessment. Additional steps will be taken during these phases of work to contact potential well owners via mail, email, phone calls, site visit, etc.</p> <p>Recognizing the potential impacts to groundwater and private wells in the Study Area, the Project Team has completed an initial assessment of the groundwater and surficial soils within the Study Area and documented the</p>

						<p>findings in a Hydrogeological Data Report. In addition, a Water Well Survey was completed and included a review of available secondary source information as well as data from stakeholders in the Study Area regarding their existing water wells.</p> <p>Additional well surveys and a detailed assessment of potential groundwater interference will be completed during future phases of the project. A Construction Dewatering Plan will also be prepared to identify potential impacts to groundwater and measures to be implemented to avoid or mitigate the impacts. In addition, all groundwater taking must adhere to the municipal, regional, provincial and federal policies and any permits or approvals required for the Project will be obtained in subsequent phases prior to construction.</p> <p>It is recommended that, prior to any construction dewatering occurring near the 17 properties that were assessed, the Property Owners be contacted regarding the undertaking of a repeat monitoring and sampling of the residential well during and after construction to confirm that there is no effect on the water quality from the baseline assessed. For the remaining 126 Property Owners for which no response was provided, an attempt shall be undertaken during Detail Design to contact these owners via mail, email, phone calls, site visit, etc. The Door-to-Door Water Well Survey provides a baseline for the water wells prior to the proposed construction to determine existing water quality and quantity of each property.</p> <p>Upon receipt of a well complaint, an investigation will be conducted as per the Ministry of the Environment, Conservation and Parks policies and a qualified expert will undertake and/or oversee the following:</p> <ol style="list-style-type: none"> 1. Collect a water well sample at the complainant's water well, prior to any treatment systems ("raw"), after 	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	DRAFT EIAR edits required? (Yes/No) If yes, specify edits
						<p>allowing the distribution system to flow for approximately 5 minutes and submit the water sample to a qualified laboratory for an analysis of the general chemistry suite of water quality parameters completed during pre-construction analysis</p> <ol style="list-style-type: none"> 2. Compare the results of the analysis of the water sample to any pre-construction water sampling analysis (if available) for the residential well 3. Investigate and provide a professional opinion regarding the claimed impact to the well or well water; and 4. Provide a detailed written opinion as to whether the water sampling analysis results demonstrate that the construction or dewatering activities may have caused an adverse effect on the well's water supply. <p>If the well issue is confirmed to be a result of the project's activities, MTO will provide a letter to explaining the outcome of the well investigation and detail the recommended mitigation measures (including lowering / replacement of pump inlet, well rehab, new well installed or local watermain connection if available) to remediate the issue. A temporary drinking water supply will be provided and connected to the resident if the project activities are found to be responsible, at the expense of the MTO, until remediation measures have resolved the issue.</p> <p>Mitigation plans will be generated during future phases of work for the project and for any excavation and structure construction within areas of medium to high significant groundwater recharge areas as shown near the Holland River and Holland River East Branch. Mitigation plans would be specific to each excavation and structure construction and include erosion and sediment control, dewatering treatment and</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	DRAFT EIAR edits required? (Yes/No) If yes, specify edits
						<p>discharge piping away or towards from Significant Groundwater Recharge Areas, or municipal sewer discharge requirements. Dewatering discharge shall be directed away from Well Head Protection areas if excavation and dewatering activities are occurring within them.</p> <p>As detailed in Section 5.1.4 of the Updated Draft EIAR, maintaining the volume, pattern and quality of groundwater within the Study Area is a key consideration for the Project. While initial mitigation measures to prevent impacts to groundwater have been identified in the Updated Draft EIAR, including the need for backfilling excavations that intercept existing groundwater flow with porous granular material, particularly within wetland areas, additional investigations are required to ensure a thorough understanding of the hydrologic and hydrogeologic conditions within the Study Area is developed before construction begins. Permits / approvals associated with construction dewatering will be obtained once additional investigations are complete and will include filing or the project on the Ministry of Environmental Conservation and Parks Environmental Activity and Sector Registry system and or securing a Permit To Take Water if required.</p> <p>41. 'Some of the installed monitoring wells could not be accessed during the hydrogeological investigation'. How many are 'some'? If 7 of the 13 wells were installed after August 2022, does that mean there were only 6 wells in the assessment and of which 'some' of those six were damaged? Why did the team not wait until the majority of wells were in place prior to the assessment?</p> <p>As detailed in Section 2.1.4.4 of the Updated Draft EIAR, 13 monitoring wells were included in</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	DRAFT EIAR edits required? (Yes/No) If yes, specify edits
						<p>the hydrogeological investigation. Three of the 13 monitoring wells could not be accessed during the hydrogeological investigations due to access issues related to safety concerns such as proximity to major highways, damaged wells after construction or encampments.</p> <p>design of any project is an iterative process, the seven wells installed in August 2022 were added to the analysis as hydrogeologic information was available to the Project Team through the initial 13 wells installed, i.e. the data collected via the initial 13 wells indicated that additional analysis and wells were required.</p> <p>42. One bypass crossing was deemed to be in "Transitional or Stressed" conditions and with "Moderate" erosion risk - which? Table 5-12 of the Updated Draft EIAR identifies each watercourse crossing and the anticipated erosion risk. HR-Trib-06 was classified as being in a Transitional state. This classification indicates that the channel morphology is not within a typical range of variance and evidence of channel instability is widespread.</p> <p>43. Bypass Crossings - 3 reaches were deemed to have degradation - which? As detailed in Table 5-12 and Figure 2-4 of the Updated Draft EIAR, PC-Trib-03, HR-Trib-06 and HR-Trib-11 were characterized as having evidence of degradation.</p> <p>44. The predominant peat and muck located around the Holland River and Holland River East Branch are carbon capture locations. Previous studies demonstrate how runoff compromises the composition of peat and muck (Journal of Hydrology Volume 182, Issues 1-4, July 1996). Therefore, the high water table will not continue to 'preserve' the peat and muck once salt runoff begins. What will be done</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	DRAFT EIAR edits required? (Yes/No) If yes, specify edits
						<p>to mitigate this and/or the loss of carbon capture in this area?</p> <p>Please refer to the response to Question 17 and Section 5.1.3 / Table 5-26 of the Updated Draft EIAR, (row SW-2.00) for additional details related to salt management. Please refer to the responses to Questions 25 and 27 regarding carbon.</p> <p>45. Future development plans indicated through 5,7, 8, 9 & 10 on the provided map are residential in nature, within the study area of the bypass route. There are significant impacts to human health due to proximity of this bypass to these developments. How will this issue be specifically mitigated in planning? Are municipalities being made aware of this issue by the Ontario government's Ministry of Health?</p> <p>Please refer to the responses to Questions 15, 16 and 22.</p> <p>46. Figure 2.7 shows the significant amount of prime and specialty crop land in the study area that will be impacted by soil contamination, runoff, air pollution etc. 42/61 farms have class 1-3 soil; are these the farms that will no longer be active agricultural land?</p> <p>As detailed in Section 5.2.2 of the Updated Draft EIAR, potential impacts to agricultural lands as a result of the Project have been assessed and will be related to the loss of agricultural land, loss of prime agricultural land, creation of severed parcels, increased fragmentation of the land base on the designated agricultural lands. These potential impacts cannot be avoided. There will also be the potential of impacts on the adjacent agricultural lands and community by virtue of the proposed locations of the</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	DRAFT EIR edits required? (Yes/No) If yes, specify edits
						<p>interchanges and by the proposed highway lighting.</p> <p>Impacts may be minimized by directing impacts away from the adjacent agricultural lands. The first method of minimizing impacts was addressed in the 2002 Approved Environmental Assessment whereby efforts were made to reduce impacts by locating the proposed route along lot lines, or property lines where possible. This approach was intended to minimize severances and fragmentation of farmland and maximize the amount of land that could remain as active farmland.</p> <p>The Updated Technically Preferred Route has followed the same approach taken in 2002 and maintained parts of the original alignment for consistency in the approach of minimizing the corridor footprint within agricultural lands and impacting the fewest agricultural buildings and operations.</p> <p>It should also be noted that there are opportunities for local agricultural operations with the future development of the Bradford Bypass lands. The future development of the Bradford Bypass lands will bring people closer to the agricultural areas and specialty crop areas/market garden/field vegetable areas which will result in increased potential for expanding sales of local vegetable crops from the farm markets.</p> <p>47. Is there no scientific research that would indicate the degree of vibrational concern in relation to proximity to a highway of this nature, rather than 'wait and see' if we need to do anything about it after the fact? The federal government provides recommendations such as increasing the</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	DRAFT EIA edits required? (Yes/No) If yes, specify edits
						<p>distance between the proposed highway and buildings, improving the soil structure and utilization of in-ground pile barriers. Humans are sensitive to vibrations in the range of 8-80 Hz; a highway with traffic vibrations typically are 5-25 Hz. Therefore, it is logical to presume that the residential, educational and business locations in proximity to this highway will face sensitivities to its vibrations during construction and over time. One doesn't need to 'wait and see' based on research from other studies. Why is this team choosing to wait? Moreover, are any current buildings in the study area being inspected prior to, during and after construction for vibrational damage? Conversely, would the construction of pile barriers be an early mitigation to prevent issues arising?</p> <p>Ground vibration from a highway is mainly caused by the impact of vehicle tires driving over irregularities in the roadway surface, such as depressions, potholes or stepped transverse cracks (e.g., uneven expansion joints). Such irregularities are minimized in newly constructed roadways. However, where irregularities such as small depressions are generated over time, maintenance activities such as localized repairs and resurfacing are used to improve the surface conditions and address this source of ground vibration.</p> <p>Assessment and mitigation for vibration during construction will be undertaken during the Detail Design phase of the project. As detailed in Section 5.2.3 of the Updated Draft EIA, a noise and vibration plan will be prepared during future phases of work for the Project. As noted in Table 5-26, (row NOISE-4.00), the plan will be prepared in advance of construction and will</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	DRAFT EIAR edits required? (Yes/No) If yes, specify edits
						<p>consider potential effects on vibration on adjacent land uses.</p> <p>Where locations are identified with respect to potential construction vibration concerns, these locations, and concerns will be documented as commitments and carried forward to subsequent Detail Design phases. Locations of vibration concern and associated mitigation measures will be added, removed or modified as the design advances. Should vibration related concerns be raised, the source of the vibration will be investigated and measures to mitigate the concern will be taken.</p> <p>48. Nitrogen dioxide is dangerous at very low levels - it is shown at 98% of the standard so is very quickly going to be a greater concern once population and development grows in the study area, as well as the indicated Benzene and Benzo pyrene. What studies show that these numbers will drop within the 10 years after construction of this bypass? Research and science indicate that fossil fuel combustion, especially car fuel, increases the levels of nitrogen dioxide (SOCAAR Near-Road Air Pollution Pilot Study 2019). Without this bypass, the study area is only 2% away from exceeding the national ambient air quality guideline, let alone the impact for acid rain on crops and soil deemed class 1-3 in the area and the corrosive nature to building structures. Smaller local road systems accumulate less concentrations, especially from large trucks. The Bypass attracts large transportation vehicles and therefore, concentrations of toxic gasses will be higher when the bypass is built. What is the province's assigned project team proposing to mitigate to deal with</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	DRAFT EIAR edits required? (Yes/No) If yes, specify edits
						<p>this aside from hoping that there will be more EVs on the road?</p> <p>Please refer to the response to Question 16. As noted in the response to Question 16, the Bradford Bypass will redistribute traffic from the local roads to the new corridor, therefore alleviating traffic and resulting emissions from the local road network. In subsequent design phases, the Project Team will continue to evaluate and characterize project-related air quality impacts to health and provide recommendations to enhance potential positive impacts and mitigate potential negative health impacts.</p> <p>49. The team updated 2002 contamination studies that had been done in regards to future highway encroachment into contaminated land use waste sites. How do the 2020 Contamination studies compare to this information?</p> <p>50. Why are the assessments of 159 new possible contaminated locations waiting until Detail Design phases?</p> <p>The Study Area for the assessment of waste and contamination consists of the Updated Technically Preferred Route plus an approximately 500m buffer. As such, and as detailed in Section 2.2.5.2, while 159 'new' properties were identified as being within the <i>Study Area</i>, the Project Team does not anticipate that all of these 159 properties will be impacted by the right of way for the proposed Bypass.</p> <p>The review of potential contamination within the Study Area completed in 2002 was very limited and focused on responsibility and best management practices should contamination be found. As detailed in Section 2.2.5 of the Updated Draft EIAR, and as part of the preparatory work undertaken prior to the Preliminary Design of the Bradford Bypass, the</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	DRAFT EIR edits required? (Yes/No) If yes, specify edits
						<p>Project Team has completed a Contamination Overview Study to identify properties/areas within the Study Area with actual or potential site contamination. The Contamination Overview Study was completed in 2020 and included a review of historical information, aerial photography and mapping to understand areas where risk of contamination might be present and where additional investigations may be required.</p> <p>Additional investigations to confirm the presence or absence of contamination are intrusive with boreholes required throughout an area to obtain soil samples. Where the Project Team obtained Permission to Enter to complete these investigations, samples have been collected and analyzed. Additional samples will be completed during future phases of work for the project as design is advanced and as Permission to Enter for the purposes of this work is secured.</p> <p>51.5.2.7 Where can the Human Health Implications Scoping Report (Intrinsic, May 2023) be located?</p> <p>[LINK to HHI will be included]</p> <p>52. The Snowflux Profile is a 6.6 year study but dated 2008. What considerations have been made for a change in this in the last 15 years due to climate change?</p> <p>As detailed in Section 2.2.8 of the Updated Draft EIR, a Snowdrift Analysis Report (4DM, April 2023) was prepared by 4DM for the project to determine the severity of snowdrifting at locations along the Bradford Bypass route and designated interchanges, and to determine the recommended locations for applying mitigation treatments and type of measures to reduce snowdrifting. The snow accumulation season calendar period and snow flux (kg/m) for all</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	DRAFT EIA edits required? (Yes/No) If yes, specify edits
						<p>three return periods were then used to model snow flux on the Bradford Bypass and interchanges using SnowStream2D. The snowdrifting model is based on local, meteorological datasets provided by Environment and Climate Change Canada weather stations, which includes historical climate data and captures changes over time.</p> <p>The snowdrift analysis and mitigation processes are based on a risk assessment approach and the probability of a snowdrifting event occurring, using "return periods". The snowdrift analysis used return period calculations that correspond to the theoretical probability of a snowdrifting event occurring, and therefore determining representative snow years that are closest to the theoretical 2-year, 5-year and 10-year return periods (50%, 20% and 15% annual snow exceedance). For clarity, a 2-year return period represents a common occurrence, while the 5-year and 6.6-year return periods correspond to more extreme conditions that occur. The "6.6 year study" or 2008 data was used in the Snowdrift Analysis Report and referenced in the Updated Draft EIA as it reflects the more extreme conditions that occur within the Study Area.</p> <p>A Qualitative Climate Change Assessment Report was also completed to outline the impacts of climate change related to the Preliminary Design Bradford Bypass project. Details of this assessment, as well as preliminary recommendations can be found in Section 2.2.6 and 5.2.6 of the Updated Draft EIA.</p> <p>53. Landscaping impacts and mitigations - will mature trees be replaced with mature trees?</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	DRAFT EIA edits required? (Yes/No) If yes, specify edits
						<p>As detailed in Section 5.2.9, a Preliminary Landscape Conceptual Design Plan was developed to identify opportunities for landscaping enhancement and propose protection and/or restoration treatment of the existing landscape features, for areas affected by the introduction of the proposed Bradford Bypass.</p> <p>The Project Team has identified that reforestation plantings will consist predominately of large growing tree species where appropriate. It is important to note that mature trees have lower survivability and are less likely to succeed in establishing themselves if planted within the right of way. Therefore, younger trees are expected to be planted. The age and size of plantings and locations of those plantings will be confirmed during future phases of work for the Project and via a Landscaping and Ecological Restoration Plan.</p> <p>54. The traffic study indicated “The majority of movements were shown to operate at acceptable levels during both peak hours. Traffic operations at intersections throughout the Study Area are shown to operate at mostly acceptable levels.” Given this is the case, surely this shows that simple lane expansion of some of these regional roads would suffice to alleviate both local and long distance traffic? Does this not reinforce the argument for alternatives to the proposed Bypass plans?</p> <p>Please refer to the Project Team’s responses to Questions 15, 18, 19 and 20.</p> <p>55. Holland River East Branch conceptual alternatives 2 and 3, while meeting the criteria mentioned for the desired change,</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	DRAFT EIAR edits required? (Yes/No) If yes, specify edits
						<p>also appear to take out substantially more trees and wetland than the original. Is this the case? Will this be mitigated with mature trees to replace mature trees? Have the environmental impact studies previously considered this area in regards to endangered species location and habitat?</p> <p>Please refer to the Project Team's responses Questions 4, 17, 27, 29 and 53.</p> <p>56. 10th Sideroad alternatives: the still preferred alternative 1 favours human and traffic considerations over the environment when alternative 3 is a feasible alternative and does less damage to the environment. Alternative 3 should be used vs Alternative 1.</p> <p>Please refer to the Project Team's responses Question 8.</p> <p>57. While I am totally opposed to the Bypass given the amount of mature forest and woodland removed, I am especially opposed to the Bathurst interchange for this reason and the damage that air and runoff pollution will cause to the remaining trees. Why is an interchange necessary at this location at all?</p> <p>The Bathurst Street interchange was identified in the 2002 Approved Environmental Assessment. Based on the Interchange Location Combination Assessment completed during this Preliminary Design study, the location of the interchange was confirmed and necessary to service local and inter-regional travel. For more information on the location of interchanges, please refer to Section 3.2.4 of the Updated Draft EIAR.</p> <p>The 2002 Approved EA identified County Road 4, Bathurst Street, and Leslie Street as the preferred interchange locations. In consultation with the municipalities, requests from the Town</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	DRAFT EIAR edits required? (Yes/No) If yes, specify edits
						<p>of Bradford West Gwillimbury and Town of East Gwillimbury were made to consider interchanges at 10th Sideroad and 2nd Concession Road.</p> <p>A feasibility assessment was conducted evaluating nine interchange location scenarios, which included an interchange at Bathurst Street, to determine the best interchange configuration through the Bradford Bypass corridor. The evaluation was conducted in accordance with satisfying the study objective to improve connectivity of the study area between Highway 400 and Highway 404, facilitating the improvement of traffic operations and movement of goods. Consideration included interchange utilization, overall network delay, out of way travel, environmental considerations and constraints, and preliminary costs.</p> <p>It was determined that an interchange at Bathurst Street is warranted amongst others including 10th Sideroad, County Road 4, 2nd Concession Road, and Leslie Street. As a result, this interchange location would be included as part of the Study.</p> <p>While the study is seeking approval for all five interchange locations, a phased implementation of these interchanges, such as Bathurst Street, may be considered pending further design development and consultation in subsequent design stages.</p> <p>58.2nd Concession Road: the 'preferred' alternative 1 does nothing to consider the environmental footprint. Alternative 3 is a viable option, and alternative 2 is at least a compromise. Alternative 3 should be used.</p> <p>Please refer to the Project Team's responses Question 8.</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	DRAFT EIAR edits required? (Yes/No) If yes, specify edits
						<p>59.BR 12 & 14: Have designs been approved? While the Updated Technically Preferred Route is subject to further refinement during future phases of work, the configuration of the interchanges and recommendations for overpasses / underpasses is unlikely to change given the anticipated growth in the Study Area and the resultant traffic demands. In the following Detail Design phase, the bridges will be further refined, and permanent navigational aids and signage will be developed. Before the bridges can be constructed, approval from Transport Canada will be required.</p> <p>60. Traffic Model Analysis: How long will the local roads forecasted to exceed capacity by 2031 and 2041 under No Build scenarios see relief in a 'build' scenario? There are already development plans along the route and so this data is misleading.</p> <p>61.What are the traffic and time saving scenarios if regional roads were expanded instead of Bypass build? 33 minutes should be compared to the no build scenario with expansion of regional and local roads, or GO station development.</p> <p>Please refer to the response to Questions 8, 15, 18, 20 and 26.</p> <p>62.Section 5 recognizes the pending damage to wildlife, habitat, endangered species yet the mitigation is non existent. Section 5 also states wildlife will be likely, especially deer losing 42 hectares of wintering area. by injury or mortality during construction without mitigation. This also doesn't mention the impact on</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	DRAFT EIA edits required? (Yes/No) If yes, specify edits
						<p>human injury or mortality. What then is the mitigation prior to construction?</p> <p>Please refer to the Project Team's responses to Questions 12, 14, 41 and 48.</p> <p>63. Bat species at risk: 58.91 hectares of habitat impacted but the mitigation is to move things prior to their roosting. The Endangered Species Act must be invoked to protect not get authorization; likewise for Eastern Whip-poor-will, Bobolink and Eastern Meadowlark, Blandings Turtle and Least Bittern. How many species will this project knowingly/eradicate?</p> <p>Please refer to the Project Team's responses to Questions 17, 29 and 33.</p> <p>64. How do we know which of the mitigations are commitments vs recommendations? Seems to me that a recommendation does not need to be followed unless it is supported by the Endangered Species Act requirements. How will accountability for this be managed and how will the public be made aware?</p> <p>As detailed in Section 5.4, 5.5, and 5.6 of the Updated Draft EIA, the various commitments to future work that will be carried forward for the Project include:</p> <ul style="list-style-type: none"> • Conditions of Approval issued by MECP in response to the 2002 Environmental Assessment (Table 5-24) • Commitments identified in the 2002 Approved Environmental Assessment (Table 5-25) • Commitments identified in the current Preliminary Design study (Table 5-26) <p>Requirements to adhere to Project Planning and Design Best Management Practices, Procedural</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	DRAFT EIAR edits required? (Yes/No) If yes, specify edits
						<p>Best Management Practices, Water Management Best Management Practices, and Erosion Control Best Management Practices are included throughout Section 5 of the Updated Draft EIAR and in a number of commitments to future work identified in Table 5-26.</p> <p>Where noted, the mitigation measures, monitoring activities and recommendations to explore opportunities to minimize impacts will be carried to all future phases of work for the project including design and construction of the Updated Draft EIAR,</p> <p>65. Is the Access Management Plan mandatory to follow? The Project Team has included a number of environmental management plans that must be developed prior to construction. Adherence to the plans during construction will be required and it is important to note that contractor behavior is monitored by the Ministry.</p> <p>66. In the tables listed in Section 5, the term 'shall' is used. IS the team's understanding that this is the same as 'must'? The use of terms like where appropriate, should and recommended is based on the need for additional investigations and design of the project to be completed in order to understand exactly where specific measures, avoidance / mitigation strategies, approvals and design principles must be implemented. At this time, it is not appropriate to commit absolutely to measures such as edge management plans or specify locations where Fisheries Act Authorizations are absolutely required. Therefore, the Updated Draft EIAR requires consideration and review of all recommendations throughout the corridor during</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	DRAFT EIAR edits required? (Yes/No) If yes, specify edits
						<p>future phases of work. This approach is necessary and standard practice for planning projects in that design is an iterative approach and this project is only completing design to a preliminary level. During future phases of work, additional design will be completed and may include refinements to the design as details are developed with greater accuracy. Limiting the future design phases by making certain elements of the project non-discretionary at the preliminary design stage limits the potential for future work to explore opportunities for further reducing impacts and / or increasing mitigation and offsetting measures.</p> <p>67. Stormwater management was used for the 404 extension yet damage still occurred to the Maskinonge River and watershed. What is the difference between what was done then and what is proposed now for the Bypass?</p> <p>As noted in the responses to Question 14 and 17, and as detailed in Section 5.1.3 of the Update Draft EIAR, a stormwater management plan for the corridor has been developed to minimize impacts to the drainage system and surrounding environment once the proposed Bradford Bypass has been constructed. In addition, as detailed in various sections of the Updated Draft EIAR, a number of environmental management plans must be developed including erosion and sediment control plan(s), groundwater management plan(s), spill management plan, etc. These plans will be developed prior to construction and must be adhered to during construction to prevent impacts to water during construction.</p> <p>68. It is good to see Salt Management includes Canada's Climate Change Code and the best options are being proposed</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	DRAFT EIAR edits required? (Yes/No) If yes, specify edits
						<p>however it doesn't state specifics. Who will be monitoring this?</p> <p>Please refer to the response to Question 17 and Section 5.1.3 / Table 5-26 of the Updated Draft EIAR, (row SW-2.00) for additional details related to salt management.</p> <p>69. Well water contamination. The report states: "If the well issue is confirmed to be a result of the project's activities, the Ministry will provide a letter to the property owner explaining the outcome of the well investigation and detail the recommended mitigation measures." yet it does not specify if the Ministry will pay for the remediation except for the temporary bottled water. Will the Ministry pay for remediation?</p> <p>Please refer to the responses to Questions 39, 40 and 41.</p> <p>70. Are the residents in the noise sensitive area aware that a noise barrier wall is being considered? When will they know it will be built? Will the potential noise barrier wall cause further impact to the water it crosses?</p> <p>In order to share information related to the Project as widely as possible, particularly to residents, businesses and stakeholders in the Study Area, each notice issued for the Project is distributed via Canada Post to all addresses within 500m of the Study Area and to those individuals who have signed up for the project contact list.</p> <p>While the Project Team cannot comment on interactions with specific residents/property owners/stakeholders due to privacy, the Project Team is optimistic that residents located in close proximity to the proposed noise barriers are aware of the recommendations provided in Section 5.2.3 of the Updated Draft EIAR.</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	DRAFT EIAR edits required? (Yes/No) If yes, specify edits
						<p>Timing for future phases of work for the project including detail design and construction has not yet been determined. The ministry is committed to continuing stakeholder and public engagement and consultation beyond the regulatory requirements set out in Ontario Regulation 697/21, including continuing discussions with members of the public, local stakeholders and Indigenous communities with respect to potential impacts and mitigation throughout future phases of the project. As such, additional notices and invitations to participate in the Project during future phases of the project will be distributed via Canada Post to all addresses within 500m of the Study Area and those individuals on the project contact list. In keeping with MTO policy, the proposed noise barriers are being considered within MTO lands. The noise barrier on the Holland River East Branch bridge will not impact the water crossing.</p> <p>71. Emissions of construction vehicles and equipment: the report uses the term 'should be' for mitigations to reduce emissions. Is this the same as mandatory and who will oversee to ensure accountability? Does this fall under the Compliance Monitoring Plan? Fugitive dust: the term 'may be used by the construction contractor'. Who is ensuring accountability for this? Does this fall under the Compliance Monitoring Plan?</p> <p>Please refer to the responses to Questions 14 and 68. Monitoring and oversight of work during construction will be the responsibility of both the Ministry and the Contractor(s) doing the work. The Ministry will complete site inspections to verify the Contractor is performing the work in accordance with the design and management plans to be prepared for the Project and all environmental laws/regulations/approvals applicable to the Project. The Contractor will</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	DRAFT EIA edits required? (Yes/No) If yes, specify edits
						<p>also be responsible for self-monitoring their own performance to ensure the same adherence to design/plans/law. The Contractor will also be responsible for reporting the results of their inspections to the Ministry.</p> <p>As owners of the Project, the Ministry is responsible for the Compliance Monitoring Plan and Annual Compliance Reports identified in the 2002 Conditions of Approval imposed by the Minister of the Environment, Conservation and Parks (Section 5.4 of the Updated Draft EIA). In accordance with Ontario Regulation 697/21, the results of mitigation monitoring will made available on the Project Website. . .</p> <p>72. Emissions, pollution levels and climate change: table 5.17 indicates that emission conditions at 100 km/hr speed, are better in the future with a no-build scenario for almost all the gases: 8.3 vs 13.49 NO₂; 697.07 vs 737.27 CO₂ and so on except PM and Acrolein and in fact, PM_{2.5} and Acetaldehyde and Benzo Pyrene are worse with the build than current conditions therefore how is building this bypass beneficial to climate change, let alone air pollution and human health? It doesn't matter what the notes are that spike the projected readings for the build scenario emissions, the emissions are clearly still higher than a no build scenario. Am I reading the chart incorrectly? This goes likewise for table 5.18 at 110 km an hour.</p> <p>As detailed in Section 5.2.4.1, impacts on a cumulative basis within the Study Area from the Future Build Conditions (with the new Bradford Bypass) increase in comparison to a No-Build scenario for several contaminants and their respective averaging periods. This is due to increased traffic along the Bradford Bypass,</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	DRAFT EIA edits required? (Yes/No) If yes, specify edits
						<p>where in a No-Build scenario this traffic is dispersed along Holland Street and Bridget Street and within communities to the south of the Study Area. As noted in response to Question 16, areas of concentrated emission impact are influenced by traffic volumes along a given segment of roadway. The implementation of the Bradford Bypass is expected to redistribute traffic from local roads surrounding the proposed Bradford Bypass to the new corridor and greater freeway network. Reductions in traffic volumes. Reduced emission impacts are anticipated as the Bypass will alleviate congestion during peak hours in areas including Town of Bradford West Gwillimbury, community of Holland Landing, Town of East Gwillimbury, and northern King Township.</p> <p>73. Table 5.19 only compares the data of build with the 2019 emissions - where is the percent for the future no build scenario? Based on tables 5.17 and 5.18, it would be even less than that of the build percentage and therefore better overall.</p> <p>Total greenhouse gas emissions were only calculated for the project sources of air quality contaminant emissions. This approach is consistent with Ministry's Air Quality Guide, wherein the Project Team is required to calculate a Greenhouse Gas and Computer-Aided Design burden analysis of the Project against provincial air quality levels and emissions. Please also refer to the response to Question 72 with regard to reduced emission impacts on local roads.</p> <p>74. Where is the Climate Change Resilience Assessment? The Climate Change Resilience Assessment reports there are</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	DRAFT EIAR edits required? (Yes/No) If yes, specify edits
						<p>high risk factors especially on hot or windy days yet only uses terminology like 'may be used', 'recommended for guidance' and 'potential measures' for mitigations. Again, why does mitigation language remain noncommittal and vague?</p> <p>75. How many days are we talking about in a year in an area that is known locally for its wind tunnel, snow belt effects, that incidentally would likely be much better suited for wind turbines?</p> <p>Please refer to the Project Team's responses to Questions 28 and 67.</p> <p>76. Landscaping: The statement reads "Depending on the final space available...woodland vegetation will be used as an opportunity for replanting compensation trees (reforestation planting)". Earlier in the report, it was a commitment to return tree for tree. Where will the reforestation occur if/when there is not enough 'final space' and what is the age of the reforested trees, that is, will mature trees be matched with mature replacement trees? The mitigation states "Reforestation plantings will consist predominately (predominantly) of large growing tree species" but doesn't specify the age of the replanting trees.</p> <p>Please refer to the Project Team's responses to Question 54 and 68. Additional investigations and design of the project are to be completed in order to understand exactly where specific measures, avoidance / mitigation strategies, approvals and design principles must be implemented. At this time, the space available for plantings and restoration is approximate and subject to change during future phases of work as design details are defined further.</p>

						<p>77. Table 5.25 “Financial” - again, no cost for the entire project nor any of the components is listed. There are 'jobs and benefits for years to come' by simply widening existing roads and many more long term benefits for climate and environment remain intact. There is a financial cost to mitigate the damage caused by this highway in carbon capture and farmland which is not factored in here.</p> <p>Table 5-25 of the Updated Draft EIAR lists the commitments carried forward to the Preliminary Design stage of the project from the 2002 Approved Environmental Assessment (2002 Approved EA). As such, refinements to Table 5-25 cannot be made.</p> <p>That said, as the ministry brings this project to market, the ministry wants to ensure we can retain the best value for the project. To protect procurement processes, the ministry will not be releasing cost estimates prior to the award of contracts for the future phases of work to be completed.</p> <p>It is important to note that costs associated with mitigation measures will be included in the overall cost for the Project.</p> <p>78. Table 5.25 notes “Minimal long term environmental impact of the Link through design and mitigation”. Where is the mitigation for carbon capture loss over time? How is this minimal? IF a project is not increasing the amount of carbon capture, the damage is not 'minimal'.</p> <p>Please refer to the Project Team's responses to Questions 25, 27 and 77.</p> <p>79. Table 5.25 notes “Minimal long term environmental impact of the Link through design and mitigation” and “ High priority given to environmental work as design</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	DRAFT EIAR edits required? (Yes/No) If yes, specify edits
						<p>proceeds". How is this the case for the endangered species that are likely going to be eradicated by this project? Unless you can guarantee that there is no loss of the endangered and threatened species, this project shouldn't be happening. Critical links in our biodiversity are being lost to human activity such as this. How can this be considered 'minimal long term impact'?</p> <p>80. Please explain the premise for this statement from Table 5.25: "Where possible, larger blocks of vegetation were avoided. However, 22.1 hectares of higher quality woodlands will be removed. The total area of the Holland Marsh Endangered Species Act affected by the proposed facility is 17.2 hectares. The impact will not affect the status of the Endangered Species Act."</p> <p>Please refer to the Project Team's response to Question 77.</p> <p>As noted in response to Question 17, the ministry is required to follow all relevant provincial and federal legislative requirements, standards, and practices as they apply to the design, construction, and operation of the project to ensure environmental protection. This includes but is not limited to the <i>Federal Fisheries Act</i>, <i>Endangered Species Act</i>, <i>Species at Risk Act</i>, <i>Canadian Navigable Waters Act</i> (CNWA), Permits to Take Water (PTTW)/Environmental Activity and Sector Registry (EASR) Registration for Groundwater.</p> <p>81. Table 5.25 states: "The Ministry has assessed potential impacts to vegetation, wildlife habitat and sensitive natural areas to propose appropriate mitigation measures to avoid, minimize and mitigate potential impacts to natural areas along</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	DRAFT EIAR edits required? (Yes/No) If yes, specify edits
						<p>the Updated Technically Preferred Route." Is this based on assessment data that is over twenty years old?</p> <p>Please refer to the Project Team's responses to Questions 2, 4 and 77.</p> <p>82. Table 5.25 states: "9.5 hectares of Provincially Significant Wetlands will be crossed by the right-of-way; the remaining 8.9 hectares are composed of marsh and swamp community types. The above figures refer to the total land area taken by the 100 metres right of-way to be designated for the route. In fact, the direct physical impacts will be significantly less and will be limited to the construction of widely separated bridge piers." Why can the team then not specify with better accuracy the amount of marshland that will be impacted?</p> <p>Please refer to the Project Team's response to Question 77.</p> <p>Potential impacts associated with preliminary design for the Project have been detailed in Section 5.1.1 of the Updated Draft EIAR wherein it is noted that a total of 4.79 hectares (0.4%) of the Provincially Significant Holland Marsh (BW5) Wetland (1261.67 hectares), 7.94 hectares (0.4%) of the Holland Marsh Wetland Complex Provincially Significant Wetland (1986.90 hectares), 0.86 hectares (0.2%) of the Maskinonge River Wetland Complex Provincially Significant Wetland (398.77 hectares) and 23.41 hectares of unevaluated wetlands are anticipated to be impacted by the preliminary design for the Project. The right-of-way for the Project also overlaps with the Greenbelt Plan (128.04 hectares) and 12.19 hectares of the Lake Simcoe Region Conservation Authority Holland Marsh Environmentally Significant Area.</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	DRAFT EIAR edits required? (Yes/No) If yes, specify edits
						<p>Impacts associated with the Project in the Updated Draft EIAR are preliminary and will be refined during future phases of work for the Project including during detail design when design details associated with the specific elements of a project become more defined.</p> <p>83. Throughout Table 5.25 I do not see any consultation with First Nations listed for mitigations. IS this because it is all listed in the separate table?</p> <p>Please refer to the Project Team's response to Question 77.</p> <p>Also, as noted in response to Question 17, consultation is an integral component of the Preliminary Design stage and project-specific assessment of environmental impacts process and is critical to a project's success. The ministry is actively consulting and engaging with Indigenous communities throughout the Bradford Bypass Project and a record of Indigenous consultation and correspondence are recorded in Table 7-3 and 7-10 of the Updated Draft EIAR.</p> <p>For more information on Indigenous consultation, please refer to Section 7.4 of the Updated Draft EIAR.</p> <p>As noted in the response to Question 70, the ministry is committed to continuing stakeholder and public engagement and consultation beyond the regulatory requirements set out in Ontario Regulation 697/21, including continuing discussions with members of the public, local stakeholders and Indigenous communities.</p> <p>84. Table 5.25 states: " The proposed 400-404 Link will remove 23.7 hectares of significant wildlife habitat, potentially affect two Provincially and Nationally "vulnerable" species (Louisiana Waterthrush and Red-shouldered Hawk) currently nesting in proximity to the</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	DRAFT EIAR edits required? (Yes/No) If yes, specify edits
						<p>recommended plan, and potentially interrupt wildlife movement along some stream corridors and woodlots, particularly in the area between Highway 400 and Simcoe County Road 4 (Highway 11).” How is this “minimizing” the impact on wildlife? 2 endangered species will be eradicated, movement of wildlife will be restricted causing potential mortality and 23.7 hectares of carbon capture and wildlife land gone. How is this “minimizing”?</p> <p>Please refer to the response to Question 77 and note that the existing conditions within the Study Area have been updated since the 2002 Environmental Assessment.</p> <p>Bridge designs for the crossings of the Holland River and Holland River East Branch have considered environmental constraints including, but not limited to, terrestrial ecosystem, including sensitive species and wetlands, fish and fish habitat, archaeological resources, floodplain modelling, and stormwater management.</p> <p>Design of structures will take into account passage for both small and large mammals where feasible. For more information on the mitigations being forward through Preliminary Design, please refer to Table 5-25 in the Updated Draft EIAR.</p> <p>As noted in prior responses and detailed in Section 2.1.1 of the Updated Draft EIAR, the Project Team has completed a detailed review of the existing conditions in the Study Area, including investigations to understand the potential presence of Species at Risk and their habitat. Based on these investigations, 12 Species at Risk were determined to have high or medium potential to occur in the Study Area; however, the presence or absence of all Species</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	DRAFT EIAR edits required? (Yes/No) If yes, specify edits
						<p>at Risk will be re-confirmed in subsequent design phases through additional field investigations and targeted surveys.</p> <p>85. Table 5.25 states: “ Preserve agricultural land and minimizing negative impacts on agricultural operations” yet “The total land area, currently in active agricultural production, directly affected by the proposed facility is 84.4 hectares in the western section and 69.9 hectares in the east and central section totaling 154.3 hectares.” Not only does this impact local food security, it also impacts carbon capture yet again.</p> <p>86. What is the cost for lost agricultural production of the 154.3 hectares of active agricultural production? Has this financial total been subtracted from whatever positive benefit to the GDP the Bypass presumes to claim?</p> <p>The lost agricultural GDP has not been considered as part of the Bradford Bypass Agricultural Impact Assessment as the purpose of the Bradford Bypass is to relieve the projected congestion on existing local roads between Highway 400 and 404.</p> <p>Congestion already costs Ontario billions in lost productivity, adds to the costs of goods, and reduces quality of life. Without new infrastructure to help move people and goods, the region will quickly become overwhelmed.</p> <p>Please refer to the Project Team’s responses to Questions 46 and 77.</p> <p>87. Table 5.25 states: “ In supporting mobility of people and goods and in supporting the economic development of the Study Area (Bradford in particular), the Link may contribute to a reduction in dependence on long-distance commuting for residents of northern York Region as a significant</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	DRAFT EIA edits required? (Yes/No) If yes, specify edits
						<p>proportion currently travel to jobs outside the area." This creates an antithesis. The Bypass is being created to cut down the travel time for long distance travel but there is an assumption that some of these long distance travellers will no longer need to use the Bypass because they will find jobs in their own area due to the development around the Bypass. Moreover, there is development of businesses in the area without the Bypass. Furthermore a study or survey has not been done to verify who is travelling from Bradford to their place of work, nor how far, so this statement is a weak hypothesis at best.</p> <p>88. Table 5-25 states: 'Avoidance of contributing to unsustainable development patterns'. On the premise that that development begets development, this project is contributing to unsustainable development patterns. Municipalities have repeatedly started within the past 2 years that they cannot afford the infrastructure costs that come with urban sprawl development. This Bypass has already attracted further development as the report itself states and therefore is part of the problem.</p> <p>Please refer to the Project Team's response to Question 77 as this language was created during the 2002 Approved EA for the Project and cannot be refined.</p> <p>Population and economic growth will effect travel patterns and choices in the Study Area just as introducing the Bradford Bypass will influence travel patterns in the Study Area. Please refer to the Project Team responses to Questions 15, 18 and 20.</p>

CT- DraftUEIAR-50	To: Project Team From: [REDACTED]	Email: [REDACTED] CC'd: [REDACTED]	Traffic Modelling	August 9, 2023	<p>Hi Project Team,</p> <p>Thank you for your recent email concerning the Bradford Bypass. Attached to this email is a summary of the traffic volumes provided by York Region and Simcoe County. As you are aware a 4 lane road will carry 40000 to 60000 vehicles per day (AADT). A 2 lane road will carry half this .</p> <p>York Region</p> <p>39088 no growth - Yonge Street Hwy 11 at West Holland River.</p> <p>8066 - Bathurst Queensville Sideroad.</p> <p>31000 to 33800 - Highway 404 at Queensville SR.</p> <p>41326 with 2 percent growth - Yonge Street north at Green Lane.</p> <p>35947 with 1 percent growth - Yonge Street south at Green Lane.</p> <p>40715 with 3 percent growth - Yonge Street east side at Green Lane.</p> <p>23542 with 1 percent growth - Yonge Street west side at Green Lane .</p> <p>Simcoe County</p> <p>16700 - CR 4 Yonge Street north .</p> <p>23000 - CR 88 Bradford Sideroad west.</p> <p>5400 - CR 54 former 10th SR.</p> <p>3300 - CR 14 former 5th Lane.</p> <p>Would you please check your traffic model. As you can see from my summary there is not enough traffic to justify a Bypass around Bradford. A Bypass around Newmarket</p>	<p>Hello [REDACTED]</p> <p>Thank you for your interest in the Bradford Bypass Preliminary Design Study and project-specific assessment of environmental impacts, undertaken in accordance with Ontario Regulation 697/21.</p> <p>As noted in our previous response sent on August 8, 2023, the model for the Study Area was developed using pre-pandemic traffic volumes to identify peak hour volumes within the Study Area.</p> <p>The Aimsun traffic model used a variety of data sources including the Greater Golden Horseshoe Model; York Region / Simcoe County forecasts of growth in population and employment; York Region Transportation Master Plan 2041 road network improvements; and, in consultation with Simcoe County who are actively updating their Transportation Master Plan.</p> <p>The implementation of the Bradford Bypass is expected to redistribute traffic from local roads surrounding the proposed Bradford Bypass to the new corridor and greater freeway network. Reductions in traffic volumes are observed on corridors including Highway 11/1 (Bridge Street), Bathurst Street, Holland Landing Road, Yonge Street, Queensville Sideroad, Doane Road, Mount Albert Road, Green Lane, and Simcoe County Road 88/Holland Street, among other roads. The alleviation of traffic on local roads benefits the area including but not limited to Town of Bradford West Gwillimbury, community of Holland Landing, Town of East Gwillimbury, and northern King Township by alleviating congestion during peak hours.</p> <p>If you have any other questions, please feel free to reach out to the Project Team at your earliest convenience. You can reach the Project Team via email at projectteam@bradfordbypass.ca, toll free at 1-877-247-6036, or by visiting the Project Website at www.bradfordbypass.ca.</p> <p>Sincerely,</p> <p>The Bradford Bypass Project Team</p>	No

CT-DraftUEIAR-53	To: Project Team From: [REDACTED]	Email: [REDACTED]	Draft EIAR	August 14, 2023	<p>Reference: Bradford Bypass per Ontario Regulation 697/21 In accordance with Sections 20 and 25 - Draft Environment Impact Assessment Report: per <u>Updated Technically Preferred Route</u></p> <p>Morning, with respect to the above Notice of Publication dated July 6th, 2023; I'd like to state my concerns, many of which are in agreement with the Simcoe County Greenbelt Coalition.</p> <p>Having reviewed <i>an driven</i> close enough in the surrounding areas to be affected by the "Recommended Plan" and imaging the possibility of seven (7) full/partial freeway interchanges between HWY 400 and HWY 404 appears (rail, structures on the Holland River) excessive, incredibly expensive (labour and materials) and a huge undertaking.</p> <p>The Town of Bradford, West Gwillimbury is a rapidly growing community already expansive in the northern and western sections of County Road 10, County Road 4 and East to the Holland River. Additionally, future expansion beyond 2025+ North to Line 10. The proposed Bypass cuts as your Study shows massively through the heart-land of prime agricultural lands, natural wetlands and impacting a landscape with a Freeway structure not to mention the enormous cost of 4-Billion dollars and possibly more.</p> <p>This proposal of a Bradford Bypass isn't in reality "bypassing" Bradford but is cutting massively through 16.3-kilometre of prime environmental lands that doesn't benefit the Town, that I can see via lost revenue traffic: pedestrian traffic (stop & shop), commercial business and retail. The biggest <u>financial losers are</u> the Town (residential &</p>	<p>Dear [REDACTED]</p> <p>Thank you for your interest in the Bradford Bypass Preliminary Design Study and project-specific assessment of environmental impacts, undertaken in accordance with Ontario Regulation 697/21.</p> <p>Please see below the responses to your comments sent on June 30, 2023 and August 13, 2023.</p> <p>The Greater Golden Horseshoe population is expected to reach nearly 15 million by 2051, and the number of trucks on the road is expected to double. For Ontarians in 2051, average travel speeds are expected to be 16 percent slower when compared to 2016. Congestion already costs Ontario billions in lost productivity, adds to the costs of goods, and reduces quality of life. Without new infrastructure to help move people and goods, the region will quickly become overwhelmed.</p> <p>Even with all currently planned transportation and transit investments, road congestion will continue to increase across the Greater Golden Horseshoe (GGH).</p> <p>This new transportation corridor will relieve congestion on existing local roads between Highway 400 and Highway 404 and support projected urban development in Simcoe County and York Region. It will also provide a northern freeway connection between Highway 400 and Highway 404. On average, between the various origin-destination pairs using the Bradford Bypass, drivers in the peak direction during the peak period, would save up to 73% or 33 minutes of travel time when connecting between Highway 400 and Highway 404 compared to existing routes in the No Build scenario. There are a number of existing businesses (commercial/industrial) operating within the Study Area. The overall impact to businesses is expected to be positive as traffic flow and accessibility will be improved. Once completed, the Bradford Bypass would attract more business to the area, creating and sustaining good local jobs.</p>	No

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	DRAFT EIAR edits required? (Yes/No) If yes, specify edits
					<p>commercial) and surrounding "mom & pop" village communities who rely on subsequent visitors who travel through. There is also the Ontario taxpayer who is fronting the capital for such a Project - 4 Billion+.</p> <p>I am not opposed to proper logically and environmentally planned modern transportation planning but this particular infrastructure is in my as well as the opinion of Simcoe County Greenbelt Coalition and associates the wrong approach and needs to pause for a re-evaluation.</p> <p>The proposed Updated Technically Preferred Route (Recommended Plan) must stop.</p> <p>There have been alternatives proposed in the past 10-15years that would appear to be more environmentally, ecological and perhaps not as expensive nor as intrusive on subsequent lands. I point you to the Ravenshoe Road Project below Lake Simcoe shoreline to HWY 89 via Line 13 and 20th Sideroad connecting over to expansion of HWY 404.</p> <p>The objective, I believe, is to <u>alleviate the current and growing</u> (as will be in another 10+ years) traffic normally heading South/North on HWY 400 and alternatively N/S on HWY 404. The bulk of traffic I see on a weekly basis (I travel from Barrie - NMKT 3-4 times a week and sometimes wknds) frequenting Bradford for general meetings and use of the Library facilities. Additionally, subsequent usage of various retail and commercial businesses.</p> <p>The daily/weekly traffic I encounter going both ways (8-9am / 4-6pm) appears on N of HWY 89 through the City of Barrie and N of HWY 26. The recent infrastructure improvements around HWY 89 are significant but they are "interchanges E/W"</p>	<p>For more information on the impact to businesses, please refer to Section 5.2 of the Updated Draft EIAR.</p> <p>The planning process that resulted in the 2002 approved Environmental Assessment (EA) for the Bradford Bypass evaluated alternatives from a broad range of potential solutions to address several transportation problems and to address significant opportunities identified in York Region and Simcoe County. The need for this freeway was confirmed during the Route Planning and EA Study as the only reasonable solution that would make a significant contribution towards addressing the problem as the population in York Region and Simcoe County grows. The 2002 EA approved alignment is technically preferred for a freeway in terms of highway network expansion, ease of construction, relationship to provincial and municipal land use planning and the preferred route is already included in Official and Transportation Master Plans, as well as the Places to Grow Act), as well as having fewer negative impacts to residential and natural areas when compared to other route options considered.</p> <p>MTO is currently undertaking 15 environmental studies to update and document environmental conditions, identify, and evaluate potential impacts of the project and recommend mitigation measures to reduce potential impacts and meet current environmental legislative requirements. This includes an Agricultural Impact Assessment, Air Quality Impact Assessment, and Terrestrial Ecosystems Existing Conditions and Impact Assessment Report. To view the full list of studies being conducted, please visit the overview page on the Project Website (https://www.bradfordbypass.ca/overview/).</p> <p>This update also included a review and assessment of the existing traffic conditions which was documented in the Environmental Conditions Report (ECR). The ECR was finalized in October 2022 following a public review period and is available on the Project website. For more information on the Environmental Conditions of the Study Area, please</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	DRAFT EIAR edits required? (Yes/No) If yes, specify edits
					<p>and the improvements at Innisfil Beach E/W and I for one welcome this type of improvement in transportation infrastructure.</p> <p>However, this doesn't address the need for a cross-link structure to HWY 404. The Ravenshoe Road Project should be re-evaluated as many participants and observers share the views of the Simcoe County Greenbelt Coalition. Having the expanse E/W off HWY 89 (in the vicinity) this would take a huge bulk of traffic seeking direct connection to HWY 404 and vice-versa.</p> <p>There is also, in my opinion, the need to plan, develop an alternate/routing W along HWY 89 towards Alcona or "bypassing" to get to HWY 27 N/S. This I would believe provides a thoroughfare to an already developed HWY 27.</p> <p>In summary, I trust I'm not alone in responding as a citizen/stakeholder in travelling essentially on some of the finest highways in Ontario. I have travelled many times in the USA and Europe and found ours to be superior in design, maintenance and efficiency. That includes the 407 structures which are very well designed and built.</p> <p>Consider these points: those that are non AECOM but serve in government:</p> <p>Request the <u>Ministry of Transportation Ontario</u> to pass a resolution on the following:</p> <ul style="list-style-type: none"> Publicly release the traffic studies, clearly indicating the points of origin and time savings to justify this project; 	<p>refer to Section 2 of the Updated Draft Environmental Impact Assessment Report (EIAR).</p> <p>When selecting the Updated Technically Preferred Route, the Project Team used a reasoned argument method of evaluation to identify the advantages and disadvantages to select the design refinements and alternatives for the project.</p> <p>The Updated Technically Preferred Route may be subject to change and will be updated throughout the project, as required.</p> <p>Details regarding the Updated Technically Preferred Route are documented in Section 3 and Appendix B of the Updated Draft EIAR, which is available on the project website.</p> <p>Please see below the response to the Environmental Report sent on June 30, 2023.</p> <p>1. Removing Greenbelt lands including Provincially Significant Wetlands from the Holland Marsh as well as some of its specialty crop areas. In fact, almost 70% of the land within the study area for this highway is prime agricultural land (class 1-3).</p> <p>As part of the Preliminary Design, the Project Team considered all impacts and will continue to work with environmental agencies, municipalities, and other concerned stakeholders to identify measures to avoid or mitigate the potential impacts of placing new or expanded provincial highways within areas of the existing and enhanced Greenbelt lands.</p> <p>The Greenbelt Plan acknowledges the necessity of building infrastructure. The Plan allows for existing, expanded or new infrastructure in the Greenbelt if the infrastructure serves the significant population growth expected in southern Ontario.</p> <p>Potential impacts to agricultural lands as a result of the Project have been assessed with regards to the loss of agricultural land, loss of prime agricultural</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	DRAFT EIAR edits required? (Yes/No) If yes, specify edits
					<ul style="list-style-type: none"> Do a value-for-money audit of this project comparing it to regional road and public transit alternatives; If traffic studies and the evaluation of alternatives justify it, pay for regional road improvements; excellent community value Plan for sustainable transportation. Prioritize getting Lake Simcoe watershed-area GO stations built: Innisfil Orbit, Barrie waterfront; and all day two way electrification of the GO line; expand rail transport N/S and E/W similar to European arteries of transport - PARK the Vehicle-ride the Rails; Complete studies that are not being done — Impacts to Lake Simcoe, cumulative climate impacts, cumulative health assessments and cumulative water impacts; Use a salt alternative on ALL major 400 series and Regional highways; The Bradford Bypass will do nothing for the residents of Bradford and East Gwillimbury except impose vast amounts of unsustainable sprawl. Bradford Council needs to restrict large/overweight transportation vehicles on Holland St. (E/W) as it is restricting daily traffic and ruining the current roads. MTO's studies and reports show that this highway will not solve local (Bradford, Innisfil) traffic problems. MTO states that these problems are the <u>responsibility of local</u> municipal governments, <u>Municipal Councils start enforcing by-laws</u> The only reasonable way to solve HWY400 / HWY404 and local travel problems is to extend Ravenshoe Road and <i>possibly</i> Bradford's 8th Line over the Holland River. There will be so much salt contamination from the Bradford 	<p>land, creation of severed parcels, and increased fragmentation of the land base on the designated agricultural lands. These potential impacts cannot be avoided. There are also potential impacts to adjacent agricultural lands and communities based on the proposed locations of the interchanges and by the proposed highway lighting.</p> <p>The first method of addressing potential impacts is to avoid the potential impact. In this study, the proposed future development of the Bradford Bypass lands will be a permanent use with portions of the Bradford Bypass being located within designated agricultural areas. As a result, there will be designated agricultural lands lost due to the project, which cannot be avoided.</p> <p>When avoidance is not possible, the next priority is to minimize impacts to the extent feasible. The minimization of impacts may be achieved during the design process and through proactive planning measures that provide for the separation of land uses. The Updated Technically Preferred Route has taken into consideration the 2002 Approved Environmental Assessment by maintaining parts of the original alignment and employing similar techniques to minimize the corridor footprint and impact the fewest agricultural buildings, investment and agricultural operations, thereby minimizing the potential impacts to the agricultural land base, agricultural operations, and the agricultural system.</p> <p>When avoidance techniques and minimizing potential impact to agriculture have not achieved the desired effect the next priority is to mitigate any further impact. Potential mitigation measures may include:</p> <ul style="list-style-type: none"> The use of salt management plans to reduce the amount of salt require for de-icing The use of adequate fencing or berms and vegetated features between different land uses to reduce the potential for trespassing and potential vandalism 	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	DRAFT EIAR edits required? (Yes/No) If yes, specify edits
					<p>Bypass that these local road bridges over the Holland River will not be permitted if the Bradford Bypass is already in place;</p> <ul style="list-style-type: none"> As it is, without the Bradford Bypass, Lake Simcoe will become a saltwater lake within 38 years, use <u>an alternative</u> to road salt. Start a new environmental assessment (EA) that looks at both provincial and local transportation problems to determine the optimum solution for all problems. There is absolutely no provincial business case reason why the Bradford Bypass should be built over this floodplain, greenbelt and Holland Marsh. IF there is, please advise. An alternative transportation corridor should be built within the vicinity of HWY 89. This would not only save large portions of our Simcoe County environment, it would also save ON-taxpayers huge amounts of money by not having (current Draft - Technically Preferred Route) to float the highway over this extremely high water table or suspend it overhead similar to Toronto's Gardiner Expressway structured columns. <p>Thank you, [REDACTED] Barrie, ON (former resident of Bradford for [REDACTED])</p> <p>Note: AECOM: your reference to "The Updated Draft Environmental Impact Assessment Report with completed archaeological studies"; it as you know 581 pages which I particularly don't have an issue with BUT it is <u>prohibitive for a senior on a fixed income to PRINT</u> even the first 30 pages which is just the Executive</p>	<ul style="list-style-type: none"> The use of plantings/vegetation as screens and buffers to reduce visual impacts and sounds Implementation of surface and/ or groundwater monitoring in areas where agricultural operations make use of surface or groundwater as part of their normal farm practices Construct or replace agricultural buildings to mitigate the loss of agricultural buildings Provide new wells or other water access for any potential groundwater disruption <p>It should also be noted that there are opportunities for local agricultural operations with the future development of the Bradford Bypass lands. The future development of the Bradford Bypass lands will bring people closer to the agricultural areas and specialty crop areas, market garden, field vegetable areas which will result in increased potential for expanding sales of local vegetable crops from the farm markets.</p> <p>Additional details on impacts to agricultural lands and proposed mitigation measures and monitoring activities are included in Section 5.2.2 of the Updated Draft EIAR, available on the Project Website:</p> <p>https://www.bradfordbypass.ca/study-process/</p> <p>2. Potential habitat destruction for twelve species at risk including the Blanding's turtle without any commitment to protect these species, their habitat or even to reduce damage. A commitment to do a future study is not good enough.</p> <p>Targeted surveys for all species at risk with potential to occur in the Study Area will be required during future phases of work. These future studies will inform the need for any permits, authorizations, mitigation or compensation under the Endangered Species Act.</p>

					Summary! Can you mail me a printed copy or I would gladly pick-up a copy at your local office in Simcoe County. Please advise asap.	<p>The Updated Draft EIA requires consideration and review of all recommendations throughout the corridor during future phases of work. This approach is necessary and standard practice for planning projects in that design is an iterative approach and this project is only completing design to a preliminary level. During future phases of work, additional design will be completed and may include refinements to the design as details are developed with greater accuracy. Limiting the future design phases by making certain elements of the project non-discretionary at the Preliminary Design stage limits the potential for future work to explore opportunities for further reducing impacts and / or increasing mitigation and offsetting measures.</p> <p>For Blanding's Turtle specifically, candidate habitat associated with the Holland River and Holland River East Branch open water and wetland communities has been identified within the Study Area. Blanding's Turtle may be impacted while moving in between habitats if these species enter the construction work area.</p> <p>As part of this phase of the project, preliminary mitigation and avoidance measures for the potential impacts to turtles are included in the Draft EIA and include:</p> <ul style="list-style-type: none"> • If stockpiles of gravel and sandy substrates or the removal of these substrates in the vicinity of turtle habitat are required during the active turtle season (April 1 to October 15), turtle exclusion fencing should be installed in accordance with the Reptile and Amphibian Exclusion Fencing Best Management Practices (Ministry of the Environment, Conservation and Parks, 2020) around stockpiles or area of disturbance prior to April 1. Fencing should be installed immediately after stockpiles are created if after April 1. • It is recommended that culverts be designed to provide openness ratios that would allow for the passage of small mammal and/or herpetofauna where possible. An openness ratio of 0.4 would permit usage by medium-

						<p>general%20rule%2C%20the.be%20approved%20for%20direct%20disposal.</p> <p>5. Impacts to people's health particularly around air pollution and the contamination of wells and groundwater. Considering that traffic related air pollution is well known to be a contributor to many diseases including cancers, heart disease and respiratory disease, a cumulative health impact study is required.</p> <p>The human health scoping implications of the project such as air quality, noise, land use, traffic congestion and safety, economic, social cohesion, and neighborhood resources have been summarized in Section 2.2.7 and Section 5.2.7 of the Updated Draft EIAR. To better understand the human health implications due to the Project as a next step, it is recommended for MTO to continue to consider the human health factors identified in this report and provide recommendations to enhance potential positive impacts and mitigate potential negative health impacts. Specifically, conducting a Screening-Level Human Health Risk Assessment of potential air quality impacts is recommended in order to evaluate and characterize Project-related air quality impacts to health.</p> <p>The project has undertaken an Air Quality Impact Assessment to explore pollutant emissions and dispersion modelling in an effort to predict the contribution of the project to future ambient pollutant concentrations. This contribution, added to background concentration levels, allows prediction of the cumulative impact of the proposed project and all other contributors to air pollution. Concentration levels are compared to provincial and federal ambient air quality criteria and standards to assist in the evaluation of project-specific mitigation needs and options.</p> <p>Areas of concentrated emission impact are influenced by traffic volumes along a given segment of roadway. The implementation of the Bradford</p>

						<p>Bypass is expected to redistribute traffic from local roads surrounding the proposed Bradford Bypass to the new corridor and greater freeway network. Reductions in traffic volumes are observed on corridors including Highway 11/1 (Bridge Street), Bathurst Street, Holland Landing Road, Yonge Street, Queensville Sideroad, Doane Road, Mount Albert Road, Green Lane, and Simcoe County Road 88/Holland Street, among other roads. The alleviation of traffic on local roads benefits the area including but not limited to Town of Bradford West Gwillimbury, community of Holland Landing, Town of East Gwillimbury, and northern King Township by alleviating congestion during peak hours.</p> <p>Recognizing the potential impacts to groundwater and private wells in the Study Area, the Project Team has completed and initial assessment of the groundwater and surficial soils within the Study Area and documented the findings in a Hydrogeological Data Report. In addition, a Water Well Survey was completed and included a review of available secondary should information as well as data from stakeholders in the Study Area regarding their existing water wells.</p> <p>Additional well surveys and a detailed assessment of potential groundwater interference will be completed during future phases of the project. A Construction Dewatering Plan will also be prepared to identify potential impacts to groundwater and measures to be implemented to avoid or mitigate the impacts. In addition, all groundwater taking must adhere to the municipal, regional, provincial and federal policies and any permits or approvals required for the Project will be obtained prior to construction.</p> <p>Impacts to groundwater and proposed mitigation measures and monitoring activities are also summarized in the Updated Draft EIAR (Section 5.1.4).</p> <p>6. Increase in greenhouse gas emissions without a cumulative impact assessment on regional climate.</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	DRAFT EIA edits required? (Yes/No) If yes, specify edits
						<p>The Project Team has undertaken a Qualitative Climate Change Assessment to assess potential impacts and suggest mitigation options for consideration. The assessment was completed accordance with MECP's Climate Change Guide (Considering Climate Change in the Environmental Assessment Process, 2017), and considers the project's resilience or vulnerability of the undertaking to changing climatic conditions. Findings are summarized in Section 5.2.6 of the Draft EIA.</p> <p>7. Extend the consultation time past 30 days and give at least 120 days for the public, affected municipalities, Indigenous communities and Indigenous governments time to understand and respond to this lengthy report</p> <p>The process of planning the Bradford Bypass has included -- and will continue to include -- consultation with the public and Indigenous communities to ensure the project move forward in an environmentally responsible way that is responsive to the needs and concerns of communities.</p> <p>In accordance with Ontario Regulation 697/21, an initial Draft EIA -- which documents the results of the studies undertaken for various environmental disciplines, proposed mitigation measures and environmental commitments to protect the environment -- was published for public review from starting on June 1 and continuing until June 30, 2023. In addition, the Ministry has been providing Indigenous communities and stakeholders various opportunities for meaningful consultation since the project was re-initiated in September 2020 including two Public Information Centres.</p> <p>Additional archaeological investigations, which are necessary to complete the impact assessment in accordance with the regulation, have recently been finalized and incorporated into an updated Draft EIA. This updated report was posted for an additional 30-day consultation period. The Updated Draft EIA posting includes the information from the</p>

						<p>initial draft to ensure stakeholders can review additional information in full context of the project.</p> <p>The Updated EIA was made available on the Project website for an additional 30-day consultation period, from July 13, 2023 until August 14, 2023. The updated draft EIA posting includes the information from the initial draft to ensure stakeholders can review additional information in full context of the project. As the initial Draft EIA and the Updated Draft were available for public review for a total of 60 days, an extension of the public review period is not being considered at this time.</p> <p>8. Mandate a cumulative health impact assessment that will outline specifically the public health costs of this highway due to air pollution, groundwater contamination and increased greenhouse gas emissions due to induced demand</p> <p>As noted in the response to Question #5, the human health implications of the project such as air quality, noise, land use, traffic congestion and safety, economic, social cohesion, and neighborhood resources have been summarized in Section 2.2.7 and Section 5.2.7 of the Draft EIA and the Project Team will continue to evaluate and characterize project-related air quality impacts to health and provide recommendations to enhance potential positive impacts and mitigate potential negative health impacts.</p> <p>9. Detailed commitments on protection of species at risk and their habitat within the study area</p> <p>As noted above in the response to Question #2, details on Species at Risk and proposed mitigation measures and monitoring commitments are documented in Section 5.1.1 of the Updated Draft EIA.</p> <p>10. Commitment to do further field studies about the presence of American Eel and Northern Sunfish - two species that have</p>

						<p>Indigenous significance and have not been included in your reports</p> <p>It was noted in discussion with Williams Treaties First Nations on December 1, 2022, that they had observed both American Eel (<i>Anguilla rostrata</i>; Endangered Species Act – Endangered, Species at Risk Act – Not at Risk) and Northern Sunfish (<i>Lepomis peltastes</i>; Endangered Species Act – Special Concern, Species at Risk Act – Special Concern) in the Holland River.</p> <p>Subsequently, the Project Team consulted with the Ministry of the Environment, Conservation and Parks, in March 2023 and was advised that the Ministry of Environment, Conservation and Parks records have no documented observations of the American Eel or Northern Sunfish in the Study Area. They also noted that the Northern Sunfish is a species of special concern and does not have a permitting status with the Ministry of the Environment, Conservation and Parks, and therefore would not be reported. These discussions with Williams Treaties First Nations and MECP have been documented in the Fish and Fish Habitat Report and Section 2.1.2 of the Updated Draft EIAR.</p> <p>No records of aquatic Species at Risk that are afforded protection under the Species at Risk Act or Endangered Species Act are known to occur in the watercourses where culverts are anticipated to be installed. AECOM ecologists conducted a detailed fish and fish habitat assessment of the water features in the vicinity of the Study Area between September 14-18, 2020, with spring field investigations occurring over multiple days in June 2021. Field investigations were also completed in the spring of 2022 due to changes to the Study Area boundary that required further review for potential fish habitat. Based on these investigations, no Species at Risk were discovered in the Study Area. Regardless, the presence or absence of all aquatic Species at Risk will be re-confirmed in subsequent design phases through additional field investigations.</p>

						<p>11. Commitment to protect the Lower Landing in its entirety from any site alteration</p> <p>In accordance with the Ministry's cultural heritage conservation process and the Ministry's obligations under the Standards and Guidelines for Conservation of Provincial Heritage Properties, 2010 (S&Gs) issued under section 25.2 of the Ontario Heritage Act (OHA) the Ministry has completed a Cultural Heritage Resource Assessment Report (CHRAR) to identify known and potential built heritage resources and cultural heritage landscapes within the Study Area, assess potential impacts and project alternatives and recommend mitigations and next steps. The cultural heritage resource assessment has informed the analysis of environmental conditions undertaken for this project and recorded in the Environmental Conditions Report and the Environmental Impact Assessment Report.</p> <p>The assessment has identified the Holland River watershed as having potential cultural heritage value or Interest (CHVI). As recommended in the Environmental Impact Assessment Report (EIAR) and the CHRAR, a cultural heritage evaluation is being undertaken to determine CHVI for the property. This includes research and evaluation to determine if the property meets criteria in Ontario Regulation 9/06 and/or Ontario Regulation 10/06 of the Ontario Heritage Act to be considered a Provincial Heritage Property or a Provincial Heritage Property of Provincial Significance. Research includes, but is not limited to, review of heritage property databases, field review, archives, museums, planning offices and other facilities, archaeological reports, other relevant reports or studies, information from community engagement including input from Indigenous communities, oral histories etc. to provide the historic context of the property including the history of Indigenous communities and post-contact communities.</p> <p>For properties, including the Holland River Watershed, that are determined by the Ministry to meet the criteria in O. Reg. 9/06 or O. Reg. 10/06 of</p>

						<p>the Ontario Heritage Act and that may be adversely impacted by the Updated Technically Preferred Route, a Heritage Impact Assessment (HIA) will be prepared to fully assess impacts and propose alternatives and mitigation to conserve the property's CHVI. In accordance with F.5 of the S&Gs, and as committed in Section 5.3.2.2 of the EIAR, if the Ministry determines that a property, including the Holland River Watershed, is a provincial heritage property of provincial significance, the Ministry must obtain the consent of the Minister of Citizenship and Multiculturalism before removing or demolishing buildings or structures on the property, or before transferring the property from provincial control. The Minister of Citizenship and Multiculturalism may not grant consent or may grant consent, with or without conditions, where the Minister is of the opinion that all alternatives to the removal, demolition or the transfer of the property have been considered by the Ministry, including alternatives that would not adversely affect the property, and the best alternative in all the circumstances has been adopted. The Minister, as a condition of consent, may require that such reasonable steps as the Minister may specify be taken to minimize or mitigate adverse effects on the property resulting from the removal, demolition or the transfer of the property.</p> <p>12. Detailed study about the impacts this highway will have on Lake Simcoe in particular how it could impact the fisheries as well as the harvesting rights of Indigenous people and their water quality.</p> <p>The Ministry has been and will continue to consult with Indigenous communities regarding potential impacts to their Aboriginal and Treaty Rights.</p> <p>The project has been assessed in accordance with the Interim Environmental Guide for Fisheries and the Protocol for Protecting Fish and Fish Habitat on Provincial Transportation Undertakings. Following the completion of the impact assessment, it was determined that many of the potential negative effects of the proposed works could be avoided or</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	DRAFT EIAR edits required? (Yes/No) If yes, specify edits
						<p>mitigated at many locations. However, due to the number and size of some of the required new crossings it is anticipated that not all negative effects could be avoided or mitigated entirely. At this time, it is assumed that a Request for Review will need to be submitted to Fisheries and Oceans Canada during Detail Design/ prior to construction.</p> <p>For more information on impacts to Lake Simcoe, please refer to the response to Question 4.</p> <p>Please see below the response to the letter sent on June 30, 2023.</p> <p>11. Time and consultation are inadequate. You have provided an un-editable PDF and 30 days for a 576 page report. This follows the pattern of terrible public information and consultation. Will you extend the consultation period?</p> <p>The process of planning the Bradford Bypass has included -- and will continue to include -- consultation with the public and Indigenous communities to ensure the project moves forward in an environmentally responsible way that is responsive to the needs and concerns of communities. In accordance with Ontario Regulation 697/21, an initial Draft Environmental Impact Assessment Report (EIAR) -- which documents the results of the studies undertaken for various environmental disciplines, proposed mitigation measures and environmental commitments to protect the environment -- was published for public review starting on June 1 and continuing until June 30, 2023. In addition, the Ministry has been providing Indigenous communities and stakeholders various opportunities for meaningful consultation since the project was re-initiated in September 2020 including two Public Information Centres.</p> <p>Additional archaeological investigations, which are necessary to complete the impact assessment in accordance with regulations, have recently been finalized and incorporated into an Updated Draft Environmental Impact Assessment Report. This</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	DRAFT EIAR edits required? (Yes/No) If yes, specify edits
						<p>updated report has been posted for an additional 30-day consultation period. The Updated Draft EIAR posting includes the information from the initial draft to ensure stakeholders can review additional information in full context of the project. As the initial Draft EIAR and the Updated Draft were available for public review for a total of 60 days, an extension of the public review period is not being considered at this time.</p> <p>The Updated Draft Environmental Impact Assessment Report was available for review on the Project Website (https://www.bradfordbypass.ca/study-process/) until August 14, 2023.</p> <p>12. Explain how a provincial highway was transformed into a very expensive regional road variant with five interchanges and two 400 series highway connections, paid for by all Ontario taxpayers. This is inconsistent with the MTO's mandate to provide long distance travel solutions. We maintain that there are better and cheaper, faster to implement, regional road and transit solutions that should be pursued, even if the Bypass does get built.</p> <p>The project is being assessed with consideration of the Ministry's mandate to provide for the safe, efficient movement of people and goods between regions and urban areas. In addition, the Project Team has consulted with local and regional municipalities, and the traffic analysis for the proposed Bradford Bypass has considered the planned local transportation and transit improvements to be implemented by others.</p> <p>The original route planning study (2002 Approved Environmental Assessment – EA) concluded that additional relief from congestion in this Study Area could only be accommodated through the protection and implementation of a provincial right of way.</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	DRAFT EIAR edits required? (Yes/No) If yes, specify edits
						<p>As part of the 2002 Approved EA, the Bradford Bypass evaluated alternatives from a broad range of potential solutions to address several transportation problems and to address significant opportunities identified in York Region and Simcoe County. The need for this freeway was confirmed as the only reasonable solution that would make a significant contribution towards addressing the problem as the population in York Region and Simcoe County grows. The 2002 Approved EA approved alignment is technically preferred for a freeway in terms of highway network expansion, ease of construction, relationship to provincial and municipal land use planning and the preferred route is already included in Official and Transportation Master Plans, as well as the Places to Grow Act), as well as having fewer negative impacts to residential and natural areas when compared to other route options considered.</p> <p>For more information on the Analysis and Evaluation of alternatives, refer to Section 2.1.6 of the 2002 Approved EA, which can be found in the enclosed link: https://www.bradfordbypass.ca/wp-content/uploads/2020/09/BBP-RoutePlanningEA-1997.pdf</p> <p>Further to the conclusion of the 2002 Approved EA, as part of this Preliminary Design study, a traffic analysis was completed and the result of the review has confirmed the need of the highway. This analysis included the review of existing traffic conditions and modelling of future forecast traffic conditions and it has been confirmed that updates to regional and municipal roads alone will not address the transportation needs within the Study Area.</p> <p>Additionally, a feasibility assessment was conducted evaluating nine interchange location scenarios to determine the best interchange configuration through the Bradford Bypass corridor. The evaluation was conducted in accordance with satisfying the study objective to improve connectivity of the study area between Highway 400 and Highway 404, facilitating the improvement of traffic operations and movement of goods. Consideration included interchange utilization, overall network delay, out of way travel,</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	DRAFT EIAR edits required? (Yes/No) If yes, specify edits
						<p>environmental considerations and constraints, and preliminary costs. It was determined that interchanges at 10th Sideroad, County Road 4, Bathurst Street, 2nd Concession Road, and Leslie Street would be included as part of the Study.</p> <p>13. We would like to see the traffic studies in their entirety. An environmental assessment used to be grounded in a demonstration of need and justification. The MTO has provided neither as it pertains to this particular project and at this time. There is no evidence that local traffic solutions MTO purports to be solving (actually a local traffic issue and not MTO's mandate) are best served by this potentially \$4 billion highway.</p> <p>The Bradford Bypass project has been assessed in accordance with Ontario Regulation 697/21. Consistent with the Regulation, the Project Team completed an update to the description of environmental conditions previously documented in the 2002 Approved Environmental Assessment (EA) for the project. This update included a review and assessment of the existing traffic conditions which was documented in the Environmental Conditions Report (ECR). The ECR was finalized in October 2022 following a public review period, and is available on the Project website.</p> <p>Significant population growth is projected for both Simcoe County and the Regional Municipality of York. Even with all currently planned transportation and transit investments, road congestion will continue to increase across the Greater Golden Horseshoe (GGH) including within the Bradford Bypass Study Area.</p> <p>The purpose of the Bradford Bypass is to relieve congestion on existing local roads between Highway 400 and Highway 404 and provide a northern freeway connection between Highways 400 and 404. Modeling results demonstrated that under the No Build (no Bradford Bypass) scenario, local roads were forecasted to exceed capacity by 2031 but saw significant relief under the Build (with Bradford</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	DRAFT EIA edits required? (Yes/No) If yes, specify edits
						<p>Bypass) scenario. Alternative alignments for the Bradford Bypass were then compared within the model, including the 2002 Approved EA alignment and interchange locations and an updated preferred interchange location alternative developed by the Project Team.</p> <p>On average, between the various origin-destination pairs using the Bradford Bypass, drivers in the peak direction during the peak period, would save up to 73% or 33 minutes of travel time when connecting between Highway 400 and Highway 404 compared to existing routes in the No Build scenario.</p> <p>The development of the analysis and key results from the Traffic Study have been summarized in the Draft Environmental Impact Assessment Report and the Updated Draft Environmental Impact Assessment Report (EIA), which were available for public review and comment from June 1, 2023 to June 30, 2023 and July 14, 2023 to August 14, 2023, respectively. The information in the draft EIA includes the origin and destination locations that were reviewed to determine the average travel time savings during the AM and PM peak hours. Similar to the process undertaken for MTO preliminary design studies, the Traffic Study will be finalized upon study completion and will be available if requested.</p> <p>c. Please share the links and the methodology, transparently, so that people can understand what travel time savings MTO is referring to. We have absolutely no idea because your write up is incredibly vague about the start and end of the routes used for analysis.</p> <p>d. What year do your studies indicate that the Bypass will be congested at peak rush hour times?</p> <p>As detailed in the Draft EIA (Section 2.4.1), an Aimsun model was created to assess the existing traffic conditions for the road network in the Study</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	DRAFT EIAR edits required? (Yes/No) If yes, specify edits
						<p>Area. The model study area encompasses the Highway 400 corridor from south of Simcoe County Road 88 to north of Highway 89, as well as the Highway 404 corridor from south of Green Lane East to its terminal at Woodbine Avenue (Table 4-3 and 4-4 of the Draft EIAR).</p> <p>The model for this area was developed using pre-pandemic traffic volumes to identify peak hour volumes within the Study Area. This model has been calibrated and validated as it closely resembled actual operating conditions.</p> <p>As detailed in Section 4.4 of the Draft EIAR, traffic is assessed through modelling to identify Level Of Service (LOS). Having confirmed the model was consistent with current (base) conditions, and therefore appropriate to assess future conditions and design alternatives, the model was used to assess LOS under future 2031 and 2041 conditions. To assess future conditions, the model was updated to include all road network and transit improvements planned within the Study Area, and, forecast traffic volumes based on the projected growth within the Study Area.</p> <p>The alternative Build scenarios showed the mainline operations on the Bradford Bypass in 2031 would operate at acceptable LOS D in the interim four lane configuration. The model indicates that by expanding to the ultimate 8 lane configuration (implementing another general purpose lane and an HOV lane in each direction by 2041), LOS on the mainline improves to LOS B or C and accommodates the additional traffic forecast by 2041.</p> <p>For further information about the Traffic Study please refer to the response to Question #3 and Section 4.4 of the Updated Draft EIAR.</p> <p>14. The Draft Environmental Impact Assessment report shows on pg. 212 the Bypass touching the southern portion of the Lower Landing (AKA BaGv-42), a significant historical and archaeological site at a significant meander on the East Holland River. MTO has moved the</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	DRAFT EIAR edits required? (Yes/No) If yes, specify edits
						<p>highway 150 m to the south of the technically preferred route, which would have completely run over the Lower Landing (pg 148). But the Draft IA states, "the southern portion of the site ... will be impacted by construction" (pg 395). The Draft Environmental Conditions Report indicated that a Stage 3 archaeological assessment "was required" (pg 225); the Draft IA report says that the Stage 3 was completed, and that Stage 4 is required. The Project team's website says, "Currently, additional archaeological investigations are being completed to finalize the impact assessments in accordance with Ontario Regulation 697/21 and are not included in this posting. This information will be available for additional public and Indigenous community review once completed." So the archeological work is not finished. And yet the route has been chosen. Property owners near the history-rich Lower Landing that are receiving expropriation notifications. We are staunchly opposed to this violation of this site particularly absent the stage 4 evaluation of the Lower Landing and the endorsement of the First Nations.</p> <p>c. As stewards of these lands and water for time immemorial, additional time should be given to allow First Nation community members to fully digest the lengthy report. Georgina Island First Nation asked that this site be avoided in 1998, 25 years ago, stating, "It is obvious that there are other routes, which can be used to connect these major highways, and we hope that another will be selected." Is Ontario still ignoring this request.</p> <p>d. Have First Nations be consulted about this part of the plan? Please</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	DRAFT EIAR edits required? (Yes/No) If yes, specify edits
						<p>provide written evidence of their approval of this route.</p> <p>Field investigations for Stage 2 and Stage 3 works have been completed and additional details are included in the Updated Draft Environmental Impact Assessment Report available on the Project Website (https://www.bradfordbypass.ca/study-process/) for public review until August 14, 2023.</p> <p>The required Stage 4 Archaeological Assessment of BaGv-42 will be completed during future phases of work for the project and will be carried out in accordance with the Ministry of Citizenship and Multiculturalism Standards and Guidelines for Consultant Archaeologists (Ontario Government 2011). No ground disturbing activities will occur at this site until the Stage 4 assessment has been conducted.</p> <p>In accordance with Ontario Regulation 697/21, the Project Team completed site specific Stage 3 archaeological assessments for areas within the Study Area that were identified as having archaeological potential in accordance with the Stage 2 archaeological assessments.</p> <p>It is common practice for Stage 4 archaeology work to be completed during Detail Design. Limiting the impact to Stage 4 archaeological sites where feasible is one of the Project Team's main priorities. As a result, the Project Team will determine the exact impact limits to archaeological sites during subsequent design phases of the project. To avoid unnecessary excavation, the Project Team will then undertake the Stage 4 archaeological assessments. Any Stage 4 field work that will be undertaken must engage interested Indigenous communities.</p> <p>As recommended by the cultural heritage resource assessment undertaken by the Project Team, the Holland River watershed was identified as a Cultural Heritage Landscape requiring further research and evaluation to determine if it possesses cultural heritage value or interest. This further assessment will be completed in a Cultural Heritage Evaluation</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	DRAFT EIA edits required? (Yes/No) If yes, specify edits
						<p>Report (CHER), and if the CHER determines that the Holland River Watershed meets the criteria in Ontario Regulation 9/06 or Ontario Regulation 10/06 of the Ontario Heritage Act, and may be adversely impacted by the Updated Technically Preferred Route, a Heritage Impact Assessment will be prepared to fully assess impacts on the resource's identified heritage attributes and propose alternatives and mitigation to conserve the property's Cultural Heritage Value or Interest. These commitments are included in Section 5.3.2 of the Updated Draft EIA.</p> <p>Consultation is an integral component of the Preliminary Design stage, the project-specific assessment of environmental impacts process, and for future project phases, and is critical to a project's success. The ministry is actively consulting and engaging with Indigenous communities throughout the Bradford Bypass Project.</p> <p>The Project Team is engaging with and considers input provided by the following Indigenous communities:</p> <ul style="list-style-type: none"> - Alderville First Nation - Beausoleil First Nation - Chippewas of Georgina Island First Nation - Chippewas of Rama First Nation - Curve Lake First Nation - Hiawatha First Nation - Mississaugas of Scugog Island First Nation - Kewartha Nishnawbe First Nation - Georgian Bay Métis Council, and - Huron-Wendat Nation <p>Comments from Indigenous communities are accepted at any time in the study process.</p> <p>15. Table 2-2 lays out the 12 species present or very likely to be present. For instance, Blandings Turtles are likely affected as they are likely in the area. The only commitment we see is to do a detailed study later on. This is a good example of study following decision or destruction, and is in violation of the standard EA practices. There are no commitments to</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	DRAFT EIAR edits required? (Yes/No) If yes, specify edits
						<p>the protection of species at risk in this document.</p> <p>Targeted surveys for all species at risk with potential to occur in the Study Area will be required during future phases of work. These future studies will inform the need for any permits, authorizations, mitigation or compensation under the Endangered Species Act.</p> <p>The Updated Draft EIAR requires consideration and review of all recommendations throughout the corridor during future phases of work. This approach is necessary and standard practice for planning projects in that design is an iterative approach and this project is only completing design to a preliminary level. During future phases of work, additional design will be completed and may include refinements to the design as details are developed with greater accuracy. Limiting the future design phases by making certain elements of the project non-discretionary at the preliminary design stage limits the potential for future work to explore opportunities for further reducing impacts and / or increasing mitigation and offsetting measures.</p> <p>For Blanding's Turtle specifically, candidate habitat associated with the Holland River and Holland River East Branch open water and wetland communities has been identified within the Study Area. Blanding's Turtle may be impacted while moving in between habitats if these species enter the construction work area.</p> <p>As part of this phase of the project, preliminary mitigation and avoidance measures for the potential impacts to turtles are included in the Draft EIAR and include:</p> <ul style="list-style-type: none"> • If stockpiles of gravel and sandy substrates or the removal of these substrates in the vicinity of turtle habitat are required during the active turtle season (April 1 to October 15), turtle exclusion fencing should be installed in accordance with the Reptile and Amphibian Exclusion Fencing Best Management Practices (Ministry of the Environment, 	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	DRAFT EIAR edits required? (Yes/No) If yes, specify edits
						<p>Conservation and Parks, 2020) around stockpiles or area of disturbance prior to April 1. Fencing should be installed immediately after stockpiles are created if after April 1.</p> <ul style="list-style-type: none"> It is recommended that culverts be designed to provide openness ratios that would allow for the passage of small mammal and/or herpetofauna where possible. An openness ratio of 0.4 would permit usage by medium-sized mammals, while the minimum openness ratio to be considered should be 0.25, which would permit usage by reptiles such as turtles (Credit Valley Conservation, 2017). Avoid work within areas of candidate turtle overwintering habitat during the turtle overwintering period (October 31 to April 1), whenever possible. <p>These preliminary mitigation measures will be further refined as the project proceeds to Detail Design and impacts are assessed in more detail.</p> <p>For further detail on potential impacts to Species at Risk and proposed mitigation and avoidance measures, please refer to Section 5.1.1 of the Draft Environmental Impact Assessment Report.</p> <p>d. The Draft IA report identifies that the Williams Treaties FN reported American Eel and Northern Sunfish in the Holland River. This must be further investigated with new fieldwork. The American Eel is in decline and gets Federal protection. Ontario's Species at Risk legislation doesn't work anymore so it's all up to the federal enforcement.</p> <p>e. What is Ontario going to do to stand by Canada's obligations to First Nation treaty and consultation rights?</p>

						<p>f. Will the American Eel's presence be investigated with new field work.</p> <p>It was noted in discussion with Williams Treaties First Nations on December 1, 2022, that they had observed both American Eel (<i>Anguilla rostrata</i>; Endangered Species Act – Endangered, Species at Risk Act – Not at Risk) and Northern Sunfish (<i>Lepomis peltastes</i>; Endangered Species Act – Special Concern, Species at Risk Act – Special Concern) in the Holland River.</p> <p>Subsequently, the Project Team consulted with the Ministry of the Environment, Conservation and Parks, in March 2023 and was advised that the Ministry of Environment, Conservation and Parks records have no documented observations of the American Eel or Northern Sunfish in the Study Area. They also noted that the Northern Sunfish is a species of special concern and does not have a permitting status with the Ministry of the Environment, Conservation and Parks, and therefore would not be reported. These discussions with Williams Treaties First Nations and MECP have been documented in the Fish and Fish Habitat Report and Section 2.1.2 of the Updated Draft EIAR.</p> <p>No records of aquatic Species at Risk that are afforded protection under the Species at Risk Act or Endangered Species Act are known to occur in the watercourses where culverts are anticipated to be installed. AECOM ecologists conducted a detailed fish and fish habitat assessment of the water features in the vicinity of the Study Area between September 14-18, 2020, with spring field investigations occurring over multiple days in June 2021. Field investigations were also completed in the spring of 2022 due to changes to the Study Area boundary that required further review for potential fish habitat. Based on these investigations, no Species at Risk were discovered in the Study Area. Regardless, the presence or absence of all aquatic Species at Risk will be re-confirmed in subsequent design phases through additional field investigations.</p>

						<p>A four-lane configuration is planned to be constructed first with two general purpose lanes in each direction. To plan for the future, the Ministry is also considering the design of an ultimate eight-lane design for the Bradford Bypass. The ultimate, eight-lane configuration for the project will feature three general purpose lanes and one HOV lanes in each direction.</p> <p>20. There is no cumulative health impact assessment to understand how traffic related air pollution, known to increase risks of cancers, leukemia, heart and lung disease, will impact the communities surrounding the route. There is also no mention of the cumulative impacts on our climate from construction and higher rates of car travel on this highway.</p> <ul style="list-style-type: none"> e. How will you be informing people living along the route about the increased risk of traffic related air pollution and its effects on human health? f. Will you put air quality monitors in Bradford? g. How do you explain the fact that you are NOT monitoring air quality in Bradford, and using the closest site, Newmarket? h. The Final Environmental Conditions Report identified numerous planned residential developments right beside the highway, including a planned new school. Have the land owners / developers / school boards received any information that tells them how bad the air quality is going to be there? <p>The human health scoping implications of the project such as air quality, noise, land use, traffic congestion and safety, economic, social cohesion, and neighborhood resources have been summarized in Section 2.2.7 and Section 5.2.7 of the Draft EIAR. To</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	DRAFT EIAR edits required? (Yes/No) If yes, specify edits
						<p>better understand the human health implications due to the Project as a next step, it is recommended for MTO to continue to consider the human health factors identified in this report and provide recommendations to enhance potential positive impacts and mitigate potential negative health impacts. Specifically, conducting a Screening-Level Human Health Risk Assessment of potential air quality impacts is recommended in order to evaluate and characterize Project-related air quality impacts to health.</p> <p>The project has undertaken an Air Quality Impact Assessment to explore pollutant emissions and dispersion modelling in an effort to predict the contribution of the project to future ambient pollutant concentrations. This contribution, added to background concentration levels, allows prediction of the cumulative impact of the proposed project and all other contributors to air pollution. Concentration levels are compared to provincial and federal ambient air quality criteria and standards to assist in the evaluation of project-specific mitigation needs and options.</p> <p>Areas of concentrated emission impact are influenced by traffic volumes along a given segment of roadway. The implementation of the Bradford Bypass is expected to redistribute traffic from local roads and freeway corridors surrounding the proposed Bradford Bypass. Reductions in traffic volumes are observed on corridors including Highway 11/1 (Bridge Street), Bathurst Street, Holland Landing Road, Yonge Street, Queensville Sideroad, Doane Road, Mount Albert Road, Green Lane, and Simcoe County Road 88/Holland Street, among other roads, which benefits the community of Bradford, Town of Bradford West Gwillimbury, by alleviating congestion during peak hours.</p> <p>The Project Team is currently utilizing the National Air Pollution Surveillance air quality monitoring stations to assess air quality levels. Five years of existing data sets were analyzed from stations within the region, and the complete data set from the closest station or most representative station for</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	DRAFT EIAR edits required? (Yes/No) If yes, specify edits
						<p>each contaminant of concern was selected to represent the background air quality for the Study Area. Due to the proximity of the Study Area to the Toronto Area, monitoring stations within the City of Toronto were given preference as the one of the most representative locations for the air quality contaminants of concern. As such, Roadside Wallberg – University of Toronto monitoring station, North Downsview monitoring station, Gage Institute monitoring station (all located approximately 38 – 53 km from the Study Area) were used. The nearest monitoring station is in Newmarket. Additional information regarding the assessment of potential air quality impacts have been summarized in Section 2.2.4 and Section 5.2.4 of the Draft EIAR.</p> <p>Land has been designated for the Bradford Bypass since the 2002 Approved EA was completed. As noted above, consultation is an integral component of the Preliminary Design stage and project-specific assessment of environmental impacts and is critical to a project's success. The ministry is actively consulting and engaging with private landowners, developers and school boards within the Study Area. Engagement and consultation has included having a project website and telephone line, having a project contact list for regular project updates, providing notices and correspondence via email, mail, and Ontario Government Notices in local newspapers, hosting public information centres and online events, and holding meetings with Indigenous communities, municipalities, environmental agencies, and stakeholders. More information on the project consultation activities are included in Section 7 of the Updated Draft EIAR.</p> <p>12. Traffic modeling to produce the air dispersion model is not robust or transparent. The air modeling report and supporting reports fail to disclose the % of diesel truck traffic, or the component of that traffic that includes trucks dating from 2006 or earlier which comprise a significant component of air pollution load. The comparison of build with no-build is not valid because the values in</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	DRAFT EIR edits required? (Yes/No) If yes, specify edits
						<p>Appendix E of the traffic modeling report show that there was an erroneous assumption that there would be significantly less truck traffic in the build scenario compared to the no-build scenario. There is no valid scientifically-based justification for this. Further, if there is an increase in truck traffic along 404 - as the model predicts - then sensitive receptors along highway 404 need to be included in a health impact study. Instead, impacts on traffic along the 400/404 corridors were excluded and the "air quality study area" was restricted to the bypass corridor itself without any explanation or justification. It is egregious that MTO did not conduct locally relevant air quality monitoring for background in Bradford, River Drive Park, Queensville and along the 404/400 corridors for traffic related air pollutants. Such baseline monitoring is generally inexpensive and could have been easily obtained. The study did not include the cumulative effects of future planned industrial uses along the Bypass corridor and along the 400/404 corridor which may significantly impact people's health along the route. The evaluation did not use 2022 World Health Organization criteria for contaminants which are much lower and more up-to date than the CAAQS or the AAQCs. We disagree that the AAQCs and CAAQS represent the "lowest concentrations at which an adverse effect may be experienced" as they are not based on up-to-date understandings of the health impacts of air contaminants including pre-term births and neurodevelopmental and other impacts. The report predicts significant exceedances for NO2 and benzo(a)pyrene even with the apparently non-conservative assumptions for diesel truck traffic used in the full build out scenario compared to the no-build scenario. The adverse health</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	DRAFT EIAR edits required? (Yes/No) If yes, specify edits
						<p>impacts of NO2 exceedances may be extremely severe and will impact on the Charter rights and human rights of residents in the study area and beyond without justification for the need for the project.</p> <p>Study Area, MOVES3 data, vehicles and assumptions: In order to model relevant vehicle types within the Air Quality Impact Assessment Study Area, MOVES3 data was input to the model and refinements were made to exclude fuel types such as ethanol given these fuels are not readily available for use in Ontario. Fuel inputs utilized in MOVES3.0 modelling at the time of the assessment included: Fuel Type IDs 1, 2, 3 and 9. ID 5 (ethanol) was not included as flex fuel cars and fuelling stations are not readily available in Ontario. The specific source type fractions utilized for various vehicle types applied within the project study area and the related fraction of expected vehicle usage for both passenger-class vehicles and heavy-class vehicles, including the distribution of vehicle types in the heavy truck vehicle category, were combined to create representative vehicle emission for vehicle class that can reasonable be expected to be in use in 2041.</p> <p>Highway 400/404 corridors were included in the Air Quality Impact Assessment. The full air quality study area is shown in Figure 2-9 of the Updated Draft EIAR and demonstrates that the air quality study area included emission sources within the boundary of assessment, including but not limited to Highway 400 (500 m south of Rural Rd. 88 to 500 m north of Concession Rd. 11), Highway 404 (500 m south of Queensville Sideroad E to 500 m north of Boag Road), the entirety of the proposed Bradford Bypass, Bridge Street, Holland Street W, 10th Sideroad, Young Street/Barrie Street, and Queensville Sideroad.</p> <p>Traffic distributions and truck traffic: The same Average Annual Daily Traffic (AADT) were used for all scenarios. AADT values for each air quality emission source vary between the three</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	DRAFT EIA edits required? (Yes/No) If yes, specify edits
						<p>scenarios evaluated based on projected existing traffic within the study area, and future no-build and build traffic projections however the same 24-hour traffic distribution percentages were applied. Three representative 24-hour distribution percentages were applied to the air quality emission sources. These were applied to a given source of emission depending on the type of road in question, e.g. a "Leslie St." 24-hour distribution was applied to air quality emission sources which were categorized as community arterial roads; a "HWY 400" 24-hour distribution was applied to air quality emission sources categorized as highways; and, a "2nd Concession Rd" 24-hour distribution was applied to rural roads. These same 24-hr distributions were applied to the assigned source for all three scenarios of evaluation (existing conditions, future no-build, and future build).</p> <p>Fuel usage distribution [i.e. diesel, gasoline, CNG, etc.] and vehicle age distribution within each vehicle type category were modelled based on MOVES3.0 default fuel use and age distribution database inputs assigned to the year of evaluation. Heavy truck traffic was included in the modelling with a percentage assigned to each air quality emission source anticipated from this vehicle type.</p> <p>Health Impacts, Critical Receptors and Background/Study Area Monitoring Data: The human health scoping implications of the project such as air quality, noise, land use, traffic congestion and safety, economic, social cohesion, and neighborhood resources have been summarized in Section 2.2.7 and Section 5.2.7 of the Updated Draft EIA.</p> <p>The Project Team is aware some critical receptors have been identified as 'missing' by a number of stakeholders. Having reviewed the data, these 'missing' receptors were included as residences in the Air Quality Impact Assessment. Potential impacts at the 'missing' receptors within the Air Quality Impact Assessment Study Area are reflected in the assessment by other, nearby critical receptors</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	DRAFT EIAR edits required? (Yes/No) If yes, specify edits
						<p>and receptors identified on Figure 2-9 and 2-10 of the Updated Draft EIAR.</p> <p>The approach to identifying representative air quality levels is conservative and often ensures the worst-case conditions are reflected so as to not under-represent conditions within a study area; i.e. background air quality contaminant levels included within the assessment may be representative or higher than expected for the area in question.</p> <p>While it is recognized that localized in-situ monitoring may provide more accurate data, use of existing monitoring stations within the NAPS network for statistically relevant background monitoring data is a generally accepted and conservative methodology for provincial environmental impact air quality assessments. Stations selected for the background air quality assessment were chosen based on total data availability over a most recent five-year period as a minimum of 12 months of daily and hourly data is required to ensure statistical relevance. Stations were also selected based on their proximity to the air quality study area with the meteorological station selected as representative of the air quality study area within 15 km north-west of the air quality study area. Stations must also be a relative representation of similar types of existing sources of air quality emission in the study area and it is notable that the meteorological station selected as representative of air quality in the study area was provided by the MECP in site-specific MET data requested for the project modelling.</p> <p>13. Many less expensive alternatives to this highway have not been considered. The Minister approved Terms of Reference for the Bradford Bypass Environmental Assessment Study overrode the requirements of the Environmental Assessment act to consider road alternatives that would not be a controlled access highway. As a result, the Hwy 9 / Green Lane corridor was the only existing roadway that was considered as a reasonable alternative. That roadway was</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	DRAFT EIAR edits required? (Yes/No) If yes, specify edits
						<p>rejected as it was not considered feasible to convert it to a controlled access facility. Consideration of these types of alternatives are, however, a requirement for all Class EA Studies. A major condition of the 2002 Bradford Bypass EA Approval, was a requirement to conduct a Class EA Study at the time MTO wished to proceed with this project. This study would ensure the currency of the proposed project in light of current travel demand, previously unforeseen environmental factors, new legislation and a full review of all reasonable alternatives including combinations of regional and local roadways. The following are reasonable alternatives that would need to be considered both individually and in combination with one or more other reasonable alternatives if the Class EA Study that was underway at the time Regulation 697 /21 was issued. Each of these proposed alternative solutions would then be evaluated against the then approved Bradford Bypass 4 lane controlled access freeway. Because the Class EA Study was canceled by this regulation, the only comparison AECOM have used throughout the Draft Impact Assessment Report is "Do Nothing". Given that the actual travel problem we are now faced with is local, rather than long distance traffic, we are confident one or more of the following reasonable alternatives would be dramatically preferable to the now 8 lane, Bradford Bypass. Alternatives to the Bradford Bypass:</p> <ul style="list-style-type: none"> a Construct a 4 lane arterial road bridge over the West Branch of the Holland River at the currently planned location for the Bradford Bypass bridge – together with paved 4 lane roadways to both Bathurst St. and a connection to Bradford's 8th Line. 	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	DRAFT EIAR edits required? (Yes/No) If yes, specify edits
						<p>b Build a 4 lane arterial road bridge over the Holland River from Ravenshoe Road to connect with Simcoe Line 13 or another appropriate east – west arterial road on the west bank of the Holland River.</p> <p>c Extend and widen Green Lane to 6 lanes and create a diagonal transition from Green Lane to Hwy 9 and highway bridge intersection with Highway 9 around Dufferin St. The Green Lane / Highway 9 option will better serve and reduce both local and long distance traffic from Newmarket south to at least Aurora Sideroad.</p> <p>Any one or a combination of these alternatives will address a substantial amount of local travel problems while being significantly less costly and environmentally invasive. Once again, what logic is being used to ignore these options given all of the rationale in favour of these other alternatives?</p> <p>The planning process that resulted in the 2002 approved Environmental Assessment (EA) for the Bradford Bypass evaluated alternatives from a broad range of potential solutions to address several transportation problems and to address significant opportunities identified in York Region and Simcoe County. The need for this freeway was confirmed during the Route Planning and EA Study as the only reasonable solution that would make a significant contribution towards addressing the problem as the population in York Region and Simcoe County grows. The 2002 EA approved alignment is technically preferred for a freeway in terms of highway network expansion, ease of construction, relationship to provincial and municipal land use planning and the preferred route is already included in Official and Transportation Master Plans, as well as the Places to Grow Act), as well as having fewer negative impacts to residential and natural areas when compared to other route options considered.</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	DRAFT EIAR edits required? (Yes/No) If yes, specify edits
						<p>The Bradford Bypass Project has been modelled based on current local, regional, and provincial projections and data. This addresses the problem of "lack of long-term planning" per the Bradford Bypass 2002 approved EA..</p> <p>The 2002 approved EA reviewed a broad area of analysis which included several corridors, including areas south of the current corridor, and Highway 89/Ravenshoe Road.</p> <p>The Bradford Corridor was selected as the preferred corridor over Highway 89/Ravenshoe Road as it was beyond the maximum north limit of 10th Line / Boag Road which was assessed in a previous EA study and was determined that a Management Area or river crossing north of this would entail unacceptable environmental impact, which lead to the withdrawal of the Highway 89 EA studies in 1986-87.</p> <p>The Bradford Corridor was selected as the preferred corridor over the southern alternatives as there was no south alternative that met the primary purpose of the study to reduce out-of-way travel. The south limit was established as Highway 88 and Queensville Sideroad.</p> <p>The original purpose of the Bradford Bypass per the 2002 Approved EA was to address the "east-west" long-distance travel demand crossover between Highway 400 and Highway 404 which is a provincial responsibility and distinct from the locally generated trips which use a municipal road to access the provincial network. As noted in the report, the overall network benefits from vehicle-hours of travel time savings and vehicle-kilometres of travel distance savings are observed during the 2041 AM peak hour and during the 2041 PM peak hour in the updated interchange locations. Local roads forecasted to exceed capacity by 2031 and 2041 under the No-Build scenarios see significant relief from traffic as a result of the diversion to the Bradford Bypass in the Build scenarios.</p> <p>While the Town of Bradford West Gwillimbury owns a closed road allowance east of Artesian Industrial</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	DRAFT EIA edits required? (Yes/No) If yes, specify edits
						<p>Parkway for 8th Line to Holland River, Hochreiter Road itself is a private road. A connection at this location would not address the primary purpose of the Bradford Bypass to connect Highway 400 and Highway 404. The local benefit of this route is likely outweighed by the reduced congestion of Bridge Street created by the Bradford Bypass. A bridge across 8th Line would still require out-of-way travel, which this study is looking to reduce, to connect to provincial transportation facilities. Improvements would likely be required on Bathurst Street and Queensville Sideroad. Significant property impact (similar to the Bradford Bypass) would be required for a new corridor connection from 8th Line straight to Highway 404. For more information on the 2002 Approved EA, please see the enclosed linked: https://www.bradfordbypass.ca/wp-content/uploads/2020/09/BBP-RoutePlanningEA-1997.pdf</p> <p>For more information on the assessment of alternative routes, please refer to the response to question #3.</p> <ul style="list-style-type: none"> Publicly release the traffic studies, clearly indicating the points of origin and time savings to justify the project. <p>As detailed in the Updated Draft Environmental Impact Assessment Report (EIA) (Section 2.4.1), an Aimsun model was created to assess the existing traffic conditions for the road network in the Study Area. The model study area encompasses the Highway 400 corridor from south of Simcoe County Road 88 to north of Highway 89, as well as the Highway 404 corridor from south of Green Lane East to its terminal at Woodbine Avenue (Table 4-3 and 4-4 of the Draft EIA).</p> <p>The model for this area was developed using pre-pandemic traffic volumes to identify peak hour volumes within the Study Area. This model has been calibrated and validated as it closely resembled actual operating conditions.</p> <p>As detailed in Section 4.4 of the Draft EIA, traffic is assessed through modelling to identify Level Of</p>

						<p>Service (LOS). Having confirmed the model was consistent with current (base) conditions, and therefore appropriate to assess future conditions and design alternatives, the model was used to assess LOS under future 2031 and 2041 conditions. To assess future conditions, the model was updated to include all road network and transit improvements planned within the Study Area, and, forecast traffic volumes based on the projected growth within the Study Area.</p> <p>Modeling results demonstrated that under the No Build (no Bradford Bypass) scenario, local roads were forecasted to exceed capacity by 2031 but saw significant relief under the Build (with Bradford Bypass) scenario. Alternative alignments for the Bradford Bypass were then compared within the model, including the 2002 Approved EA alignment and interchange locations and an updated preferred interchange location alternative developed by the Project Team.</p> <p>The alternative Build scenarios showed the mainline operations on the Bradford Bypass in 2031 would operate at acceptable LOS D in the interim four lane configuration. By expanding to the ultimate 8 lane configuration (implementing another general purpose lane and an HOV lane in each direction by 2041), LOS on the mainline improves to LOS B or C and accommodates the additional traffic forecast by 2041.</p> <p>On average, between the various origin-destination pairs modeled in the peak periods, drivers are expected to save up to 73% or 33 minutes of travel time connecting between Highway 400 and Highway 404 compared to existing local routes.</p> <p>For further information about the Traffic Study please refer to Section 4.4 of the Updated Draft EIA. A copy of the Traffic Report can be also downloaded at the following link << insert link to Traffic Report>>.</p> <ul style="list-style-type: none"> Do a value-for-money audit of this project comparing it to regional road and public transit alternatives. If value studies and the

						<p>increase across the Greater Golden Horseshoe (GGH).</p> <p>The Bradford Bypass 2002 approved EA reviewed a broad area of analysis which included several corridors, including areas south of the current corridor road, and Highway 89/Ravenshoe Road.</p> <p>The Bradford Corridor was selected as the preferred corridor over Highway 89/Ravenshoe Road as it was beyond the maximum north limit of 10th Line / Boag Road which was assessed in a previous EA study and was determined that a Management Area or river crossing north of this would entail unacceptable environmental impact, which lead to the withdrawal of the Highway 89 EA studies in 1986-87.</p> <p>The Bradford Corridor was selected as the preferred corridor over the southern alternatives as there was no south alternative that met the primary purpose of the study to reduce out-of-way travel. The south limit was established as Highway 88 and Queensville Sideroad.</p> <p>While the town of Bradford owns a closed Road allowance east of Artesian Industrial Parkway for 8th Line to Holland River, Hochreiter Road itself is a private road. This connection would not address the primary purpose of the Bradford Bypass to address provincial responsibilities to connect Highway 400 and Highway 404. The local benefit of this route is likely outweighed by improvement to capacity of Bridge Street. A bridge across 8th Line would still require out-of-way travel, which this study is looking to reduce, to connect to provincial transportation facilities. Improvements are likely required on Bathurst Street and Queensville Sideroad. Significant additional property impact (similar to the Bradford Bypass) would be required for a new corridor connection from 8th Line straight to Highway 404. For more information on the 2002 EA, please see the enclosed linked: https://www.bradfordbypass.ca/wp-content/uploads/2020/09/BBP-RoutePlanningEA-1997.pdf</p>

CT-DraftUEIAR-55	To: Project Team From: [REDACTED] Ontario Federation of Anglers & Hunters	Email: [REDACTED]	EIAR Comments	August 14, 2023	<p>Dear Bradford Bypass project team,</p> <p>On behalf of the Ontario Federation of Anglers and Hunters, I have attached herein our written comments regarding the "Updated Draft Environmental Impact Assessment Report" for the Bradford Bypass.</p> <p>Thank you for the opportunity to participate in this process.</p> <p>Yours In Conservation,</p> <p>[REDACTED] Fish and Wildlife Biologist Ontario Federation of Anglers & Hunters</p> <p>[REDACTED]</p> <p>[REDACTED]</p> <p>[REDACTED]</p> <p>[REDACTED]</p> <p>The Ontario Federation of Anglers and Hunters (OFAH) is Ontario's largest, non-profit, fish and wildlife conservation-based organization, representing 100,000 members, subscribers and supporters, and 725 member clubs. We have reviewed the "Updated Draft Environmental Impact Assessment Report" and offer the following comments for consideration.</p> <p>As stated in our previous submission, much of the preferred bypass route is in close proximity to highly valuable fish and wildlife</p>	<p>Hello [REDACTED]</p> <p>Thank you for your interest in the Bradford Bypass Preliminary Design Study and project-specific assessment of environmental impacts, undertaken in accordance with Ontario Regulation 697/21.</p> <p>1. The assessment goes into detail regarding the potential impacts of this project on aquatic systems and river hydrology. Almost all associated commitments employ qualifiers like "where appropriate," "should" and "recommended." The use of such discretionary language across the document ensures that the Ministry is technically only committed to unavoidable legal obligations.</p> <p>The use of terms like where appropriate, should and recommended is based on the need for additional investigations and design of the project to be completed in order to understand exactly where specific measures, avoidance / mitigation strategies, approvals and design principles must be implemented.</p> <p>At this time, it is not appropriate to commit absolutely to measures such as edge management plans or specify locations where Fisheries Act Authorizations are absolutely required. Therefore, the Updated Draft EIAR requires consideration and review of all recommendations throughout the corridor during future phases of work. This approach is necessary and standard practice for planning projects in that design is an iterative approach and this project is only completing design to a preliminary level. During future phases of work, additional design will be completed and may include refinements to the design as details are developed with greater accuracy. Limiting the future design phases by making certain elements of the project non-discretionary at the preliminary design stage limits the potential for future work to explore opportunities for further reducing impacts and / or increasing mitigation and offsetting measures.</p>	No

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	DRAFT EIAR edits required? (Yes/No) If yes, specify edits
					<p>habitat. The Lake Simcoe watershed contributes nearly one billion dollars to Ontario's economy annually, and Lake Simcoe itself is designated a Provincially Significant Inland Fishery. The Holland Marsh wetland complex is a Provincially Significant Wetland, which contains a provincially significant Area of Natural and Scientific Interest and a Provincial Wildlife Area. Not only do these areas provide critical ecosystem services and habitat, but they are also areas of substantial social and economic activity, including fishing and hunting. As such, we feel the province must prioritize impact avoidance in these areas, followed by mitigation and offsetting only when absolutely necessary.</p> <p>As a conservation organization, the OFAH's chief concerns lie in the ecological impacts of the Bradford Bypass.</p> <p>The Updated Environmental Impact Assessment Report clearly indicates that significant impacts are not only possible, but expected with respect to aquatic, vegetative, and wildlife health, wetland and hydrological function, and more. Despite this, MTO makes few explicit commitments to avoid, mitigate, or offset disturbance/damage to fish and wildlife habitat.</p> <p>The assessment goes into detail regarding the potential impacts of this project on aquatic systems and river hydrology. For example, almost all associated "commitments" employ qualifiers like "where appropriate," "should" and "recommended." Regardless of how thorough their recommended tools and techniques may be, the use of such discretionary language across the document ensures that the Ministry is technically only</p>	<p>2. The MTO seek immediate Fisheries Act authorizations for the project.</p> <p>As noted above, as the project is currently in Preliminary Design, additional work to design the corridor and identify exactly where and what type of Fisheries Act approvals are required is still to take place in subsequent phases. Seeking approvals under the Fisheries Act for the construction of the proposed Bradford Bypass at this time is not suitable as design refinements that may be identified in the future may negate any approval obtained at this time.</p> <p>3. MTO ensure onsite buildings, which are possible species at risk habitat are properly assessed.</p> <p>Details on Species at Risk work and recommendations developed during this preliminary design study and proposed mitigation measures and monitoring commitments are documented in Section 5.1.1 of the Updated Draft EIAR. Commitments to complete species-specific surveys, including targeted surveys for Species at Risk, have been identified in in Section 5.1.1 and are listed in Table 5-26 (TERR-7) as activities to be completed during future phases of work for the project.</p> <p>4. That MTO require specific removal approaches for invasive phragmites and other invasive vegetation.</p> <p>MTO are committed to supporting the removal of invasive species and require mitigation and preventative measures on all their projects.</p> <p>The Project Team have incorporated a number of measures to be employed during construction to remove and / or prevent the spread of invasive species during construction. These measures are noted throughout Section 5 of the Updated Draft EIAR and Table 5-26. Notably, (Table 5-26, TERR-2.06) the Project Team has also included a requirement for future phases of work to include a Landscaping and Restoration Plan which is to</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	DRAFT EIAR edits required? (Yes/No) If yes, specify edits
					<p>committed to unavoidable legal obligations (e.g. under the Endangered Species Act). This discretionary language permeates the document and suggests that MTO does not intend to meaningfully consider stakeholder and expert input. Indeed, during public consultation periods, many stakeholder groups and experts have advised against many aspects of the project proposal, with little to no effect.</p> <p>For the OFAH's part, we have strongly advocated for the following:</p> <ul style="list-style-type: none"> That MTO seek immediate Fisheries Act authorizations for the project. That MTO ensure onsite buildings, which are possible species at risk (chimney swift and several species of endangered bats) habitat, be properly assessed. That MTO require specific removal approaches for invasive phragmites and other invasive vegetation. <p>To our knowledge, none of these recommendations have resulted in changes. Now that the full EI report has been made public, we have expanded this list to recommend the following actions:</p> <p>Wildlife</p> <ul style="list-style-type: none"> Require a complete examination of structures with the potential to provide suitable nesting and/or roost habitat for bird species protected under the Migratory Birds Convention Act and bird or bat species protected under the federal Species at Risk Act. Provide further consideration for the comments/concerns of Indigenous communities, with special focus on the claim that endangered American Eel (<i>Anguilla rostrata</i>) and species of special concern Northern Sunfish 	<p>include the future contractor's approach to invasive species management. A detailed review of the right-of-way shall be completed during subsequent phases of the project to identify areas of potential for invasive species and develop an approach to managing these species in the Land and Restoration Plan. Management of invasive species is to include removal and disposal of any species within the right-of-way.</p> <p>5. Require a complete examination of structures with the potential to provide suitable nesting and/or roost habitat for bird species protected under the Migratory Birds Convention Act and bird or bat species protected under the federal Species at Risk Act.</p> <p>As detailed in Section 5.1.1.2 and Table 5-26, additional investigations to confirm the presence or absence of any species protected by the Migratory Birds Convention Act, the federal Species at Risk Act or the provincial Endangered Species Act are required to be completed during detail design of the project. In addition, several requirements have been included as operational constraints to avoid potential impacts to birds and bats, e.g. any structural works including demolitions or vegetation removals are to take place outside of the nesting periods.</p> <p>6. Provide further consideration for the comments/concerns of Indigenous communities, with special focus on the claim that endangered American Eel and species of special concern Northern Sunfish have been detect in the Holland River.</p> <p>As detailed in Section 2.1.2.1 of the Updated Draft EIAR, it was noted in discussion with William Treaties First Nations on December 1, 2022, that they had observed both American Eel (<i>Anguilla rostrata</i>; Endangered Species Act – Endangered, Species at Risk Act – Not at Risk) and Northern Sunfish (<i>Lepomis pehstastes</i>; Endangered Species Act – Special Concern, Species at Risk Act – Special Concern) in the Holland River.</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	DRAFT EIAR edits required? (Yes/No) If yes, specify edits
					<p>(Lepomis peltastes) have been detected in the Holland River.</p> <ul style="list-style-type: none"> To minimize impacts on endangered bat species, do not permit the use of high-pressure, sodium and LED lights immediately adjacent to woodlands. Require permanent exclusion fencing along the entire limits of the Bradford Bypass right-of-way, with appropriate "jump-out locations." Require the immediate installation of exclusion fencing where the removal or accumulation of substrates is necessary in or around turtle habitat. Require suitable wildlife crossings/corridors for all sizes of wildlife, in accordance with the relevant Environmental Impact Assessment recommendations. Do not permit work within areas of candidate turtle overwintering habitat during the turtle overwintering period. Do not permit work within candidate reptile hibernacula habitat during reptile overwintering period. <p>Vegetation</p> <ul style="list-style-type: none"> Require adherence to the Clean Equipment Protocol when removing vegetation to minimize risk of spreading invasive species. Require seeded mixes and/or live transplants of native species to be used to rehabilitate or restore areas of vegetation that have been temporarily disturbed. Require edge management plantings along newly exposed forest edges, using native vegetation. <p>Watercourses and ground water</p>	<p>Subsequently, the Project Team consulted with the Ministry of the Environment, Conservation and Parks, in March 2023 and was advised that the Ministry of Environment, Conservation and Parks records have no documented observances of the American Eel or Northern Sunfish in the Study Area. They also noted that the Northern Sunfish is a species of special concern and does not have a permitting status with the Ministry of the Environment, Conservation and Parks, and therefore would not be reported.</p> <p>No records of aquatic Species at Risk that are afforded protection under the Species at Risk Act or Endangered Species Act are known to occur in the watercourses where culverts are anticipated to be installed. AECOM ecologists conducted a detailed fish and fish habitat assessment of the water features in the vicinity of the Study Area between September 14-18, 2020, with spring field investigations occurring over multiple days in June 2021. Field investigations were also completed in the spring of 2022 due to changes to the Study Area boundary that required further review for potential fish habitat. Based on these investigations, no Species at Risk were discovered in the Study Area.</p> <p>Regardless, as detailed in Section 5.1 and Tables 5-9 and 5-10, the presence or absence of American Eel specifically will be confirmed during future phases of work for the project. In addition, as detailed in Table 5-26 (FISH-2.00 and various rows within the TERR section), additional investigations to confirm the presence or absence of any Species at Risk are required during subsequent design phases for the project.</p> <p>7. To minimize impacts on endangered bat species, do not permit the use of high-pressure, sodium and LED lights immediately adjacent to woodlands.</p> <p>As noted in Section 5.1.1.2 and Table 5-26 (TERR-17), the final highway design shall take into consideration potential light impacts on wildlife</p>

					<ul style="list-style-type: none"> Require infrastructure to be located as far from any watercourse as possible to minimize erosion. Require that channel realignment be in accordance with "Natural Channel Design" principles and relevant Lake Simcoe Region Conservation Authority Guidelines. Require channel realignment to maintain the natural form and fluvial processes of the watercourse (e.g., sedimentation, erosion, and transportation). Require the use of open bottom culverts to avoid impacts on fish movement. Require any sections of the Holland River Marsh Provincially Significant Wetland that are disturbed by the project to be restored back to wetland habitat. Require wetland compensation, only where habitat cannot be restored. Require any watercourse banks that are disturbed to be immediately stabilized and re-vegetated to prevent erosion and/or sedimentation. Require erosion and sediment control measures to be installed along the construction footprint within 30 metres of any Provincially Significant Wetland. Require any crossings to be perpendicular to the watercourse to reduce erosion. If it is not possible for new crossings to span the recommended width (re: Updated Draft Environmental Impact Assessment), require additional erosion protection. Require any exposed groundwater flow to be filled in with the appropriate material to minimize impacts on groundwater flow, water 	<p>species and avoid the use of high-pressure sodium and LED lights immediately adjacent to woodlands as these types of lighting have been noted to negatively affect bat activity.</p> <p>8. Require permanent exclusion fencing along the entire limits of the Bradford Bypass right-of-way, with appropriate "jump-out locations." Require the immediate installation of exclusion fencing where the removal or accumulation of substrates is necessary in or around turtle habitat.</p> <p>As noted in Section 5.1.1.2 and Table 5-26 (TERR-16) of the Updated Draft EIAR, recommendations to avoid potential wildlife vehicle collisions within the Study Area include permanent wildlife exclusion fencing along the entire limits of the Bradford Bypass right-of-way and jump-outs are recommended at approximately 1.4 kilometre intervals in accordance with the Ministry of Transportation's Environmental Guide for Wildlife Mitigation. Additionally, to mitigate end-effects where wildlife try to exit the right-of-way by walking along the fence, it is recommended that fence ends angle away from the right-of-way for a distance up to 100 metres and turtle exclusion fencing is to be installed around stockpiles of gravel and sandy substrates (TERR-4.07).</p> <p>For more information on mitigations to impacts on terrestrial features, please refer to Section 5.1.1.2 of the Updated Draft EIAR.</p> <p>9. Require suitable wildlife crossings/corridor for all sizes of wildlife in accordance with the relevant Environmental Impact Assessment recommendations.</p> <p>The Project Team understands that maintaining habitat connectivity across the landscape is important for preserving local wildlife and may reduce potential wildlife-vehicle collisions. While most of the proposed right-of-way is situated within areas of active agriculture or commercial land use, a portion of the right-of-way intersects forested and wetland habitats, specifically in the vicinity of the</p>

					<p>quality, water temperature, and water levels.</p> <ul style="list-style-type: none"> Require active monitoring of in-water and near-water works throughout the project. <p>General</p> <ul style="list-style-type: none"> Require implementation and adherence to the Project Planning and Design Best Management Practices, Procedural Best Management Practices, Water Management Best Management Practices, and Erosion Control Best Management Practices, to minimize unnecessary, long-term landscape/environmental impacts. Require the continued consultation of experts during the Detail Design phase of this project, including biologists, ecologists, hydrologists, fluvial geomorphologist, and archaeologists. <p>As previously stated, the OFAH is focused on protecting fish and wildlife values. The materials, proposals, and processes associated with the Bradford Bypass thus far are simply too complacent in habitat destruction and loss of ecological function to warrant our support, nor have they shown a meaningful commitment to consultation. However, if the province were to change course and seriously consider the input of stakeholders/experts, we would be happy to work alongside MTO and other relevant entities to find solutions that protect fish and wildlife values while supporting the province's infrastructure needs.</p>	<p>Holland River. In order to account for watercourse crossing, potential flooding scenarios, and the commitment made in the 2002 Approved Environmental Assessment to span existing Provincially Significant Wetlands, a significant portion of the highway in the vicinity of the Holland River and Holland River East Branch will be spanned. The extensive floodplain in the area will mean that the abutments of the structures will extend beyond the river and the wetlands, providing ample wildlife crossing opportunities for both large and small wildlife to access the natural features present both north and south of the proposed right-of-way. Additionally, it is recommended that culverts be designed to provide openness ratios that would allow for the passage of small mammal and/or herpetofauna where possible. An openness ratio of 0.4 would permit usage by medium-sized mammals, while the minimum openness ratio to be considered should be 0.25, which would permit usage by reptiles such as turtles.</p> <p>Although not observed during Preliminary Design surveys, where larger mammal movement in the proposed right-of-way (i.e., white-tailed deer) is observed, wildlife passage should be considered. Additional winter tracking surveys during Detail Design phase may be necessary to determine the need of additional wildlife crossing locations within the proposed right-of-way for larger mammals.</p> <p>For more information on mitigations to impacts on terrestrial features, please refer to Section 5.1.1.2 of the Updated Draft EIA.</p> <p>10. Do not permit work within areas of candidate turtle overwintering habitat during the turtle overwintering period.</p> <p>11. Do not permit work within candidate reptile hibernacula habitat during reptile overwintering period.</p> <p>As noted in Section 5.1.1.2 of the Updated Draft EIA and Table 5-26 TERR-7.0, work within areas of candidate turtle overwintering habitat during the</p>

						<p>15. Require infrastructure to be located as far from any watercourse as possible to minimize erosion.</p> <p>It is not possible to locate the permanent infrastructure associated with the project away from all watercourses in the Study Area. Section 5 and Table 5-26 of the Updated Draft EIAR therefore include a number of measures to be implemented during the future phases of work for the project including design and construction.</p> <p>As detailed in Tables 5-25 and 5-26, Erosion and Sediment Control Plans will be required during design and construction of the project and will include measures to potential impacts of erosion.</p> <p>16. Require that channel realignment be in accordance with "Natural Channel Design" principles and relevant LSRCA guidelines.</p> <p>17. Require channel realignment to maintain the natural form and fluvial process of the watercourse (e.g., sedimentation, erosion and transportation).</p> <p>18. Require the use of open bottom culverts to avoid impacts on fish movement.</p> <p>As noted in Section 5.1.3.2 and Table 5-26 (FLUV rows) of the Updated Draft EIAR, channel realignments for the Bradford Bypass project are to be designed in accordance with 'Natural Channel Design' principles including Lake Simcoe Region Conservation Authority.</p> <p>In addition, requirements for channel realignment to maintain the continuity of channel form and process; for substantial channel realignment to be avoided; and for open bottom culverts to be used where suitable have been identified in Table 5-26.</p> <p>19. Require any sections of the Holland River Marsh Provincially Significant Wetland that are disturbed by the project to be restored back to wetland habitat.</p> <p>20. Require wetland compensation, only where habitat cannot be restored.</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	DRAFT EIAR edits required? (Yes/No) If yes, specify edits
						<p>As noted in Section 5.2.9 of the Updated Draft EIAR, landscaping recommendations for wetland, marshes and swamp areas within the corridor have been identified on a preliminary basis and a detailed review of the site conditions within the existing vegetative communities will be required to prepare suggested plant lists for areas of restoration. Restoration measures are to consist of small deciduous and coniferous trees, deciduous shrubs, tall grasses, and forbs matching the native species observed on site. In addition, the proposed wetland planting restoration will extend beneath the bridge crossings of the Holland River and Holland River East Branch where feasible and will depend on the availability of sunlight and precipitation under the structures once the final designs have been developed. Based on the current recommended bridge designs and height of the bridges, sufficient exposure to sunlight and precipitation would support growth of low vegetative cover around the edges and in the central gap beneath the bridge structures. Details of the piers and spacing will be determined in subsequent Detail Design phases and will be considered during the preparation of the detailed Landscape Restoration designs.</p> <p>As noted in Table 5-26 (TERR-3.08), where wetland habitat cannot be restored or is permanently impacted by the proposed highway, consideration of wetland compensation efforts including enhancement to the adjacent wetland communities or creation of new wetland habitat to maintain wetland function throughout Study Area will be considered.</p> <p>21. Require any watercourse banks that are disturbed to be immediately stabilized and re-vegetated to prevent erosion and/or sedimentation.</p> <p>22. Require erosion and sediment control measures to be installed along the construction footprint within 30 metres of any Provincially Significant Wetland.</p> <p>23. Require any crossings to be perpendicular to the watercourse to reduce erosion.</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	DRAFT EIAR edits required? (Yes/No) If yes, specify edits
						<p>24. If it is not possible for new crossings to span the recommended width, require additional erosion protection.</p> <p>As noted in various locations within Section 5.1 of the Updated Draft EIAR, design of watercourse/wetland crossings and work near watercourses and wetlands is to include a number of measures to avoid and/or mitigate impacts including immediate stabilization of disturbed areas; erosion and sediment control measures; revegetation with suitable native species; perpendicular design of crossings where possible to eliminate erosion risk.</p> <p>25. Require any exposed groundwater flow to be filled in with the appropriate material to minimize impacts on groundwater flow, water quality, water temperature, and water levels.</p> <p>As detailed in Section 5.1.4 of the Updated Draft EIAR, maintaining the volume, pattern and quality of groundwater within the Study Area is a key consideration for the Project. While initial mitigation measures to prevent impacts to groundwater have been identified in the Updated Draft EIAR, including the need for backfilling excavations that intercept existing groundwater flow with porous granular material, particularly within wetland areas, additional investigations are required to produce a thorough understanding of the hydrologic and hydrogeologic conditions within the Study Area is developed before construction begins. Permits / approvals associated with construction dewatering will be obtained once additional investigations are complete and will include filing of the project on the Ministry of Environmental Conservation and Parks Environmental Activity and Sector Registry system and / or securing a Permit To Take Water, if required.</p> <p>26. Require active monitoring of in-water and near-water works throughout the project.</p> <p>As noted in various locations of Section 5 of the Updated Draft EIAR, monitoring of all work is</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	DRAFT EIA edits required? (Yes/No) If yes, specify edits
						<p>required throughout construction and as noted in Table 5-26 (FISH-1.12), in-water and near-water work shall be monitored to confirm that mitigation measures are properly implemented, functioning, maintained and repaired as needed, and removed following construction.</p> <p>27. Require implementation and adherences to the Project Planning and Design Best Management Practices, Procedural Best Management Practices, Water Management Best Management Practices, and Erosion Control Best Management Practices, to minimize unnecessary, long-term landscape/environmental impacts.</p> <p>Requirements to adhere to Project Planning and Design Best Management Practices, Procedural Best Management Practices, Water Management Best Management Practices, and Erosion Control Best Management Practices are included throughout Section 5 of the Updated Draft EIA and in a number of commitments to future work identified in Table 5-26.</p> <p>28. Require the continued consultation of experts during the Detail Design phase of this project, including biologists, ecologists, hydrologists, fluvial geomorphologist, and archaeologists.</p> <p>As noted throughout the Updated Draft EIA, a variety of additional studies, investigations and design reviews are to be completed during detail design and can only be completed by qualified persons (e.g. terrestrial ecologists, soil qualified persons, heritage specialists). Discipline experts shall continue to be consulted during the detail design phase of the Bradford Bypass Project.</p> <p>If you have any other questions, please feel free to reach out to the Project Team at your earliest convenience. You can reach the Project Team via email at projectteam@bradfordbypass.ca, toll free at 1-877-247-6036, or by visiting the Project Website at www.bradfordbypass.ca.</p>

CT-DraftUEIAR-56	To: Project Team From: [REDACTED]	Email [REDACTED]	Draft EIA Comments	August 14, 2023	<p>Good afternoon,</p> <p>Thank you for sending the Notice of Publication of the Updated Draft Environmental Impact Assessment Report (Updated Draft EIA) for the Bradford Bypass Project. Please find the Ministry of Citizenship and Multiculturalism's comments on the Updated Draft EIA. Our comments focus on the sections that relate to archaeological resources.</p> <p>Please let us know if you wish to discuss.</p> <p>Sincerely,</p> <p>[REDACTED]</p> <p>[REDACTED]</p> <p>A/Heritage Advisor Heritage Planning Unit Heritage Branch [REDACTED]</p>	<p>Hello [REDACTED]</p> <p>Thank you for your interest in the Bradford Bypass Preliminary Design Study and project-specific assessment of environmental impacts, undertaken in accordance with Ontario Regulation 697/21.</p> <p>Please see attached the Project Team's responses to MCM's comments on the Updated Draft EIA.</p> <p>If you have any other questions, please feel free to reach out to the Project Team at your earliest convenience. You can reach the Project Team via email at projectteam@bradfordbypass.ca, toll free at 1-877-247-6036, or by visiting the Project Website at www.bradfordbypass.ca.</p> <p>Sincerely,</p> <p>The Bradford Bypass Project Team</p>	Yes – see MCM comment table for specific EIA revisions.

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	DRAFT EIAR edits required? (Yes/No) If yes, specify edits
CT-DraftUEIAR-57	To: Project Team From: [REDACTED]	Email: [REDACTED]	Property Contamination	August 14, 2023	<p>Dear Project Team:</p> <p>please see attached correspondence as it relates to the above subject matter.</p> <p>Thanks, [REDACTED] [REDACTED] [REDACTED]</p> <hr/> <p>--- Name --- [REDACTED]</p> <p>--- Email --- [REDACTED]</p> <p>--- Please provide your comments on the Draft Environmental Impact Assessment Report here: ---</p> <p>[REDACTED] is the owner of the industrial property (the Property) municipally known as 7 [REDACTED] Bradford. It fronts the east side of the road will be adjacent to the north side of the Bradford By-Pass Right of Way. Therefore, we have an interest in the project and would like to provide our comments.</p> <p>It is our understanding that due to new standards, the alignment has changed in this area and a sliver of land will be required on the southerly side of the Property. We would like to ensure that the southerly driveway to the Property will be maintained. We would also like to ensure that the sight-lines on Artesian will not be impacted by the overpass, located at Station [REDACTED] and consequently impact the Property's access in this location.</p>	<p>Dear [REDACTED]</p> <p>Thank you for your interest in the Bradford Bypass Preliminary Design Study and project-specific assessment of environmental impacts, undertaken in accordance with Ontario Regulation 697/21.</p> <p>As you are aware, we also recently spoke with [REDACTED] regarding the contamination information included in Section 2.2.5 of the Updated Draft EIAR and the risk rating assigned to [REDACTED]. In response to both your and [REDACTED]'s questions, we have provided a detailed summary of the work completed for the project and related to soil quality and contamination below. We hope this clarifies the soil quality information provided in relation to the project and that based on the information and analysis completed to date, the Project Team has not confirmed whether or not contamination is present on [REDACTED] or [REDACTED]. Additional analysis of both properties will be required during future phases of work for the project.</p> <p>The Contamination Overview Study (COS) (AECOM, 2020) was completed to identify properties/areas within the Study Area with actual or potential site contamination that may impact future highway design and / or require additional analysis during future phases of work for the project. The COS is a high-level assessment of the Study Area based on desktop review of available historic records and data. The historic records and data are then interpreted by the Project Team to understand areas of actual or potential contamination within the Study Area.</p> <p>Data available to the Project Team and documented in the COS indicates that historic uses on or near [REDACTED] include a landfill and that uses on the [REDACTED] have included a commercial use. Based on this information, the COS has assigned a risk rating of high for the property located at [REDACTED] and a risk level of medium for the property located at [REDACTED].</p>	No

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	DRAFT EIA edits required? (Yes/No) If yes, specify edits
					<p>Artesian is used by transport trucks and it will be imperative that the overpass contemplated over this road will have ample height to allow for truck clearance.</p> <p>We note the open storm channel running along side the Property which enters a culvert under the Metrolinx railway. We would like to ensure that there will be no flooding onto the Property from this new storm channel during intense storm events or snow melts. A pinch point may even be caused by general debris or beavers and this may need regular inspections.</p> <p>The building on the Property is of metal cladding and a metal roof. We do have concerns from the potential salt spray has on corroding the building. Given this and the proximity to wetlands, this area would be a candidate for a salt-sensitive area.</p> <p>We are supportive of the project and support having interchanges both at County Road 4 and the 10th Side Road.</p> <p>We would appreciate being kept updated on this project.</p> <hr/> <p>We are an owner of vacant land (the Lands) generally located southwest of the [REDACTED] [REDACTED] it is legally described as part of [REDACTED] [REDACTED]. The [REDACTED] proposed right of way transverses through the Lands and as such, we have an interest in this project. The purpose of this letter is to comment specifically on potential contamination that has been applied to the Land. The above-mentioned report</p>	<p>It is important to note that these risk ratings are not confirmation that either of these properties is, or is not, contaminated. Confirmation that an area is or is not contaminated requires physical inspection of the site by qualified people and detailed analysis of soil and water samples from within the area.</p> <p>As an example, historical information might indicate that underground storage tanks were historically located on a property. This information would mean the property was assigned a higher risk rating as the presence of underground storage tanks would be a potential concern. Confirmation that the storage tanks were present would, however, require detailed inspection of the property by soils experts. In addition, to understand if the presence of the storage tanks has resulted in "actual contamination" of the property, soil and water samples would need to be collected through borehole and test pitting investigations and the samples would need to be analyzed to understand the soil quality.</p> <p>Building on the information within the COS, the Project Team has also completed a Waste and Excess Materials Management Plan (WEMMP) (AECOM, April 2023). The WEMMP focuses on areas within the proposed Bradford Bypass right-of-way and identifies the appropriate procedures for the management of soil and waste within the right-of-way. These procedures include the need for additional investigations and for an Excess Soil Management Plan to be prepared prior to construction so that soils are handled, stored, transported and reused or disposed of appropriately and so that the project complies with all applicable environmental legislation, policies, permitting requirements and protocols.</p> <p>The WEMMP does include some soil quality information where environmental samples were obtained during this Preliminary Design study (as described in Section 2.2.5 and 5.2.5 of the Updated Draft EIA). The soil quality information obtained during this preliminary design study is limited as environmental samples were only obtained from locations where other intrusive investigations were</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	DRAFT EIAR edits required? (Yes/No) If yes, specify edits
					<p>continues references from previous background studies for the project. Below is a clip of Figure 2 Map 3 from the Contamination Overview Study (AECOM 2020). This report identifies the Land as #0724. It gives the Land a "high" potential contamination rating and labels the Land as a closed landfill; we believe this is an error and perhaps has been confused with [REDACTED] (the Town of Bradford's dump hereinafter referred to as the Town). We have been the landowner since 1970 and we did not acquire the Land as a waste disposal site nor use it as one.</p> <p>The Contamination Overview Study (AECOM 2020) encloses reports from ERIS databases.</p>  <p>The above description provides a location in UTM coordinates. These coordinates do not reflect the Lands [REDACTED] however, they do identify Bradford's parcel [REDACTED] which is located east of [REDACTED]. A map from Simcoe County's interactive mapping is shown below.</p> <p>In every instance, the reports do not give a specific address of the closed landfill and instead give a location based on lot and concession. The below map also shows the lot and concession numbers. Since there</p>	<p>taking place (e.g. where geotechnical boreholes were drilled to provide foundations information that was key to developing bridge design). Therefore, the WEMMP includes procedures related to future analysis of soil quality. These procedures are summarized in Section 5.2.5 of the Updated Draft EIAR which notes that the suitability of the soil for potential reuse, and confirmation of where actual contamination is present, will require additional assessment of soil quality within the right-of-way during the subsequent detail design phase of the project. The additional assessment may include sampling and laboratory analysis of soils from all properties where soil will be disturbed by construction of the project.</p> <p>Portions of the [REDACTED] and [REDACTED] properties are within the proposed Bradford Bypass right-of-way however no detailed inspection of the properties have been completed by any member of the Bradford Bypass Project Team. The Project Team has also not collected any soil or water samples from these properties to determine soil quality. As such, both properties will require additional analysis during future phases of the project and sampling and laboratory analysis of the property soils may be required.</p> <p>Based on the information available to the Project Team at this time:</p> <ul style="list-style-type: none"> • [REDACTED] based on the historic information available to the Project Team and the property required for the project's right-of-way, additional analysis including detailed inspection of the property by soils experts as well as sampling and laboratory analysis of the property soils will be required. The sampling will be used to confirm soil quality and groundwater conditions in the area of the right-of-way and will also determine if there are areas of potential environmental concern or contamination. • [REDACTED] based on the historic information available to the Project Team and that a small area of the property is required for the project's right-of-way, 	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	DRAFT EIAR edits required? (Yes/No) If yes, specify edits
					<p>was no registered plan in the area, the legal description of a small parcel would use lot and concession and to identify a small parcel within a lot and concession, one would need to review the instrument. (As a technicality, a small parcel should be legally described as being "part of" the lot and concession – this may have lead to the confusion).</p>  <p>We have investigated the history of the Town's parcel (██████████) and hereinafter referred to as such) and provide Instrument Number ██████████ which shows the ██████████ sold a piece of their large farm to the ██████████ in 1950.</p> <p>Coincidentally, this is the date the ERIS Report uses a landfill being active. Although this instrument uses rods as a unit of measurement, the metes and bounds reflect the boundary of parcel ██████████. We enclose page ██████████ from the historical abstract book for the 8th Concession, which is found at the Ontario Land Registry Office, and a copy of the instrument. (A similar exercise would be done for the ██████████</p>	<p>additional analysis of the property will be required. The additional analysis will include detailed inspection of the property by soils experts however it is not known at this time if sampling of the property's soils will be required.</p> <p>Any soil quality information or data that you are willing to share with the Project Team will be considered in subsequent phases of the project. Additionally, it is the Ministry's standard process to share soil quality data obtained through the Project with Property Owners, and the Ministry will be in touch in subsequent phases of the project to coordinate access to the property for additional analysis to be completed and to share information when it is available.</p> <p>In terms of the design on Artesian Industrial Parkway, this roadway will be maintained in its existing two-lane configuration, which includes one lane in each direction. The Bradford Bypass will traverse over Artesian Industrial Parkway and the structure will continue to allow for trucks to travel the roadway. Furthermore, the Bradford Bypass structures will not preclude future widening of Artesian Industrial Parkway to four lanes, if and when the Town of Bradford West Gwillimbury choose to pursue this initiative.</p> <p>One of the key considerations for salt management for the Bradford Bypass will include the use of the Ministry Salt Management Plan which contains best management practices to facilitate the optimal rate, timing, and location of salt application. The Ministry effectively ensures that the Salt Management Plan meets the objectives of Environment Canada's Code of Practice for Environmental Management of Road Salts. The Ministry Salt Management Plan incorporates the best available winter maintenance practices that are implemented to provide safe driving conditions on the provincial highway network while minimizing environmental impacts. Road salt best management practices have been developed by government and industry, primarily through the Transportation Association of Canada's Syntheses of Best Practices: Road Salt Management framework, and Environment and Climate Change Canada's</p>

					<p>Section 3.3 of the Contamination Overview Study (AECOM 2020) mentions that the historical aerial photos do not allow for the exact location of the landfilling activities to be determined. Of course, this was being viewed from the notion that the activities may have been occurring on two entire lots instead of a small parcel on one lot and a small sliver of the next lot. This indeterminate location is re-iterated in Section 3.6.1 and again in Section 4. We believe the disturbances in the area of ID [REDACTED] on the 1954 aerial mapping, found on Simcoe Interactive GIS, shows the extent of the landfill activities. In the 1980's, prior to the development of Artesian Industrial Parkway and the industrial lots which front it (all registered in the Plan of Subdivision [REDACTED]), we retained Wilson Associates to conduct soil reports with testing. Test pits were dug throughout the site and do not indicate evidence of landfill operations. We enclose our reports Hydrogeologic Evaluation (1985) and Soils Evaluation (1986). We did not learn of the Town's landfill from the Bradford By-Pass studies. In fact, the Town placed a hold zoning on our industrial lots due to their proximity to the Town's dump. We were required to conduct a D-4 Report to the satisfaction of the Town to remove the holding by-law. This report was prepared by Azimuth Environmental in 2015 and the by-law was passed in 2016 to release the hold. The report mentions MOE site [REDACTED] which is the landfill site located on ID [REDACTED]. Furthermore, the Azimuth report contains background information and a memo from 1972 which specifically remarks that the site is "located near the tracks". We have enclosed the Azimuth D-4 Report (2015), a copy of the notice of the by-law, and the passed by-law.</p> <p>ID [REDACTED] is still owned by the Town, is legally described as part of [REDACTED]</p>	<p>Code of Practice for the Environmental Management of Road Salts. The best management practices typically included in a Road Salt Management Plan are proven and science based.</p> <p>For more information on salt mitigation measures, please refer to Section 5.1.3.2 of the Updated Draft EIAR.</p> <p>If you have any other questions, please feel free to reach out to the Project Team at your earliest convenience. You can reach the Project Team via email at projectteam@bradfordbypass.ca, toll free at 1-877-247-6036, or by visiting the Project Website at www.bradfordbypass.ca</p> <p>Sincerely, The Bradford Bypass Project Team</p>	

Reference #	To/From /Organization	Format (Email, Phone, Fax)	Topic / Theme Discussed	Date Comment/ Question/ Request Received	Comment/ Question/ Request	PROJECT TEAM RESPONSE	DRAFT EIAR edits required? (Yes/No) If yes, specify edits
					<p>██████████ and is municipally known as ██████████. The description from the Contamination Overview Study (AECOM 2020) is wrong because there is ██████████. ██████████ does not exist as an address and this parcel is certainly not a brew house. This report also gives this parcel a medium (yellow) contamination potential rating. It also does not display any "star" on the mapping figure indicating that this was a closed landfill site. We believe this to be wrong.</p> <p>For the above reasons, we believe labeling the ██████████ as a high contamination potential rating and as a closed landfill is an error. As land developers, this has detrimental impact on our business because it is this information that is in the public realm and creates a negative stigma on our land. We would respectfully request the next report to be updated with respect to contamination. We also note that there have been investigative boreholes on our land. We would respectfully request a copy logs, tests, and findings with respect to geotechnical, hydrogeological, and environmental contamination studies specific to this location. We thank you for the consideration of our comments. Should you have any questions, please contact the undersigned.</p> <p>Yours Truly,</p> <p>██████████</p> <p>██████████</p>

* The Draft Environmental Impact Assessment report only had a handful of pages on stormwater management and drainage, therefore not much detail was provided. The report did mention 2 other reports which LSRCA should obtain and provide comments on, if required. The 2 specific reports are mentioned in the comments below.

Documents Reviewed (15-JUNE-2023):

- Report: AECOM, "Draft Environmental Impact Assessment Report", dated June 1, 2023

Background Information:

- 16.3km
- Interim – 2 lane configuration (2 lanes in each direction)
- Ultimate – 4 lane configuration
- Holland River and Holland River East Branch
- Stormwater drainage (Section 2.1.3 – page 62 AND Section 5.1.2 – page 279)

Comment #	Item	Section	Page #	1 st LSRCA Comments (15-JUNE-2023)	1 st Applicant Response on Date	2 nd LSRCA Comments on Date	2 nd Applicant Response on Date
E1.				<p>Reports: Please forward the following 2 reports to LSRCA for review and commenting:</p> <ul style="list-style-type: none"> Drainage and Hydrology Report (AECOM, May 2023) Stormwater Management Plan (AECOM, March 2023) <p>These reports were previously requested but not received.</p>	<p>The latest Drainage and Hydrology Report was provided to LSRCA on August 14, 2023.</p> <p>In accordance with Section 22 of Ontario Regulation 697/21, the Draft Stormwater Management Plan was provided to LSRCA for review between March 22, 2023, to April 12, 2023. Responses to LSRCA's comments on the Draft Stormwater Management Plan were provided on August 16, 2023.</p> <p>Comments provided on the Draft Stormwater Management Plan were considered by MTO and revisions are being made accordingly. Once finalized, the Stormwater Management Plan will be provided to the Director of MECP's Environmental Assessment Branch and subsequently posted on the Project Website.</p>		
E2.				<p>Stormwater Management Criteria: Please consider the following stormwater management criteria (as per LSRCA, April 2022, SWM guidelines) for the construction of the proposed linear development / interchanges / SWM ponds etc.:</p>	<p>AECOM acknowledges this recommendation. The suggested criteria are factored as part of the Stormwater Management Report for the construction of the proposed Bradford Bypass development / interchanges / SWM ponds etc.</p>

E3.				<p>New, Upgraded and/or Replacement Crossings (i.e., Culverts, bridges, etc.): Please reference LSRCA April 2022 SWM guidelines and LSRCA Ontario Regulation 179/06 Implementation Guidelines for additional detail pertaining to complete submissions, criteria, cut/fill balances, minimizing fill, hydraulic, hydrology, floodplain mapping etc. associated with new, upgraded, and/or replacement crossings (i.e., culverts, bridges, etc.).</p> <p>LSRCA would like the opportunity to review and comment on all the aspects of the design consideration/analysis; hydrologic modelling, hydraulic modelling, floodplain mapping, etc.</p>	<p>AECOM acknowledges this recommendation. Notes have been included in the Stormwater Management Report to reference LSRCA's April 2022 SWM guidelines and LSRCA Ontario Regulation 179/06 Implementation Guidelines pertaining to the items included in the LSRCA comment.</p> <p>The design consideration/analysis; hydrologic modelling, hydraulic modelling, floodplain mapping, etc., are documented in the latest Drainage and Hydrology Report which was submitted to LSRCA on August 14, 2023.</p> <p>The process of planning the Bradford Bypass has included -- and will continue to include -- consultation with the public and Indigenous communities to ensure the project moves forward in an environmentally responsible way that is responsive to the needs and concerns of communities. LSRCA is a designated consultation group for the Project and you will continue to be informed of project updates.</p>		
E4.				<p>Previous Comments: Please consider implementing the suggestions / comments prepared by LSRCA dated April 5, 2023.</p>	<p>Comment noted. Responses to LSRCA comments were provided on August 16, 2023.</p>		

Submission Resubmission Requirements:

1. A completed response matrix including detailed response outlining how each of the comments above have been addressed with reference to applicable reports and drawings.
2. The response matrix is to also include a summary of any additional changes to the design and/or analysis. This includes changes to reports, drawings, details, facility design and changes not identified in the detailed response to comments.
3. Reports and engineering drawings and details are to be signed and sealed by a Professional Engineer.
4. All submissions and reports are to include a digital copy of applicable models.

5. All submission and reports are to include applicable technical components which achieve the minimum requirements outlined in the Lake Simcoe Region Conservation Authority Technical Guidelines for Stormwater Management Submission, April 2022.

Important Notes and References:

1. Please contact the Lake Simcoe Region Conservation Authority (LSRCA) to scope any required Environmental Impact Study or Natural Heritage Evaluation.
2. The stormwater management submission is required to be prepared in accordance with LSRCA Technical Guidelines for Stormwater Management Submissions. [Technical-Guidelines-for-Stormwater-Management-Submissions April 2022](#)
3. Submissions are to be in accordance with the LSRCA Watershed Development Guidelines. [Ontario Regulation 179/06 Implementation Guidelines](#)
4. The hydrogeological analysis is required to be prepared in accordance with “Hydrological Assessment Submissions: Conservation Authority” Guidelines for Development Applications.” [Hydrogeological Guidelines - Hydrological Assessment 2013](#)
5. Where the LSPOP applies, submissions are to be in accordance with the LSPOP found here: [Watershed Phosphorus Offsetting Policy May 2023](#)
6. Low Impact Development Treatment Training tool can be found here: [LID Treatment Training Tool April 2018](#)
7. Lake Simcoe Region Conservation Authority Review Fees can be found here: [Planning Application and Permit-fees January 2022](#).
8. Please note that the review fees cover two rounds of reviews; third and subsequent submissions will be subject to additional fees per the fee schedule.

Appendix A, Fish and Fish Habitat Existing Conditions Summary Table, Draft Environmental Conditions Report, Highway 400 to Highway 404 Link (Bradford Bypass), Ontario Ministry of Transportation, prepared by AECOM, dated August 12, 2022.

Comment #	Item	Section	Page #	1 st LSRCA Comments on September, 2022	1 st Applicant Response on October 27, 2022	2 nd LSRCA Comments on June 28, 2023	2 nd Applicant Response on Date
NH1	DECR	2.1.1.3.2	41, 44 & 49	<p>The text states that no rare vegetation communities were identified during field investigations. According to the ELC mapping and Table 2-3, a rare vegetation community was identified during field investigations: Dry-Fresh Hickory Deciduous Forest FOD2-3 (ELC046).</p> <p>This community is listed as a provincially rare vegetation community in Appendix M of the Significant Wildlife Habitat Technical Guide. The polygon is mapped as confirmed Significant Wildlife Habitat on Figure 2-4c.</p> <p>This discrepancy should be clarified or revised.</p>	The Final Environmental Conditions Report will be revised to include the FOD2-3 species as a rare vegetation community.	Addressed.	Noted. No further response required.
NH2	DECR	2.1.1.3.2		A table listing the ELC communities within the Terrestrial Study Area including a brief description, should be included as an appendix.	ELC communities are included in Figure 2-2 of the ECR. This information will also be included in Appendix B of the Terrestrial Impact Assessment (IA) Report. Please let the Project Team know if the LSRCA would like a table of ELC communities with their description in advance of the finalization of the Terrestrial IA Report.	Addressed.	Noted. No further response required.
NH3	DECR	2.1.1.3.2	37	The locations of regionally/provincially rare plants from previous studies, and any recorded during recent field surveys, should be provided on the ELC mapping.	The location of provincially rare plants (ex. Endangered plant species, Butternut, and black ash) are presented in Figures 2-3 of the ECR.	Addressed.	Noted. No further response required.

Comment #	Item	Section	Page #	1 st LSRCA Comments on September, 2022	1 st Applicant Response on October 27, 2022	2 nd LSRCA Comments on June 28, 2023	2 nd Applicant Response on Date
				<i>Vascular Plants of the Lake Simcoe Watershed</i> , Appendix 5.3 of the State of the Lake Simcoe Watershed 2003 report and the Distribution and Status of the Vascular Plants of the Greater Toronto Area (2000) should also be consulted for regional status of plants.	Regionally rare plant species will be noted in the full plant species list in Appendix C of the Terrestrial IA Report. A copy of Appendix C can be made available to Lake Simcoe Conservation Authority upon request once the report is completed. The plant list is broken up by ELC Community.		
NH4	DECR	2.1.1.3.4	57, 58	Consider providing the rationale for not carrying forward some species at risk into Table 2-7 to demonstrate that potential habitats have been reviewed before excluding the species form further consideration.	This information will be included in Appendix E of the Terrestrial IA Report, which can be made available to Lake Simcoe Conservation Authority upon request once the report is completed.	Addressed.	Noted. No further response required.
NH5	DECR	2.1.1.3.3	51	The results for the one visit that was undertaken at AMP-13 are not listed in Table 2-4. It is noted in Table 2-4 that access was not granted for AMP-12.1 and AMP-12.2. Will the conservative approach that assumes amphibian breeding be adopted for these stations as well?	This is a reporting error that will be updated in the Final ECR. The AMP-12 and AMP-13 listed in the terrestrial report are AMP-11 and AMP-12 in Table 2-4 of the ECR. The conservative approach applies to AMP-12 with the site being considered confirmed amphibian breeding habitat (SWH).	Addressed.	Noted. No further response required.
NH6	DECR	2.1.1.2	36	Note that background noise doesn't necessarily characterize habitat quality, but rather sampling conditions and therefore ability to detect species and determine abundance.	The text in the Final ECR will be updated to include reference to the sampling conditions.	Addressed.	Noted. No further response required.
NH7	DECR	Table 2-6	57	The "Date of most recent observation" column of Table 2-6 should be revised to 2021 for Bobolink as the species was recorded during the breeding season in suitable habitat during the most recent field studies.	This table and the associated "Date of Most Recent Observation" is specific to the background sources and does not include the results of the Project's field investigations. The	Thank you for clarifying.	Noted. No further response required.

Comment #	Item	Section	Page #	1 st LSRCA Comments on September, 2022	1 st Applicant Response on October 27, 2022	2 nd LSRCA Comments on June 28, 2023	2 nd Applicant Response on Date
					column title will be revised for the Final ECR.		
NH8	DECR	Table 2-7	58	The habitat for Bobolink should be revised to confirmed. It should be noted in Table 2-7 that additional candidate habitat is present for Eastern Meadowlark beyond ELC007 (and Bobolink).	The Final ECR will be updated to reflect Bobolink as confirmed. A statement noting that agricultural fields present candidate habitat depending on crop selection will be provided in the Species at Risk section of on the Terrestrial IA Report.	Addressed.	Noted. No further response required.
NH9	DECR	2.1.1.3.4	58	Targeted surveys for species at risk should be undertaken for species with records within the Terrestrial Study Area. For example, surveys for Louisiana Waterthrush (Threatened) need to be undertaken earlier in the season as the species stops singing by the time general breeding bird surveys are performed and is therefore difficult to detect. Targeted surveys should be undertaken for Blanding's Turtle as reptiles would only be detected incidentally during other field studies. Least Bittern can be difficult to detect without callback surveys. Crepuscular surveys for Eastern Whip-poor-will should be undertaken.	The Environmental Impact Assessment Report (EIAR) will provide recommendations for targeted SAR surveys to be undertaken during the next design phase of the Project once the Preliminary Design phase is complete.	Addressed.	Noted. No further response required.
NH10	DECR	2.1.1.3.5	68	The text states that 8 Significant Wildlife Habitat types were confirmed, but the list only includes 3. A list of the other confirmed habitats should be provided. The use of "several" regarding candidate Significant Wildlife Habitat in the Terrestrial Study Area suggests far fewer than the 24 candidate habitats in the Terrestrial Ecosystems Existing Conditions Report (AECOM 2020) referred to in section 2.1.1.1. A list of all candidate Significant Wildlife Habitat within the study area should be provided.	The text related to significant wildlife will be updated in the Final ECR to include a detailed breakdown of candidate and confirmed wildlife present within the Study Area. A full analysis of the SWH in the Study Area will be included in Appendix F of the Terrestrial IA Report, which can be made available to Lake Simcoe Conservation Authority upon request, once the report is complete. Candidate SWH noted in the 2020 Existing Conditions Report prepared by AECOM was based on a review of applicable background information and desktop analysis. The 2020 report	Addressed.	Noted. No further response required.

Comment #	Item	Section	Page #	1 st LSRCA Comments on September, 2022	1 st Applicant Response on October 27, 2022	2 nd LSRCA Comments on June 28, 2023	2 nd Applicant Response on Date
					also considered a larger Study Area (500m) than the refined 120m Study Area applied for the ongoing Terrestrial IA Report. The number of candidate SWH was refined based on field investigations completed between 2020 and 2022 by the Project Team.		
NH11	DECR	2.1.1.3.2	General	A list of plants recorded during botanical surveys and incidentally should be provided. For any rare or species at risk plants, or plants which are indicators of specialized habitats, indicate the ELC polygon in which they were recorded.	A full plant list recorded during botanical surveys, and the ELC polygon in which they were recorded in will be provided in Appendix C of the Terrestrial IA Report.	Thank you for providing Appendix C. New comment: The following species in the plant list are considered rare in the Lake Simcoe watershed or regionally rare: <i>Orthilia secunda</i> <i>Physocarpus opulifolius</i> <i>Hamamelis virginiana</i> <i>Carex bromoides</i> <i>Physostegia virginiana</i> <i>Solidago patula</i> <i>Pyrola americana</i> <i>Cinna arundinacea</i> <i>Lonicera oblongifolia</i> <i>Cypripedium parviflorum</i> var. <i>pubescens</i> rare in York <i>Corylus americana</i> rare in York Should rare species be located in an area that will be impacted, a plan to transplant/relocate these plants to a suitable habitat should be prepared at detailed design.	A detailed plant inventory will be completed during future phases of work for the project. Should regionally rare species be identified within the final limits of work, mitigation measures specific to regionally rare species can be considered.
NH12	DECR	2.1.1.3.3	General	A list of birds recorded during breeding bird surveys, indicating the survey station at which they were detected should be provided. Twenty breeding bird survey stations is very limited coverage for an area this large. Consideration should be given to increasing the coverage.	A list of birds recorded during the breeding bird surveys, broken up by station, will be provided in Appendix D of the Terrestrial IA Report. Breeding bird survey stations were focused on natural features	Addressed.	Noted. No further response required.

Comment #	Item	Section	Page #	1 st LSRCA Comments on September, 2022	1 st Applicant Response on October 27, 2022	2 nd LSRCA Comments on June 28, 2023	2 nd Applicant Response on Date
					<p>within the proposed limits of work. As noted in the methodology, stations were placed 250m apart following to avoid overlap or double counting in areas of contiguous habitat.</p> <p>Additional targeted surveys for Chimney Swift, Barn Swallow, Least Bittern and Eastern Whip-poor-will as well as surveys to identify additional habitat for Eastern Meadowlark and Bobolink will be recommended in the EIAR for the next design phase.</p>		
NH13	DECR	2.1.1.3.2	41-48	<p>LSRCA has fen ELC ecosites (FEO, FES) mapped within the Terrestrial Study Area, shown in the screen captures below. These are mapped in the document as MAS2-1 (ELC095, ELC096, ELC124) and SWT3-1 (ELC120, ELC123, ELC121).</p> 	<p>Both the fen communities and fen indicator species noted in the 2002 approved EA were not observed within the proposed right-of-way during the Preliminary Design field investigations. The Study Area for the Preliminary Design was 120m. Given the larger Study Area of the 2002 approved EA (500m) it may be possible that fen communities still exist within proximity of the proposed right-of-way. Remnants of previous fen communities or fen indicator species could be present in MAS2-1 and SWT3-1 communities delineated in the field. A full plant list broken down by ELC community will be provided in Appendix C of the Terrestrial IA Report.</p> <p>MTO has considered SWH as a part of this Study and mitigation measures will be considered to</p>	Addressed.	Noted. No further response required.

Comment #	Item	Section	Page #	1 st LSRCA Comments on September, 2022	1 st Applicant Response on October 27, 2022	2 nd LSRCA Comments on June 28, 2023	2 nd Applicant Response on Date
				 <p>Some of the regionally rare plant species recorded in 2002 as noted in the document, are fen indicator plants (<i>Andromeda polifolia</i>, <i>Salix candida</i>, <i>Carex buxbaumii</i>). A plant list to confirm if any of these species were recorded in the Terrestrial Study Area during recent surveys should be provided. Targeted surveys for fen communities should be undertaken. Access to appropriately survey may require a boat. Some fen communities are provincially rare vegetation communities (i.e. Significant Wildlife Habitat).</p>	<p>minimize impacts to any fen communities; however, targeted surveys for fen communities are not planned. With the exception of refined planting list during the restoration phase of the Project, the mitigation measures for the area would be the same with or without the additional targeted surveys. It is recommended the refined planting lists be completed during the detail design phase.</p>		
NH14	DECR	2.1.1.2, 2.1.1.3.2	34, 37	<p>Were the regionally rare plant species from 2002 refound during the recent field studies? Two of the botany visits occurred in late summer (late August-early September). Note that some of the rare plants are best identified during June and early July (i.e. sedges). The same is true of some fen indicator plants. A list of plants recorded during the botanical surveys should be provided.</p>	<p>Both the fen communities and fen indicator species noted in the 2002 approved EA were not observed within the proposed right-of-way during field investigations. Targeted surveys for regionally rare/ fen indicator species were not completed during the preliminary phase of the project.</p>	<p>Partially addressed: June botanical surveys of the wetlands along the main branch West Holland and East Holland rivers should be undertaken at detailed design. Should rare species be located in an area that will be impacted, a plan to transplant/relocate these plants to a suitable habitat should be prepared. Please consider adding items to the recommendations for terrestrial ecosystems in the Draft Environmental Impact Assessment Report.</p>	<p>A detailed plant inventory can be completed during future phases of work for the project. Should regionally rare species be identified, mitigation measures specific to regionally rare species will be considered.</p>
NH15	DECR	2.1.2.2.2	79	<p>The fish habitat assessments that took place in June are too late to capture the spring freshet and spawning that may take place during this period. Therefore, a conclusion of “not fish habitat” cannot be made based solely on these June assessments.</p>	<p>Classification of “Not Fish Habitat” was not based solely on the June fish community assessment. It included an assessment of the channel following the Ministry of Natural Resources Forestry’s</p>	<p>LSRCA supports the MNRF’s recommendation.</p>	<p>Noted. No further response required.</p>

Comment #	Item	Section	Page #	1 st LSRCA Comments on September, 2022	1 st Applicant Response on October 27, 2022	2 nd LSRCA Comments on June 28, 2023	2 nd Applicant Response on Date
					<p>(MNR) Stream Permanency Handbook (2013) to identify whether the watercourse receives channel forming flows and could provide seasonal fish habitat (at a minimum). Watercourses deemed not fish habitat were features where channel forming flows were not observed (i.e., no evidence of substrate sorting, no evidence of a defined channel bed or bank). This criteria indicates that the feature only flows for a few days to weeks after a snow melt or a major rain event.</p> <p>We have made note of MNR's suggestion for additional pre-construction field work to be undertaken on various tributaries of the East and West Holland River, and will include this as a recommendation in the EIR for the next design phase of the project.</p>		
NH16	DECR	Figure 2-5m (DECR), Template D2A (Appendix A)	98	According to LSRCA temperature data collected at Boag Road just east of the 404, that section of the Maskinonge River (WC33) would be classified coolwater. Temperature sampling data, locations, dates, ambient temperatures and classification methods should be provided to support the classifications in the report.	Thermal regimes were provided by MNR. AECOM did not undertake any thermal classification of watercourses. A background information request was submitted to the Lake Simcoe Region Conservation Authority (LSRCA) on Dec 4, 2019, but no aquatic data was received. Please submit LSRCA's thermal regime data to verify existing documentation.	<p>K. Lillie of LSRCA sent the requested data via email to A. Minielly of AECOM on December 12, 2019.</p> <p>LSRCA resent the data to the project team on June 14, 2023. It appears that the original data did not include the Maskinonge sampling station. LSRCA will send that data too.</p>	The fish species in the data provided by LSRCA are recorded in the appropriate crossing summaries in the Fish Existing Conditions and Impact Assessment Report. A citation has been added to note the inclusion of this data.

Comment #	Item	Section	Page #	1 st LSRCA Comments on September, 2022	1 st Applicant Response on October 27, 2022	2 nd LSRCA Comments on June 28, 2023	2 nd Applicant Response on Date
NH17	Appendix A	Template D2B		The month March appears before July in most entries under the In-water Works Timing Window column. This should be amended to avoid confusion. For C-12-A-1, it appears that sampling dates have been inserted into the In-Water Timing Works column instead of the timing window. This should be revised.	The Final ECR appendix will be revised so the sampling dates are inserted in the timing window column.	Addressed.	Noted. No further response required.
NH18	Appendix A	Template D2B		In-water timing works	The Final ECR appendix will be revised from 'In-Water Timing-Works' to 'In-water timing works'	Noted.	Noted. No further response required.
NH19	DECR	Table 2-10	82	Was LSRCA fish data considered in the background review? Any LSRCA fish species records that may be additional to what is provided from MNRF data should be included.	A background info request was submitted to LSRCA on Dec 4, 2019, and no aquatic data was received with the response or provided on a later date. Please submit LSRCA's aquatic data to verify existing documentation.	See NH16 above.	Noted. See response to NH16 above.
NH20	DECR	2.1.2.3.1, 2.1.5.3	86, 154	An explanation of the discrepancies in the hydrologic classifications of watercourses between Figures 2-5a-m and Table 2-17, described below, should be provided: C10A-B is classified as permanent in section 2.1.2.3.1 but intermittent in section 2.1.5.3 C11A-1 is classified as permanent in section 2.1.2.3.1 but intermittent in section 2.1.5.3 C13A-1 is classified as intermittent in section 2.1.2.3.1 but ephemeral in section 2.1.5.3 C18G-1 is classified as intermittent in section 2.1.2.3.1 but ephemeral in section 2.1.5.3 C18H-1 is classified as intermittent in section 2.1.2.3.1 but ephemeral in section 2.1.5.3 C23A-1 is classified as intermittent in section 2.1.2.3.1 but ephemeral in section 2.1.5.3 C25C-1 is classified as intermittent/permanent in section 2.1.2.3.1 but ephemeral/permanent in FG C28-A-1 is classified as permanent in section 2.1.2.3.1 and intermittent in section 2.1.5.3	These will be amended in the Final ECR.	Not addressed: There is still a discrepancy between Table 2-17 of the final ECR and Appendix A of the final ECR – the two are not consistent, nor with Table 5-12 in Section 5.1.5.2.1 of the Draft EIA. Please ensure the flow regimes are accurate and consistent.	Comment noted. All flow regimes will be confirmed and revised as required in the Final EIAR. The discrepancies between Appendix A and Table 5 – 12 are likely a result of different approaches taken between the Fluvial and Fisheries Assessments. For example, when a water feature was on the borderline of being classified as ephemeral or intermittent, the Fisheries team often opted for a more cautious approach. In this example, the feature would have been assessed as an intermittent watercourse to ensure that any potential fish habitat, seasonal or otherwise, was not overlooked or unaccounted for.

Comment #	Item	Section	Page #	1 st LSRCA Comments on September, 2022	1 st Applicant Response on October 27, 2022	2 nd LSRCA Comments on June 28, 2023	2 nd Applicant Response on Date
NH22	DEIA	2.1.2.2	48-61			<p>New comment: All crossings that contain fish habitat in the West Holland subwatershed are described as supporting warmwater fish communities, but WC 20/C18-D-1 at which there is a proposed crossing is marked as cool on Figure 2-2 page 54. Please clarify.</p> <p>According to LSRCA fish sampling data, portions of the headwaters of the Maskinonge River in the vicinity of the proposed interchange at Hwy 404 are considered cool water. LSRCA stream temperature sampling from the confluence of WC-8 and WC-9 on Figure 2-2 indicates these streams are cool-water. LSRCA fish sampling data for the East Holland tributaries on which C-22-A-1 and C-23-A-1 occur indicates these are cool-water streams. Please revise the mapping and associated tables and text.</p>	<p>This conservative approach likely led to the variations in the thermal classifications.</p> <p>Watercourse 20/C18-D-1 is classified as a warmwater feature on the Ministry of Natural Resources and Forestry (MNR) Land Information of Ontario database, as well as in the Draft EIAR text. This will be updated in Figure 2-2 in the Final EIAR.</p> <p>Watercourse WC-8 is an ephemeral agricultural swale that was dry during the three assessments that were completed at the watercourse. Can the LSRCA temperature data please be provided to the Project Team?</p> <p>As per the MTO/DFO/MNR Fisheries Protocol, Aurora District MNR was contacted to provide in-water work timing windows. Data provided were indicative of a warmwater feature and the MNR LIO database identifies the features C-22-A-1 and C23-A-1 as warmwater features. No changes are required to the Draft EIAR; however, additional data and sampling will take place to confirm thermal regimes during future phases of work for the project.</p>
NH23	5.1.1.1.2					<p>New comment: LSRCA's "Mapping potential road mortality hotspots for amphibians and reptiles in the</p>	<p>Both LSRCA documents have been reviewed and considered as part of this project, and</p>

Comment #	Item	Section	Page #	1 st LSRCA Comments on September, 2022	1 st Applicant Response on October 27, 2022	2 nd LSRCA Comments on June 28, 2023	2 nd Applicant Response on Date
						<p>Lake Simcoe watershed” report should be reviewed at detailed design to determine where enhanced herptile crossings may be warranted. The report is available at www.lsrca.on.ca/Shared%20Documents/reports/wildlife-road-mortality-hotspots.pdf as well as “Using wildlife ecopassages to reduce turtle road mortality in the Lake Simcoe watershed” available at www.lsrca.on.ca/Shared%20Documents/Wildlife-Ecopassages-Reduced-Mortality.pdf</p>	mitigation measures/commitments relating to wildlife crossings and ecopassages are included in Section 5.1.1.2 of the Draft EIA.
NH24	EIA	5.1.1.2	432			<p>New comment: TERR-17.00 should include a recommendation to use directional lighting to the extent possible to minimize light pollution into natural areas.</p>	A commitment to include the use of directional lighting where feasible can be included in the Final EIA. The use of directional lighting will be considered where the alignment travels alongside wetland and woodland environments.
NH25	EIA	5.1.1.2	430			<p>New comment: TERR-13.00 should indicate that a translocation plan for terrestrial crayfish may be needed if direct impacts to habitat cannot be avoided.</p>	Additional surveys will be completed during future phases of the project and will include recording observations of terrestrial crayfish burrows/ chimneys. Should burrows/ chimneys be identified, mitigation measures specific to terrestrial crayfish will be considered.
NH26	EIA	5.1.1.2	427			<p>New comment: Headwater Drainage Feature Assessments should be undertaken for ephemeral watercourses that will be impacted, to determine the appropriate management.</p>	The need for headwater drainage assessments will be confirmed during future phases of work for the project. As noted in Table 5-26 of the Updated Draft EIA, additional work related to channel realignments is required and will include assessment and design in accordance with natural channel design

Comment #	Item	Section	Page #	1 st LSRCA Comments on September, 2022	1 st Applicant Response on October 27, 2022	2 nd LSRCA Comments on June 28, 2023	2 nd Applicant Response on Date
							principles, related conservation authority guidelines and a number of other principles (refer to row FLUV-5.00).
NH27	EIA	5.1.2.6	270			New comment: Aquatic and fluvial-geomorphic monitoring of realignments and culvert replacements should be added under Monitoring to ensure they are functioning as intended.	Requirements for monitoring and inspections have been identified in the Fish and Fish Habitat and Fluvial Geomorphology Impacts sections of the Updated Draft EIAR (Section 5.1.2 and Section 5.1.5, respectively) and will be refined during future phases of work for the project. Requirements for post-construction monitoring and inspections will also be defined during future phases of work for the project and will include any requirements identified by regulatory agencies such as DFO, MECP, etc.
NH28	EIA	Table 5-6, Table 5-8	272			New comment: Please add an invasive phragmites management note to Table 5-6 as phragmites is mapped at C11-A-2, C16-A-1, and to Table 5-8 as phragmites is mapped at C25-C-1.	Comment noted. This change will be updated in the Final EIAR.
NH29	EIA	Figure 2-2	60			New comment: The Maskinonge River tributary at Hwy 404 just north of Boag Rd does not have a classification crossing or and is within the Bradford Bypass ROW and appears to be within the area of direct impact. Please revise, identify the type of works that will be required, and assess impacts.	Comment noted. The scale at which the Study Area figures were created make it seem like work will take place at that watercourse. In reality, the construction limits for the project terminate to the east of the crossing and thus, it will not be impacted by construction activities.
NH30	EIA	Figure 2-2	58-60			New comment: LSRCA sampling data indicates the headwaters of the Maskinonge River in the	As per the MTO/DFO/MNRF Fisheries Protocol, Aurora District MNRF was contacted to provide in-water work timing

Comment #	Item	Section	Page #	1 st LSRCA Comments on September, 2022	1 st Applicant Response on October 27, 2022	2 nd LSRCA Comments on June 28, 2023	2 nd Applicant Response on Date
						vicinity of the 404 are cool-water. Please revise.	windows. Data provided were indicative of a warmwater feature and the MNRF LIO database identifies the features at C26-A-1 as warmwater feature.
NH31		Fig. 2-2	54			New comment: LSRCA stream temperature sampling from the confluence of WC-8 and WC-9 on Figure 2-2 indicates this is cool-water. Please revise the mapping and associated tables and text.	Timing windows provided by MNRF was indicative of a warmwater timing window. WC-8 was ephemeral and dry during the 3 inspections we did at that crossing. Can LSRCA provide their temperature data?
NH32		Fig. 2-2	56			New comment: LSRCA fish sampling data for the East Holland tributaries on which C-22-A-1 and C-23-A-1 occur indicates these are cool-water. Please revise the mapping and associated tables and text.	As per the MTO/DFO/MNRF Fisheries Protocol, Aurora District MNRF was contacted to provide in-water work timing windows. Data provided were indicative of a warmwater feature and the MNRF LIO database identifies the features at C-22-A-1 and C23-A-1 as warmwater features.
NH33	EIA	5.2.9.2.1	387			New comment: For preliminary design purposes, culverts should be sized for medium-sized animal passage, and reduced if necessary through detailed design based on other project factors.	TERR-16.04 and TERR-16.05 in Table 5-26 list the proposed mitigation measures and commitments for culvert openness ratios and wildlife passages. These are also detailed in Section 5.1.1.2 of the Draft EIAR. An openness ratio of 0.4 will be considered where possible.
NH34	EIA	5.1.1.2	255			New comment: Impacted areas (woodland and wetland) outside of settlement areas and the Greenbelt Plan area will be subject to LSRCA's Ecological Offsetting Policy (2021).	A preliminary landscape design was prepared for the project and is included in Section 5.2.9 / Figure 5-4 of the EIAR. Additional details regarding ecological restoration and landscaping measures for the project will be defined during

Comment #	Item	Section	Page #	1 st LSRCA Comments on September, 2022	1 st Applicant Response on October 27, 2022	2 nd LSRCA Comments on June 28, 2023	2 nd Applicant Response on Date
							future phases of work for the project and will include development of a Landscaping and Ecological Restoration Plan.
NH35	EIA	Table 5-25	414			New comment: Please add LSRCA (under the LSPP) to the Concerned Group/Agency column for "Vegetation – Removal and/or disturbance of vegetation and flora, along with fragmentation of large woodland blocks."	Comment noted. This change will be reflected in the Final EIAR.
NH36	EIA	Table 6-1	467			New comment: Please add the Lake Simcoe Protection Act to legislation under the disciplines of Terrestrial Ecosystems and Fish and Fish Habitat in Table 6-1.	Comment noted. We understand LSRCA's concerns regarding protection of the terrestrial and fisheries environments within the study area. Adherence to the requirements of the Lake Simcoe Protection Act will be achieved using other "prescribed instruments" as defined by the Act. These instruments include a variety of provincial and federal legislation, guidelines, and policies including the Endangered Species Act, the Fisheries Act, the Ontario Water Resources Act, etc.
NH37	EIA		429			New comment: A recommendation to undertake wetland water balances at detailed design for infrastructure within or adjacent to wetlands should be included under TERR 6.0 -6.1.	Comment noted. The need for wetland water balances will be determined based on the additional hydrologic and hydrogeologic analysis to be carried out during future phases of work for the project, and which are described in Table 5-26 Groundwater and Hydrogeology.

Submission Resubmission Requirements:

1. A completed response matrix including detailed response outlining how each of the comments above have been addressed with reference to applicable reports and drawings.
2. The response matrix is to also include a summary of any additional changes to the design and/or analysis. This includes changes to reports, drawings, details, facility design and changes not identified in the detailed response to comments.
3. Reports and engineering drawings and details are to be signed and sealed by a Professional Engineer.
4. All submissions and reports are to include a digital copy of applicable models.
5. All submission and reports are to include applicable technical components which achieve the minimum requirements outlined in the Lake Simcoe Region Conservation Authority Technical Guidelines for Stormwater Management Submission, April 2022.

Important Notes and References:

1. Please contact the Lake Simcoe Region Conservation Authority (LSRCA) to scope any required Environmental Impact Study or Natural Heritage Evaluation.
2. The stormwater management submission is required to be prepared in accordance with LSRCA Technical Guidelines for Stormwater Management Submissions. [Technical-Guidelines-for-Stormwater-Management-Submissions April 2022](#)
3. Submissions are to be in accordance with the LSRCA Watershed Development Guidelines. [Ontario Regulation 179/06 Implementation Guidelines](#)
4. The hydrogeological analysis is required to be prepared in accordance with “Hydrological Assessment Submissions: Conservation Authority” Guidelines for Development Applications.” [Hydrogeological Guidelines - Hydrological Assessment 2013](#)
5. Where the LSPOP applies, submissions are to be in accordance with the LSPOP found here: [Watershed Phosphorus Offsetting Policy July 2021](#)
6. Low Impact Development Treatment Training tool can be found here: [LID Treatment Training Tool April 2018](#)
7. Lake Simcoe Region Conservation Authority Review Fees can be found here: [Planning Application and Permit-fees January 2022](#).
8. Please note that the review fees cover two rounds of reviews; third and subsequent submissions will be subject to additional fees per the fee schedule.

**RE: Bradford Bypass Project
Métis Nation of Ontario Region 7 Comments on the Ontario Ministry of Transportation
Updated Draft Environmental Impact Assessment Report
Highway 400 to Highway 404 Link (Bradford Bypass)**

Dear [REDACTED],

Thank you for your review and subsequent comments on the Updated Draft Environmental Impact Assessment Report (EIAR) for the Highway 400 to Highway 404 Link (Bradford Bypass) project, prepared for the Ministry of Transportation (the Ministry). Engagement and consultation are key components of any Ministry project, and the Ministry is committed to considering all comments shared with the Bradford Bypass Project Team.

Engagement and consultation for the Bradford Bypass project is ongoing. As noted in recent emails, the Project Team would appreciate meeting with the Métis Nation of Ontario Region 7 to discuss the comments shared and how these comments can be incorporated into the Final EIAR which is to be prepared at the end of this Preliminary Design phase.

We'd appreciate if you could confirm if the Métis Nation of Ontario Region 7 is available to meet on October 10 or 11, 2023, or another date and time convenient to yourselves. Thereafter, the Project Team will share a meeting invite.

At this time, the Ministry would like to schedule the above meeting to go over comments raised by Métis Nation of Ontario Region 7 in a collaborative manner, however, initial responses have been provided below.

The Ministry is committed to continuing engagement and consultation beyond the regulatory requirements set out in Ontario Regulation 697/21, including continuing discussions with Indigenous communities, throughout the project.

The Project Team will include a summary of the Métis Nation of Ontario Region 7 comments in the Final EIAR, and the Region 7 specific comments will be included in the Final EIAR consultation record (Appendix C4).

Métis Nation of Ontario Region 7 comments re: assessment of Indigenous rights

As noted in the Métis Nation of Ontario Region 7 comments, the Bradford Bypass project was initially assessed and documented in the Route Planning and Environmental Assessment Study Report (1997). The Route Planning and Environmental Assessment Study Report received approval from the Minister of Environment and Energy (currently the Ministry of the Environment, Conservation and Parks) on August 28, 2002.

The current Preliminary Design and project specific assessment of environmental impacts has built upon the 2002 Approved Environmental Assessment Report and included a comprehensive review and update of the environmental conditions within the Study Area. This review was documented in the Environmental Conditions Report (AECOM, 2022) which was finalized October 27, 2022, following a public review period during which Indigenous communities, regulatory agencies and local stakeholders were invited to provide comments on the Environmental Conditions Report.

The environmental conditions presented in the Updated Draft EIAR are not intended to give greater emphasis to any one aspect of the environment and the information in the Updated Draft EIAR should be considered in addition to the information provided in the Environmental Conditions Report which is available on the Study Process page of the Project Website (<https://www.bradfordbypass.ca/study-process/>).

As also noted in the Métis Nation of Ontario Region 7 comments, the Bradford Bypass is subject to Ontario Regulation 697/21: Bradford Bypass Project (the Regulation). While the Regulation exempts the project from the Class Environmental Assessment for Provincial Transportation Facilities (MTO), the project has included 15 environmental studies. The environmental studies conducted include:

- Fish and Fish Habitat Existing Conditions and Impact Assessment Report
- Fluvial Geomorphology
- Terrestrial Ecosystems Existing Conditions and Impact Assessment Report (including an assessment of vegetation and vegetation communities, wildlife and wildlife habitat, species at risk and designated natural areas)
- Groundwater Impact Assessment
- Drainage and Hydrology
- Erosion and Sediment Control Risk Assessment
- Waste and Excess Materials Management Plan
- Land Use and Property Impact Assessment
- Noise and Vibration Impact Assessment
- Agricultural Impact Assessment
- Air Quality Impact Assessment

- Archaeological Assessment (Stages 2, 3, and 4, as required)
- Cultural Heritage Assessment
- Preliminary Landscape Composition Plan, and
- Snowdrift Assessment.

The Project Team acknowledges that these environmental studies, and the Updated Draft EIAR, may not address Indigenous rights explicitly. Accordingly, the Ministry has sought comments and feedback from Indigenous communities throughout the project as described in Section 7 of the Updated Draft EIAR. The Ministry is also committed to continued engagement and consultation throughout the Detail Design phase of the project.

The Ministry is familiar with the *MNO-MNRF Framework Agreement (2018)* and the *MNO-Canada Métis Government Recognition and Self-Government Agreement (2019)* and recognizes fully that the project is located within a Métis Nation of Ontario Region 7 harvesting area and that the Métis Nation of Ontario has recognized governance rights. The Ministry would appreciate meeting with the Métis Nation of Ontario Region 7 to better understand the context for these comments and ensure that impacts as a result of the project are properly assessed. With respect to harvesting rights, the Ministry would appreciate Métis Nation of Ontario Region 7 confirming the extent and nature of any harvesting by community members within the Study Area and the impacts anticipated as a result of the project. In addition, the Ministry is monitoring developments related to the Agreement, although no impacts to Métis Nation of Ontario Region 7 members rights or representation in Ontario are anticipated as a result of the project. If the Métis Nation of Ontario Region 7 is anticipating impacts to rights in this realm, please let us know.

Métis Nation of Ontario Region 7 comments re: Ministry's consultation

While the Updated Draft EIAR refers to one project milestone where consultation with the Georgian Bay Métis Council took place (November 2022), in circulating the materials at all project milestones (e.g., Draft Environmental Conditions Report, Public Information Centres, Draft EIAR, etc.), the Ministry had hoped to consult with all Indigenous groups concurrently. We acknowledge that Métis Nation of Ontario Region 7 members were unable to respond to the Project Team's requests for comments and input over the course of the project due to capacity limitations. The Ministry acknowledges the letters sent to the Project Team in this regard. The Ministry also acknowledges and thanks the Métis Nation of Ontario Region 7 for your review and technical comments on the Draft EIAR.

The Ministry is optimistic that the recent funding agreement will allow Métis Nation of Ontario Region 7 members to meet with the Project Team so that concerns can be addressed within the Final EIAR, and so that additional consultation and engagement can take place during subsequent phases of the project (e.g., Detail Design and construction).

Métis Nation of Ontario Region 7 comments re: references to the Georgian Bay Métis Council

The Ministry appreciates the clarification regarding Métis Nation of Ontario Region 7 and will update the EIAR accordingly.

Métis Nation of Ontario Region 7 comments re: Biophysical Focus

The Ministry appreciates Métis Nation of Ontario Region 7 expressing an interest in working collaboratively to determine an approach for how impacts are being considered. The EIAR has only documented the Preliminary Design of the Bradford Bypass study and summarizes the environmental studies noted above, which update and document existing conditions; identify

and evaluate potential impacts of the project on the existing conditions; and recommend mitigation measures and monitoring requirements to reduce these impacts to meet current environmental legislative requirements. Impacts and proposed mitigation measures will be reviewed and confirmed in subsequent phases of the project. The Ministry would appreciate a meeting to understand Métis Nation of Ontario Region 7's suggestions for criteria to be assessed and mitigation measures that could be employed as part of the project.

Métis Nation of Ontario Region 7 comments re: Overall Concerns

As noted above, the environmental conditions presented in the Updated Draft EIAR are not intended to give greater emphasis to any one aspect of the environment. The information in the Updated Draft EIAR should be considered in addition to the Environmental Conditions Report (2022)

The current Preliminary Design and project specific assessment of environmental impacts has built upon the previous 2002 Approved Environmental Assessment and includes a comprehensive review and update of the environmental conditions within the Study Area, as documented in the Environmental Conditions Report and Section 2 of the Updated Draft EIAR. In addition, the project has continued to adhere to the MECP's Conditions of Approval issued in response to the 2002 Approved Environmental Assessment during this Preliminary Design study, as detailed in Table 5-24 of the Updated Draft EIAR. The Updated Draft EIAR provides a summary of the work completed for the preliminary design stage of the project and the commitments for future studies in detail design. This approach to the Bradford Bypass project is consistent with other infrastructure projects where an iterative approach is taken to defining design of the project, potential impacts and the mitigation measures to be employed.

The Project Team has also added a number of commitments that were not originally included in the 2002 Approved Environmental Assessment. These additional commitments are detailed in the Updated Draft EIAR (Table 5-26) and include (as examples):

- commitments for additional consideration of wetland areas and exploration of opportunities to minimize impacts to these wetlands through engineering refinements during all subsequent phases of work for the project, including Detail Design and construction.
- A commitment that the Ministry will continue to work with Indigenous communities, environmental agencies, municipalities, and other concerned stakeholders to identify principles and recommendations for mitigating the impacts to wetland areas.
- Additional fieldwork and analysis of the wetlands to support accurate delineation of wetlands and design of mitigation and remediation practices.
- Wetland restoration of areas within 10-30 meters of watercourses in the Holland Marsh Wetland Complex and underneath the proposed structures at the Holland River and Holland River East Branch.

The Ministry appreciates the Métis Nation of Ontario Region 7 interest in participating in the project and looks forward to continued engagement, to confirm when these opportunities arise. At this time, though the Updated Draft EIAR does include commitments for monitoring to occur, design and staging for construction of the wetland crossings is required to understand the actual monitoring that will be required, e.g., durations, timing, type of work must be known before the Ministry can engage Métis Nation of Ontario Region 7 or others to confirm their interest in participating.

Project Team Request to Meet

As noted, the Ministry is committed to meaningfully consult Métis Nation of Ontario Region 7 in relation to the Bradford Bypass project. Engagement and consultation are key components of any Ministry project and the Ministry is committed to responding to all comments shared with the Project Team.

Engagement and consultation for the Bradford Bypass project is ongoing and the Ministry would appreciate meeting with the Métis Nation of Ontario Region 7 so that concerns can be addressed within the Final EIAR.

We would appreciate if you could confirm the Métis Nation of Ontario Region 7 availability to meet with the Project Team during the month of October 2023. Alternatively, if there are more convenient dates in October for the Métis Nation of Ontario Region 7 to discuss the project and the community's recent comments, please contact Jeff Seibert, Indigenous Liaison Specialist via telephone at [REDACTED] or via email at [REDACTED].

The Ministry will continue to engage with Métis Nation of Ontario Region 7 throughout all subsequent phases of the project.

Sincerely,

Director, Central Operations

c: Wan Chi Ma, MTO Senior Project Manager

Comment #	Section #	Ministry of the Environment, Conservation and Parks Comments	Project Team Response	Edits Required to EIA? (Yes/No)
Ministry of the Environment, Conservation and Parks - Air Quality Impact Assessment Report Cover Letter				
1.	N/A	<p>Central Region Technical Support Section (TSS) of the Ministry of the Environment, Conservation and Parks (MECP) has reviewed the Final Air Quality Impact Assessment Report (the Air Quality Report), dated June 12, 2023, for the Bradford Bypass Class Environmental Assessment study. In addition, the air quality sections 2.2.4 and 5.2.4 of the Draft Environmental Impact Assessment Report, dated June 1, 2023, were also reviewed.</p> <p>The methodology implemented to assess air quality impacts from the proposed Bradford Bypass undertaking follows the ministry's guidelines.</p>	Comment acknowledged.	No
Comments on the Air Quality Impact Assessment Report				
1.	Section 6.4.2, Page 59	The Air Quality Report Page 59: When selecting vegetation as roadside barriers for mitigating near-road particulate impacts during the operational phase, it is suggested that trees that are not subject to significant seasonal changes, such as coniferous plants, be considered. (EPA 600/R-16/072, July 2016).	<p>Comment noted. A Preliminary Landscape Conceptual Design Plan was prepared for the project and provides recommendations for landscaping treatments along the proposed Ministry right-of-way. Plantings will consist predominately of large growing tree species, while edge management plantings will emulate a natural forest edge with a combination of deciduous and coniferous trees along the existing forest.</p> <p>Detailed Landscape Plans shall be developed during future Detail Design stages of the project for re-vegetation of disturbed / impacted areas and to provide landscaping enhancements in other areas.</p>	No
2.	Section 8, Page 66	The Air Quality Report Page 66: Please note that a minimum of one week of baseline monitoring may not be enough to observe representative background ambient air conditions. The ministry recommends considering an extended baseline monitoring period depending on the scale of the construction project.	Comment acknowledged. The timeline for baseline monitoring will be confirmed in subsequent design phases of the project.	No
Ministry of the Environment, Conservation and Parks – Draft Environmental Impact Assessment Report – Conservation and Source Protection Cover Letter				
1.	N/A	In response to your request to review the Bradford Bypass EIA, Conservation and Source Protection Branch (CSPB) offers the following comments.	Comment acknowledged.	No
Conservation and Source Protection Comments on the Draft Environmental Impact Assessment Report				
1.	N/A	The Clean Water Act, 2006 (CWA) aims to protect existing and future sources of drinking water. To achieve this, several types of vulnerable areas are delineated around surface water intakes and wellheads for every municipal residential drinking water system that is located in a source protection area. These vulnerable areas are known as a Wellhead Protection Areas (WHPAs), and surface water Intake	Comment acknowledged. AECOM has factored in the Clean Water Act, 2006 and source protection requirements. The Source Protection Information Atlas was consulted and reviewed as part of the Groundwater Protection and Well Monitoring Plan, provided to MECP for review on March 24, 2023.	No.

Comment #	Section #	Ministry of the Environment, Conservation and Parks Comments	Project Team Response	Edits Required to EIA? (Yes/No)
		Protection Zones (IPZs). Other vulnerable areas that can be delineated under the CWA for municipal drinking water systems include Significant Groundwater Recharge Areas (SGRAs) and Highly Vulnerable Aquifers (HVAs). In addition, event-based modelling areas (EBAs) and Issues Contributing Areas (ICAs) may also occur, overlapping with one of the four above-named vulnerable areas. The Source Protection Information Atlas is publicly available and can be used to locate delineated vulnerable areas in Ontario.		
2.	N/A	The Bradford Bypass may include activities during its construction, operation, and maintenance phases that, if located in a vulnerable area, may be considered a risk to sources of drinking water (i.e., as per the Clean Water Act, have the potential to adversely affect the quality of drinking water sources) and could be subject to policies in a source protection plan. Where an activity poses a risk to drinking water, policies in the local source protection plan may impact how or where that activity is undertaken. Policies may prohibit certain activities, or they may require risk management measures for these activities. Municipal official plans, planning decisions, and prescribed instruments must conform with policies that address significant risks to drinking water and must have regard for policies that address moderate or low risks.	Comment acknowledged. The Project Team has factored in the Clean Water Act, 2006 and source protection requirements. The Source Protection Information Atlas was consulted and reviewed as part of the Groundwater Protection and Well Monitoring Plan, provided to MECP for review on March 24, 2023. In addition, AECOM acknowledges that considerations shall continue to be taken in subsequent design phases to protect sensitive hydrologic features for systems not addressed in source protection plans.	No
3.	N/A	For more information on the CWA, source protection areas and plans, including specific information on the vulnerable areas and drinking water risks, please refer to Conservation Ontario's website where you will also find links to the local source protection plans and assessment reports. A list of the prescribed drinking water risks can be found in section 1.1 of Ontario Regulation 287/07 made under the Clean Water Act, 2006. In addition to prescribed drinking water risks, some source protection plans may include policies to address additional "local" risk activities, as approved by the MECP.	Comment acknowledged. The Project Team has factored in the Clean Water Act, 2006 and source protection requirements. The Source Protection Information Atlas was consulted and reviewed as part of the Groundwater Protection and Well Monitoring Plan, provided to MECP for review on March 24, 2023.	No
4.	N/A	The Bradford Bypass is a proposed 16.3 kilometre highway that will extend from Highway 400 between 8th Line and 9th Line in Bradford West Gwillimbury to Highway 404 between Queensville Sideroad and Holborn Road in East Gwillimbury (see Map 1 below). The proposed highway is planned to be situated mainly within the Lake Simcoe and Couchiching/Black River Source Protection Area with a very small portion of the western extent of the highway to be situated within the Nottawasaga Valley Source Protection Area. The Bradford Bypass project would therefore be subject to the applicable policies of the approved South Georgian Bay Lake Simcoe (SGBLS) Source Protection Plan (SPP).	The Project Team acknowledges policies of the South Georgian Bay Lake Simcoe Source Protection Plan may apply to the Project. , The South Georgian Bay Lake Simcoe Source Protection Authority shall be consulted in subsequent phases of the project to determine whether an activity related to the construction, operation, or maintenance of the project may be a threat to sources of drinking water threat as per the Clean Water Act, 2006.	Yes – include commitment in the stormwater section and commitments table of EIA
5.	N/A	According to the description and mapping within the Draft Bradford Bypass EIA Report, the study area that encompasses the updated	Comment acknowledged.	No

Comment #	Section #	Ministry of the Environment, Conservation and Parks Comments	Project Team Response	Edits Required to EIAR? (Yes/No)
		<p>technically preferred route of the Bradford Bypass intersects with several drinking water source protection vulnerable areas (see Map 2 below). These vulnerable areas include: WHPA-A with a vulnerability score of 10, WHPA-B with a vulnerability score of 6, WHPA-C with a vulnerability scores of 2 and 4, WHPA-D with a vulnerability score of 2, IPZ-3 with a vulnerability score of 5.59, HVA with a vulnerability score of 6, SGRA, WHPA-Q1 and WHPA-Q2 with moderate stress.</p> <p>Given that parts of the study area of the updated technically preferred route of the Bradford Bypass are located within some high scoring vulnerable areas, there may be certain activities associated with the construction, operation, and maintenance of the proposed Bradford Bypass that may pose a significant drinking water risk to the drinking water source. The activities associated with the Bradford Bypass may also pose moderate/low risks to the drinking water source. In addition, within HVAs there may be other kinds of drinking water systems present that are not explicitly addressed by the source protection plan and the proponent should take these into consideration. EA projects should protect sensitive hydrologic features including current or future sources of drinking water not explicitly addressed in source protection plans, such as private systems – individual or clusters, and designated facilities within the meaning of O. Reg. 170/03 under the Safe Drinking Water Act – i.e., camps, schools, health care facilities, seasonal users, etc.</p>	<p>The locations of well head protection areas have been considered as part of the stormwater design and potential impacts and proposed mitigation measures and monitoring requirements related to groundwater and hydrogeology are documented in Section 5.1.4 of the Environmental Impact Assessment. Specifically regarding impacts to drinking water, proposed mitigation measures and monitoring requirements are documented in GW-10.0 in Table 5-26.</p> <p>In addition, AECOM acknowledges that protection of sensitive hydrologic features for systems not addressed in source protection plans will continue to require consideration during future phases of work for the Project.</p>	
6.	N/A	<p>In the draft Bradford Bypass EIA Report, we note that the proponent discusses source water protection-related matters in a number of sections which outline the impacts (e.g., stormwater runoff, road salt, spills, discharge of effluent from dewatering operations) and mitigation measures for groundwater quality that may stem from the construction and operation of the bypass. However, the EIA report does not adequately discuss the risks to water quantity seeing that that study area is within a delineated vulnerable area for water quantity (i.e., WHPA-Q1 and WHPA-Q2) with moderate stress. Therefore, the proponent should take the two source protection water quantity threats, namely an activity that reduces recharge of an aquifer and an activity that takes water from an aquifer or surface water body without returning the water taken to the same aquifer or water body, into consideration as they continue to assess the environmental impacts of the bypass.</p>	<p>Comment acknowledged. Impacts to water quantity and proposed mitigation measures are discussed in Section 5.1.3 of the Updated Draft EIAR. Quantity control shall be provided to some extent with the use of permanent flow check dams to be located along the swales. These elements of the design and the assessment of source protection quantity threats shall be reviewed in greater detail during future phases of work for the Project.</p>	No
7.	N/A	<p>While the report does identify source protection vulnerable areas and potential impacts to them, it does not fully acknowledge that applicable policies of the approved SGBLS SPP may also need to be implemented, above and beyond the mitigation measures, to address the risks to sources of drinking water source that stem from the construction, operation, and maintenance of the Bradford Bypass.</p>	<p>The Project Team acknowledges policies of the South Georgian Bay Lake Simcoe Source Protection Plan may apply to the Project. In addition, AECOM acknowledges that protection of sensitive hydrologic features for systems not addressed in source protection plans will continue to require consideration during future phases of work for the Project.</p>	Yes – include commitment in the stormwater section and commitments table of EIAR

Comment #	Section #	Ministry of the Environment, Conservation and Parks Comments	Project Team Response	Edits Required to EIA? (Yes/No)
			Additionally, the South Georgian Bay Lake Simcoe Source Protection Authority shall be consulted to determine whether an activity related to the construction, operation, or maintenance of the project may be a threat to sources of drinking water threat as per the Clean Water Act, 2006.	
8.	N/A	<p>As a result of several overlapping source protection vulnerable areas that intersect with the study area of this undertaking, there may be at least 27 policies in the SGBLS SPP that potentially apply to address the risks to both water quality and water quantity. The proponent should be aware of these policies and consider them before project development. These policies include (but not necessarily limited to):</p> <ul style="list-style-type: none"> • SEWG(a)-1: Existing and future stormwater management approvals • SEWG(a)-2: Stormwater management research • PEST(App)-1: Existing and future application of pesticides to land • PEST(H&S)-2: Future handling and storage of pesticides • SALT(App)-1: Existing and future application of road salt • SALT(App)-2: Salt application research • SALT(H&S)-2: Future handling and storage of road salt • SNOW-2: Future storage of snow • FUEL-2: Future handling and storage of fuel • FUEL-3: Inspection reports on private fuel outlets • DNAPL-2: Future handling and storage of DNAPLs • DNAPL-3: Research into DNAPL alternatives • SOLV-2: Future handling and storage of organic solvents • DEMD-1: Future water taking from an aquifer • DEMD-2: Development of municipal water management plan • DEMD-3: Development of municipal water conservation plan • RLU-1: Restricted land use • LUP-1: Future prohibition of certain land use activities • LUP-2: Site plan control for the application of road salt • LUP-3: Design of new stormwater management facilities to reduce the risk of contaminating drinking water • LUP-11: Protection of significant groundwater recharge areas from incompatible development or site alteration that may reduce the recharge of an aquifer within WHPA-Q2 • LUP-12: Submission of a hydrogeological study that the existing water balance can be maintained through the use of best management practices such as low impact development 	<p>The Project Team acknowledges policies of the South Georgian Bay Lake Simcoe Source Protection Plan may apply to the Project. In addition, AECOM acknowledges that protection of sensitive hydrologic features for systems not addressed in source protection plans will continue to require consideration during future phases of work for the Project.</p> <p>Additionally, the South Georgian Bay Lake Simcoe Source Protection Authority shall be consulted to determine whether an activity related to the construction, operation, or maintenance of the project may be a threat to sources of drinking water threat as per the Clean Water Act, 2006.</p>	No

Comment #	Section #	Ministry of the Environment, Conservation and Parks Comments	Project Team Response	Edits Required to EIA? (Yes/No)
		<ul style="list-style-type: none"> EDU-1: Education and outreach program to target those applying pesticides EDU-2: Education and outreach program to target those handling or storing fuel, DNAPLs, and organic solvents EDU-3: Education and outreach program to target those municipalities and the salt application industry, applying, handling and storing road salt and snow EDU-4: Education and outreach programs focusing on water conservation in areas where taking water from an aquifer without returning the water to the same aquifer EDU-11: Road signage to identify the locations of wellhead protection areas and intake protection zones 		
9.	N/A	<p>The proponent is advised to consult with the local source protection authority if they have not already done so. The South Georgian Bay Lake Simcoe Source Protection Authority can provide assistance in determining whether an activity associated with the construction, operation, or maintenance of the project may be a risk to sources of drinking water as per the Clean Water Act, 2006. The Source Protection Authority may also be able to confirm how the policies in the source protection plan apply.</p> <p>Please note, even if the project activities in a vulnerable area are deemed not to pose a risk to sources of drinking water, there may be other policies that apply and so consultation with the local source protection authority is important.</p>	A commitment to consult with the South Georgian Bay Lake Simcoe Source Protection Authority during all future phases of work for the Project will be included in the Final EIA.	Yes – include commitment in the stormwater section and commitments table of EIA
Ministry of the Environment, Conservation and Parks – Draft Environmental Impact Assessment Reports – Groundwater Cover Letter				
1.	N/A	<p>As requested, I have completed a groundwater related review of the following documents submitted in support of Section 20 of the Environmental Assessment Act, O.Reg. 697/21, Bradford Bypass Project:</p> <ul style="list-style-type: none"> "Draft Environmental Impact Assessment Report, Highway 400 – Highway 404 Link (Bradford Bypass)". Prepared for Ontario Ministry of Transportation. Prepared by AECOM Canada Ltd., and dated June 1, 2023 (Draft EIA Report) "Hydrogeological Data Report, Highway 400 – Highway 404 Link (Bradford Bypass)". Prepared for Ontario Ministry of Transportation. Prepared by AECOM Canada Ltd., and dated June 19, 2023 "Water Well Survey Report, Highway 400 – Highway 404 Link (Bradford Bypass)". Prepared for Ontario Ministry of Transportation. Prepared by AECOM Canada Ltd., and dated June 19, 2023 	Comment noted.	No

Comment #	Section #	Ministry of the Environment, Conservation and Parks Comments	Project Team Response	Edits Required to EIA? (Yes/No)
		<ul style="list-style-type: none"> • "Final Waste and Excess Material Management Plan, Highway 400 – Highway 404 Link (Bradford Bypass)". Prepared for Ontario Ministry of Transportation. Prepared by AECOM Canada Ltd., and dated June 19, 2023 • "Contamination Overview Study – FINAL, Highway 400 – Highway 404 Link (Bradford Bypass)". Prepared for Ontario Ministry of Transportation. Prepared by AECOM Canada Ltd., and dated February 2020 		
2.	N/A	The Bradford Bypass is a new 16.3 km freeway that will extend from Hwy 400 between 8th Line and 9th Line in Bradford West Gwillimbury (County of Simcoe) and connect to Hwy 404 between Queensville Sideroad and Holborn Road in East Gwillimbury (Regional Municipality of York). A previous individual environmental assessment for the Bradford Bypass project was approved on August 28, 2002. As a condition of this approval, the design and construction of the highway were still subject to the Ministry of Transportation Class EA. On October 7, 2021, Ontario Regulation 697/21: Bradford Bypass Project (O.Reg. 697/21) came into effect to exempt the Project from the requirements of the Environmental Assessment Act. The regulation sets a streamlined assessment process going forward and for continued environmental protection and consultations for the Bradford Bypass Based Project and associated Early Works.	Comment noted.	No
3.	N/A	The 2023 Draft EIA Report is intended to document the evaluation of alternatives considered for this project; present the updated Technically Preferred Route and document the environmental impacts, proposed mitigation measures and environmental commitments.	Comment noted.	No
4.	N/A	Table 5-26 of the 2023 Draft EIA Report contains a comprehensive overview of groundwater related environmental impacts and proposed monitoring and mitigation measures to address the identified groundwater impacts, including those identified as part of the 2002 EA. The EIA notes that the key activities related to the construction and operation of the proposed Bradford Bypass that may impact groundwater quality and quantity are bridge construction, soil removal, high fill placement, excavations and deep highway cuts, spills and road salt spreading. The majority of potential impacts to groundwater are associated with the short-term construction phase of the project. The potential long-term impacts are the permanent lowering of water levels which may impact private water wells, surface water features and impacts to water quality due to road salting and/or spills.	Comment noted.	No
5.	N/A	To date, the proponent has completed the following groundwater related work: <ol style="list-style-type: none"> 1. Preliminary geotechnical and hydrogeologic study of the Study Area. 	Comment noted.	No

Comment #	Section #	Ministry of the Environment, Conservation and Parks Comments	Project Team Response	Edits Required to EIA? (Yes/No)
		<p>2. Preliminary baseline groundwater level monitoring and groundwater quality sampling of accessible monitoring wells and private wells to establish baseline conditions.</p> <p>3. A desk-top MECP Water Well Information System (WWIS) water well and groundwater use survey, along with mail out and in-person door-to-door well user survey within a 500m radius of the proposed route alignment. Seventeen (17) property owners responded to the mailed survey and participated in a pre-construction survey. Area water supply wells rely on either a shallow or deep overburden aquifer or the bedrock aquifer. Approximately 40% of the respondents' wells rely on the shallow aquifer, 40% on the deep overburden aquifer and about 15% on the weathered shale/limestone aquifer.</p> <p>4. Assessment of Source Protection Information Atlas and identified areas of groundwater susceptibility such as Highly Vulnerable Aquifer (HVA) and Significant Groundwater Recharge Area (SGRA).</p> <p>5. Contamination Overview Study within approximately 500m radius of proposed route and identified and rated (high, medium or low) actual or potential contaminated sites. A high-level assessment of potential contamination within the Study Area was completed in 2002. Additional work was recently completed to identify properties along the proposed route with existing or potential contamination, waste, and excess materials based on current and former land uses. The potential for contamination of these properties was categorized as having a low, medium, or high potential. Field sampling or a site reconnaissance/windshield-level survey were not completed as part of this contamination overview. The assessment was completed by reviewing available information from the city, Technical Standards and Safety Authority (TSSA), ERIS Report of databases including the ministry's water well records and Certificates of Approval etc., air photos and available mapping. Among the results: twenty-nine (29) properties were identified as having a high-risk potential for environmental contamination and fourteen (14) properties/facilities were identified as medium risk. In addition, six (6) significant spill locations were identified as having a high potential to impact the soil and groundwater quality within the area. The proposed route was also noted to intercept four (4) properties/facilities identified as having high potential for contamination and three (3) properties as having medium potential for contamination.</p> <p>6. Preliminary assessment of source dewatering locations, daily volumes and excavation depths and identified potential impacts of</p>		

Comment #	Section #	Ministry of the Environment, Conservation and Parks Comments	Project Team Response	Edits Required to EIA? (Yes/No)
		construction dewatering on groundwater and surface water resources. Indicated that dewatering would be required due to subsurface conditions (presence of groundwater sensitive areas, shallow groundwater table and groundwater discharge areas) and to the general surficial nature of road construction.		
6.	N/A	The MECP acknowledges that previous (April 11, 2023) comments by the MECP on the Groundwater Protection and Well Monitoring Plan have been incorporated into Table 5-26 of the Draft EIA Report. Specifically, the baseline groundwater quality sampling program was updated to include hydrocarbon sampling and the installation of electronic water level dataloggers in both monitoring wells and residential wells during Detail Design.	Comment noted.	No
Groundwater Comments on the Draft Environmental Impact Assessment Report				
1.	N/A	<p>The MECP also strongly supports the proponent's commitments to undertake the following:</p> <ol style="list-style-type: none"> 1. Complete additional environmental studies / investigations such as Phase One Environmental Site Assessments (ESAs) and Phase Two ESAs of the identified high and medium risk properties to determine the presence and extent of contamination during Detail Design. 2. Complete detailed assessment (i.e., zone of influence) of potential impacts on groundwater and surface water resources during Detail Design. 3. Complete a Construction Dewatering Plan (Water Discharge/Management); an Erosion and Sediment Control Plan; and a Groundwater Quality Monitoring Program during Detail Design. 4. Complete follow-up contact with private well owners via mail, email, phone calls, in-person site visit to determine existing water quality and quantity at each property. The MECP strongly supports the recommended follow-up door-to-door well survey as part of Detail Design to identify all such wells prior to construction and ensuring that affected well owners will continue to have water supplies of appropriate quality and in adequate quantity, and to ensure that any work done on affected wells or any replacement wells is done pursuant to Ontario Regulation 903, Wells (pursuant to the Ontario Water Resources Act). 5. Assess the pre-construction groundwater quality and water level monitoring during Detail Design and modify accordingly for continued monitoring during construction and post-construction. It was noted that seventeen (17) monitoring wells were installed and monitored, however, additional monitors may be required and will be further assessed as part of Detail Design. 	Comment noted.	No

Comment #	Section #	Ministry of the Environment, Conservation and Parks Comments	Project Team Response	Edits Required to EIAR? (Yes/No)
		6. Complete an Environmental Management Plan (EMP) during Detail Design. The EMP should include, but not be limited to, plans for encountering highly productive zones, dewatering interferences with surface water and groundwater users, and groundwater and surface water monitoring plans.		
2.	N/A	Based on the available information, it is my opinion that the Draft Environmental Impact Assessment Report and associated studies contained an appropriate level of detail to document the general hydrogeologic setting of the study area and groundwater related environmental impacts, described proposed mitigation measures and environmental commitments to address the identified groundwater related impacts as per the ministry's guidelines and O.Reg. 697/21. The MECP strongly supports the proponents' commitment to complete the above noted additional environmental studies/investigations during Detail Design.	Comment noted.	
3.	N/A	In the event a Permit to Take Water will be required for construction dewatering, additional work will be completed during Detail Design to better assess potential impacts resulting from dewatering and discharge and/or construction related activities such as bridge construction. To expedite the construction process, the proponent should consider initiating a pre-consultation with MECP hydrogeologists regarding the PTTW during Detail Design. As such, the MECP will likely be further involved during the Detail Design through the PTTW application process.	Comment noted. As discussed in Section 5.1.4.1.4 of the EIAR, where expected construction dewatering volumes that exceed 400,000 L/day, a Permit To Take Water (Category 3) will be required from Ministry of the Environment, Conservation and Parks in accordance with Section 34 of the Ontario Water Resources Act (RSO, 1990). Permitting requirements will be determined during the subsequent Detail Design phase. Similar to other Ministry projects, and as noted in Table 7-6 of the EIAR, the Project Team will submit a permit pre-consultation to MECP if a PTTW is determined to be required.	No
4.	N/A	The following recommendation is offered for the proponent's consideration: It is noted that Table 5-26 of the Draft EIA Report has two duplicate sections which are redundant. The issues and mitigation measures described in Sections GW-1.00, GW-2.00, GW-3.00, GW-4.00 and GW-5.00 are identical to Sections HYDRO-1.00, HYDRO-2.00, HYDRO-3.00, HYDRO-4.00 and HYDRO-5.00. It is recommended the previously noted sections of GW and HYDRO of Table 5-26 be combined into one.	Comment acknowledged. The Project Team has included these requirements in two locations and under the different disciplines of Hydrogeology and Groundwater deliberately. Given the sensitive nature of the Study Area and the heightened interest in the groundwater and hydrogeology areas of assessment from a number of stakeholders, the Project Team wanted to ensure that requirements during future phases of work were clearly described and nothing appeared to have been omitted/missed.	No
Species at Risk Comments on the Draft Environmental Impact Assessment Report				
1.	Section 2	Include the Red-headed Woodpecker in Table 2-2 for consideration.	Table 2-2 lists the Species at Risk (Threatened or Endangered) that were determined to have high or medium potential to occur within the Study Area based on candidate habitat presence within the Study Area.	No

Comment #	Section #	Ministry of the Environment, Conservation and Parks Comments	Project Team Response	Edits Required to EIA? (Yes/No)
			<p>The Red-headed Woodpecker was identified in the Terrestrial Ecosystems Existing Conditions and Impact Assessment Report (AECOM, 2023) as a record of Species at Risk within the vicinity of the Study Area, however no observations were made during field investigations and the presence or absence of this species could not be confirmed at this time.</p> <p>Additional investigations will be completed during future phases of work to confirm and /or update the analysis of Species-at-Risk documented during this Preliminary Design study.</p>	
Ministry of the Environment, Conservation and Parks – Draft Environmental Impact Assessment Report – Surface Water Cover Letter				
1.	N/A	Note that previously (March 2023), I have reviewed and commented on a draft Stormwater Management (SWM) Plan for the Bradford Bypass County Road 4 Early Works that was prepared by AECOM.	Comment noted. The County Road 4 Early Works Final Stormwater Management Plan was updated based on the comments provided by MECP, and posted on the Project Website on March 21, 2022.	No
2.	N/A	The Bradford Bypass is a new 16.3 km freeway that will extend from Hwy 400 between 8 th Line and 9 th Line in Bradford West Gwillimbury (County of Simcoe) and connect to Hwy 404 between Queensville Sideroad and Holborn Road in East Gwillimbury (Regional Municipality of York). A previous individual environmental assessment for the Bradford Bypass project was approved on August 28, 2002. As a condition of this approval, the design and construction of the highway were still subject to the Ministry of Transportation Class EA. On October 7, 2021, Ontario Regulation 697/21: Bradford Bypass Project (O.Reg. 697/21) came into effect to exempt the Project from the requirements of the Environmental Assessment Act. The regulation sets a streamlined assessment process going forward and for continued environmental protection and consultations for the Bradford Bypass Based Project and associated Early Works.	Comment noted.	No
3.	N/A	<p>It is understood that the report is prepared to comply with the provisions of the Ontario Regulation 697/21. The main purpose of this Stormwater Management Plan is to document the Stormwater Management (SWM) strategy that is proposed for the Bradford Bypass Project and ensure it addresses the SWM Requirements outlined on the Ontario Regulation 697/21.</p> <p>From surface perspectives, the study area falls into four watersheds: the west limits of the study area, including Highway 400, falls within the Penville Creek sub-watershed (Innisfil Creek watershed) and is under the jurisdiction of the Nottawasaga Valley Conservation Authority (NVCA); the main study area falls within the Holland River and Holland East Branch watersheds; and a small portion of the area on the east of</p>	Comment noted.	No

Comment #	Section #	Ministry of the Environment, Conservation and Parks Comments	Project Team Response	Edits Required to EIA? (Yes/No)
		Highway 404 falls within Maskinonge River watershed. Holland River and Maskinonge River are within the jurisdiction of the Lake Simcoe Region Conservation Authority (LSRCA).		
4.	N/A	Based on the information provided, the project would involve fifty-one (51) crossings across thirty-four (34) watercourses. All of the crossings that contain fish habitat in the Holland River/Holland East Branch watersheds and the Maskinonge watershed support warmwater fish communities. Only the crossings in the Innisfil Creek watershed support cool-water fish communities. In addition to the river crossings, the project will also require some river channel realignments. The surface water features identified in the study area also includes both evaluated Provincially Significant Wetlands (PSW) and unevaluated wetlands located along the Holland River and other watercourses. No critical aquatic habitat (SARA) was identified in the study area.	Comment noted.	No
Surface Water Comments on the Draft Environmental Impact Assessment Report				
1.	N/A	In my opinion, the draft EA report has adequately identified potential impacts from the project on surface water features, along with commitments and mitigation measures/common practices recommended to address the impact identified. Recommendations and considerations for specific river crossing have been provided based on the fluvial geomorphology assessment. Erosion and sediment control risk assessment is completed for each section/polygon of the construction site. The recommended mitigation measures and common practices will be mainly completed based on Best Management Practices in the MTO's erosion and sedimentation overview risk assessment guide and Ontario Provincial Standard Specifications (OPSS) for erosion and sediment control during construction. In-water work is to be implemented following the Ministry of Transportation's Best Management Practices Manual for Fisheries. For culvert replacements with no applicable Best Management Practices available, the works will be carried forward for a full impact assessment. Potential impact on fish habitat has been identified for both land-based activities and in-water activities with commitments/mitigation measures provided.	Comment noted.	No
2.	N/A	River channel realignment will be designed in accordance with natural channel design principles and will follow conservation authority guidelines. For works that may result in a Harmful Alteration, Disruption or Destruction of fish habitat, a request for review from DFO will be needed during Detail Design. In terms of potential road salt impact on local surface and groundwater receivers, the report states that MTO's salt management plan will be implemented which contains best management practices to facilitate the optimal rate, timing, and location of salt application to meet the objectives of environment Canada's code of practice for environmental management of road salts.	Comment noted.	No

Comment #	Section #	Ministry of the Environment, Conservation and Parks Comments	Project Team Response	Edits Required to EIA? (Yes/No)
3.	N/A	It is also noted that the 2002 approved Environmental Assessment identified several proposed mitigation and commitments to future work for the project. Table 5-25 of the report has summarized and described the status of the approved Environmental Assessment commitments.	Comment noted.	No
4.	N/A	<p>As these MTO guidelines and OPSS are well developed/recognized standard practices, I have no concerns with the application of the selected standard mitigation practices in this project. It is understood that the recommended mitigation measures and erosion controls will be further confirmed and finalized during the detailed design. The following additional comments are provided for consideration by the proponent:</p> <ol style="list-style-type: none"> 1. It is recommended that a more site-specific mitigation and erosion and sediment control implementation plan be prepared, based on the report identified MTO' guidelines/plans, Ontario Provincial Standard Specifications (OPSS), Best Management Practices and recommended mitigation measures/considerations, during the detailed design stage to mitigate or minimize any potential adverse impact from the project on surface water features. 2. It is recommended that a detailed environmental monitoring plan be developed during the detailed design stage and be implemented during the construction. Such a monitoring plan should be an essential complement to the proposed mitigation measures including the erosion and sediment control plan to determine whether the proposed mitigation is implemented as required and whether the proposed mitigation measures are sufficient and effective to address impacts on the surface water features identified. 3. In terms of requirement for Permit to Take Water (PTTW) for the construction dewatering, please be advised that guideline documents and the Permit to Take Water application package can be downloaded directly from the MECP website. If the construction includes the discharge of any collected water from the dewatering activities into surface water features, or a stormwater sewer that directly discharges into surface water features, appropriate treatment and control/mitigation measures shall be provided to ensure that the proposed discharge will not result in any undesirable impact on the receiving waters. Dewatering and discharge plans will be reviewed further during the PTTW application process when all the detailed information, including the dewatering and discharge plan, as well as the monitoring, contingency and erosion and sediment control plans for the proposed construction dewatering activities, becomes available. 	<ol style="list-style-type: none"> 1. As noted in ESC-1.05 of Table 5-26 in the EIA, an Erosion and Sediment Control Plan will be designed and implemented during subsequent phases of the project. 2. Consistent with Condition 13 (MECP Conditions of Approval issued in relation to the 2002 Approved EA), and as noted in Table 5-24 of the EIA, the Ministry will develop a compliance monitoring plan during the subsequent Detail Design phase of the project. 3. Comment noted. As discussed in Section 5.1.4.1.4 of the EIA, where expected construction dewatering volumes that exceed 400,000 L/day, a Permit To Take Water (Category 3) will be required from Ministry of the Environment, Conservation and Parks in accordance with Section 34 of the Ontario Water Resources Act (RSO, 1990). Permitting requirements will be determined during the subsequent Detail Design phase. 4. Comment noted. The Reference List will be reviewed and revised as required in the Final EIA. 	Yes – review and revise reference list as required

Comment #	Section #	Ministry of the Environment, Conservation and Parks Comments	Project Team Response	Edits Required to EIA? (Yes/No)
		4. The report reference list should include all MTO's guideline documents cited in the text of this EA report.		
Comments on the Draft Noise Impact Assessment Report				
1.	Section 4.1	TNM 2.5 was used in the noise predictions. This software was superseded by a newer version (TNM 3.1). Therefore, the noise predictions should be re-calculated using the newer version TNM 3.1.	<p>The Project Team acknowledges that a newer versions of the noise modelling software TNM exist (TNM 3.0 and 3.1)</p> <p>The use of TNM 2.5 is consistent with the Environmental Guide for Noise (MTO, 2022).</p> <p>In addition, TNM 2.5 has not been superseded by TNM 3.0 or 3.1. The United States Federal Highways Administration (FHWA) provides the prediction model software; FHWA currently authorizes TNM 2.5 and requires its use on Federal projects in the United States.</p> <p>The Project Team did perform a conformance calculation which was appended in the Draft Noise Impact Assessment Report. The calculation demonstrated that the results of TNM 2.5 and TNM 3.1 would be comparable within this project.</p> <p>Furthermore, use of TNM 3.0 or later introduces practical risks, as the program is prone to glitches and crashing.</p>	No
2.	Section 2.1.1.1	<p>Minimum background noise levels for day assessments in Section 2.1.1.1 are listed as follows: Class 1: 50 dBA Class 2: 45 dBA Class 3: 40 dBA.</p> <p>These levels should be changed to: Class 1: 55 dBA (day) / 50 dBA (night) Class 2: 50 dBA (day) / 45 dBA (night) Class 3: 45 dBA (day) / 40 dBA (night)</p> <p>The first group of minimum background noise levels pertains to stationary sources while the second group of minimum background noise levels pertains to transportation sources. This project involves transportation sources (no stationary sources are involved).</p>	We have used the lower noise level limits consistent with the Environmental Guide for Noise (MTO, 2022) and as the basis for completing the most conservative approach to understanding potential noise impacts.	No
3.	Throughout	<p>In the following tables:</p> <p>4.2, 5.1, 5.2, 5.3, 5.4, 5.5, 5.6, 5.7, 5.8, 5.9, 5.10, 5.11, 5.12, 5.13, 5.14, 5.15, 5.16, 5.17, 5.18, 5.19, 5.20, 5.21, 5.22, 5.23, 5.24, 5.25, 5.26, 5.27 and 5.28;</p> <p>the predicted LEQ levels (dBA) were based on 24 hours, i.e.(LEQ 24). The assessment should be based on 16 hours relating to the following</p>	<p>The use of Leq8 (night) and Plane of Window are described in NPC-300 part C for land use planning authorities, whereas the use of Leq24 and Outdoor Living Area (OLA) are consistent with the Environmental Guide for Noise (MTO, 2022).</p> <p>The point of assessment was the OLA in accordance with the MTO Environmental Guide for Noise (MTO, 2022), and</p>	No

Comment #	Section #	Ministry of the Environment, Conservation and Parks Comments	Project Team Response	Edits Required to EIA? (Yes/No)
		times: 7:00 am to 11:00 pm, i.e.(LEQ 16) at the Outdoor Living Area (OLA). As well as on 8 hours relating to the following times: 11:00 pm to 7:00 am (i.e. LEQ 8) at the Plane of Window (POW). Therefore, all the above listed tables should be adjusted to list LEQ 16 day / LEQ 8 night (not LEQ 24).	<p>standard practices previously approved by MECP for assessment of roadway improvements/capital works EAs.</p> <p>Per the MTO Environmental Guide for Noise, traffic volumes for freeways are to be based on 24-hour volumes. The resulting descriptor is LEQ_{24}.</p>

Mayor [REDACTED]
Town of Bradford West Gwillimbury

Dear Mayor [REDACTED],

The ministry has completed the review of the proposed interchange configuration at 10th Sideroad as committed to in our letter dated June 12, 2023, in response to the May 16, 2023, Council Resolution.

The review consisted of generating a new interchange design that would meet the overall intent of the residents' specific comments. A comparative analysis was then conducted between this new design alternative and the current proposed design based on several factors and criteria such as highway requirements, traffic, property impact and safety etc. Through the review, the Project Team concluded that the current proposed Parclo A4 design will continue to be recommended as it best optimizes traffic operations while maintaining a smaller overall footprint.

The main summary of the concluding points for the review are as follows:

- The current proposed design offers nearly 50% additional traffic capacity and the new alternative (Diamond-Parclo A4 hybrid) provides only 25% according to the traffic volumes that were projected for the 2041 planning horizon. Based on this, the current proposed design would be best suited to accommodate the increased traffic demand that will come with the increase in population over the next 30 years.
- The new alternative (Diamond-Parclo A4 hybrid) will increase the overall net property impact, with much of this directly impacting Henderson Park. The Project Team acknowledges the Town of Bradford West Gwillimbury's plan to expand the park for the community, therefore minimizing the park property impact was one of the Project Team's key design considerations.

.../2

- For the next phase of the design, the ministry is committed to explore the possibility of providing berms and/or vegetation to further create natural separation between the ministry's right-of-way and the adjacent residential street.

The overall analysis was presented to Town of Bradford West Gwillimbury staff on July 26, 2023, to seek additional feedback. A summary of this meeting along with the detailed memorandum that was completed to support the conclusion has been included in this response package.

As a next step, the ministry plans to meet with residents in the 10th Sideroad area who requested a meeting to discuss potential property impacts.

Thank you for bringing these concerns to our attention. If you have any further questions, please contact me.

Wan Chi Ma, P.Eng.
Senior Project Manager

Enclosures

- c. Geoff McKnight, Chief Administrative Officer

Site Address: [REDACTED]	Date: September 1, 2023	LSRCA File #: [REDACTED]	Municipal Ref #: [REDACTED]
Application Type: Environmental Assessment	APID: [REDACTED]	Submission #: First	Municipality: East Gwillimbury

*These comments are high level as the Draft Drainage, Hydraulics and SWM Report does not contain all the expected detailed design information, calculations, drawings, etc. for the bridges, ponds, culverts, or swales.

Documents Reviewed:

- **Report:** AECOM, "Draft Drainage, Hydraulics and Stormwater Management (SWM) Report", July 20, 2023
- **Appendix A to L**

Background Information:

- 16.3km
- Interim – 2 lane configuration (2 lanes in each direction)
- Ultimate – 4 lane configuration
- Holland River and Holland River East Branch
- Culverts are based on the 'MTO Highway Drainage Design Standards'
- Bridges design criteria are based on the 'MTO Highway Drainage Design Standards'
- Flat bottom grassed swales (15225m of flat bottom grassed swales are proposed on the south and north side of BBP)
- Enhanced grassed swales
- Wet Ponds – 9 ponds proposed to provide quantity and quality control for a drainage area of 130ha
- 24-hour SCS Type II rainfall event produced the highest peak flows
- 2-D Hec-Ras model developed
- The study area encompasses 19 bridges, 13 new culverts, 63 non-structural culverts, and 2 culvert extensions, 1 culvert under Metrolinx tracks to be relocated.

Comment #	Item	Section	Page #	1 st LSRCA Comments (01-SEPT-2023)	1 st Applicant Response on Date	2 nd LSRCA Comments on Date	2 nd Applicant Response on Date
E1.		Section 2.1		<p>Culverts (with drainage areas of less than 125ha):</p> <p>If the upstream drainage area is less than 125Ha than LSRCA does not regulate for flood hazard (floodplain) in these locations. From LSRCA's perspective only safe conveyance needs to be demonstrated PLUS no impact to erosion.</p> <p>Ideally, the culvert should be open-bottom or embedded.</p>	In total, sixty-four (64) culverts have drainage areas less than 125ha. Of these, fifty-two (52) culverts are within LSRCA jurisdiction. Safe conveyance and erosion impacts have been evaluated as part of the Drainage, Hydraulic and Stormwater Management Report (AECOM, 2023), and culvert type and impacts will be re-assessed and confirmed during subsequent phases of the project.		
E2.		Section 2.1		<p>Culverts (with drainage areas of greater than 125ha):</p>	In total, eight (8) culverts have drainage areas greater than 125ha within the Study Area. Of		

Comment #	Item	Section	Page #	1 st LSRCA Comments (01-SEPT-2023)	1 st Applicant Response on Date	2 nd LSRCA Comments on Date	2 nd Applicant Response on Date
				If the upstream drainage area is greater than 125Ha than LSRCA does regulate for flood hazard (floodplain) in these locations. There will be a need to demonstrate with supporting information that the proposed culvert will not negatively impact flooding or erosion.	these, five (5) culverts are within LSRCA jurisdiction. In addition, the Holland River HEC-RAS model does not include the locations where the five culverts are located. Consultation with LSRCA will continue throughout subsequent phases of the project regarding available data (i.e., water levels, flow velocities, etc.) at the proposed culvert locations and to identify any adverse impact in terms of flooding and erosion potential at culverts with drainage areas greater than 125ha.		
E3.		Section 2.5		Bridge Crossings – Holland River & Holland River East Minimal Submission Requirements: Ideally LSRCA would appreciate the minimum requirement for submissions including hydraulic modelling and analysis as outlined in appendix I, section 10.0 of LSRCA's April 2022 Technical guidelines.	A digital copy of the preliminary HEC-RAS hydraulic model is provided via email to LSRCA. The model covers the two major crossings within the proposed highway alignment. Details about the model parameters are included in the DRAFT Drainage, Hydraulic and Stormwater Management (SWM) Report (AECOM, 2023). Other parameters are included directly in the model. At this Preliminary Design stage of the project, there was no calibration or validation of the model, as the project is a proposed new highway alignment so there is no reference data to calibrate the model. Available data for the existing condition can be obtained from a 1D model developed by LSRCA, however, this model only covers the Holland River East Branch and therefore cannot be compared directly with the 2D HEC-RAS model.		
E4.		Section 2.5		Bridge Crossings – Holland River & Holland River East Flood and Erosion: It will need to be demonstrated through supporting models, resultant tables, maps, etc. (as outlined in appendix I, section 10.0 of LSRCA's April 2022 technical guidelines) that the proposed	The proposed structures at the Holland River and Holland River East Branch have proposed spans of 550 m and 750 m, respectively. For this assessment, the hydraulic model provided preliminary results to understand general trends and potential impacts of these crossings on the surrounding area. The results and proposed mitigation measures (i.e., overflow culverts) are documented in Section 6.4 and Section 7 of the Drainage, Hydraulic and		

Comment #	Item	Section	Page #	1 st LSRCA Comments (01-SEPT-2023)	1 st Applicant Response on Date	2 nd LSRCA Comments on Date	2 nd Applicant Response on Date
				<p>bridges structures will not negatively impact flooding and erosion.</p> <p><u>Table 15</u>: “Summary of Water Elevations and Velocities for Proposed Condition at the BBP ROW” shows an increase in regional flood elevation of 0.11m between existing and proposed. Please clarify if this increase impacts private properties. Provide supporting documentation, calculations, maps, etc.</p>	<p>Stormwater Management Report (AECOM, 2023). Impacts to erosion will be assessed in greater detail during subsequent phases of the project.</p> <p>A change in water elevations of 0.11m is localized to the Holland River East Branch near the crossing. At this Preliminary Design stage of the project, it is not possible to determine if there will be impacts to private properties due to the hydraulic complexity of the river system, which depends on the water level management of Lake Simcoe. The hydraulic analysis will be refined in future design stages when additional information will be available.</p> <p>The 2D hydraulic model includes several simulations with different elevations at Lake Simcoe, which we found to have an impact in the resultant floodplain. Consultation with LSRCA with continue throughout subsequent phases of the project regarding impacts to the floodplain and proposed mitigation measures.</p>		
E5.		Section 2.5		<p>Bridge Crossings – Holland River & Holland River East</p> <p>Overbank Velocities / Erosion:</p> <p>Please provide a resultant table showing the existing and proposed overbank velocities, for the more frequent storm events. It must be demonstrated that there is no negative impact to erosion upstream or downstream of the proposed bridges. If there is, how will the velocities be mitigated.</p> <p>Please summarize the overbank velocities and findings in relationship to erosion.</p>	<p>A summary table with channel velocities is included for both river crossings (left bank, channel center line, right bank) in Table 9 of the Drainage, Hydrology and Stormwater Management Report (AECOM, 2023).</p> <p>Velocity changes are larger in the Holland River due to the size of the opening (500 m) and alignment of the channel. Smaller changes occur for higher frequency events (i.e., 2, 5, 10, 25-yr). Floods with larger return periods are less frequent and therefore have a lower impact on erosion potential.</p> <p>Changes in velocity for the Holland River East Branch are minimal due to the alignment of the channel and the proposed size of the bridge opening (750 m).</p>		

Comment #	Item	Section	Page #	1 st LSRCA Comments (01-SEPT-2023)	1 st Applicant Response on Date	2 nd LSRCA Comments on Date	2 nd Applicant Response on Date
					For both cases the maximum velocity at both crossings during the Regional event is 0.88 m/s for both channels.		
E6.				Digital Copy: Please submit the digital copy of the 2D hydraulic model for LSRCA's review and commenting.	A copy of the Digital Model is provided via email.		
E7.				Fill within the Floodplain: To preserve flood storage every attempt should be made to minimize the fill placed within the floodplain. Please consider minimizing the amount of 'fill' to be placed within the floodplain due to the construction of the bypass and its associated works (i.e., bridges, ditches, sloping, etc.). Ideally a compensation 'cut' should be performed to offset the 'fill' at every 0.3m increment (up to and including the Regulatory flood elevation). Please quantify the volume of 'fill' in m ³ to be placed within the floodplain.	Comment acknowledged. The information requested will be determined and provided to LSRCA in subsequent phases of the project.		
E8.				Detailed Design: Please consider circulating LSRCA staff the detailed design with all the supporting information (i.e., maps, calculations, design drawings, ESC measures, etc.) for all the bridges, culverts, ponds, and swales.	Comment noted. All the required supporting information shall be provided to LSRCA in the Detail Design phase of the project.		

Submission Resubmission Requirements:

1. A completed response matrix including detailed response outlining how each of the comments above have been addressed with reference to applicable reports and drawings.

2. The response matrix is to also include a summary of any additional changes to the design and/or analysis. This includes changes to reports, drawings, details, facility design and changes not identified in the detailed response to comments.
3. Reports and engineering drawings and details are to be signed and sealed by a Professional Engineer.
4. All submissions and reports are to include a digital copy of applicable models.
5. All submission and reports are to include applicable technical components which achieve the minimum requirements outlined in the Lake Simcoe Region Conservation Authority Technical Guidelines for Stormwater Management Submission, April 2022.

Important Notes and References:

1. Please contact the Lake Simcoe Region Conservation Authority (LSRCA) to scope any required Environmental Impact Study or Natural Heritage Evaluation.
2. The stormwater management submission is required to be prepared in accordance with LSRCA Technical Guidelines for Stormwater Management Submissions. [Technical-Guidelines-for-Stormwater-Management-Submissions April 2022](#)
3. Submissions are to be in accordance with the LSRCA Watershed Development Guidelines. [Ontario Regulation 179/06 Implementation Guidelines](#)
4. The hydrogeological analysis is required to be prepared in accordance with “Hydrological Assessment Submissions: Conservation Authority” Guidelines for Development Applications.” [Hydrogeological Guidelines - Hydrological Assessment 2013](#)
5. Where the LSPOP applies, submissions are to be in accordance with the LSPOP found here: [Watershed Phosphorus Offsetting Policy July 2021](#)
6. Low Impact Development Treatment Training tool can be found here: [LID Treatment Training Tool April 2018](#)
7. Lake Simcoe Region Conservation Authority Review Fees can be found here: [Planning Application and Permit-fees January 2022](#).
8. Please note that the review fees cover two rounds of reviews; third and subsequent submissions will be subject to additional fees per the fee schedule.

Comment	Report Section, Page	MCM Comment on Updated Draft EIAR	Project Team Response	Edits Required to EIAR? (Yes/No)
1	General Comment/Executive summary, page x 1.0 Introduction, Table 1-1: Preliminary Design and Project Specific Assessment of Environmental Impacts Activities, page 5	<p>The executive summary states that "additional archaeological assessments have been completed to finalize the impact assessments in accordance with Ontario Regulation 697/21". MCM's records show that the archaeological assessments are not complete.</p> <p>The Stage 2 archaeological assessment [REDACTED] was submitted to MCM on July 27, 2023 and is awaiting review. In our June 30, 2023, comments on the Draft EIAR, we recommended that an expedited review request be submitted for this assessment. Our records show that no expedited review request has been made. The Stage 2 archaeological assessment for additional properties added to the project location.</p> <p>At the time of these comments, most of the stage 3 archaeological assessments for this project have not been submitted to the ministry for review.</p> <p>MCM's role is to review archaeological assessments to ensure that they comply with the standards and guidelines that are issued by the Minister of Citizenship and Multiculturalism, and that the archaeological fieldwork and report recommendations ensure the conservation, protection and preservation of the cultural heritage of Ontario. When all matters relating to archaeological sites within the project area of a development proposal have been addressed to the satisfaction of MCM, a letter will be issued by the ministry stating that there are no further concerns about alterations to archaeological sites by the proposed development, and the report will be entered onto the Ontario Public Register of Archaeological Reports. An archaeological assessment is not considered complete until it has been entered onto the Ontario Public Register of Archaeological Reports.</p> <p>Archaeological concerns have not been fully addressed until reports have been entered into the Ontario Public Register of Archaeological Reports where those reports recommend that:</p> <ol style="list-style-type: none"> 1. the archaeological assessment of the project area is complete and 2. all archaeological sites identified by the assessment are either of no further cultural heritage value or interest (as per Section 48(3) of the Ontario Heritage Act) or that mitigation of impacts has been accomplished through excavation or an avoidance and protection strategy. <p>Approval authorities and proponents should wait to receive the MCM's review letter indicating that the report(s) has been entered into the Register before issuing a decision or proceeding with any ground disturbing activities.</p> <p>Table 1-1 provides a "Timeline and Status" for the project's activities and milestones. The table is missing information on when the required archaeological assessments will be completed (in the "Ontario Regulation Reports Review" row). This information should be included.</p> <p>For your reference, our records show that the following projects with outstanding reports are attributed to the Bradford Bypass.</p> <ul style="list-style-type: none"> ▪ [REDACTED] Stage 2 Bradford Bypass, remaining properties ▪ [REDACTED] Stage 2 AA of part of Lot 15, Concession 8, Township West Gwillimbury - Part of the Bradford Bypass 	<p>As detailed in the Updated Draft EIAR, additional archaeological investigation work has been completed to finalize the impact assessments in accordance with Ontario Regulation 697/21.</p> <p>The Updated Draft EIAR was available for review on the Project Website from July 13, 2023, until August 14, 2023.</p> <p>The Project Team understands that an archaeological assessment is not considered finalized until it has been entered onto the Ontario Public Register of Archaeological Reports. The Updated Draft EIAR reference to "...additional archaeological assessments have been completed..." referred to the completion of the physical work of archaeological assessment and that the associated reporting by AECOM was complete. In addition, MTO's own licensed archaeologists have reviewed each report to ensure compliance with the ministry Standards and Guidelines for consultant archaeologists. We also would like to reiterate that no construction will occur on these areas until these reports have been accepted into the registry.</p> <p>As of November 10th, all archaeological reports have been submitted to MCM. A summary of the reports, their status in terms of submission to MCM and clarification of the next steps (MCM review and entering onto the Register), will be added to Section 5.3 of the Final EIAR.</p>	<p>Yes</p> <p>Summary of the reports, their status in terms of submission to MCM and clarification of the next steps (MCM review and entering onto the Register), to be added to Section 5.3 of the Final EIAR.</p>

2	2.3.1 Archaeology 2.3.1.1 Background, page 123-124	<p>This section should be more specific about when the remaining Stage 2 archaeological assessment reporting and Stage 3 archaeological assessment reports will be submitted to MCM for review.</p> <p>This section states that the Stage 3 archaeological assessments have been prepared in accordance with Section 21 of O. Reg 697/21. Section 21 of the regulation states that:</p> <p>21. (1) In accordance with subsection (2), the proponent shall complete a Stage III Archaeological Assessment for areas of the updated study area that are identified as having archaeological potential in accordance with a Stage II Archaeological Assessment.</p> <p>(2) Any Stage III Archaeological Assessment shall be completed in accordance with the Ministry of Heritage, Sport, Tourism and Culture Industries' Standards and Guidelines for Consultant Archaeologists.</p> <p>Please see comment 1 above. As the Stage 3 archaeological assessments have not been submitted to MCM for review, MCM finds that this section of the regulation has not been addressed.</p>	Comment noted. Please refer to Comment Response #1.	Yes – see comment #1.
3	3. Evaluation of Alternatives 3.1.1 Alignment Shift Between 10th Sideroad and County Road 4, pages 136-141	The report presents alignment shifts that are designed to avoid archaeological site BaGv-112. While MCM supports avoidance as a protection strategy, we note that the stage 2 archaeological assessment is awaiting review, and the stage 3 archaeological assessment associated with BaGv-112 has not yet been submitted to the Ministry. MCM can not confirm the extent of the surveyed area, the survey technique, or the boundaries of the archaeological site until the reports have been submitted and reviewed. Therefore, findings related to the boundaries of this site should be considered tentative. MCM can not comment on the alignment at this time.	Comment noted. Please refer to Comment Response #1.	No

Comment	Report Section, Page	MCM Comment on Updated Draft EIAR	Project Team Response	Edits Required to EIAR? (Yes/No)
4	3. Evaluation of Alternatives 3.1.2 Holland River East Branch, page 144 and 148	<p>The "Riverbend site" is sometimes identified as Borden Number BaGv-42 in the document, and other times it is identified as BaGv-114. MCM records show that the "River Bend" site is BaGv-114, and the "East Holland River" site is BaGv-42 (site has a marine component). Please review references to these archaeological sites in the document and revise as appropriate.</p> <p>Similar to comment 3 above, MCM notes that the boundaries of BaGv-114 and BaGv-42 have not yet been confirmed through archaeological assessment, as the reports are preliminary. Findings related to the boundaries of this site should be considered tentative. MCM can not comment on the alignment at this time.</p>	Comment noted. Borden numbers will be confirmed and revised as required in the Final EIAR.	Yes – check and revise borden numbers throughout Final EIAR.
5	3. Evaluation of Alternatives 3.2.8 Leslie Street Interchange, page 186	This section states that the preferred alternative, Alternative 1, avoids a "significant cultural heritage resource". Please provide more information about what this heritage resource is.	This section of the Updated Draft EIAR is referring to the significant Cultural Heritage Resource located at 21145 Leslie Street (BHR 2). This property is Designated under Part IV of the Ontario Heritage Act, however through the evaluation process completed as part of the Project, it was determined that a Cultural Heritage Evaluation Report (CHER) is not required as the preferred alternative for the Leslie Street interchange avoids this property.	No
6	5. Environmental Impacts and Mitigation Measures of the Updated Technically Preferred Route 5.3.1 Archaeology 5.3.1.1 Potential Impacts, page 390	This section includes a paragraph about the Sutherland Wesleyan Methodist and Rogers Cemetery, and states that no maps of the cemetery were found. It is unclear why this detail is being provided here, as any implications for the project are not identified. Additional information should be provided.	<p>Comment noted.</p> <p>As detailed in Table 5-26 (ARC-1.20) of the Updated Draft EIAR, areas identified as cemeteries will not be impacted by the Project. Sections 5.3.1 and 5.3.1.1 will be in the Final EIAR to clarify that there are no impacts to areas identified as cemeteries as a result of the Project.</p>	Yes – provide clarification on there being no impacts to cemetery to Section 5.3.1.
7	5. Environmental Impacts and Mitigation Measures of the Updated Technically Preferred Route 5.3.1 Archaeology 5.3.1.2 Commitments and Mitigation Measures, page 390-396	This section presents the recommendations of draft Stage 3 archaeological assessments. These recommendations should be considered preliminary until the reports have been reviewed and entered onto the August Public Register of Archaeological Reports.	Comment noted. Please refer to Comment Response #1.	No
8	5.6 Summary of Preliminary Design Environmental Impacts, Proposed Mitigation Measures, Monitoring Activities and Commitments to Future Work Table 5-26, page 461-467	<p>Row ARC-1.00 (and sub-rows) states that several required Stage 3 Archaeological Assessments have been completed. As stated above, our records show that many Stage 3 assessments associated with the Bradford Bypass Project have not been submitted to MCM for review (see comment 1 above for a list of PIFs for reports that have not been submitted). An archaeological assessment is not considered complete until it has been entered onto the August Public Register of Archaeological Reports.</p> <p>Please provide MCM with the Project Information Form numbers (PIF#s) for each of the archaeological assessment reports discussed in this section, to assist MCM in tracking their submission and review.</p> <p>Given the number of reports that have yet to be reviewed by MCM, and the timelines for this project, we strongly recommend that these reports be submitted to the Ministry as soon as possible. We further recommend that the archaeologist submitting the report make an "expedited review" request in making that submission.</p>	<p>Comment noted. Please refer to Comment Response #1.</p> <p>The PIFs for the archaeological assessment reports discussed in the Final EIAR are listed below:</p> <ul style="list-style-type: none"> • Stage 1 AA: [REDACTED] • Stage 2 AA: [REDACTED] • Stage 2 AA: [REDACTED] • Stage 3 AA: Bradford Ridge site (BaGv-115): [REDACTED] • Stage 3 AA: Frazer Creek site (BaGv-116): [REDACTED] • Stage 3 AA: Holland Forest West site (BaGv-117): [REDACTED] • Stage 3 AA: Holland Forest East site (BaGv-148): [REDACTED] • Stage 3 AA: Bradford Hill site (BaGv- 112): [REDACTED] • Stage 3 AA: Wheatfield site (BaGv- 113): [REDACTED] • Stage 3 AA: River Bend site (BaGv-114): [REDACTED] • Stage 3 AA: East Holland River Site (BaGv-42): [REDACTED] • Stage 3 AA: Doan Site (BaGu-215): [REDACTED] 	Yes – see comment #1.
